Mr. President, I am grateful to the Senators who joined me in the conference with the House. All of them, in a completely nonpartisan way, made a major contribution to the significant and excellent bill that is before the Senate at this time.

I wish, also, to express my appreciation to the House conferees who joined with us. They made a major contribution to working out a conference compromise that contains most of the best provisions of both the House and Senate bills.

We had a few struggles. Some important provisions of the Senate bill were deleted. But I believe the bill that we lay before the Senate today is the most important single piece of legislation for rural America that the Senate has ever considered. It is a major significant step forward in implementing the rural development policy adopted in title IX of the Agricultural Act of 1970.

Mr. President, this bill deals with most, but not all, of the major elements in a complete, general purpose national rural development effort. But we hope and think that we have dealt with most of the highest priority needs of rural America. The bill consists of six titles. Each fills a major gap in existing legislation for rural America.

Title I consists of major expansions and improvements of the Consolidated Farmers Home Administration Act of 1961. It will go a long way, through guaranteed, insured, and direct loans and grants to fill the credit, investment, and equity capital needs of family farms and for essential rural industrialization, job expansion, and improved community facilities.

Titles II and III amend the small watershed protection and resource conservation and development project programs. They will provide essential additional Federal cost sharing for water quality and the provision of ample water for rural community and industrial development.

Title IV will be administered by the Forest Service of the Department of Agriculture. It will provide a start on the badly needed strengthening of rural fire protection and suppression capability in the rural areas and communities of this country.

Title V will be administered jointly by the Secretary of Agriculture and the presidents of the State land grant universities. It will utilize and build upon the research, extension, and community service capability of all the public and private institutions of higher education in each State to expand scientific inquiry and education backup for nonfarm rural development and solution of the problems on small farms of the Nation.

Title VI covers a number of subjects.

It expands the basic statutory missions of the Department of Agriculture to include rural development.

It empowers the Secretary of Agriculture to coordinate the rural development work of all the departments and agencies of the Federal Government and to focus them upon rural development, both in terms of their substantive programs and also in terms of their personnel and their offices.

The bill requires the Secretary of Agriculture to utilize the personnel and offices of all Federal agencies in a rural area, interchangeably in an efficient way, in full coordination with local and State rural development efforts, to bring the full resources of the Federal Government to bear on the rural development component of the national policy of balanced growth.

The Secretary is required to render an annual report to Congress concerning the progress made in reaching rural development goals he is required to establish and upon his success in utilizing the resources and programs of other Federal agencies. To assist him with this work, we have provided an additional Assistant Secretary of Agriculture.

Title VI also closes a loophole in section 901(B) of the Agricultural Act of 1970 which requires the location of installations and offices in rural areas. The words "insofar as practicable" in existing law are deleted and in their place the executive branch is directed to give rural areas "first priority" in locating new offices and installations

Other provisions of title VI include:

Authorization of ACP-type—REAP—cost sharing payments to landowners for air, water, and other agriculturally related pollution abatement whether or not specific soil and water conservation purposes are involved:

Expansion of the Great Plains conservation type program to nationwide operation; and

Making desertland entrymen eligible to obtain Farmers Home Administration farm loans before issuance of a patent on the same basis that homestead entrymen may under existing law

The bill establishes 10 or more major new farm and rural development loan programs and nine new programs of Federal cost sharing for specific types of rural development projects and purposes ranging from rural industrial parks to scientific research, rural fire protection, and credit for young farmers.

For the first time in history, so far as I have been able to determine, we are moving to put all of the most needed action programs, the most needed service and technical assistance programs, the most needed financial assistance programs, all backed up with scientific research and education, into the same package in the same bill to be initiated at the same time.

In this bill we put all the major components of rural development together in the same piece of legislation—the Rural Development Act of 1972—so that the educational component, the research component, the credit and other financial assistance component, and the planning component are provided simultaneously through tested and proven administrative machinery already in place and operating in rural areas. This provision of a complete rural development systems-approach ought to make ultimate success more certain, and to improve the skill, effectiveness and speed of getting the programs underway.

This bill, also, as Senator Ellender did in a bill that he twice piloted to Senate passage several years ago, will assist and encourage rural development in a completely coordinated way consistent with the local general purpose development plans of multijurisdictional areawide rural planning and development districts.

Our purpose is to encourage and speed up economic growth in rural areas, to provide the jobs and income required to support better community facilities and services, to improve the quality of rural life, and to do so on a self-earned, self-sustaining basis.

But we also provide safeguards and requirements that will insure that such stimulated rural growth will take place in an orderly, systematic way with full attention to land and water use plans and the protection of environmental and ecological values as well as cultural and human needs in the rural areas.

The bill requires that applications for proposed individual projects of rural development nature be submitted to and reviewed by the areawide multijurisdictional planning and development agency established by or under State law. Similar review of development proposals by municipalities and counties is provided. The bill provides that such reviews shall be completed within 30 days. The Secretary of Agriculture is authorized to reimburse these governments and agencies for the cost of making the review. Moreover, the bill provides special appropriation authorizations of funds to these agencies and governments in rural areas to prepare the general purpose rural development plans against which individual project applications will be reviewed and evaluated.

The higher educational and research institutions in each State are authorized and provided funds to assist in providing scientific information, technical assistance, and feasibility studies required to improve the rural development planning capability of local agencies and governments.

The bill, not only provides several major new programs of loans and grants for pollution abatement and control, but also requires that the environmental aspects of proposed projects be fully considered and taken into account.

COORDINATION WITH OTHER PROGRAMS AND AGENCIES

This bill was developed with the knowledge that the Committee on Public Works is considering a major public works planning and economic development measure. We were fully informed that the Committee on Interior and Insular Affairs was considering major national land use and water resource planning measures.

The rural development bill is designed to complement and work harmoniously with whatever land use planning and public works planning and economic development programs may be put into effect and operation at any particular time.

This bill is designed to provide for the same major Federal response that is provided to cities in the Housing and Urban Development Act of 1972, adopted earlier by this body, and depends upon provisions of that act for certain aids to community development planning and management.

In the bill before us, we have a mutually-supporting combination of programs that in coordination with programs provided by other legislation, that:

Will help rural areas to move forward with the rest of America;

Will provide the kinds of Federal aids for rural areas that Congress is already providing for city areas;

Will work in harmony with other national programs of planning and project assistance to buttress the development and community improvement efforts of people and their local governments in rural communities throughout every State in the Nation.

The bill, also, provides several new farm credit programs to strengthen the work of Farmers Home Administration and that of the institutions of the Farm Credit Act of 1971.

Mr. President, in the latter connection, I wish to point out at this time that the bill before us does not duplicate any of the programs or authorizations provided by the Farm Credit Act of 1971 or by the existing provisions of the Consolidated Farmers Home Administration Act of 1961. Rather the Rural Development Act of 1972 builds upon and supplements these other legislative landmarks. Nor does any provision in the bill before us restrict or reduce the provisions of existing farm, rural housing, and water and waste disposal loan and grant programs.

Mr. President, the same is true with respect to loans and grants available from Small Business Administration, Economic Development Administration, Department of Housing and Urban Development, and the Environmental Protection Administration. We seek here not to duplicate or supercede these other programs but to supplement and strengthen them. The bill specifically provides for cooperative participation in joint loans and grants with these other agencies.

Mr. President, I wish to turn now to a more detailed explanation of the way that this bill will help local people solve some of the problems of rural America. I will describe the principal provisions of this legislation on the basis of the rural needs that these provisions were designed to meet.

JOBS, INCOME, AND TAX BASE

Mr. President, members of the Committee on Agriculture and Forestry became convinced in the course of our hearings, deliberations, and study of rural problems that the first thing that we have to do is assist rural communities to overcome a condition of persistent an highly prevalent unemployment and underemployment and low incomes in our rural areas and communities.

We do not believe that rural areas can grow and prosper on a permanent dole. We believe that resource development and work at productive jobs is the solution to rural ills.

We believe that more and better jobs and higher income will provide the increased local and State tax base needed to finance the public investments and expenditures required for the improved community facilities and services that are essential to attracting industry and encouraging continued economic growth and environmental and cultural improvement.

FARM INCOME AND DEVELOPMENT

The committee is convinced that the fundamental foundation of increased rural prosperity is good and stable farm family income. We have been conscious that the Congress will be working next year on an extension and improvement of the basic farm program.

With that in mind, the Rural Development Act of 1972 does not deal with farm commodity programs, as important as they are; but it does make several major improvements in the amount and types of farm credit that is made available by Farmers Home Administration.

These include:

First. Applicants seeking long-term real estate loans to acquire farm ownership or to expand their farm units to a more economical size or to make major real estate improvements will be able to obtain loans based more nearly on the true current market value of the improved property by deleting the requirement, in existing law, that appraisals be based upon a lagged "normal" value. This is section 103.

Second. Farmers organizing irrigation water systems are made eligible for a total loan based upon the entire cost of an economic irrigation unit by removal of the limitation in existing law on the maximum size of such loans. This is section 110.

Third. The agricultural credit insurance fund is relieved of the responsibility to handle the increasing volume of nonfarm rural credit transactions leaving it an exclusively farmers' credit insurance fund. This is section 115, which also transfers to the agricultural credit insurance fund all of the assets and liabilities of the Farmers Home Administration direct loan account and of the emergency credit revolving fund.

Fourth. Section 115 also provides that the agricultural credit insurance fund can be used to provide interest rate subsidies on any insured farm credit real estate loan where the insured creditor charges a higher rate of interest than the borrower pays. The maximum interest rate chargeable on farm real estate loans is kept at 5 percent provided by existing law.

Fifth. Members of the 4-H Club, Future Farmers and Homemakers of America and similar organizations are made eligible for operating loans to undertake club projects and enterprises. This is section 120.

Sixth. Farmers and ranchers are made eligible for loans to make additions to or alterations in their equipment, facilities, or methods of operation that are needed to comply with the requirements of the Occupational Safety and Health Act of 1970. This is provided in section 121.

Seventh. Farmers and ranchers are made eligible for loans and grants for pollution control and abatement measures. No such grant may exceed 50 percent of the development cost of the project. This is provided with respect to real estate improvements in section 118 and with respect to operating expenses in section 121.

Eighth. The maximum permissible size of farm operating loans and indebtedness is increased from $35,000, in existing law, to $50,000 by section 122.

Ninth. In addition to direct loans for operating purposes which have always been subject to the maximum limitation of the appropriated funds in the annual appropriation bills and in the President's budget, section 123 will enable the Secretary to insure and guarantee all sound farm operating loan applications for those who are unable to obtain credit elsewhere.

Tenth. The entire farm credit program of the Farmers Home Administration is modernized and changed to allow more efficient and expeditious operation by various changes in detailed procedural matters.

Eleventh. The volume of funds potentially available for farmownership and farm operating loans of Farmers Home Administration should be greatly expanded by the provision in section 128 for the guarantee of such loans originated, held, and serviced by country bankers, the Farm Credit Administration institutions, and other private creditors. The only limitation is that the guaranteed creditor must be willing to assume at least 10 percent of the risk on the loan.

Twelfth. Desertland entrymen are accorded the same consideration as homestead entrymen with respect to financial assistance from the Farmers Home Administration, which is authorized to accept entered desertland prior to issuance of a final patent as security for Farmers Home Administration loans.

Thirteenth. A program of long-term—up to 10-year—contracts similar to the Great Plains conservation program is made available in section 201(b) to all farmers and ranchers and other landowners and operators throughout the United States. The conservation plans involved in such contracts must have been prepared in cooperation with and approved by the soil and water conservation district or districts in which the land is located. It is expected that the professional technical service of Soil Conservation Service will be available to the districts for this work.

Fourteenth. Farmers and ranchers are made eligible in section 606 for ACP or REAP-type cost-sharing payments for agriculturally-related pollution abatement and prevention measures.

Fifteenth. A new nationwide research

and extension program is provided in title V of the bill to enable the private and public universities and colleges of every State to utilize their expertise in carrying out extension and research programs and activities with respect to new approaches for small farms in management, agricultural production techniques, farm machinery technology, new products, and cooperative agricultural marketing and distribution suitable to the economic development of family-size operations. It is the purpose to enable the families on these small farms to stay there and earn a good living, instead of joining the trek to the city or remaining behind in poverty.

Mr. President, I submit that the preceding recitation of farm development provisions of the Rural Development Act of 1972 would qualify the bill as a major measure of farm legislation even if it had no other provisions.

This is only proper and appropriate. Farm family income is still, in most rural areas, the basic and essential foundation of rural prosperity. The bill when enacted will make a major contribution to increasing the income of the Nation's farm families.

LOCATION OF INSTALLATIONS AND OFFICES

One provision of the rural development policy enacted as title IX of the Agricultural Act of 1970 was a provision requiring the executive branch to establish policies and procedures to insure that offices and installations be located "insofar as practicable" in areas of "lower population density."

The loophole provided by this language turned out to be too wide; very few of the new installations were located in rural areas.

Section 601 of the Rural Development Act of 1972 closes this loophole. It requires that first priority in the location of offices and installations shall be given to rural areas as defined in the act.

We hope that this amendment will indicate to the administrative officers of the executive branch that the Congress is very serious about this matter. We intend that location of new offices and installations and of relocated facilities shall be used as a positive tool for rural development, bringing with it increased rural jobs and increased rural payrolls.

RURAL INDUSTRIALIZATION AND INCREASED BUSINESS ACTIVITY AND ENTERPRISE

While the Rural Development Act could correctly be termed a major farm legislative measure, its principal thrust is toward providing jobs and increased business income in rural America through encouragement of rural industrialization and increased business activity and income. Almost all of the provisions of the bill are designed to provide credit, investment, and equity capital to encourage rural economic development through private enterprise.

Special provisions are made to help finance the essential community facilities, water supplies, and other industrial prerequisites and an attractive environmental and economic climate that encourages and facilitates the development of new and expanding rural industry and business.

Many of these same measures not only will provide more and better jobs and more secure income for many rural people; these measures will, also, assist rural communities to upgrade the quality of their services and facilities that are available to, and used by, farm families and other rural residents.

The major provisions of the bill that will encourage rural industry and business are:

First. Residents of rural areas will be eligible to obtain direct, insured, or guaranteed long-term real estate loans to acquire or establish small business enterprises in rural areas to provide such residents with essential income. This is section 102.

Second. The assets that provide the security for these loans may be appraised, for loan purposes, at the current market value rather than using a lagged moving average as would be required by existing law. This will enable the borrowers to obtain virtually 100 percent facility loans. This is section 103.

Third. Interest rates on these loans, when obtained from a private or cooperative lender on a guaranteed basis, will be determined by the borrower and the lender; when obtained on a direct or insured basis the interest rate will be determined by the Secretaries of Agriculture and Treasury in accordance with the formula provided in section 113.

Fourth. In section 116, the bill establishes a new loan guarantee and insurance fund for rural development loans and for payment of interest rates subsidies. This new rural development insurance fund will perform many of the functions of the proposed Federal Rural Development Credit System and Bank, such as making direct and insured loans and guaranteeing loans of private creditors as well as making and selling its own notes and bonds. The Secretary of Treasury, as well as private creditors, are authorized to purchase notes and bonds issued by the rural development insurance fund. In addition the fund may be used to pay the difference between the interest rate charged to the borrower and that charged by the insured or guaranteed creditor.

Fifth. Section 118 adds a significant new provision to the Consolidated Farmers Home Administration Act of 1961 that will probably become known as section 310B industrial loan and grants.

This important new rural industrialization investment provision provides that public, private, or cooperative organizations organized for profit or nonprofit—including Indian tribes—and individuals may obtain direct, insured, or guaranteed loans to improve, develop, or finance business, industry, and employment and improve the economic and environmental climate in rural communities, including pollution abatement. In making such loans the Secretary of Agriculture is authorized to make full use of the grant and credit resources of Economic Development Administration, Small Business Administration, and the Department of Housing and Urban Development, as well as those of other Federal departments and agencies, of State agencies and private and quasi-public financial institutions, including the institutions supervised by the Farm Credit Administration.

Grants may be used by the individual borrower or borrowers for pollution control and abatement in rural areas. The maximum annual appropriation is authorized to be $50,000,000. Public borrowers are also eligible for $50,000,000 annually for grants to build and equip rural industrial parks and similar facilities.

Sixth. In section 121, residents of rural areas are made eligible to obtain short-term operating loans of up to $50,000 for small business enterprises in rural areas. These loans may be direct, insured, or guaranteed.

Seventh. These new rural development loan programs are designed to use and strengthen the credit structure that already exists in rural America. Section 129 requires that any proposed loan must first be offered to an existing private credit institution or lender. And if that creditor is willing to assume 10 percent of the risk, the Secretary of Agriculture is authorized to guarantee not more than 90 percent of the loan the other creditor makes. If no creditor is available to make a 90-percent guaranteed loan, the prospective borrower can obtain a loan from a private creditor, who will be enabled to insure the mortgage instruments with the Secretary of Agriculture.

If no potential creditor is available locally, the Farmers Home Administration could make the loan, and then sell the security instruments on an insured basis on the central money markets of the Nation.

If neither guaranteed nor either kind of insured loans are available to the borrower, the Secretary is authorized to make a direct loan.

Guaranteed loans would be made, held, and serviced by the private creditor, in accordance with the provisions of section 128. The authority for the Secretary to guarantee private loans is extended to include all the farmownership and operating loans and other types of loans made by Farmers Home Administration as well as to the new rural development loans. Any type of loan made, for example, by the institutions of the Farm Credit Administration are eligible for loan guarantees. The same is true of local independent banks, insurance companies and other financial institutions.

RURAL INDUSTRIALIZATION PREREQUISITES AND COMMUNITY FACILITIES

If rural America is to attract industry and increased business activity and to provide a quality of life required by new industry and needed by rural residents, a great deal more than provision of needed credit, investment, and equity capital is required.

In addition, the new industry must have, for example, an adequate, dependable, and high quality water supply. It must have adequate waste disposal systems that will meet modern Federal and State pollution control standards. It requires a great many other essential community facilities including access roads, and streets, gas and electricity connections, and available land and buildings of sufficient size and arrangement. If industry is to grow it must be able to obtain adequate fire insurance at a reasonable cost.

The Rural Development Act of 1972 takes these industrialization prerequisites into account and makes provision for them.

These provisions are:

First. Section 104 expands the scope of existing law that provides for rural water and waste disposal systems to include loans for all essential community facilities. These would include neighborhood and community centers as well as firehouses and other community facilities that the rural community might need to improve the living conditions of its residents or to hold or attract industry and business.

Second. The maximum amount of grants authorized annually for water and waste disposal systems is raised from $100 million in existing law to $300 million in section 105.

Third. Funds for planning of water and waste disposal systems is raised, in section 108, from $15 million to $30 million. This section, also, makes it clear that solid waste disposal as well as sewer systems are included in this planning grant authority.

Fourth. The limitation on the maximum size of community facility loans of $4 million in existing law is repealed by section 110 so that rural communities can build such systems of an appropriate and economical size without bumping into the restriction of an artificial limitation.

Fifth. Section 116 authorizes the Secretary to utilize the Rural Development Insurance Fund to make, insure, and guarantee community facility loans, and to pay any needed interest rate subsidies out of the fund.

Sixth. Funds available for watershed project and resource conservation and development loans will be increased by eliminating the exclusive reliance under existing law upon direct loans that must be funded in annual appropriation bills. Section 117 authorizes the Secretary to insure or guarantee such loans without limit, in accordance with the sound proposals of the local sponsors.

Seventh. Section 118 of the bill adds a new section 310B to the Consolidated Farmers Home Administration Act of 1961. This section establishes a major new rural industrialization loan and grant program. Under this new program, the Secretary may not only make loans and pollution abatement grants to the private borrower. But he also may make to public bodies, of the rural communities where the new industry or business is to be located, needed loans and up to $50 million annually of grants. These loans and grants may be used for measures designed to facilitate development of private business enterprise, including the development, construction, or acquisition of land, buildings, plants, equipment, access streets and roads, parking areas, utility extensions, necessary water supply and waste disposal facilities, refinancing, services, and fees to the extent that these may be needed to attract or hold new or expanding industrial and other business enterprises. This section provides, moreover, that the Secretary of Agriculture may, and shall, utilize the loan grant programs of other agencies of the Federal and State Governments, including Economic Development Administration, to expand the scope of this industrial facility program.

Eighth. Rural youths who are engaged in business enterprise projects in connection with a youth organization may obtain needed operating funds under section 120.

Ninth. Title II of the Rural Development Act of 1972 authorizes Federal cost sharing and loans to local sponsors of small watershed—Public Law 566—projects to provide needed current and future industrial and community water supplies, including the needs for adequate fire protection. These amendments to existing law also include Federal cost sharing and loans for ground water recharge, water quality protection, and for the conservation and proper utilization of land as well as water.

Tenth. Title II provides similar expansion of the purposes of Federal cost sharing with local sponsors of resource conservation and development projects under the Bankhead-Jones Act to provide for municipal and industrial water supply, and water quality management.

Eleventh. Title IV provides a small pilot program that will test the feasibility of the U.S. Forest Service, working through State forestry departments, to provide additional equipment and technical assistance and organization to extend the successful nationwide coordinated forest fire program to all of rural America to protect homes, business, and farms as well as forests from uncontrolled fires.

Twelfth. Title V provides, as part of the new rural development research and extension program, that the private and public institutions of higher education, including community junior colleges and area technical institutes, shall be given additional funds to help rural industry and business by making feasibility studies and in other ways including technical assistance on business management.

RESEARCH AND EXTENSION

Mr. President, the superb scientific and educational resources of the Nation's private and public universities, colleges, and technical institutes would be put to work under title V on behalf of rural development and small farms.

The bill builds the new program on the foundation laid over the past 100 years by the Department of Agriculture and the State land grant colleges in connection with engineering and agriculture and home economics. This focus of the land grant system is shifted, by title V, to include rural development and solution of the problems of people on small farms.

No longer will land grant college activities be somewhat confined to the colleges of agriculture, engineering, and home economics. The resources of the entire campus—the departments of government, geology, business administration, public administration, arts and sciences, and all the rest—will be utilized. And the program is not confined solely to the single land grant institution in each State, although that institution will provide leadership and coordination.

Title V of the Rural Development Act of 1972 gives a major role to the land grant colleges of 1890, to major professional engineering colleges, and to the other public and private institutions of higher education in each State.

An advisory board made up of the representatives of all the educational institutions and of farmers, workers, business, finance, and local government and areawide planning and development districts will be responsible for the development and approving the State program under this act.

The title provides that the annual program of work submitted to the Secretary of Agriculture must indicate the allocation of funds and assignments of responsibilities to cooperating colleges and universities within the State.

Both scientific research in the laboratories and offices on the campuses and the extension education facilities of all these schools are going to be put to work to help facilitate and guide rural development and the solution of the problems of small farmers including cooperative marketing and distribution.

This program as written in title V, is a small pilot program of 3 years to test out the techniques and organization structure. If successful, the program may be extended and amended and expanded to more fully meet the needs of rural America.

ENVIRONMENTAL PROTECTION

Environmentally speaking, Mr. President, we must not make the same mistakes in developing rural America that we did in building some of our great cities. The people of rural America do not want ugly, dirty, or dangerous developments which will detract from, rather than enhance, the beauty and serenity of the countryside.

Rural America now has, very largely, clean water and clean air. We want to keep it that way.

Rural America is not now troubled with noise pollution in any great degree; rural America should stay that way.

As we move forward in a nationwide high-priority rural development effort, it is our purpose to do it in ways that will not contribute to air pollution, water pollution, or noise pollution, or any other kind of pollution or ecological insults.

The Rural Development Act of 1972, the bill before you now, reflects that concern and provides specific safeguards and actions to make it possible to build a prosperous and attractive rural America—a development effort that will preserve and enhance rather than destroy the unique charm and way of life that has always characterized small towns and the countryside and that led President Thomas Jefferson to look upon small town and country life as ideal, artistically, culturally, and politically.

Not only are the new rural development projects provided by this bill subjected to the stringent areawide planning requirements that I shall discuss later, but specific antipollution programs and measures and safeguards are built directly into the rural development program. These are, in addition to the considerable expansion of the sewer and solid waste disposal loan and grant provisions of existing law:

First. Rural communities of less than 5,500 population that now have water supply waste disposal systems, including Indian tribes acting as governmental bodies, that for some unforeseen and unanticipated reason or occurrence are now no longer adequate to the needs of the community, are given, in section 112, the highest priority for approval of water and waste disposal system loans and grants.

Second. The authorized appropriation for water and waste disposal planning grants is doubled by section 108.

Third. The bill, in sections 118 and 121, authorizes loans to public bodies and private enterprise firms and persons and up to $75 million per year in grants for pollution abatement and control in rural areas, in connection with industrial and business development projects. Pollution abatement and control loans may be direct, insured, or guaranteed. Indian tribes are included as eligible along with other public bodies.

Fourth. "Water quality management" and "control and abatement of agriculturally related pollution" are added to existing law by titles II and III as purposes of water impoundment costs for which the Secretary may provide Federal cost sharing with local sponsors of small watershed protection—Public Law 566—and resource conservation and development projects under the Bankhead-Jones Act.

Fifth. Federal cost sharing is provided under the REAP—formerly ACP—program for air, water, noise, and other agriculturally related pollution prevention and abatement practices by section 606.

Sixth. Section 605 of the bill inaugurates a major new rural environmental protection program of cost-sharing contracts with rural landowners or operators similar to the amended Great Plains conservation program of long-term—up to 10 years—contract.

Seventh. Similar environmental protection measures are authorized in the long-term conservation contracts provided for watershed project areas in title II.

Mr. President, I suggest to you that the totality of these environmental protection and enhancement measures I have just recited constitute a major environmental measure that is embodied as part and parcel of the Rural Development Act of 1972.

Moreover, the legislative history of the measure before the Senate Committee on Agriculture and Forestry clearly indicates that it is our intention that no proposed project using loan or grant funds be approved that is not in full compliance with Federal and State antipollution standards and that indeed it is our purpose to provide the investment and equity capital funds and potential income that will enable farmers, rural industry, and rural communities to promote economic growth, develop prosperous economies, and thus be enabled to undertake the sometimes heavy costs of installing antipollution devices and operating methods.

With these measures we believe that rural America not only should, but can, enhance the quality of its ecological environment while building a stronger economy. We think that this is necessary if rural development is to be truly successful. Thus, we have written these special environmental provisions into the Rural Development Act of 1972.

These measures if taken alone would, in themselves, be correctly considered to be a significant rural environmental protection and pollution control bill.

RURAL HOUSING

Mr. President, the Rural Development Act of 1972 establishes two new rural housing programs to fill gaps in the existing program structure. These are:

First. A program to guarantee rural housing loans made by cooperative and other private creditors to rural housing credit applicants whose income exceeds the level required to qualify for the low- and moderate-income program that is now operated by the Farmers Home Administration. In effect, the Secretary of Agriculture is authorized to extend guarantees on rural housing loans in rural areas in the same circumstances that the Secretary of Housing and Urban Development now extends mortgage insurance for individual and multifamily housing in suburban and central city neighborhoods. Such guarantees would be subject to the interest rate determinations made by the Secretary of Housing and Urban Development under the National Housing Act.

This new program will make it possible for the schoolteachers, doctors, dentists, industrial managers, and other relatively higher income people whose services are so vital to successful rural development and a higher quality of life in rural America to obtain the fully repayable credit they need to acquire or build adequate homes for their families.

Second. The existing law concerning assurance of repayment is amended with respect to Farmers Home Administration rural housing loans in the State of Hawaii to provide that a guarantee of payment given under color of the law by the State Department of Hawaiian Home Lands shall be acceptable to the Secretary. This is in section 119 of the bill.

AREAWIDE GENERAL PURPOSE RURAL DEVELOPMENT PLANNING

Mr. President, the bill now before the Senate is a truly comprehensive rural development planning bill.

The development planning provisions of the bill are the following:

First. The section of existing law dealing with planning for water and waste disposal system is amended, strengthened, and expanded by section 106 of this bill. All applications for proposed water, waste disposal, and other essential community facilities must be submitted for review to the multijurisdictional substate general purpose planning and development district established by or under State law and designated as a clearinghouse agency under the provisions of Office of Management and Budget Circular No. A-95. Only those loan and grant applications that are not inconsistent with the areawide general purpose development plans of such district agencies, if such exist, can be approved by the Secretary of Agriculture. The bill authorizes the Secretary of Agriculture to reimburse such district agency for the cost of reviewing such project applications, a review that must be completed within 30 days, so as not to impede or hold up the expeditious processing of applications.

Second. The maximum authorized annual appropriation for water and waste disposal planning grants is doubled, by section 108, from $15 million to $30 million.

Third. Mr. President, not only are rural development projects made subject to review of multijurisdictional areawide planning and development commissions, as they are called in my home State of Georgia, but such commissions or agencies are reimbursed for the cost of making the reviews.

Even more importantly, this bill, in section 111, establishes a major new general purpose rural development planning grant program of not to exceed $10 million annually. Thus, these districts or areawide agencies are not only empowered to review rural development applications and will be reimbursed for the cost of doing so; the bill also provides for Federal assistance to the district agencies for preparing the general purpose rural development plan against which individual project proposals will be reviewed and evaluated.

Fourth. Mr. President, it is expected that the preceding planning provisions will be sufficient to the need. For this reason, the report of the managers of the conference specifically prohibits the using of rural industrialization grants provided in section 118 for planning purposes.

Fifth. Mr. President, title II of the bill augments and strengthens the planning provisions of the small watershed protection projects program—Public Law 566.

Sixth. A major contribution to national balanced growth planning, to national land and water use planning, and to general purpose rural development planning is provided by the major new program established by section 302 of the bill. This provision would provide for the first time a specific statutory requirement for a national conservation needs inventory to be made each 5 years. This would formalize and officially recognize an activity that has been undertaken from time to time by the Department of Agriculture under leadership of the Soil Conservation Service.

The Secretary of Agriculture is directed to carry out a land inventory and monitoring program to include but not be limited to studies and surveys of erosion and sediment damages, flood plain identification and utilization, land use changes and trends and degradation of the environment resulting from improper use of soil, water, and related resources.

This periodic inventory, to be conducted under leadership of the professional conservationists of the Soil Conservation Service, will provide invaluable data for city planning as well as development of resource data needed for guidance of rural community development as part of the national balanced growth policy.

One purpose of the inventory is to provide for the identification of prime agriculture producing lands that should be protected in interest of sufficient open spaces in otherwise densely settled areas. Such data will, also, be useful in planning programs for the protection of the total environment in cities as well as rural areas.

Seventh. The research and education program estabilshed by title V is needed for the major contribution it can make to national land use and general purpose rural development planning of local governments, areawide, multijurisdictional development agencies and individual persons and firms. The contribution will be made both in terms of scientific research studies and feasibility investigations, and by direct technical assistance to planning bodies.

Two examples of the contribution of the educational institutions come to mind at this time.

In the State of Georgia, the extension service and Dr. J. W. Fanning, its head at that time, played an essential and major role in the initial establishment and growth of the areawide planning and development commissions that have since proved to be increasingly and progressively successful.

In Virginia, whch has adopted a significant multijurisdictional areawide planning and development system, the State extension service has stationed some of its personnel right in the State office that is guiding this development and is assigning full-time extension personnel to each of the areawide planning districts as rapidly as funds permit. The president of the Virginia land-grant university served as chairman of the State commission that formulated and helped bring to enactment the district planning law.

Under title V, one of the major responsibilities of the public and private universities and colleges in each State will be to lend its scientific and educational resources on a compuswide basis to general purpose multijurisdictional rural development planning.

Mr. President, the Rural Development Act of 1972 is, thus, a major rural development planning measure that will fit in harmoniously with State and National land and water use planning, with public works and economic development planning by multi-state regional commissions as well as with local multicounty areawide planning districts.

Provision is made to enable the soil and water conservation districts and the local sponsors of watershed protection and resource conservation and development projects to work in a coordinated manner with general purpose planning districts.

COORDINATION OF NATIONAL DEVELOPMENT PROGRAMS

Mr. President, not all of the nearly 1,000 Federal programs that could, and should, contribute greatly to more rapid and orderly rural delvelpoment are located within the Department of Agriculture.

We do not propose that most of them be located there.

Rather, the Rural Development Act of 1972 provides that most of these programs remain in the Federal departments and agencies where they are now located; but this bill does give the Secretary of Agriculture the responsibility and the authority to call upon and coordinate all of these programs and their personnel and resources throughout the executive branch.

This mandatory coordination of Federal rural development activites by the Secretary of Agriculture is provided in section 603 of the bill. Its major provisions are:

First. The organic act establishing and providing for the operation of the Department of Agriculture—section 526 of the revised statutes, 7 U.S.C. 2204—is amended in several places to add "rural development" as one of the basic and fundamental missions of that great department of government that President Lincoln termed "the people's department." This is section 603(a).

Second. The duties of the Secretary of Agriculture are expanded in section 603(b) to include advising the President and other members of his Cabinet and the Congress on policies and programs designed to improve the quality of life for people living in the rural and nonmetropolitan regions of the Nation.

Third. The duties of the Secretary of Agriculture are expanded, also, in paragraph (4) of section 603(b) by adding the following language to the organic act of the Department:

> "(b) The Secretary of Agriculture is authorized and directed to provide leadership and coordination within the executive branch and shall assume responsibility for coordinating a nationwide rural development program utilizing the services of executive branch departments and agencies and the agencies, bureaus, offices, and services of the Department of Agriculture in coordination with rural development programs of State and local governments. In carrying out this responsibility the Secretary of Agriculture shall establish employment, income, population, housing, and quality of community services and facilities goals for rural development and report annually prior to September 1 to Congress on progress in attaining such goals. The Secretary is authorized to initiate or expand research and development efforts related to solution of problems of rural water supply, rural sewage and solid waste management, rural housing, and rural industrialization."

Fourth. Senator Bellmon's experience in improving the effectiveness and efficiency of the Department's response to the problems of the drought in his State last year led to additional coordination language in this bill.

Section 603(c)(1) provides:

> (c)(1) The Secretary of Agriculture shall utilize to the maximum extent practicable State, regional, district, county, local, or other Department of Agriculture offices to enhance rural development, and shall to the maximum extent practicable provide directly, or, in the case of agencies outside of the Department of Agriculture, through arrangements with the heads of such agencies, for—
>
> (A) the location of all field units of the Federal Government concerned with rural development in the appropriate Department of Agriculture offices covering, the geographical areas most similar to those covered by such field units, and
>
> (B) the interchange of personnel and facilities in each such office to the extent necessary or desirable to achieve the most efficient utilization of such personnel and facilities and provide the most effective assistance in the development of rural areas in accordance with State rural development plans.
>
> (2) The Secretary shall include in the report required by this section a report on progress made in carrying out paragraph (1) of this subsection, together with such recommendations as may be appropriate.

Fifth. The Secretary is required to make an annual report to the Congress through the President on the progress being made in implementing the provisions on coordination and leadership in section 603, together with such recommendations as may be appropriate.

Mr. President, it is the intention of the Rural Development Act of 1972 that the Secretary of Agriculture shall be the President's Rural Development Director and that leadership, coordination, planning, research, and education in connection with all the rural development activities of the Federal Government shall reside in the Secretary of Agriculture and the Department of Agriculture. The Department is known and respected in rural America; its personnel are in daily direct contact with the people and problems of rural America. It is strategically located to provide both advocacy and leadership in a nationwide rural development effort. It is the intention of the Rural Development Act of 1972 that this be done.

Sixth. To give the Secretary of Agriculture the high level assistance that this new responsibility will require, an additional Assistant Secretary is authorized by section 604. The conference report indicates the intention of the conferees that this position be utilized to strengthen and broaden the rural development efforts of the Department of Agriculture. This position is in addition to that of the Administrator of the Farmers Home Administration and of the existing Assistant Secretary for Rural Development and Conservation.

The bill and conference report leaves it to the Secretary as to just how he will utilize his authorized positions and agencies to carry out an effective and coordinated rural development effort. However, we expect that the Secretary will utilize his agencies such as the Farmers Home Administration, the Soil Conservation Service, and the Forest Service to carry out those parts of the coordinated rural development program that each of them has demonstrated successful capability for carrying out. It is not the purpose of the Rural Development Act of 1972 to set up new untried structures but to build up the existing strengths of the agencies of the Department of Agriculture.

PROHIBITION OF INDUSTRIAL AND JOB PIRATING

Mr. President, the members of the conference committee worked long and diligently to iron out the differences between the antipiracy provisions of the House bill and those of the Senate bill.

I believe that anyone who evaluates the matter will agree that the provision against using the rural industrialization programs provided by this bill to cause industrial concerns to pull up stakes in one area and to locate in another will find that they are both stronger and more workable than the provisions in either the House or the Senate bill. The conferees recognized the legitimate concerns of both business and industrial representatives and of representatives of workers for protection of existing industrial plants, business, and jobs.

Mr. President, rural development cannot succeed unless it results in a major net addition to the jobs and business opportunities in the national economy. It cannot succeed merely by shifting jobs and business activity around from one part of the country to another.

The safeguarding provisions of the bill relative to this subject are found in section 118(a).

Enforcement of these provisions rests with the Secretary of Labor, who, in cooperation with the Secretary of Agriculture, is required to formulate a processing review procedure that will not unduly slow up the processing of loan and grant applications. In no event may the Secretary of Labor take longer than 60 days to review an application. The conferees urge and expect that most such reviews by the Secretary of Labor will be completed within 30 days.

DEFINITIONS OF RURAL AREAS

Mr. President, with respect to no other provision was the range of difference between the Senate bill and the House bill any greater than in the upper limit placed upon the definition of rural areas specifying where the programs provided by the bill will be effective.

Both bills defined rural areas as all of the open countryside and villages, towns and small cities of less than 5,500 population.

The Senate bill included in addition in the rural areas all cities between 5,500 and 50,000 in size, except that the immediately adjacent urbanized and urbanizing suburbs of cities of larger than 50,000 population would be excluded from rural areas.

The conferees approached this matter gingerly but consciencIously. We arrived at a harmonious compromise which is probably better than either bill.

The bill before you now, for all purposes, except for industrial and business loans and grants and for location of offices and installations, defines rural areas as open countryside, villages, towns and small cities up to 10,000 in population. Within this major category, rural communities of less than 5,500 with a deteriorating water or waste disposal system shall be given highest priority for water and waste disposal loans and grants.

For rural industrialization and business loan and grant purposes and for bestowing highest priority in location of installations and offices, rural areas include all of the open countryside, villages, towns, and small cities up to 50,000 in population—except for the urbanized and urbanizing adjacent suburbs of cities larger than 50,000 Within this category the bill requires that special consideration be given to applications from the open countryside. villages, towns, and small cities smaller than 25,000.

As Members of the Senate will recall, the various titles of the Senate-passed bill had various definitions of rural areas. The conferees decided to simplify this matter by providing just the two major categories I have just outlined.

RURAL RENAISSANCE

Mr. President, I want to say this in closing. While this bill does not in any way fully meet the pressing needs of rural America, it is probably the single most significant rural development legislation ever considered by the Congress.

It is a long stride in the right direction. It is a major start.

The Rural Development Act of 1972 will enable this Nation to help to develop more and better jobs and income earning opportunities in rural communities to relieve the pressures of population overcrowding and environmental pollution in the cities. However, the enactment of this legislation is only a beginning. The executive branch must do an aggressive, dedicated job of implementing and administering the law if the intent of Congress is to be honored.

Some questions have been raised as to the intent of the last sentence in section 112 which directs the Secretary of Agriculture to utilize the Soil Conservation Service to render technical assistance to applicants to the extent he deems appropriate. I will yield to Senator BELLMON who has indicated his interest in commenting on this point.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized.

Mr. BELLMON. Mr. President, I thank the distinguished chairman.

As the chairman knows, I was the sponsor of section 923 of Senate bill S. 3462, which authorized the Secretary to establish a priority for grants and loans for community water facilities to those rural communities in which an existing water supply system needed immediate action because of unanticipated deterioration or diminution of its water supply. This section authorized the Secretary to utilize the Soil Conservation Service to render technical assistance to priority applicants. Similar language is contained in section 112 of the Rural Development Act of 1972 as reported by the conferees. It is the intent of section 112 that the Secretary may use for projects under this section the Soil Conservation Service to provide applicants with technical assistance for developing new sources of water supply and upgrading water distribution systems where such assistance is not readily available from the staff of Farmers Home Administration or private professional engineers, or where the Soil Conservation Service has an existing special expertise.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MILLER. Mr. President, I yield 3 minutes to the Senator from Georgia.

Mr. TALMADGE. Mr. President, I thank the distinguished Senator from Iowa.

I am in agreement with the explanation given by Senator BELLMON and wish to emphasize that it was the committee's intent that the technical assistance be provided for the purpose of assisting applicants under section 112.

Mr. President, I yield the floor, and I thank my distinguished friend, the Senator from Iowa, for yielding me time.

The PRESIDING OFFICER. The Senator from Iowa is recognized.

Mr. MILLER. Mr. President, I thank the distinguished Senator from Georgia, the distinguished chairman of the conference committee, for the excellent statement he has made on the conference report.

I point out that at the time this rural development bill was reported from the Senate Committee on Agriculture and Forestry to the full Senate, the Senator from Kansas (Mr. DOLE) and I attached additional views in the committee report, on pages 134 and 135, in which we set forth some of our concern about the bill as it came from the Committee on Agriculture and Forestry.

Mr. President, I am very pleased to say that as a result of the action taken on the Senate floor and the action taken in the conference committee, all of our concerns have been removed.

I think in fairness that I should say that the House conferees took a very cooperative attitude.

One of the main areas of difficulty was the degredation of a rural area, and Senators often do have differences of opinion about what constitutes a rural area.

We did finally agree, except as far as the enterprise loans were concerned, that the application of the bill would be to communities of 10,000 inhabitants or less and that with respect to the enterprise loans, communities of 50,000 or less would be eligible. There will undoubtedly be some communities with 10,500 or 51,000 people, who will feel aggrieved with the fixed figures that we have adopted. However, we did the best we could. I think that honest people can disagree. However, honest people have to get together and agree. And that is exactly what happened in this conference.

I would point out that the range of programs in the rural development bill is such as to auger well for the future of people living in rural American.

It augurs well for the attainment of a goal which this administration has set; namely, that we reverse the trend of the flow of the population from the rural areas into the cities and urban areas where congestion and other problems are getting worse as a result of our failure in the Congress to do something about this problem a long time ago.

Many of us from rural areas have been sounding a warning. I know that the Senator from Iowa did so as long ago as 11 years. It seems too bad that we had to wait 11 years to do something as meaningful as we have accomplished. However, it is better late than never.

I point out that the rural development bill includes, among many other features, rural enterprise loans; grants for water and waste disposal systems; planning requirements; water and waste disposal planning grants; rural development planning grants; priority for certain water facility and waste disposal loans and grants; interest rates on rural development loans; agricultural credit insurance fund amendments; insured watershed and resources conservation and development loans; rural industrial assistance; guaranteed rural housing loans; young farmers loans; rural enterprise operating loans; and insured operating loans.

One of the major items dropped in conference which was in the Senate committee was one which frankly gave the Senator from Kansas (Mr. DOLE) and me particular concern. That relates to a $500 million authorization for so-called rural revenue sharing.

It was the feeling of the conferees, and especially those of the House, that this would represent some duplication of other provisions of the bill and that it would be better to not try to force this issue, because we were told by the House conferees that the House would not accept this provision.

So, Mr. President, on balance I think we have come out with a very acceptable and a very far-reaching and constructive step. My only regret is that we did not take that step a long time ago.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MILLER. Mr. President, I am pleased to yield to the distinguished Senator from Minnesota.

The PRESIDING OFFICER. The Senator from Minnesota is recognized.

Mr. HUMPHREY. Mr. President, I join with the other Senators in commending the distinguished chairman of the committee, the Senator from Georgia (Mr. TALMADGE) and the ranking minority member, the Senator from Iowa (Mr. MILLER), and the other members of the Committee on Agriculture and Forestry in bringing this remarkable piece of legislation to this final stage in the legislative process. It has been aptly and properly described by the Senator from Georgia.

I do think it is fair to say that the Committee on Agriculture and Forestry is pretty much a nonpartisan, bipartisan committee. We have worked together to achieve this particular piece of legislation. And, as has been noted by the Senator from Georgia, this is a major victory for rural America and the nearly 70 million people who live there.

Mr. President, the Rural Development Act of 1972 is a major step forward toward the achievement of a more balanced national growth and development pattern in the United States.

The better than year-long efforts of the Subcommittee on Rural Development of which I was privileged to be chairman, the full Agriculture Committees of the Senate and House, and the conference committee that forged the compromise bill now before the Senate, have resulted in a truly historic piece of legislation.

Although the bill as reported by the conference committee is less than what I and many others had hoped for, it still constitutes a major victory for Rural America and the nearly 70 million people who live there.

Few bills considered by Congress have received as much attention, study and careful scrutiny as this particular bill has over the last 12 months. Over 350 witnesses testified on the provisions of this bill during our Washington and other field hearings. These witnesses represented almost all professions and walks of life—farmers, Governors, university presidents, planners, economists, businessmen, conservationists, bankers, young people, the elderly, and the poor.

It should also be noted, Mr. President, that we enjoyed strong bipartisan support and cooperation in the Congress in developing this important legislation. This was due in large part to the very able leadership of the chairman of the Senate Committee on Agriculture and Forestry, the Honorable HERMAN E. TALMADGE. Senator TALMADGE moved this bill through both the Senate Agriculture Committee and the conference committee with great skill and dispatch.

When I opened the first day of rural development hearings on April 23, 1971, I noted—

That two-thirds of our Nation's substandard housing is in rural America;

That while big city residents have their phone calls beamed to foreign countries by satellite, many rural residents still must suffer 8, 10, and 12 party line telephone service, and;

That the quality of education, health care, job training, transportation and of other essential social amenities are not what they should be in our Nation's smaller communities and rural countryside.

In addition, I asserted the need to restore a freedom that many Americans have lost; namely their "freedom of residence." Millions of Americans have been, and still are, forced to remain or move from an area, either because of economics or politics.

In the last 30 years alone, 30 million people have migrated from our Nation's farms and open countryside to our cities. This trend still persists today at a rate of about 600,000 yearly.

Most of these people did not make this move because they wanted to. Most of them were literally forced into moving because of the declining job opportunities available to them in agriculture, or in mining, or in the business that served or depended upon those industries locally.

Furthermore, many Americans living today in our Nation's bigger cities have indicated time and time again that they would like to move to a smaller community if they were able to earn a decent living there and could be assured of a decent level of social amenities there.

And that is basically what the Rural Development Act of 1972 is really all about. This act provides the essential tools and resources that will be required to help renew and restore the promise and potential of our Nation's countryside. And it constitutes the first major step toward implementing the commitment made by Congress in the Agriculture Act of 1970 which stated:

> The Congress commits itself to a sound balance between rural and urban America. The Congress considers this balance so essential to the peace, prosperity, and welfare of all our citizens that the highest priority must be given to the revitalization and development of rural areas.

This act provides a large part of the financial investment, credit, research, technical, and institutional resources that will be required to implement this commitment.

Under title I of the act, guaranteed, insured and direct loans and grants would be provided to help meet the credit, investment, and equity capital needs for essential rural industrialization, job expansion and community facility improvements.

Under titles II and III, additional Federal cost-sharing for water quality improvement and provision of ample water for rural community and industrial development would be provided through further expansion of authorities under the small watershed and resource conservation and development programs.

Under title IV, a new Federal cost-sharing program would be established to aid small rural communities which are in need of help to establish or improve their local firefighting capability.

Under title V, a new nationwide research and extension information program would be established utilizing the resources of the State Land Grant colleges and other public and private institutions of higher education to strengthen and support rural community development and to help solve many of the problems faced by families in operating and managing our Nation's smaller farmers.

Under title VI, the basic statutory mission of the U.S. Department of Agriculture would be broadened to empower the Secretary of Agriculture to coordinate the rural development programs and activities of all departments and agencies of the Federal Government, including improved utilization of both personnel and offices. A new Assistant Secretary position also is provided to help provide the leadership necessary to carry out these new responsibilities.

Other provisions of title VI include:

First, tightening the language of section 901(b) of the Agricultural Act of 1970, which requires location of facilities and offices in rural areas. The words "insofar as practicable" are deleted and in their place, the executive branch is directed to give "first priority" in locating or relocating offices or other facilities in rural areas;

Second, ACP-type cost-sharing payments are authorized to rural landowners for air, water, and other agriculturally related pollution abatement whether or not specific soil and water conservation purposes are involved;

Third, expansion of the existing Great Plains conservation program into a nationwide program; and,

Fourth, making desertland entrymen eligible to obtain Farmers Home Administration farm loans before obtaining final patent on the same basis that homestead entrymen may do under existing law.

These are just some of the more important provisions of the new act. There are many others.

What is important to understand about this new act is that it is merely an important "beginning"—not an "end." While the provisions of this new act, if administered aggressively, will provide an important stimulus to revitalizing the smaller and medium-sized rural communities of this Nation, much more will need to be done by Federal, State, and local government to stem the flow of people from rural to urban areas.

Given the preponderance of young adults in our Nation's population today, we can expect the population of this country to reach 300 million within the next 30 to 40 years.

With 70 percent of our population residing in communities of 50,000 or more today, it is reasonable to expect that most of our future population increases will also be occuring in the already overcrowded, overcongested metropolitan regions of our Nation. In fact, projections now indicate that unless something is done soon to change these trends that over 85 percent of our Nation's total population will be located in these metropolitan regions by the year 2000.

In the last 13 years alone, the Federal Government has spent over $160 billion in our Nation's cities in an effort to make them more manageable and decent places in which to live. However, despite these huge expenditures, our Nation's larger cities still face an enormous backlog of revenue needs to help finance transportation, education, police protection and other essential community facilities and services.

The "general revenue sharing" legislation now pending before Congress, if enacted, will provide some of this needed financial help for our Nation's cities. But unless some meaningful steps are taken to assist the rural areas and smaller communities of our Nation, further disparities of opportunity will be created between rural and urban America. And if that happens even more people will be encouraged to migrate to the cities, thereby quickly negating any progress our cities might otherwise make with help from additional Federal revenues.

Therefore, revitalizing our Nation's countryside and life in our smaller communities are key elements in achieving a more balanced geographic distribution of people and economic opportunity in the United States. The merits of this objective have been endorsed, encouraged and extolled in every major study conducted in the last 10 years concerning Nation's future growth and development.

Now the time has come to act.

Now the time has come to implement those recommendations and objectives.

The Rural Development Act of 1972 does exactly that and I am convinced that we must move forward immediately with the programs it provides with great zeal and dispatch.

Mr. President, I urge my Senate colleagues to give their full support and vote for this conference bill. I also ask Mr. President, for unanimous consent to have printed at this point in the RECORD a more detailed outline of the bill's provisions which I have prepared.

There being no objection, the outline was ordered to be printed in the RECORD, as follows:

Brief Description of Rural Development Act of 1972 as Agreed Upon by House and Senate Conferees

1. Broadens the definition of "rural areas" as it applies to eligible applicants under the FHA for certain purposes. (10,000 for community facility and rural housing financial assistance and 50,000 for rural enterprise and business financial assistance.)

2. Increases funding authorization for the planning and construction of rural community water and waste disposal systems (to $30 million and $300 million respectively).

3. Requires FHA in making water and waste disposal facility loans or grants to give preference to very small communities (5,500 or less) whose existing system has deteriorated.

4. Expands list of "eligible public body applicants" qualified to receive financial assistance under the FHA Act to include cooperatives and Indian tribes.

5. Provides for $10 million authorization in grants for the preparation of comprehensive rural development plans.

6. Requires that purposes for which loans and grants are made to public bodies shall not be inconsistent with state, substate, and local government comprehensive development plans.

7. Extends deadline time period within which Secretary can make water and waste disposal grants as it relates to compliance with completion of local comprehensive water and waste disposal plans (October 1, 1973).

8. Authorizes FHA to make loans and grants for the acquisition, expansion or operation of business and industrial enterprises (large or small—private or public—profit or nonprofit), or for the purpose to facilitate the development of such enterprises (industrial parks, pollution control, etc.). However, loans and grants made for such purposes cannot be made which might result in pirating businesses or jobs from one area to another or which will result in adding capacity to an industry within an area when an excess or unused capacity already exists for that type of industry within that area.

9. Expands authority of FHA to make loans for "other essential community facilities".

10. Removes indebtedness ceiling limitation for public bodies applying for assistance under the FHA Act.

11. Provides that existing five percent maximum interest rate shall be applied to all FHA long-term real estate loans, except the new long-term business and industrial real estate loans. The latter type loans are to be at market rates determined by the Secretaries of Agriculture and Treasury, based upon a prescribed formula. When business loans made by a private lender are guaranteed by FHA, the interest rate is determined by an agreement between the borrower and the lender..

12. Establishes a new Rural Development Credit Insurance Fund for the purpose of making and insuring rural development type loans. No obligation ceiling is established for this particular fund. Interest rate subsidies may also be made out of this fund.

13. Increases the funding authorization level of the Agricultural Credit Insurance Fund to $500 million and relieves this fund of non-farm rural development obligations. (Such obligations will be handled through new Rural Development Credit Insurance Fund.)

14. Loans authorized under the FHA Act can be made on a direct, insured or guaranteed basis, with any risk being limited to 90 percent for guaranteed loans.

15. FHA is authorized to guarantee loans for rural housing and business enterprise purposes.

16. Provides farm and small business operating credit under the FHA Act to "rural youths" in connection with youth organization activities.

17. Authorizes FHA to make loans to farmers for the purpose of complying with the requirements of the Occupational Safety and Health Act of 1970.

18. Increases the upper limits of individual farm operating FHA loans to $50,000 and provides that such loans may be made on an "insured" basis. Same applies to new small business enterprise loans.

19. Authorizes the Secretary to obtain "fidelity" bonds on FHA employees to protect the government against fraud or dishonesty.

20. Provides for joint financial participation by FHA with respect to loans and grants made through other federal departments and agencies, such as Small Business Administration, Farm Credit Administration, Economic Development Administration, HUD, and EPA.

21. Permits applicants seeking loans to acquire, expand or operate farms or small business enterprises to acquire such loans based upon the "current market value" of their assets instead of "normal value". This would mean that borrowers could obtain virtually 100 percent facility loans.

22. Desertland entrymen are accorded the same consideration as homestead entrymen with respect to financial assistance from FHA which is authorized to accept desertland prior to a final patent as security for FHA loans.

23. A program of long-term (up to ten years) contracts similar to the Great Plains Conservation Program is made available to all farmers and other land owners or operators in small watershed protection project areas (P.L. 566) and other areas throughout the United States. Plans under such contracts would have to be prepared in cooperation with and approved by soil and water conservation districts.

24. Farmers and ranchers are made eligible for REAP (ACP) type cost-sharing payments for agriculturally related water, air and noise pollution abatement and prevention measures.

25. Authorizes federal cost-sharing and insured loans to local sponsors of small watershed (P.L. 566) projects to provide needed current and future industrial and community water supplies, including to meet fire protection needs. Also includes cost-sharing and loans for ground-water recharge, water quality protection and for conservation and proper utilization of land as well as water.

26. Provides similar expansion of cost-sharing with local sponsors of RC&D projects under the Bankhead-Jones Act to provide municipal and industrial water supply and water quality management.

27. Provides a small three-year pilot program that will test the feasibility of the U.S. Forest Service, working through State Forestry Department, to provide cost-sharing funds and technical assistance to help very small communities to develop and expand their fire fighting capabilities to protect homes, businesses and farmers from uncontrolled fires.

28. Provides for the establishment of a new nationwide research and extension program to support rural development and to help small farmers in the management and operation of their farming enterprises. This new program will be administered by the Secretary of Agriculture in cooperation with the State Land Grant Colleges, but involving all other private and public institutions of technical or higher education. (Land Grant Colleges of 1890 and professional schools of engineering are specifically cited as playing a major role in this program.)

29. Tightens up requirements of 1970 Agricultural Act relating to the locating of offices and facilities in rural areas. Requires that Executive Branch give "highest priority" to rural areas in locating such facilities.

30. Requires the Secretary of Agriculture to carry out a land inventory and monitoring program to include, but not be limited to, studies and surveys covering erosion and sediment damages, flood plain identification and utilization, land use changes, and trends and degradation of the environment resulting from improper use of soil, water and related resources.

31. Gives the Secretary of Agriculture primary responsibility for rural development within the Executive Branch which includes advising the President, members of the Cabinet, and the Congress regarding such matters. The Secretary of Agriculture also is given authority to call upon and coordinate the programs and activities of *all* Executive Branch departments and agencies within rural areas relating to rural development or that are designed to improve the quality of life of the people living in nonmetropolitan America.

32. Provides for a new or additional Assistant Secretary position within USDA, such position to be utilized to strengthen and emphasize rural development within that Department.

The Rural Development Act of 1972 is the first major piece of legislation that has been enacted by Congress to implement title IX of the Agricultural Act of 1970.

Mr. President, this legislation was directed specifically toward the fulfillment of that commitment, pledge, and mandate made by the Congress of the United States.

I was very privileged and fortunate to be given the opportunity by the chairman to serve as chairman of the Subcommittee on Rural Development.

I must say that the hearings we held were not only interesting, but often the most informative hearings I have participated in during my years in the Senate.

I wish every Senator could have heard the witnesses and the testimony that we received. I wish to make note of one or two developments.

Mr. President, you will recall when the Senate first considered the Rural Development Act of 1972 (S. 3462) it contained two important titles which were subsequently dropped from this bill; namely, titles I and III.

Title I of S. 3462, originally sponsored by the distinguished chairman of the Committee on Agriculture and Forestry (Mr. TALMADGE), myself, and 49 other Senators, would have established a new borrower-owned rural nonfarm development credit system similar to, but completely separate from, the existing farm credit system. This particular title was deleted from S. 3462 on the Senate floor.

Speaking for myself, I think that was most unfortunate, but it was the will of the Senate.

Title III of S. 3462, sponsored by the distinguished Senator from Alabama (Mr. ALLEN), myself and many other Senators would have authorized a $500 million annual Rural Revenue Sharing Fund to be appropriated on a formula basis involving the States. This particular title was dropped from the bill in conference with the House.

The loss of these two titles was a major loss for rural America and a major blow to our goal of achieving a more balanced national growth and development pattern in the United States. In view of the importance of these two titles which were dropped from the Rural Development Act of 1972, I wish to serve notice today that I intend to reintroduce a bill—either this session of Congress or early next session—which will embody title I of S3462 and title III of that bill, if the Senator from Alabama (Mr. ALLEN) wishes to pursue enactment of that particular title.

I will say to the Senator from Alabama that I will join him, if he wishes, to again renew his effort in that field because he has been the leader in the area of rural revenue sharing. I want to be his associate and cosponsor in this area.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a short explanation of these two titles of S. 3462, plus the section-by-section analysis of them.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TITLE I—RURAL DEVELOPMENT AND FINANCIAL RESOURCES ACT OF 1972

SHORT EXPLANATION OF TITLE I

This title provides for the establishment of a borrower-owned rural non-farm development credit banking system similar to the Farm Credit System.

The new system would be called the Rural Development Credit System, and would consist of—

(1) a Federal Rural Development Credit Board (referred to as "Federal Board"), which would establish general policy for the system. (Subtitle B—sections 201 and 202);

(2) a Federal Rural Development Credit Agency (referred to as "Federal Agency"), an independent agency in the executive branch, headed by an Executive Director, which would exercise general supervision over the system (except the Federal Rural Development Investment Incentives Administration) (section 308). finance rural development projects, (sections 309, 312, 313), and provide technical assistance in developmental banking. The Secretary of Agriculture is authorized to insure financial assistance extended by the Federal Agency (section 314) (Subtitle C—sections 301–315);

(3) Ten Regional Rural Development Banks (referred to as "Regional Banks"), which would be Federally chartered instrumentalities of the United States; would raise funds through the sale of stock to the United States, District Agencies, Participants, Cooperators, other rural financial institutions, and borrowers and through the sale of debentures; and would extend financial assistance for rural development purposes directly or through District Agencies. Participants, cooperators, or other financial institutions. (Subtitle D—sections 401–426);

(4) District Rural Development Credit Agencies (referred to as "District Agencies"). These would be financial subsidiaries of multijurisdictional planning and development districts applying for and receiving charters as instrumentalities of the United States. They would raise funds through the sale of stock to the United States, borrowers, persons eligible to borrow, Participants, cooperators, and investors; and would extend financial assistance for rural development purposes and other requirements either directly or through Participants and cooperators (Subtitle E—sections 501–507);

(5) Participating Rural Development Financial Institutions (referred to as "Participants") and cooperators. Any financial institution or unit of local general government could (1) upon application be designated a Participant, or (2) qualify as a Cooperator by participating in a loan for a Regional Bank or District Agency and purchasing nonvoting stock equal to one percent of the loan. Participants and cooperators could obtain and extend financial assistance from and for District Agencies and Regional Banks; but only a Participant could purchase voting stock (Subtitle F—sections 601–609); and

(6) a Federal Rural Development Investment Incentives Administration established and supervised by the Federal Board and headed by an Administrator, appointed and serving by and at the pleasure of the Federal Board and the President. It would provide interest supplements and capital augmentation grants to assist rural development. (Subtitle G—sections 701–707.)

GENERAL STATEMENT

A. *General Purpose.*—This title provides for a permanent system of rural development credit banks and related financial institutions and services—modeled after the Farm Credit System, but separate therefrom—to support the existing private rural banking system in meeting the credit needs of both rural communities and rural private business enterprises. This system would utilize the nation's existing network of commercial banks, and would eventually become a wholly independent credit system owned by borrowers and local banks, other financial institutions, and units of local government without reliance upon Congressional appropriations for loan funds or operating expenses.

B. *Federal Rural Development Credit Board.*—This Board would establish the general policy for the entire Federal Rural Development Credit System and all its institutions in carrying out the provisions of this Act. The Board would be composed of 15 appointed and 4 ex-officio members. Appointed members would be appointed by the President, by and with the advice and consent of the Senate. Ex-officio members would include the representative of the Secretary of Agriculture serving on the Farm Credit Board; the Governor of the Farm Credit Administration; the Executive Director of the Federal Rural Development Credit Agency; and the Administrator of the Federal Rural Development Investment Incentives Administration. Twelve of the 15 members of the Board must be legal residents of rural areas, and all members of the Board would be appointed for six-year terms with the exception of the first appointees.

C. *Financing the New Credit and Investment Incentive System* would be accomplished through an appropriation by Congress of not to exceed $200 million annually for 10 years for the Federal Rural Development Credit Agency to purchase stock of Regional Rural Development Banks, all of which would eventually be retired and repaid to the Federal Treasury. Stock, debentures, and bonds would be sold in regional and central money markets by such banks, and by the Federal Rural Development Credit Agency on behalf of such banks. Not to exceed $100 million anually would be authorized to be appropriated by Congress for the Federal Rural Development Investment Incentives Administration to make payments to encourage expansion of private enterprise into rural areas and to provide financial assistance to public bodies in carrying out rural development projects. This financial assistance could be made either in the form of an interest supplement or a capital grant. Only public and nonprofit entities would be eligible for the capital grants. But both private and public entities would be eligible for interest supplements.

D. *The Organizational Structure of the New System,* under policy control of the Board, would include a Federal Rural Development Credit Agency, headed by an Executive Director appointed by the Federal Rural Development Credit Board with the advice and consent of the Senate. Ten Regional Rural Development Banks would be established to serve all regions of the nation. These banks would provide credit assistance required for rural development purposes within each region; supervise rural multijurisdictional District Rural Development Credit Agencies and participating local financial institutions; and issue loan guarantees, debentures, bonds, and other obligations to gather funds from central money markets to be made available in rural areas for community development projects and enterprises. Each of these banks would be governed by its own Board of Directors—but would be required to operate within the policy of the Federal Board and under supervision of the Federal Agency. Each Bank would have a President, selected by its own Board to serve as chief executive officer.

District Rural Development Credit Agencies could be established under the system, as financial subsidiaries of any multijurisdictional, areawide, general purpose planning and development district established by State to serve rural areas. These District financial agencies would own capital stock of and obtain financial assistance from the Regional Banks. These District agencies would, in turn, provide guarantees, insurance, or discounting for loans made by participating local financial institutions. Local banks and other financial institutions and units of general government in rural areas could apply for and become qualified to act as participants in the Rural Development Credit System, and would thus become the local point at which potential borrowers would submit applications.

In addition to the system of credit agencies established by this bill, a Federal Rural Development Investment Incentives Administration would be created under the direct control and supervision of the Federal Rural Development Credit Board, but would be operated independently of the Federal Rural Credit Agency and its related institutions. An Administrator would be appointed by the Federal Board to serve as the chief executive officer of the Investment Incentives Administration. The function of the Administration would be to administer the rural location incentives program of interest supplements and capital grants. Eligibility for rural location incentives would be in accordance with strict criteria established in the bill. Provision for this investment incentives program is in recognition of the nationally established policy promulgated by Congress to foster a more balanced national distribution of population and economic growth in the United States as cited in Title IX of the 1970 Agricultural Act and Title VII of the 1970 Housing and Urban Development Act.

E. *Loan Purposes.*—Guarantees, insurance, or rediscounting of local bank loans could be obtained through this new credit system for rural development purposes, as long as such purposes contribute to balanced national growth policy or the enhancement of rural communities or rural areas as a place to live and make a living. These are the same rural development purposes listed by the President in his 1971 and 1972 Rural Community Development messages to Congress.

Eligible borrowers under this new credit system would include individual persons, partnerships, corporations, cooperatives unable to obtain needed funds from the Banks for Cooperatives under the Farm Credit System, public and quasi-public bodies and their instrumentalities and nonprofit private associations. However, loans are restricted to borrowers who cannot obtain credit elsewhere. Borrowers would be required to purchase capital stock in the credit system, as a condition of loan approval, in an amount equal to not less than 5 percent, and not more than 11 percent of the loan amount applied for. Loan applicants must demonstrate that the project or enterprise for which the loan funds will be utilized will primarily operate within a rural area and benefit rural residents. Applicants also must demonstrate that the project to be financed with loan funds secured from the system will not result in the geographic transfer or displacement of employment opportunities or business activities elsewhere in the area, in another area, of a competing firm, branch plant or contractor or subcontractor of either, or in the creation of added capacity in any industry already suffering from excess capacity. The applicant's loan application also must have the endorsement of the multijurisdictional governmental planning and development district, if any, certifying that the proposed projects is not inconsistent with the current comprehensive development plan for the district where located.

Neither the Title I or Title II credit programs would be duplicative or competitive with the rural housing, banks for cooperatives, and other programs available under the Farm Credit Act of 1971 or with the credit available from the private banking system of the Nation. A cooperative would be expected to make full use of the assistance available from the banks for cooperatives and to depend upon the Rural Development Credit System or the Department of Agriculture only for that part of its financing that it cannot obtain from the banks for cooperatives.

The Committee intends that Rural Development Credit System will utilize to the fullest extent possible the credit and grant resources of other Departments and Agencies of the Federal and State governments and the financing and services of private banks and other financial institutions, and to strengthen them, through reliance upon guaranteed loans, insured mortgages, or discounting of loans made by them. Institutions of the Rural Development Credit System are authorized to participate with other credit agencies in making loans to eligible borrowers.

F. *Loan Terms, Conditions and Security Requirements.*—Terms and conditions of financial assistance extended by this new credit system would be established by the appropriate Regional Rural Development Credit Bank or District Agency subject to the rules and regulations of the Federal Rural Development Credit Agency and the policies of the Federal Rural Development Credit Board. Such terms and conditions may vary depending on the rural development purpose intended. The amount of security required to assure payment of principal and interest would be determined by the District Rural Development Credit Agency.

G. *Credit Insurance.*—Obligations of the new credit system could be insured by the U.S. Secretary of Agriculture, who could, also insure or guarantee repayment of financial assistance extended by the system. Five million dollars is authorized to be appropriated as initial capital for a revolving fund to be used to provide such insurance. All the premiums charged for such insurance would be deposited in the fund. Such insurance by the Secretary of Agriculture would carry the full faith and credit of the United States.

H. *Financial Supervision, Examinations and Audits* of the new credit system would be performed by the Farm Credit Administration, on a reimbursable basis, and by the General Accounting Office.

I. *Tax Status.*—The Regional Rural Development Banks and their related agencies shall be subject to Federal, State and local taxes, both as relates to property and income from any obligations purchased, except for periods when the United States owns capital stock in the institution upon which a special Federal franchise tax must be paid by the institution.

J. *Purchase, Sale and Liability of Obligations.*—Each Regional Rural Development Credit Bank may purchase its own obligations and the obligations of any other such bank and may provide for the sale of obligations issued by it or issued jointly by it with one or more other regional banks. The Federal Rural Development Credit Agency would establish a sales agency to be used for the purchase and sale of these obligations. Long term obligations of the Regional Banks would be limited to twenty times the capital and surplus of all the Regional Banks. Each Regional Bank would be liable on its own obligations and for interest payments on joint obligations of other Regional Banks.

K. *Interest Rates on Financial Assistance* provided by this credit system would reflect the cost of money in the central money markets of the Nation plus losses, operating expenses, and the cost of loan processing and servicing.

L. *Loan Application Process.*—After a determination has been made that an applicant has been unable, within a reasonable time, to obtain needed financial assistance from other private or public sources at rates and conditions required to contribute to the purposes of the Act, the applicant would submit his loan application directly to a local participating member of the new credit system, such as a local private bank or other financial institution or a local unit of government. If a local financial institution or government unit is not available to make the loan to the potential borrower, the borrower may go directly to the nearest District Rural Development Credit Agency, or if need be, directly to the Regional Rural Development Credit Bank serving the area.

When the local private bank or other financial institution or local participating unit of government receives a rural development loan application from a potential borrower, the institution may make the loan out of its own funds, or it may take one of the following courses:

(a) Make the loan and obtain a guarantee of repayment of interest and principal from the District Agency; or

(b) Obtain mortgage insurance thereon from the District Agency; or

(c) Finance part of the loan and ask the District Agency in cooperation with other credit sources (public or private) to finance the rest on a participation basis; or

(d) Make the loan with an understanding that the District Agency will purchase the obligation paper involved; or

(e) Make the loan and discount it with the District Agency.

In any event, two things would be required in all cases where the financial assistance of the District Agency would be required:

First, the participant (the participating local financial institution or local unit of government) would be required to endorse the note and assume part of the risk;

Second, in every case where District Agency financial assistance was expected to be called upon, review and approval of the obligation in accordance with standards of the District Agency and with the district development plan would be required.

Loans or other financial assistance which the District Agency could not provide from its own resources would in turn be sold to, discounted or rediscounted with, or guaranteed or insured by, the Regional Rural Development Credit Bank.

The Regional Rural Development Credit Banks, using their accounts receivable along with capital, reserves and surplus, as collateral, would individually, or jointly with one or more other Regional Banks, sell debentures, bonds, or other obligations on the central and regional money markets of the Nation to obtain funds to use in making financial assistance available to borrowers through the District Rural Development Credit Agencies and the Participating Local Financial Institutions.

Section-by-Section Explanation

SUBTITLE A—FINDINGS, PURPOSES, AND DEFINITIONS

Sec. 101. Title and Findings and Purpose

This section makes findings with respect to the importance of farming and forestry and the need for improved community facilities and better employment opportunities. It is the purpose of this title to provide for the financing of these facilities and job opportunities. A Rural Development Banking System is needed to provide this financing.

Sec. 102. Definitions

This section defines "Rural Development Credit System," "rural area," "rural development purpose," "local general government," "Regional Bank," "region," "Federal Board," "District Agency," "Participant," "Federal Agency," "Executive Director," "and financial assistance."

The term "rural area" is defined as all territory that is not within the outer boundary of any city having a population of 50,000 or more and adjacent territory that is not within a suburban area having a population density of more than one hundred persons per square mile.

In applying this definition, the Secretary of Agriculture will use data from the latest decennial census of the United States.

The term "rural development purpose" means any public or private project that will contribute to a balanced national growth policy and to the enhancement of any rural area as a place to live. The term specifically includes, but is not limited to, twelve kinds of projects which are listed.

The Rural Development Credit System consists of the following—

(1) A supervisory Federal Agency whose chief executive officer is called the Executive Director, and whose policy-making board is called the Federal Board;

(2) a Federal Rural Development Investment Incentives Administration to provide subsidies for rural development purposes; and

(3) the following institutions which will make loans for rural development purposes—

(a) Participants (also known as Participating Rural Development Financial Institutions)—Any local bank or other financial institution or any unit of local government, which is designated a participant under Subtitle F;

(b) District Agencies—Any financial agency of a multi-jurisdictional planning and development district of a State designated by the appropriate Regional Bank under Subtitle E.

(c) Ten Regional Banks established in Subtitle D.

SUBTITLE B—FEDERAL RURAL DEVELOPMENT CREDIT BOARD

Sec. 201. The Federal Rural Development Credit Boards organization and compensation

(a) This section creates a Federal Rural Development Credit Board of 19 members. Fifteen members, each from a different state, would be appointed by the President with the advice and consent of the Senate. Not more than eight members can be from the same political party. In making appointments the President will attempt to provide fair representation of different geographic regions and economic interests. In addition, the representative of the Secretary of Agriculture on the Farm Credit Board, the Governor of the Farm Credit Administration, the Executive Director of the Federal Agency, and the Administrator of Federal Rural Development Investment Incentives Administration would be ex officio members.

(b) All members of the Federal Board would be citizens of the United States and not less than 12 appointed members would be residents of rural areas.

(c) The Federal Board would elect a chairman and vice chairman from among its members. The Federal Board would elect a Secretary from among its members or from outside its membership. These officers would be elected for one year terms.

(d) No appointed Federal Board member could be an officer or employee of the United States or any state or any of the institutions of the Rural Development Credit System or of the Farm Credit System.

(e) Appointed members of the Federal Board would serve for terms of six years, except for the first members appointed, who would be appointed for staggered terms of 6, 4, and 2 years. A person appointed to fill an unexpired term would serve only for the remainder of the term for which his predecessor was appointed.

(f) The Federal Board would establish its own rules of procedures except that a majority of all members of the Board would constitute a quorum for the transaction of its business.

(g) Each appointed member would receive $200 a day for not more than 75 days of meetings each year. All members would be reimbursed for travel and reasonable expenses incurred in discharge of their official duties.

(h) The Federal Board would hold at least four regularly scheduled meetings a year. Special meetings would be held at the call of the chairman or of any three members of the Board.

Sec. 202. Powers of the Federal boards

The Board would establish the general policy for all institutions of the Rural Development Credit System. It would function as a unit and it would not operate in an administrative capacity.

SUBTITLE C—FEDERAL RURAL DEVELOPMENT CREDIT AGENCY

Sec. 301. Federal Rural Development Credit Agency; Executive Director

This section establishes an independent agency to be known as the Federal Rural Development Credit Agency to be headed by an Executive Director and to be responsible for carrying out the programs provided for in this title.

Sec. 302. Appointment of Executive Director, salary and expenses allowance

The Executive Director is to be appointed with the advice and consent of the Senate by the Federal Board, and he will serve at the pleasure of the Federal Board, except that during any period in which he holds stock in any Regional Rural Development Credit Bank his appointment shall be subject also to approval by the President and he shall serve at the pleasure of the President. His compensation would be fixed at the rate prescribed for positions in level IV of the Executive Pay Schedule which currently is $38,000 per annum.

Sec. 303. Compliance with Board orders

The Executive Director would be responsible for carrying out the functions of the Federal Agency and the policies of the Federal Board. All acts of the Executive Director will be conclusively presumed to be in compliance with Board orders.

Sec. 304. Rural Development Credit Organization

The Executive Director is authorized to fix the powers and duties of the divisions of the Federal Agency and to appoint and employ personnel. He will provide on a reimbursable basis administrative management services to the Federal Board and the Federal Rural Development Investment Incentives Administration.

Sec. 305. Seal

This section provides for a seal of the Federal Rural Development Credit Agency to be adopted by the Executive Director and to be judicially noted.

Sec. 306. Administrative expense

This section authorizes the Federal Agency to make necessary expenditures for proper administration of the Act.

Sec. 307. Allocation of expenses

This section provides for the assessment of the institutions of the system for their appropriate share of the cost of administering this title. During the first five fiscal years of operation, appropriations would be authorized to augment such assessments. At the end of each fiscal year, the Federal Agency would re-determine the appropriate assessment for each institution and appropriate adjustments would be made.

Sec. 308. Enumerated powers

This section enumerates the powers, functions, and responsibilities of the Federal Agency. In general they provide for the supervision and direction of the System. Some of the enumerated powers are:

(a) Modify the territory of the Regional Banks, subject to approval of the Federal Board and the President.

(b) Issue and modify Federal charters and designations of institutions of the System and approve changes in the names of banks operating under the Act.

(c) Approve the merger of Regional Banks.

(d) Make annual reports to the Congress on the condition of the Credit System and make recommendations for such legislative changes as are needed.

(e) Coordinate Regional Banks and approve standards of Regional Banks.

(f) Prescribe and review loan security requirements and prescribe which loans can be made only with prior approval.

(g) Approve the issuance of obligations of the institutions of the Credit System and execute consolidated obligations on behalf of the Regional Banks.

(h) Approve both interest rates paid by institutions of the System on their obligations and the interest rates these institutions charge their borrowers.

(i) Make investments in stock in the institutions of the Credit System and require the retirement of such stock.

(j) Regulate the relationships among institutions of the System.

(k) Provide services necessary for effective management of institutions of the System.

(l) Undertake research into rural development and the credit needs of rural areas and ways of meeting these needs.

(m) Provide information on the System to the general public and to investors.

(n) Provide protection of the assets of the institutions against losses caused by employees.

Section 309. Special powers

(a) The Federal Agency is authorized special powers until there is no net out-migration of population from rural areas. These special powers are:

(1) to extend financial assistance with respect to the obligations of a State or local government to finance any rural development project;

(2) to extend financial assistance to States or local government to finance any rural development purpose;

(3) to extend financial assistance for the purpose of facilitating economic, physical, and social development in rural areas;

(4) to establish terms and conditions for the financial assistance extended.

(b) The Federal Agency will develop criteria to assure that projects assisted by it are not inconsistent with comprehensive planning of multijurisdictional planning and development districts and to assure that the projects will not disrupt other Federal programs.

(c) Financial assistance of the Federal Agency may not exceed the total capital cost of the project to be financed.

(d) The Federal Agency will determine

the interest rate on financial assistance extended by it.

(e) This subsection will allow States and local governments who obtain a part of the cost of a project from another department or agency of the Federal Government and the remainder in the form of financial assistance from the Federal Agency, to charge against its debt limit only that part of the total that represents the loan. The Federal Agency would extend the full amount to the borrower, but would arrange with the other Federal department or agency to accept its commitment to pay directly to the Federal Agency the funds that are to be provided by the other department or agency. The borrower would execute an obligation to the Federal Agency only for that part of the total cost of the project that is not covered by the commitment of the other Federal Department or agency. The other department or agency is authorized to make the payment involved directly to the Federal Agency in lieu of paying it directly to the borrower.

(f) The Federal Agency is authorized to enter into multilateral contracts and agreements in order to encourage cooperation among local governments.

(g) The Federal Agency is authorized to impose charges for its services.

Section 310. Technical assistance

This section authorizes the Federal Agency to provide technical assistance in a number of fields related to the Agency's activities. This assistance would be provided directly, or through agreements with other Federal and State agencies. In those cases where other Federal or State agencies are already conducting programs of technical assistance, the Federal Agency will utilize these existing programs. The Federal Agency is authorized to employ or contract for personnel in those fields which are not covered by existing programs of other Federal or State agencies.

The Federal Agency is authorized and required to provide to applicants for assistance under this title any necessary technical assistance in planning to meet the requirements of environmental protection and multi-jurisdictional planning.

Section 311. Delegation of duties and powers to institutions of the system

This section authorizes the Federal Agency to delegate to any Regional Bank such of its duties, powers, and authority as may be determined to be in the interest of effective administration. It authorizes the Regional Banks and other institutions of the Rural Development Credit system to accept such delegations and to redelegate such duties, powers and authority, in accordance with rules and regulations of the Federal Agency.

Section 312. Agreements for sharing losses

The Federal Agency is authorized to enter into agreements with the Regional Banks for sharing the gains and losses on loans or securities held therefor.

Section 313. Indirect participation by private financial sources

The Federal Agency is authorized, on behalf of Regional Banks and other institutions of the Rural Development Credit System, to issue bonds, debentures and other obligations; to buy and sell securities it has issued or guaranteed or whose mortgage it has insured or in which it has invested; to invest funds not needed in its financing operations; and to guarantee securities in which it has invested.

The Secretary of Agriculture would be authorized to guarantee the obligations of the Federal Agency. The Secretary will collect a reasonable fee for this guaranty and for the analysis of any obligation proposed to be issued by the Federal Agency. The full faith and credit of the United States is pledged to the payment of all amounts guaranteed under this subsection.

The Secretary may not guarantee payment of any obligation of the Federal Agency issued after the total amount of stock held by the Executive Director in the several Regional Banks is less than an amount equal to 50 per cent of the total outstanding obligations of the Regional Banks.

Section 314. Federal insurance of obligations to the agency

The Secretary of Agriculture, upon application by the Federal Board, is authorized to insure any financial assistance extended by the Federal Agency. The Secretary is also authorized to make a commitment for the insurance of a loan prior to the date of its execution or disbursement, if it is determined that such loan meets all the applicable criteria of this Act.

The Secretary will prescribe the terms and conditions of the insurance under this section. Upon default by the borrower, the Secretary will provide for full payment to the Federal Agency of any unpaid principal and interest on an insured loan.

The Secretary is authorized to charge and collect premiums for insurance under this section. These premiums will be fixed at the lowest levels which the Secretary and the Board agree to be reasonable and sufficient to keep the insurance program in a sound position and maintain the revolving fund.

There is established a revolving fund to be used by the Secretary to carry out the insurance of financial assistance under this section and the guarantee of financial assistance under section 313(b). Moneys in the fund not needed for operating expenses or the payment of insurance may be invested in bonds or other obligations guaranteed by the United States.

Section 315. First lien

The Federal Agency, the Regional Banks, and the District Agencies are each given the first lien on stock insured by them (except for such stock which is held by the Executive Director) for the payment of any liability of the stockholder to such bank or agency.

SUBTITLE D—REGIONAL RURAL DEVELOPMENT CREDIT BANKS

Section 401. Establishment; title; number

This section provides for the establishment of ten Regional Rural Development Credit Banks as Federally chartered instrumentalities of the United States subject to the policies of the Federal Board. Their charters may be modified by the Federal Agency in a manner not inconsistent with the provisions of this title.

To the maximum extent practicable, the jurisdictional territory of each Regional Bank will correspond to the rural areas of the uniform regions established by the President for the operation of Federal agencies. The headquarters of each Regional Bank will be located within the rural area which it serves. Although each Regional Bank is not required to maintain its headquarters in the headquarters city of the President's uniform region, each bank is required to maintain a liaison office in such city. The Board of any Regional Bank may establish such offices as are needed for the effective operation of the Bank's business. The territorial jurisdiction of any such office must include an entire multijurisdictional area-wide general purpose planning and development district if it includes any part of such district. The headquarters of such an office must be located within the rural area served.

Section 402. Corporate existence; general corporate powers

This section provides for the corporate powers of each regional rural development credit bank. The bill recites a number of general corporate powers which are necessary to the operation of the Regional Banks as corporate bodies. In addition to these usual corporate powers, this section gives the regional banks certain authorities over the District Agencies. The Regional Banks must approve the salary scale of the officers and employees of the District Agencies and the compensation of the Chief Executive Officer. Also, the Regional Bank will supervise the operations of the District Agencies. The appointment of the Chief Executive Officer of the District Agencies will be subject to the approval of the appropriate Regional Bank as long as the United States holds 33⅓ percent or more of the capital stock of such District Agency.

The Regional Banks are authorized to delegate to District Agencies such functions as the Regional Banks may determine appropriate. The Regional Banks will require the District Agencies to endorse obligations which are presented to the Regional Bank for the purpose of obtaining financial assistance.

In order to enable the District Agencies to make financial assistance available, the Regional Banks will purchase non-voting capital stock in the District Agencies. This purchase of capital stock cannot exceed each District Agency's pro rata share of the capital stock of the Regional Bank held by the Executive Director on behalf of the United States.

This section authorizes the Regional Banks to borrow in the central money markets of the Nation and issue obligations individually or in concert with one or more other Regional Banks. The Regional Banks may accept deposits of securities or current funds from borrowers, participants, and District Agencies and pay interest on such funds.

The Regional Banks may participate in extending financial assistance with one or more other Regional Banks or with private banks and other financial institutions in rural areas.

The Regional Banks may conduct or contract for studies of lending and of rural development, provided that such studies do not duplicate research capability of Federal and State agencies located in the state that is served.

Section 403. Board of Directors

This section provides for a 12-member bipartisan Board of Directors for each Regional Bank. All members must be legal residents of the rural area within which the Bank is authorized to operate.

Different methods are provided for the appointment of the members of the Board of Directors, depending on the amount of stock held by the Executive Director. When the Executive Director holds two-thirds or more of the outstanding capital stock of the Regional Bank, nine Board members are approved by the Federal Board from a panel of at least 20 persons nominated by the Executive Director. The nominees cannot be officers or employees of the United States or any State government or of any institution of the Rural Development Credit System or the Farm Credit System. Three members of the Regional Bank Board will be approved by the Federal Board from a panel of five nominees elected by the holders of voting stock in the Regional Banks. These nominees will be subject to the same residence requirements and employment restrictions described in the preceding paragraphs of this section.

As the capital stock held by the Executive Director decreases, the number of Board members approved by the Federal Board from nominees of the Executive Director decreases. The number of nominees elected by the holders of voting stock increases.

When the Executive Director holds no capital stock in a Regional Bank, eleven members of the Regional Bank's Board of Directors will be approved by the Federal Board from a panel of at least 15 nominees elected by the stock holders of the Regional Bank. Only one member of the Regional

Bank's Board of Directors will be approved by the Federal Board from a panel of at least three nominees named by the Executive Director.

The Board of Directors of each Regional Bank will elect from its own members a Chairman of the Board and it will select a President of the Bank, who will be an ex officio member of the Board.

The Board of Directors may approve such other officials and executive employees as are needed.

Members of the Board of Directors will receive $100 per day for the performance of their official duties. This compensation will not be paid for more than 75 days in any calendar year. The members of the Board will also be reimbursed for necessary travel, subsistence, and other expenses incurred in the discharge of their official duties.

Section 404. Capitalization of the regional banks

This section authorizes the President of each Regional Bank to issue its prorata share of the amount of outstanding capital stock of the Rural Development Credit System as determined by the Federal Board. The Federal Board in making its determination will take into account the unmet need for credit for rural revitalization of the territory served by the Regional Bank. The Executive Director is authorized to purchase non-voting stock of any Regional Bank in the same amount that the Regional Bank is authorized to issue.

Section 405. Regional bank stock; value; shares; voting; dividends

This section provides for the issuance by the Bank of stock of various classes at a par value of $5 each.

The approval of the Federal Agency is required.

Voting stock of each Bank can be held only by District Agencies and Participants and borrowers which obtained financial assistance directly from the Bank Voting stock cannot be transferred, pledged, or hypothecated except as specifically authorized by this title. A District Agency may elect to receive nonvoting stock rather than voting stock.

The amount of capital stock in each Regional Bank is to be increased from time to time in such amount as may be necessary to permit the issue of additional shares to borrowers and Participants so that they may become eligible for financial assistance.

The Banks are authorized to issue nonvoting stock to the Executive Director of the Federal Agency and also to District Agencies, Participants, other rural financial institutions, and to borrowers directly from the Bank.

The earnings of the Regional Bank, determined in accordance with approved accounting principles and practices, are to be distributed—

(1) at rate of 10 percent of the net earnings for each year into the reserve fund of the bank until that fund equals 100 percent of the outstanding stock;

(2) not less than 10 percent of the net earnings into a capital surplus fund of the bank;

(3) the payment of a franchise tax as required by section 407 for any year in which stock is held by the Executive Director;

(4) not less than 10 percent of the net earnings towards the retirement of nonvoting stock and any other indebtedness of the Regional Bank held by the Executive Director;

(5) thereafter, the remaining net earnings may be paid as dividends on nonvoting stock held by persons other than the Executive Director, but at a rate not to exceed the average cost to the Regional Bank of funds obtained through the issuance of bonds, dividends, and other obligations; and

(6) the remaining net earnings shall be paid as dividends on voting stock as determined by the Bank's board of directors.

Provision is made authorizing the sale of nonvoting stock, or its conversion into voting stock, and for the sale of voting stock only to District Agencies and to Participants or borrowers who obtain financial assistance directly from the Regional Bank.

Nonvoting stock can be redeemed in accordance with a schedule of values set from time to time by the Regional Bank. When the District Agency, direct Participant, or direct borrower reduces its outstanding indebtedness to the Regional Bank, it may convert its voting stock into nonvoting stock or surrender it for redemption or for credit to extinguish its final indebtedness, in accordance with the rules of the Regional Bank.

Nonvoting stock held by the Executive Director may be retired at any time subject to the approval of the Federal Agency, and is required to be retired each year to the extent of available earnings as provided in section (e), item 4, of this section.

Section 406. Governing of policies, programs and procedures of regional banks

This section requires the Federal Agency to establish and promulgate policies and regulations to govern the Regional Banks. Any Regional Bank, its Board of Directors, and its President, will be conclusively presumed to be acting in accordance with such policies and regulations.

As long as the Executive Director holds stock in the Regional Bank, the policies, program, and procedures of such Banks shall be subject to prior approval by the Federal Agency.

Section 407. Stock purchased by executive director: retirement; franchise tax

This section authorizes the Executive Director to purchase stock in any Regional Bank to help such Bank inaugurate lending operations or meet emergency credit needs of borrowers. The operations of the Regional Banks will be subject to audit by the General Accounting Office. The Executive Director will require the Bank to retire this stock whenever the Bank has resources available to do so and when the need for such investment is reduced or no longer exists. For as long as the Executive Director holds any stock in a Regional Bank, the Bank must, before declaring dividends, pay to the United States a franchise tax equal to the lower of (1) 25 percent of its net earnings, or (2) a rate of return based on the average annual rate of interest on all public debt issues of the United States and the number of days that stock is outstanding during the year.

Section 408. Subscription by the United States of capital

This section authorizes the Executive Director to purchase stock of any Regional Bank on behalf of the United States.

Section 409. Power to borrow, issue notes, bonds, debentures, and other obligations

This section authorizes the Regional Bank with the approval of the Executive Director to issue its own notes, bonds, debentures, or other obligations. With the approval of the Executive Director, it may join with any or all Regional Banks in borrowing or issuing consolidated obligations. In joining with other Regional Banks, each Bank will not exceed the limits to which it would be subject as an individual Bank.

Section 410. Aggregate of obligations; securities

This section limits the long-term obligations of the Regional Banks to 20 times the capital and surplus of all the Regional Banks primarily liable thereon, or such lesser amount as the Federal Agency shall establish by regulation.

Each Bank is to maintain free from any lien or other pledge, notes representing loans made under the authority of this Act, obligations of the United States, other readily marketable securities, or cash in an aggregate value equal to the total amount of long-term obligations for which the Bank is primarily liable.

Section 411. Liability of regional banks

Each Regional Bank would be liable on its own obligations and for interest payments on obligations of other Regional Banks. In addition, each such Bank would be primarily liable for the portion of any issue of consolidated obligations made on its behalf and jointly and separately liable for the payment of any additional sums when called upon by the Federal agency to make payments of interest or principal which any other Regional Bank primarily liable therefor is unable to make.

The United States will not be liable or assume any liability, either directly or indirectly on such obligations except as provided in Sections 313(b) and 314 of the Title.

Section 412. Finance committee

This section provides for a Finance Committee composed of the Presidents of the Regional Rural Development Credit Banks to determine the amount, maturities, rates of interest, and participation by the several banks of each issue of joint or consolidated obligations.

Section 413. Bonds as investments

Bonds and other similar obligations issued under the authority of this Act will be lawful investments for all fiduciary and trust funds and may be accepted as security for all public deposits.

Section 414. Purchase and sale by Federal Reserve System

Obligations issued under this title may be bought and sold by any member of the Federal Reserve System; and (to the same extent and subject to the same limitations as are placed upon the purchase and sale of State, county, district and municipal bonds under section 14(b) of the Federal Reserve Act) by any Federal Reserve Bank.

Section 415. Purchase and sale of obligations

Each Regional Rural Development Credit Bank may purchase its own obligations and the obligations of any other such Regional Bank and may provide for the sale of obligations issued by it or issued jointly with one or more other such banks.

Section 416. Fiscal agency

This section provides for a fiscal agency to be established by the Regional Rural Development Credit Banks to carry out such of their functions relating to the issuance, marketing and handling of obligations and flow of funds as may be required.

Section 417. Merger of regional banks

This section authorizes merger of Regional Banks upon approval of the majority of the stockholders of each Bank and the Federal Agency.

Section 418. Board of directors for merged bank

In the event of a merger of two or more Regional Banks, a new Board of Directors will be created. This Board would be created in accordance with the provisions of Section 403 and it would have all the powers, functions, and duties normally exercised by a Regional Bank Board.

Section 419. Voluntary liquidation; insolvency; receiverships; and conservators

This section prohibits any institution of the system from going into voluntary liquidation without the consent of the Federal Agency. The liquidation may proceed only in accordance with regulations prescribed by the Federal Agency.

Upon default of any obligations, a Regional Bank may be declared insolvent and placed in the hands of a conservator or receiver appointed by the Executive Director. Proceedings must be in accordance with regulations of the Federal Agency.

Section 420. Financial assistance provided

To provide adequate financial assistance to eligible borrowers, the Regional Banks are authorized to—

(1) extend to District Agencies and through them to participators and cooperators assistance in financing any rural development purpose project in the rural area served by the Regional Bank;

(2) extend financial assistance either through District Agencies, Participants, and cooperators or directly to persons engaged in the construction or improvement of rural development purpose projects for eligible borrowers;

(3) to provide or assist a District Agency or Participant in providing insurance to protect a borrower for a rural development purpose project against damage or casualty loss;

(4) require that District Agencies maintain ownership of stock in the Regional Banks equal to not less than $5 and not more than $10 per $100 of outstanding financial assistance provided them by Regional Banks.

Section 421. Interest rates and other charges

Financial assistance by the Regional Banks shall bear interest and be on such terms and conditions as may be determined by the Board of Directors of the Bank, it being the objective to provide such financing at the lowest reasonable cost on a sound business basis, so that borrowers may make their maximum contributions to improving the rural area served. The Board of Directors shall also take into account the cost of money, the necessary reserves, capital surplus, and expenses of the Regional Bank, the orderly retirement of capital subscriptions of the United States, and the cost of providing services. Interest rates on a loan may be varied from time to time during the repayment period in accordance with the rates of interest currently being charged by the Bank.

Section 422. Eligibility for financial assistance

This section lists 20 persons or entities which are eligible for assistance under the Act. Financial assistance is conditioned upon—

(1) review of the proposed project by the governing body of the multi-jurisdictional areawide general purpose planning and development district, if any, and certification by such body that the proposed project is not inconsistent with the current areawide general purpose development plan of such district;

(2) determination that the applicant has been unable within a reasonable time to obtain needed financial assistance from other private or public sources at rates and conditions required to contribute to the purposes of this Act;

(3) that the applicant can meet the principal and interest payments to be specified in the loan agreement taking into consideration available grants in aid;

(4) determination that the project will be located in and operate primarily in a rural area and that the proposed project promises to make a net increase in the number of jobs, quality of life, or median family income of the rural area served;

(5) determination that the project will not be used for the purpose of engaging in sectarian, religious, or partisan political activities; and

(6) determination that the proposed undertaking is not inconsistent with laws or regulations protecting the quality of the environment.

Section 423. Security

In extending financial assistance the Regional Banks will require the best available security of the beneficiary, and the Bank will require the endorsement of the appropriate District Agency. However, in determining repayment ability of the applicant, the Regional Banks may consider factors other than the ratio between the amount of the loan and the applicant's security value.

Section 424. Services related to borrower's operations

The regional banks are authorized to provide technical assistance or funds to obtain technical assistance to district agencies, participants and other financial institutions or to borrowers and applicants for loans in rural areas.

Section 425. Financial assistance through agencies, participants, or cooperators

The Regional Banks will make financial assistance available through District Agencies, Participants, or Cooperators in the area served by the Bank. If no District Agency or Participant is available in the area, the Regional Bank may extend financial assistance through such bank, trust company, savings, or other financial institution as it may designate or it may make the loan directly to the borrower. If the loan is made directly to the borrower, such borrower must purchase the stock of the Regional Bank in an amount not less than $6 and not more than $11 for each $100 of the loan proceeds.

Section 426. Eligibility of district agencies and participants

The Regional Banks will determine on the basis of an application the eligibility of any District Agency and any Participant to handle loans and serve as agents of the Regional Bank in accordance with criteria established by the Federal Agency. District Agencies which receive financial assistance from Regional Banks will be required to purchase bank stocks equivalent to five to ten percent of the amount of financial assistance received. Participants who receive financial assistance from Regional Banks will be required to purchase bank stocks equivalent to one per cent of the financial assistance received.

SUBTITLE E—DISTRICT RURAL DEVELOPMENT CREDIT AGENCIES

Section 501. Designations and charters

Any financial subsidiary of any multi-jurisdictional areawide, general purpose planning and development district of a state that has been officially designated as a clearing house agency under Office of Management and Budget Circular A-95 may apply to the appropriate Regional Bank for designation as a District Agency. This application must be approved by the Regional Bank and sent to the Executive Director, who makes recommendations to the Federal Board. Upon approval by the Federal Board, the applicant will be designated as a District Rural Development Credit Agency and chartered as an instrumentality of the United States. The Federal Board may for good cause deny any application for a charter.

The Executive Director will establish regulations governing any District Agency and will prescribe the initial amount of stock that the District Agency must purchase in the Regional Bank, and the territory within which the District Agency will operate. Upon recommendation of the appropriate Regional Bank, the Executive Director may modify the charter of any District Agency.

No application under this section will be approved unless the applicant agrees to subscribe to stock in the Regional Bank in such amount as may be required by such Bank.

Section 502. Governing board

Each District Agency will have a governing Board of Directors whose number, terms, qualifications, and election would be in accordance with state law and its Federal charter. No member of the Board of Directors will be an employee of any institution of the Rural Development Credit System nor of the Farm Credit System, nor of the Federal government nor any State government. No Board member can within a year after he ceases to be a member of the Board be elected or designated a salaried employee of a District Agency.

Section 503. General corporate powers

This section recites the corporate powers of the District Agencies.

Section 504. Capital stock, classes of stock, transfer, exchange; and dividends

This section authorizes a District Agency to issue voting stock, non-voting stock, and provides for an equity reserve. It distinguishes between voting and non-voting stock and states the restrictions which apply to each. Each Participant or cooperator obtaining financial assistance from the District Agency will be required to purchase an amount of stock equal in value to one dollar for every one hundred dollars of financial assistance obtained.

Each Participant will require that its borrowers purchase an amount of stock equal to not less than $5 and not more than $10 per $100 of financial assistance obtained.

Each direct borrower from the District Agency will be required to purchase at the time the loan is made an amount of stock of the District Agency equal to not less than $6 per $100 of the amount of the loan and not more than $11 per $100 of the amount of the loan.

When a District Agency participates with a commercial bank or other financial institution, the requirement that the borrower owns stock shall apply only to the portion of the loan which involves District Agency.

Section 505. Application of earnings; restoration of capital impairment, and surplus account

This section provides for the manner in which earnings in excess of operating expenses (including valuation reserves against loan assets) shall be applied to the restoration of capital impairment, establishment and maintenance of surplus accounts and stock participation or cash distribuitons. When the regional bank holds stock in a District Agency, the cash distribution shall be such percentage of earnings as will be determined under regulations of the regional bank.

Section 506. Loans, participation; other financial assistance; terms; conditions; interest; security

This section authorizes District Agencies to make loans for rural development purposes through Participants and cooperators or directly to borrowers. Interest rates, terms, conditions and security requirements of financial assistance authorized under this section will be prescribed by the board of directors of the District Agency and approved by the appropriate regional bank. In setting rates and charges on financial assistance, it will be the objective to provide credit as the lowest reasonable cost on a sound basis, taking into account the cost of money, necessary reserves and expenses of the Agency, and services provided borrowers and Participants.

Interest rates on loans may vary from time to time during the repayment period of the loan in accordance with the current rates being charged by the agency. The District Agency may provide for deferral for up to ten years of the initial annual repayment of principal and interest and it may authorize a continuing commitment of a line of credit to a borrower or participant.

The District Agency must make every effort to equitably allocate its assistance between potential types of users.

Section 507. Other services

Each District Agency is authorized to provide technical assistance and financial related services to borrowers, applicants and participants.

SUBTITLE F—PARTICIPATING RURAL DEVELOPMENT FINANCIAL INSTITUTIONS AND UNITS OF LOCAL GENERAL GOVERNMENT

Any bank or other financial institution making loans in rural areas for rural development purposes and any county, municipality, or other unit of local general government will, upon application, be considered for designation as a participating rural development financial institution (hereinafter called a "Participant").

Section 602. Functions of participants

Participants are authorized to—

(1) obtain from and extend financial assistance for, or on behalf of, District Agencies and Regional Banks; and

(2) to issue obligations for purchase by District Agencies or Regional Banks; and

(3) perform such other duties as the District Agency and Regional Bank may delegate.

The Participant will be required to provide from its own funds at least five percent of any loan made by it to any borrower.

Section 603. Endorsement by participants

A Participant must endorse to the District Agency obligations which it sells to, insures or guarantees with or discounts with such District Agency. However, the participant will not be required to assume responsibility for the repayment of principal and interest represented by such obligations.

Section 604. Purchase of capital stock

The Participant must require borrowers to subscribe to an amount of capital stock equal to not less than five percent and not more than ten percent of the financial assistance extended by the District Agency. In addition, each Participant must maintain at all times a total ownership of capital stock which is equal to at least one percent of the amount of all loans and obligations it has obtained from the District Agency.

Any institutions listed in section 601 which qualify as Participants are authorized to purchase voting stock of District Agencies.

Any of the institutions listed in section 601 may qualify as "cooperators" by participating in any loan or other obligation on behalf of the District Agency or Regional Bank and the purchase of non-voting stock equal to at least one percent of the loan or other obligation.

Cooperators will not be required to maintain voting stock ownership but they will be subject to all other rules, regulations and requirements provided for participants.

Section 605. Governance of participants and cooperators

This section provides for rules and regulations governing Participants and cooperators. The designation of any institution as a Participant may be canceled by the appropriate District Agency and this cancellation may be appealed to the appropriate Regional Bank. The decision of the board of directors of such Regional Bank will be final.

Section 606. Certificates of participation

Each Participant will be issued a certificate which certifies that it has been designated as an official Participating Rural Development Financial Institution. Designation of Participants is subject to the approval of the Federal Board.

Section 607. Terms and conditions

Terms and conditions under which assistance may be made available to borrowers by any Participant will be established by the District Agency concerned. Such terms and conditions may vary according to the rural development purpose for which the loan is to be used.

Section 608. Security

Participants will require borrowers to provide the best available collateral for financial assistance. Participants may consider demonstrated repayment ability in determining whether assistance should be approved. In determining the amount of security necessary, a Participant will take into consideration any grant or payment from the Federal or State government, including any grant or payment for which the borrower may qualify and obtain under the provisions of this act.

Section 609. Rural activity required

Only those financial institutions whose volume of loans in rural areas is more than one-half of the total volume of all its loans will be eligible to purchase voting stock of District Agencies or regional Banks.

SUBTITLE G—FEDERAL RURAL DEVELOPMENT INVESTMENT INCENTIVES ADMINISTRATION

Section 701. Findings and policy

This section finds that incentive payments are needed for rural community development and declares it to be the policy of Congress to carry out a program of such payments.

Section 702. Incentives for investment in rural development

This section provides for the establishment by the Federal Board of a Federal Rural Development Investment Incentives Administration, independent of the Federal Agency and Regional Banks, to carry out programs of interest supplements and capital augmentation payments.

Section 703. Administrator

The Rural Development Investment Incentives Administration would be headed by an Administrator appointed by the Federal Board with the approval of the President. He would serve at the pleasure of the Federal Board and the President. He would be compensated at level four of the executive pay schedule, which currently is $38,000 per annum.

Section 704. Rural development investment supplements; eligibility and amount

Any private or public entity that is operating a rural development project that is located within the area served by a District Agency that had a net loss in the population of its rural area within the most recent ten-year period for which data is available from the U.S. Bureau of the Census, and who cannot pay from projected earnings in any fiscal year the full amount of the annual interest on his loan, will be eligible to receive an interest supplement at the end of such fiscal year. This supplement will be equivalent to the amount by which the interest due exceeds the greater of (1) the amount which can be paid from project earnings, or (2) an interest payment calculated at an interest rate of two percent per annum.

To establish his eligibility for an interest supplement, the applicant is required to prove conclusively that—

(1) the project will make a substantial and definite contribution to the enhancement of the quality of life or increased income and employment in the rural area where located,

(2) the enterprise is operated according to principles of prudent and efficient management and will sustain a net loss if the full contractural interest rate is paid,

(3) audited accounts demonstrate that the interest supplement applied for is not in excess of the amount for which the applicant is eligible.

(4) the project to be financed will not be in substantial direct competition with another project that is wholly financed by private enterprise.

No applicant will be eligible for an interest supplement unless his books of account are open at all times for inspection by appropriate authority.

Section 705. Rural development capital augmentation payments; eligibility; and amount

Any public or private nonprofit entity who seeks to construct or operate a rural development project in an area served by a District Agency that had a net loss in the population of its rural area within the most recent ten-year period for which data is available from the U.S. Bureau of the Census will be eligible to apply for a rural development capital augmentation payment.

To establish eligibility for such payment, an applicant will be required to prove conclusively that—

(1) the project will make a substantial contribution to enhancement of the quality of life and increased income and employment in the rural area where located,

(2) the project for which the capital augmentation payment is requested was constructed or acquired in accordance with the principles of prudent and efficient management,

(3) that audited accounts demonstrate that the amount of payment applied for is not in excess of the amount for which the applicant is eligible,

(4) the project to be financed will not be in substantial direct competition with another such project which is wholly financed by private enterprise.

The amount of any rural development capital augmentation payment shall not exceed the amount by which—

(1) the cost of acquiring or constructing the project together with essential equipment and working capital exceeds

(2) the amount of principal and interest that can be amortized over the lifetime of the project by a prudent and efficient manager who will utilize the project to make a significant contribution to the attainment of the purposes of this title.

No applicant will be eligible for a rural development augmentation payment unless his books of account are open at all times for examination by appropriate authority.

Section 706. Examination of books of account

As a condition of approval of any application for financial assistance under this title, the applicant would be required to keep his books of account open at all times for examination by appropriate authority and by the General Accounting Office.

SUBTITLE H—GENERAL PROVISIONS

Section 801. Finance and other supervision

The Rural Development Credit System would be subject to the supervision of the Farm Credit Administration with respect to all procedures relating to financial examinations, including audits; and would be subject to the supervision of the Administrator of the Rural Enterprise and Community Development Administration of the Department of Agriculture with respect to the appraisal of real and personal property for security purposes. Investigating, accounting and administrative auditing services of the Farm Credit Administration would be utilized on a reimbursable basis by the Federal Rural Development Investment Equalization Administration and by the Federal Rural Development Credit System.

Section 802. Examinations and reports; audits

This section provides for examinations and audits of the Rural Development Credit System by Farm Credit Administration examiners at such times as the Federal board may determine, but in no event will any such institution be examined and audited less than once a year. In addition, the Executive Director is authorized to require examinations and audits by independent certified accountants. The executive director or any institutions of the system may request credit examiners to make examinations of organizations to which the extension of financial assistance is contemplated or to which the delegation of authority is contemplated.

A report of each annual audit of the Rural Development Credit System will be made by the Farm Credit Administration through the Federal board to the President and to the Congress. Farm Credit Administration shall be reimbursed by the Federal agency for the cost of performing such audits. The Federal board will make a report to the Congress at the end of each calendar year, concerning the condition of economic growth in areas served by the board, the condition and experience of the regional banks and the Federal Rural Development Investment Incentives Administration and such recommendations for legislative actions as it deems necessary to improve the Rural Development Credit System. The Federal board may require the Federal Agency, the Regional Bank and the Federal Rural Development Investment Incentives Administration and the district agencies to submit to it similar annual reports.

Each institution of the Rural Development Credit System will be subject to audit by the General Accounting Office at such times and to such extent as the Comptroller General determines.

Section 803. Conditions of other banks and lending institutions

The Comptroller of the Currency is required, upon request of the Farm Credit Administration, to furnish for confidential and exclusive use of the Regional Banks such information as he may have available relating to the financial condition of national banks with which such institution of the system has made or contemplates making discounts, loans or delegations of power.

Section 804. Consent to the availability of reports and to examinations

This section requires any organization seeking discount privileges or delegated powers from a Regional Bank to consent to examination by Farm Credit Administration examiners or, in the case of state banks, trust companies and saving associations, to permit state authorities to furnish reports for their examinations upon request of the Farm Credit Administration. This information will be available only for the exclusive and confidential use of the regional banks.

Section 805. Reports on conditions of institutions receiving loans or deposits or redelegated power

This section authorizes various agencies, upon request of the Farm Credit Administration, to furnish certain information to the Rural Development Credit System. This information (regarding the condition of any organization to which an institution of the System has made or contemplates making a loan or uses or contemplates using as a custodian of credit instruments, as a depository or to which it has or contemplates delegating powers) will be kept in confidence. The Federal Reserve Banks are also required to make their records available for audit.

Section 806. Jurisdiction

Each institution of the Rural Development Credit System shall for the purposes of jurisdiction be deemed to be a citizen of the state, commonwealth or District of Columbia in which its principal office is located. United States District Courts are not to have jurisdiction over any local unit of government or any financial institution exercising delegated power under this title.

Section 807. State legislation

This section authorizes the Federal Agency to declare obligations or securities to be ineligible as collateral under this title where the state law applicable to such obligations provides insufficient protection in the event of default.

Section 808. Tax status

The Federal Board, the Federal Agency, the Regional Banks and the District Agencies will be subject to Federal, state and local taxes as provided in this section.

The real property and tangible personal property of such board, banks and agencies will be subject to Federal, state and local taxation to the same extent according to its value as similar property held by other persons.

The income from any obligations purchased by such Regional Bank or District Agency from any federal, state or local government or quasi-governmental body and the income from any obligations issued by such Regional Bank or District Agency will be subject to the same extent as the income of obligations of private corporations.

The Regional Banks will be subject to the franchise tax provided in section 407(c) of this act.

Notwithstanding the foregoing provisions of this section, no Regional Bank or District Agency will be subject to Federal, state or local income taxes for any period in which capital stock in a regional bank is held by the executive director for the United States.

Section 809. Nature of obligations

All obligations issued by the Federal Agency or Regional Banks will be lawful investments for all fiduciaries. All obligations issued by the Rural Development Credit System pursuant to this title will be exempt from regulation by the Securities and Exchange Commission.

Section 810. Amendments to other laws

This section amends Title 5 of the United States Code to place the executive director of the Federal Rural Development Credit Agency and the Administrator of the Federal Rural Development Investment Incentives Administration in level IV of the executive schedule, which currently is $38,000, and to place the deputy executive director of the Federal Rural Development Credit Agency at level V of the executive schedule, which is currently $36,000 per annum.

National banking associations are authorized to purchase the obligations of any Regional Rural Development Credit Bank or District Rural Development Credit Agency created by this title.

Section 811. Separability

This section provides that if any provision of this title is held invalid, the remainder of this title shall not be affected thereby.

Section 812. Reservation of right to amend or repeal

This section reserves the right to alter, amend or repeal any provision of this title.

Section 813. Appropriations

There is authorized to be appropriated the following sums:

(1) to the Federal Agency not to exceed $200 million annually for not to exceed ten years for the purchase of capital stock of the Regional Banks;

(2) to the Federal Rural Development Investment Incentives Administration not to exceed $100 million annually for the incentives for rural development authorized under Subtitle G;

(3) to the Federal Agency not to exceed $26 million annually for expenditure, directly or by contract, for research and scientific study on rural development;

(4) to the Secretary of Agriculture $5 million as initial capital for the revolving fund;

(5) to the Secretary of Agriculture such sums as may be necessary to carry out his responsibility under this title;

(6) without fiscal year limitation, such additional sums as may be necessary to carry out the purposes of this title.

TITLE III—RURAL REVENUE SHARING

SHORT EXPLANATION

This title authorizes the appropriation of $500 million annually to be apportioned on a formula basis among the States. Each State's share would then be further apportioned and granted as follows: (1) one-third would be apportioned and granted to multijurisdictional planning districts; (2) one-third would be apportioned and granted to counties for the benefit of the local governments therein; and (3) one-third would be retained by the State. The amounts granted would be used by the recipients for rural development, a rural area being, in general, the area outside cities of 50,000 or more.

GENERAL STATEMENT

The concept of the Federal government sharing revenue with State and local governments for rural community development purposes was first proposed by President Nixon in a Message to Congress on March 10, 1971 (page 74 of this report.)

The President proposed abolishing eleven categorized grant programs which were spending $921 million in fiscal 1971, adding $179 million in new money, and creating a pool of funds totaling $1.1 billion to be divided among the states for use in rural community development.

Title III provides for no change in existing categorical grant programs nor amendment of their authorizing legislation. It does authorize annual appropriations not to exceed $500 million for rural community development revenue sharing. The Committee intends that revenue sharing funds may be used selectively to expand existing, as well as to initiate new, rural development programs.

It was the consensus of the Committee that the present categorical programs which have been tried and proven should be maintained. However, the Committee did approve the concept of giving States, districts, and local governments additional funds with more flexibility in determining how the money could be best spent for rural development purposes within their jurisdictions.

For example, revenue sharing is provided in this title for the protection, conservation, and development of the natural resources for improvement of rural areas and of rural community development under the leadership of local entities of government. Conservation districts under State district enabling legislation are assigned specific responsibilities for soil, water, and related resource development and, as eligible local instrumentalities of State government, may be authorized to utilize State, district, or local government revenue sharing funds as those entities may determine.

These rural revenue sharing funds may be used generally for any purpose which contributes to the enhancement of rural areas as a place to live, to make a living, and to provide increased employment. In addition, the funds may be used as the State, district, or local government's share of matching funds for other Federal-State formula or project grant programs.

This title provides for the apportionment of the revenue sharing funds among the States on the following basis: 40 percent on the State's rural population; 20 percent on the rural per capita income; and 40 percent on decrease in the State's rural population. Each State must pass one-third of the rural revenue sharing funds it receives on to substate multi-jurisdictional areawide general purpose planning and development districts that have been designated as clearing houses under Office of Management and Budget Circular A-95 and a like amount to local governments within the State.

The two-thirds thus passed on to districts and local governments would be apportioned within each State on the same formula basis as funds are apportioned among the States.

The monies provided under the revenue sharing authorization would be available to areas of any State, Puerto Rico, the Virgin Islands, American Samoa, and Guam which are outside the outer boundary of any city having a population of 50,000 or more and its immediately adjacent urbanized and urbanizing area with a population density of more than 100 persons per square mile.

In order to become eligible for funds each State must present to the Secretary of Agriculture a State rural development plan which will generally be a composite of rural development plans submitted by all multi-jurisdictional general purpose planning and development districts within the State.

SECTION-BY-SECTION EXPLANATION

STATEMENT OF FINDINGS AND PURPOSE

Sec. 1001 provides that Congress finds and declares that in order to provide more effective assistance to rural areas of the Nation for the purposes of stemming outmigration, stimulating and aiding economic development and the creation of job opportunities, providing more and better public works and community development facilities, and assisting in the solution of farm, home, and other community problems, it is necessary to establish a program by which States may share in Federal revenues.

SUBTITLE A—DEFINITIONS

Sec. 1002 provides that the definitions contained in the following subsections are applicable for the purposes of this Title.

Subsection (a) provides that the term "rural area" means territory within any State, Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, and Guam outside of any city having a population of 50,000 or more, and its immediately adjacent urbanized and urbanizing area with a population density of more than 100 persons per square mile.

Subsection (b) provides that the term "rural development" means any program or activity of a State, county, municipality, township, town, or multijurisdictional areawide planning and development district of a State which raise rural per capita income, directly increase employment or income or otherwise benefits the residents of a rural area, and that the term "rural community development programs and activities" includes, but is not limited to, the promotion, establishment, assistance, improvement, and encouragement of a greater number of programs and activities related to rural development.

Subsection (c) provides that the term "rural per capita income" means the average personal income of population of a rural area as defined by this title.

Subsection (d) provides that the term "fiscal year" means the fiscal year of the United States.

Subsection (e) provides that the word "Secretary" means the Secretary of Agriculture.

Subsection (f) provides that the word "State" means the several States, Puerto Rico, the Virgin Islands, and Guam.

Subsection (g) provides that the word "Governor" means the chief executive officer of each State.

Subsection (h) provides that the term "multijurisdictional areawide planning and development district" means an organized planning and development body composed of two or more counties, towns, townships, boroughs, municipalities, or a combination of any such governmental units established by or under state law and designated under OMB Circular A-95.

Subsection (i) provides that the term "Attorney General" means the Attorney General of the United States.

Subsection (j) provides that the term "personal income" means such term as defined by the Office of Business Economics of the Department of Commerce, or, as appropriately modified or changed by the Secretary.

Subsection (k) provides that the term "local government" means a municipality, county, parish, borough, or township as defined and used by the United States Bureau of the Census, but does not include independent school districts.

Subsection (l) provides that the term "development plan" means a plan for the expenditure of funds to which an eligible recipient is entitled under section 1102. The plan shall include various programs and activities and growth potentials of the rural areas.

Subsection (m) provides that the term "State rural development planning system" includes a State rural development planning advisory commission, comprised of the Governor and one representative from each district planning board within the State to advise the Governor with respect to the formulation of the State rural development plan. Such planning boards shall be comprised of elected officials from local governments in rural areas within the district. The duties shall be determined by State law or the Governor under State law. Such multijurisdictional planning districts shall encompass the rural areas of entire geographic territory of the State.

DATA FOR DEFINITIONS

Sec. 1003(a) provides that, where appropriate, definitions in section 1002 shall be based on reports of the Department of Commerce or the Office of Management and Budget. The latest published data is to be used in applying these definitions.

SUBTITLE B—RURAL DEVELOPMENT REVENUE SHARING

APPROPRIATION AUTHORIZATION

Sec. 1101 authorizes the appropriation for Subtitle B of sums without fiscal year limitation not to exceed $500,000 for each fiscal year.

APPORTIONMENT

Sec. 1102(a) provides that appropriations authorized by section 1101 shall be apportioned by the Secretary to the States in an amount equal to the sum of the amounts determined in paragraphs (A), (B), and (C).

Subparagraph (A) provides that each State shall be apportioned an amount equal to 40 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the pollution of the rural areas of such State and a denominator of which is the sum of the populations of the rural areas of all States.

Subparagraph (B) provides that each State shall be apportioned an amount equal to 20 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the average of per capita incomes of all the States less the rural per capita income of such State with the difference multiplied by the rural population of the State at the same point in time, and the denominator of which is the sum of the numerator of all States. However, if the rural per capita income of a State is greater than the average of the per capita incomes of all the States, the difference is considered zero.

Subparagraph (C) provides that each State is to be apportioned an amount equal to 40 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the numerical decrease of the population of the rural areas of such State (the Secretary is to take into consideration prior migration trends) and the denominator of which is the sum of the numerical decreases in the population of the rural areas of all States in which numerical decreases in the population of rural areas took place.

Section 1102(b) provides that one-third of the amount apportioned to each State under section 1102(a) shall be divided among the multijurisdictional areawide planning and development districts of such State so that each district will receive an amount equal to the sum of the amounts determined in paragraphs (A), (B), and (C).

Subparagraph (A) provides that each district shall be apportioned an amount equal to 40 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the population of the rural areas of such district and the denominator of which is the sum of the populations of the rural areas of all districts.

Subparagraph (B) provides that each district shall be apportioned an amount equal to 20 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the average per capita incomes of all the districts less the rural per capita income of such district with the difference multiplied by the rural population of the district at the same point in time, and the denominator of which is the sum of the numerator of all districts. However, if the rural per capita income of a district is greater than the average of the per capita incomes of all the districts, the difference is considered zero.

Subparagraph (C) provides that each district is to be apportioned an amount equal to 40 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the numerical decrease of the population of the rural areas of such district (the Secretary is to take into consideration prior migration trends) and the denominator of which is the sum of the numerical decreases in the population of the rural areas of all districts in which numerical decreases in the population of rural areas took place.

Section 1102(c) provides that one third of the amount apportioned to each State under section 1102(a) shall be divided among the local governments of such State so that each local government shall receive an appropriate share of the amount to which its county is entitled under paragraphs (A), (B), and (C).

Subparagraph (A) provides that each county (which shall include any similar subdivision of a State which is not divided into counties) shall be entitled to receive for the local governments therein an amount equal to 40 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the population of the rural areas of such county and the denominator of which is the sum of the populations of the rural areas of all counties.

Subparagraph (B) provides that each county shall be entitled to receive for the local governments therein an amount equal to 20 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the average per capita incomes of all the counties less the rural per capita income of such county with the difference multiplied by the rural population of the county at the same point in time and the denominator of which is the sum of the numerator of all counties. However, if the rural per capita income of a county is greater than the average of the per capita incomes of all the counties, the difference is considered zero.

Subparagraph (C) provides that each county shall be entitled to receive for the local governments therein an amount equal to 40 per centum of the total amount to be apportioned multiplied by a fraction the numerator of which is the numerical decrease of the population of the rural areas of such county (the Secretary is to take into consideration prior migration trends) and the denominator of which is the sum of the numerical decreases in the population of the rural areas of all counties in which numerical decreases in the population of rural areas took place.

Section 1102(d) provides that each State shall be entitled to one-third of the amount apportioned under section 1102(a).

Section 1102(e) provides that until the State, district, or county is authorized to receive funds and carry out activities as provided by this Act, or in the event it refuses to accept such funds, the funds to which it would have been entitled shall be available for allocation by the Secretary for the purposes of this subtitle.

Section 1102(f) provides that the computations and determinations by the Secretary shall be final and conclusive.

STATE RURAL DEVELOPMENT PLAN

Section 1103 provides that commencing with fiscal year 1973, as a condition precedent to receiving entitlements under section 1102, the Governor of each State shall publish and submit a State rural development plan to the Secretary of Agriculture, which shall be formulated through the State rural development planning system or an alternative rural development planning system which assures consultation and coordination with substate multijurisdictional planning and development district and local government. Amendments to such plan may be submitted prior to the end of the fiscal year to which such plan relates. Development plans and amendments thereto shall not be subject to approval by the Secretary. This section requires that such plans take into account the rural development plans prepared by districts and local governments.

Section 1104 provides that each State is authorized to expend its section 1102 entitlement moneys for rural development as defined in section 1002(b).

SUBTITLE C—ADMINISTRATION

PAYMENTS TO STATES, DISTRICTS, AND LOCAL GOVERNMENTS

Sec. 1201 provides that the Secretary shall make payments to each State agency at such intervals and in such installments as he shall determine.

RECORDS, AUDITS, AND REPORTS

Subsection (a) of section 1202 provides that revenues shared by the States, districts and counties are to be accounted for as Federal funds.

Subsection (b) provides that each state, district, and county must utilize proper disbursement and accounting procedures, maintain and provide the Secretary with access to books, documents, records, etc., and make such reports as the Secretary may require.

BALANCED GROWTH POLICY

Sec. 1203 provides that shared revenues shall be expended in accordance with the provisions of section 901(a) of title IX of the Agricultural Act of 1970. Public Law 91-524.

NONDISCRIMINATION

Sec. 1204 provides that shared revenues shall be considered as Federal financial assistance within the meaning of Title VI of the Civil Rights Act of 1964 (42 U.S.C. 20000d).

RECOVERY OF FUNDS

Subsection (a) of section 1205 provides that if the Secretary determines, after giving reasonable notice and opportunity for hearing, that a State has failed to comply substantially with the provisions of this title, he shall (1) refer the matter to the Attorney General for appropriate civil action; or (2) notify such State that if corrective action is not taken within 60 days of such notice that such State's revenue share will be reduced in the same or succeeding fiscal year by an amount equal to the funds which were not expended in accordance with the title's provisions; or (3) take such other action as may be provided by law.

Subsection (b) authorizes the Attorney General to seek appropriate court relief with respect to a matter referred to him under subsection (a).

Subsection (c) authorizes a State to file a petition in an appropriate U.S. Court of Appeals to review the Secretary's reduction of such State's revenue share pursuant to subsection (a), and provide rules of procedure and for Supreme Court review with respect to such petition.

POWERS OF THE SECRETARY

Sec. 1206 vests the Secretary with general administrative powers to carry out effectively the provisions of this title.

AGREEMENTS BETWEEN STATES, DISTRICTS, AND LOCAL GOVERNMENTS

Sec. 1207 gives Congressional consent to cooperation and agreements between States, districts, and local governments.

REPORT BY THE SECRETARY

Sec. 1208 requires the Secretary to make an annual report to the President and the Congress regarding the programs conducted under, and general effectiveness of, this title.

ADMINISTRATIVE EXPENSES

Sec. 1209 authorizes, without fiscal year limitation, such sums as may be necessary to administer this title.

LOCATION OF INSTALLATIONS

Sec. 1210 provides that all installations located, relocated, or constructed with shared revenues shall conform to section 901(b) of the Agricultural Act of 1970, Public Law 91-524.

LABOR STANDARDS

Sec. 1211 provides that the provisions of the Davis-Bacon Act, relating to the payment of prevailing wage rates, shall be applicable to certain projects assisted by shared revenues under this title.

RELOCATION COSTS

SEC. 1212 provides that no Federal relocation contribution in addition to shared revenues shall be provided to assist those displaced by community development activities under this title.

MATCHING GRANTS

Sec. 1213 provides that rural community development funds may be used by a State, multijurisdictional areawide planning and development district, or local government as matching shares for Federal grant programs which contribute to rural development.

EFFECTIVE DATE

Sec. 1214 provides that the effective date of this title shall be July 1, 1972.

Mr. HUMPHREY. Mr. President, I think it is a great day for rural America when we pass this bill and I urge the Department of Agriculture to proceed immediately with its implementation. It is possible to do that and we request that it be done immediately following the President signing the bill into law, which I assume, he will do without reservation.

LOANS FOR RURAL COOPERATIVES

Mr. MOSS. Mr. President, no one will welcome more than I the adoption by the U.S. Senate of the conference report of H.R. 12931, the Rural Development Act of 1972 and the speeding of it on its way to the President.

In the first place, I am a cosponsor of the Senate bill (S. 3462) and although some of the most far-reaching provisions of this bill were lost in House-Senate conference, I still feel that passage of the conference version here today will represent one of the longest steps we have taken for years to improve the quality of life for rural America. When the full effects of this bill are felt, I am confident we can begin reversing the exodus of rural inhabitants of cities because our rural communities will become more attractive places to live, with more orderly development, improved opportunities for industry and small business and more jobs for rural residents close to their homes, better marketing facilities for rural products, more centers of culture and education, and greater assistance with the growing problem of protecting the rural environment from pollution of its water and air.

I want to commend the distinguished Senator from Minnesota (Mr. HUMPHREY), for sponsoring this innovative bill in the Senate, and the dedicated chairman of the Senate Agriculture Committee (Mr. TALMADGE) and all of the subcommittee members and staff who have spent so many long hours on this measure. Its enactment alone will go a long way toward qualifying this Congress for the label of "the Rural Development Congress."

My second reason for hailing final Senate action on this bill today is that it contains the objectives of an amendment to the Consolidated Farmers Home Administration Act I introduced in the 90th Congress, and have introduced in each succeeding Congress. That amendment would authorize the FHA to make loans to both new and existing farm cooperatives unable to obtain credit from other sources.

At the time, in 1967, when I introduced my first bill to authorize the Farmers Home Administration to make loans to cooperatives which served rural families (S. 1971, 91st Congress) many of the rural cooperatives in my State of Utah were victims of what I called a giant credit gap.

They were unable to meet the assets, net worth and management experience required for a loan from the Farm Credit Administration Bank for Cooperatives, so they were turned down there. On the other hand they did not meet the poverty requirements necessary for consideration for a loan under the Office of Economic Opportunity cooperative loan program—which is that two-thirds of the families in the cooperative be in the so-called poverty class. The Utah cooperatives thus fell in between the two available loan programs—existing in a "no loan land," with nowhere to turn for family assistance.

I found after I had introduced my bill that the same situation which prevailed in Utah existed in other States as well, and I was offered support and cooperation from a number of my colleagues. But although hearings were held, no further action was taken.

By the time I had introduced the bill in this Congress, the OEO cooperative loan program was being phased out, and the need for new sources for loan for cooperatives was even more apparent. I, therefore, felt there was a better chance of passage for my 92d Congress bill, S. 1094, and hoped for early action.

Then came the introduction of S. 2223, the predecessor of S. 3462, and the hope it provided, and I turned my attention to supporting it.

Because the conference version before us does not contain exactly the language of my bill (S. 1094) I would like to read the language of that conference version which relates to loans to cooperatives, and ask the chairman a question or two about it afterward.

The section of the conference version to which I would draw attention is section 118, Rural Industrialization Assistance, (a) subtitle A of the Consolidated Farmers Home Administration Act of 1961. It is amended by adding at the end thereof, after section 310A, a new section, as follows:

> Section 310 B (a)—
>
> "The Secretary may also make and insure loans to public, private, or cooperative organizations, organized for profit or nonprofit, to Indian tribes on Federal and state reservations or other federally recognized Indian tribal groups, or to individuals for the purpose of improving, developing, or financing business, industry and employment and improving the economic and environmental climate in rural communities, including pollution abatement and control. Such loans, when originated, held, and serviced by other lenders, may be guaranteed by the Secretary under this section without regard to subsections (a) and (c) of Section 333.
>
> "(b) The Secretary may make grants, not to exceed $50,000,000 annually, to eligible applicants under this section for pollution abatement and control projects in rural areas. No such grant shall exceed 50 per centum of the development cost of such a project."

As I read this, the Farmers Home Administration would be authorized to extend to farm cooperatives—that is cooperatives which serve rural families—the kinds of loans contemplated in my bill (S. 1094). The language in that bill provides that loans would be made—

> to local cooperative associations furnishing to farmers and rural residents services and facilities for harvesting, storing, processing (including preservation or preparation of edible products for market) transporting or marketing agricultural commodities or products, consumer purchasing services, or processing or marketing of other products of farmers or rural residents.

The bill provided that—

> Such loans may include funds for the organization and establishment of the association, necessary and, buildings, and equipment, or for the repair, expansion, or enlargement of such services or facilities, or operating capital for refinancing.

Is it your understanding, Mr. Chairman, that under the provisions of H.R. 12921, section 118, sections 310(a) and (b) such loans and grants may be made?

Mr. TALMADGE May I say to the distinguished gentleman from Utah, who has taken such a constant and supporting interest in this bill, that it is our understanding and intent that the information the Senator from Utah has just made is correct. The section 118 of the Rural Development Act of 1972 fully authorizes all of the loan and grant authorities provided in the Senator's bill, S. 1094.

Mr. MOSS. I certainly do agree that almost any of the efforts made by a farm cooperative to improve or expand its services or facilities would come under the heading of providing more orderly development of the rural community, while at the same time improving it economically and environmentally, so I would feel that the objective which I have sought for so long in behalf of farm cooperatives are encompassed in this bill.

I thank the chairman for this clarification. I wanted to make this legislative history of the intent of the Congress on this bill at this time.

Mr. MILLER. Mr. President, unless someone else would like to speak I am prepared to yield back our time.

Mr. ALLEN. Mr. President, as a cosponsor of S. 3462, as a member of the Senate Rural Development Subcommittee of the Senate Committee on Agriculture and Forestry, as a member of the conference committee, and as one who is deeply interested in strengthening and preserving the most vital of our blessings—the heritage of rural America—I strongly recommend Senate passage of the rural development conference report.

Almost everyone agrees that rural development is important.

Unfortunately, we as a nation are not yet acting as if we think rural development is important.

This is not to say that we are guilty of hypocrisy. We in a democratic society have to agree on our objectives before we can take effective action. Furthermore, we are doing a great deal—as individuals and organizations, as private enterprises and Government units—to develop the economic and social potentialities of rural America. The trouble is, we are not doing enough. We are moving too slowly, and we are not acting in unison.

The objectives of Congress in the area of rural development are well stated in title IX of the Agricultural Act of 1970. Under the heading "Commitment of Congress," we adopted this language:

> The Congress commits itself to a sound balance between rural and urban American. The Congress considers this balance so essential to the peace, prosperity, and welfare of all our citizens that the highest priority must be given to the revitalization and development of rural areas.

We agreed to this national commitment 2 years ago for a great variety of reasons. Each of us, perhaps, has an individual set of reasons based upon his own observations and predelictions.

My own convictions can be put into two categories—first, the fact that both rural and urban America are suffering for lack of opportunity in rural areas; and, second, that we know progress is possible because we see it happening, but not fast enough.

Let us look into the first category of reasons—the fact that rural and urban America are suffering for lack of opportunity in rural areas.

I have seen with my own eyes, and I have heard testimony from witness after witness, that migration out of rural America has produced almost incredible hardship for people and seemingly insuperable problems for city governments and institutions.

In agriculture a technological revolution has displaced people much faster than new jobs and business opportunities have come into being. We have slowed outmigration in many ways. For one, we have been fighting to hold and build markets for our agricultural production in other countries and resisting excessive imports of competing farm products. We have sought to prevent the forceout of farmers by means of programs to support farm prices and income, and in some cases, dividing markets among farmers through marketing quotas.

Through publicly supported research and extension educational work, we have tried to see to it that even the poorest among the farmers could know and use the latest technology. Through conservation programs, we have tried to prevent the erosion of soil and thus maintain a resource base for economic production. Through farm ownership loans, farm operating loans, and various other credit programs, we have tried to make possible the ownership and operation of farms by millions of families who otherwise would have had no chance to be either owners or operators of farms.

I could give many more examples of governmental efforts to maintain the kind of agriculture and rural America—to strengthen the human side of the equation against the harmful forces of the onrushing technological revolution.

Obviously, we have not fully succeeded. Since 1940 more than 30 million people have migrated from rural America, and some 20 million of them from the farms. Now more than 70 percent of our people live on only about 2 percent of our land. Only 9 million people now live on farms. Of 435 congressional districts, only 35 have farm populations of more than 25 percent, and 21 States do not have a single district in which as many as 15 percent are farm people.

Many of the people who have migrated from rural America were not prepared for industrial jobs or for city living. Even had more of them been well prepared, their numbers were so great and they came so fast, that the cities to which they flocked could hardly have avoided being smothered and choked.

Police departments, fire departments, welfare departments, health departments, sanitation departments—every facet of city government, plus the private institutions of our cities, have been strained, tested, and found wanting.

All of this is to say that rural development also has a special meaning for nonrural residents. It means that if we are to help solve the problems of the cities, we must create a new rural environment which not only will curb migration to urban centers, but also will reverse it.

The migration has been slowed, but it has not stopped. During the 1960's about 1,500 counties lost population—about the same number of counties as in the 1950's.

The ills of rural America have been

stated many times. There appears to be no serious disagreement on the major facts. President Nixon has stated—and we find this in the printed hearing records of our Rural Development Subcommittee—that approximately half of the unemployment and underemployment is in rural America, and approximately half of those below the poverty level live in rural America. In his recent message to Congress on rural development, the President said:

> Dramatic disparities exist between metropolitan and rural areas in such indices as per capita income, housing standards, educational attainment and access to medical care.

He noted, also, that Government services cost more per person in thinly settled area, and that State and local governments are frequently "too impoverished or too fragmented to undertake the necessary planning and development activities."

The chairman of our Senate Agriculture Committee, the distinguished Senator from Georgia (Mr. TALMADGE), has stated—and this is in the hearing record—that migration from rural to urban areas is comparable to the movement of 22 million immigrants to our shores between 1890 and 1930. The distinguished senior Senator from Georgia has further stated that the balance-of-payments problem between rural and urban America is far greater than that between our Nation and foreign countries, pointing out that rural people pay millions of dollars of interest to people in the cities and spend millions more on education of children who go to live in the cities. Senator TALMADGE quotes the Veterans' Administration to the effect that 108 of the 159 counties of his State of Georgia are credit-shortage areas where veterans have great difficulty getting home loans. As an example of the staggering credit needs of rural America, he cites Farmers Home Administration survey results showing that communities with populations of 5,500 or less need water and sewer systems that would cost well over $13 billion.

Our Rural Development Subcommittee chairman, the distinguished junior Senator from Minnesota (Mr. HUMPHREY), pointed out in hearings that two-thirds of the Nation's substandard housing is found in rural America. Senator HUMPHREY also pointed out that rural America is short of jobs, doctors, and hospitals, transportation facilities.

He further pointed out that industry is not going to move to rural areas if schools are inferior, if there is inadequate electric and telephone service, and if the nearest health care facility is 50 or 100 miles away.

We also have testimony that tells of progress in rural America. We know some kinds of action really work. We can, therefore, commit ourselves to the objectives of rural revitalization, not merely in desperation, but in a spirit of determination and well-founded hope.

One magnificent example is that great engine of democracy, the Tennessee Valley Authority. In subcommittee we took a close look at the triumphs of TVA both at Decatur, Ala., and at hearings here in Washington.

For almost 39 years now, the Tennessee River Valley has been a successful pilot plan to show how men can develop their resources by democratic means and for the benefit of all the people. The achievement of TVA is a record of men at work with their Government with an absolute minimum of control and interference from Washington, D.C. Let me quote a highly significant statement from the testimony before our subcommittee of Aubrey J. Wagner, chairman of the TVA Board:

> Since 1933 when TVA was created, there has been a notable increase in job opportunities in the Tennessee Valley region, and outmigration has been halted.

Let me repeat and emphasize that statement by Chairman Wagner: Outmigration has been halted.

Mr. Wagner went on to say that per capita income in the TVA region has risen from 45 percent of the national average to 75 percent. Jobs in manufacturing make up a greater part of the total employment in the region than in the Nation as a whole. And in recent years about 80 percent of the region's new industrial jobs have been created outside the metropolitan areas.

I quote further from Mr. Wagner's testimony:

> The development of the Tennessee River and its tributaries has provided a base for industrial and commercial growth and a prime recreation asset. The waterway makes available low-cost barge transportation, and the dams we have built provide abundant supplies of water for communities and industries, as well as for water-based recreation. Flood control has made the level land on the shoreline safe from floods and therefore more usable by industry. And, of course, TVA's dams and steamplants provide large amounts of low-cost power.
>
> All of this has meant jobs. Private industry has invested over $2 billion in new and expanded plant facilities along the main stem of the Tennessee River since TVA completed the navigable channel in 1945 . . . In total in the Tennessee Valley, about a million and a half new jobs have been created in the last 30 years.

Yes, Mr. President, TVA represents rural development on a grand scale. The people of the TVA area have outstripped the Nation in their progress—in their agriculture, their business, their industry, in the increase of their personal incomes, and in the comforts and conveniences of modern life.

In much smaller areas, the rural electric cooperatives throughout the Nation have been helping build stronger, more attractive communities, and providing an indispensable ingredient for industry and commerce—dependable electric service at rates comparable with those of the highly populated cities.

I agree with this statement made by Robert D. Partridge, general manager of the National Rural Electric Cooperative Association, in his testimony before our rural development subcommittee:

> Were it not for the rural electrification program, there would be little or no hope of revitalizing rural areas, which many of us consider essential to achieving balanced national growth.

Rural electric systems are adding consumers to their systems at a rate of nearly 250,000 new meters a year, compared with about 150,000 a year in the mid-1960's. This growth rate in 1970 was 4 percent or nearly double the growth of the electric utility industry as a whole. And the volume of power delivered to consumers on rural electric lines is increasing faster than for the rest of the industry. The power loads of REA borrowers are doubling every 7 years while loads for the entire industry are doubling every 10 years.

In Alaska during last fiscal year, 23 remote villages were electrified, bringing the total of such systems to 40. And in Nevada and Utah the last "power desert" in the continental United States got electric lines.

A REA survey in 1970 indicated that rural electric systems in that year helped to create 38,570 new jobs through 765 commercial, industrial, and community facilities projects.

In Alabama rural electric cooperatives have for years exercised leadership in making communities attractive to people and, therefore, to industry. They have helped the Farmers Home Administration put its expanded housing program before the people, and in one recent 6-month period, the Farmers Home Administration in Alabama doubled its rate of lending for rural housing. Our electric cooperatives have taken the lead in organizing nonprofit housing groups such as the one helped into being by the Baldwin County Electric Cooperative with headquarters at Robertsdale. It is an organization that can borrow money and develop land for rural residences. In many cases, such groups should be able to accomplish much more than could individuals building one house each.

Other Alabama electric cooperatives have helped organize water and sewer projects. For example, Sand Mountain Electric Cooperative with headquarters at Rainsville recently helped get a water project started. And in the Sand Mountain cooperative area, new jobs are being provided by a Monsanto plant, a new cookie bakery, garage body plant, and recreational developments at DeSoto State Park, Lake Guntersville State Park, Buck's Pocket Tri-County Park, and other places.

This electric cooperative is not alone in its interest in recreation developments. Recreation and tourism together make up one of the fastest growing industries in Alabama. It is a half billion dollar business today and the best is yet to come. Many of our excellent recreational sites are in rural locations served by the electric cooperatives, and I am happy to note they take pride in both serving and boosting our great recreation and sightseeing attractions.

In the field of health care, Alabama is providing still another encouraging approach to the problem of rural health delivery services. In Montgomery last July, our Senate Rural Development Subcommittee heard outstanding testimony from the University of Alabama Medical Center spokesmen about a three-point program to help rural doctors and make rural medical practice more attractive. One part of the program is a medical information system through which any physician in the State can call a panel of specialists at the medical center, day or night, without charge, and can obtain consultation or information from the library, and if necessary he can arrange for emergency flights of medicine, equipment, or patients.

Another part is called the MEDEX training program for physicians' assistants. Recently the program has centered on the training of returning military corpsmen, and at the time of our subcommittee hearing in Alabama last July 23 MEDEX trainees were working with rural doctors in five States of the South. The third part of the program is the Lawrence County project, which aims at developing a model of rural health care involving use of MEDEX assistants and trained outreach teams to help with health care in the home.

We thus see that in various parts of the country where we have held hearings, we have heard not only about problems but also of much promising work and some success.

Somebody must be doing something right, because at least a few of our rural areas are gaining in population. The President identified those areas in his rural development message as the middle Tennessee Valley, which I have already discussed, the Southern Piedmont, eastern Oklahoma, and northern and western Arkansas.

The question now is, how are we going to turn the tide around in many more rural areas?

Probably everyone would agree that new industry is essential. But it has become clear that it will take more than new industry to revitalize rural areas. It takes good electric service and modern telephones, water and sewer systems, doctors and hospitals, good schools, roads, libraries, recreation facilities. Another way of saying all that is: "It takes money."

It also takes organization.

Rather than dismantle the Department of Agriculture, we should insist that the Department of Agriculture has the fundamental mission of organizing and administering a real rural development program. For emphasis, we could call it the Department of Agriculture and Rural Development. That would be all right with me.

There are so many pieces of a rural development program scattered through the Federal Government that we can hardly count them. Many of these pieces are in the Department of Agriculture. They are not pulled together and administered as a program. But they should be, and in my opinion, they must be if town and country America is ever to enjoy the fruits of prosperity to which it is entitled.

Much of the money required to do the job need not be expended in the forms of grants—rather it can be loaned, and later returned to the Treasury for use again. So much money is required that we cannot, as a practical matter, rely on Federal expenditures, grants, and revenue sharing to go around. But credit is another matter. Vastly more credit is needed, and credit is practical for the circumstances with which we are dealing.

But to make credit programs fully effective, we need more advance planning, and for this we need to be able to make limited grants. A community cannot hope to obtain credit for facilities such as water and sewer systems until it has a plan and an official presentation that meets the requirements of the lending agency. Yet, in many cases, the community has nobody with the required time and expertise, and no money to hire engineering and other firms to do the advance work that must be done. Problems of this sort represent a bottleneck in rural development, and it will take some grant money to break the bottleneck.

We have also learned in our hearings and through observation that there have been important gaps in credit programs as well as quantitative limits that seriously restrict the potential for getting results. Housing credit is a problem for rural people of moderate income. We can upgrade rural housing much faster than we are now doing if we open up the Farmers Home Administration housing program to them.

The biggest and most important gap we have observed is that of credit for job-creating industrial and commercial enterprises. I personally feel it is necessary to help and encourage local governmental units in their efforts to offer incentives to industry and business.

In addition to helping local government in that manner, we need to make sure that the Federal rural development program can offer loans to both public and private organizations to finance small- or medium-sized industrial and commercial establishments and related facilities.

The principles I have set forth are embodied in the legislation now before us.

We must, of course, continue our endeavor to improve the quality of life in our urban areas, but we must never forget that the strength and prosperity of rural America is basic to the strength and prosperity of our Nation.

Rural America is the very foundation of our national life. It is rural America which has given us the moral and spiritual values that have preserved the vigor of our Nation and the foundations of our freedom and our enterprise.

Indeed, America's greatness has been built not upon material wealth alone but, far more importantly, upon the initiative, the independence, and the love of a divine providence that has flown from the homes of town and country America into the fiber and fabric of our Nation's life.

It is with a deep sense of responsibility to the record of the past and a keen awareness to the challenge of the future that I urge enactment of the Rural Development bill.

The PRESIDING OFFICER. All time is yielded back. The question is on agreeing to the adoption of the conference report. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Louisiana (Mrs. EDWARDS), the Senator from Georgia (Mr. GAMBRELL), the Senator from Wyoming (Mr. McGEE), the Senator from South Dakota (Mr. McGOVERN), the Senator from North Carolina (Mr. JORDAN), the Senator from Minnesota (Mr. MONDALE), the Senator from Rhode Island (Mr. PELL), the Senator from New Mexico (Mr. ANDERSON), the Senator from North Dakota (Mr. BURDICK), the Senator from Oklahoma (Mr. HARRIS), the Senator from Rhode Island (Mr. PASTORE), and the Senator from New Mexico (Mr. MONTOYA) are necessarily absent.

I further announce that, if present and voting, the Senator from Georgia (Mr. GAMBRELL), the Senator from Wyoming (Mr. McGEE), the Senator from South Dakota (Mr. McGOVERN), the Senator from Minnesota (Mr. MONDALE), the Senator from Rhode Island (Mr. PASTORE), the Senator from North Dakota (Mr. BURDICK), and the Senator from New Mexico (Mr. MONTOYA) would each vote "yea."

Mr. SCOTT. I announce that the Senator from Colorado (Mr. ALLOTT), the Senators from Tennessee (Mr. BAKER and Mr. BROCK), the Senators from Nebraska (Mr. CURTIS and Mr. HRUSKA), the Senator from Kansas (Mr. DOLE), the Senator from Michigan (Mr. GRIFFIN), the Senator from Illinois (Mr. PERCY), the Senator from Pennsylvania (Mr. SCHWEIKER), the Senator from Ohio (Mr. TAFT), the Senator from Texas (Mr. TOWER), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

Also, the Senator from Arizona (Mr. GOLDWATER) and the Senator from Oregon (Mr. HATFIELD) are necessarily absent. If present and voting, the Senator from Colorado (Mr. ALLOTT), the Senator from Nebraska (Mr. CURTIS), the Senator from Oregon (Mr. HATFIELD), the Senator from Illinois (Mr. PERCY), the Senator from Ohio (Mr. TAFT), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The result was announced—yeas 73, nays 0, as follows:

So the report was agreed to.

ORDER OF BUSINESS

(The remarks of Mr. JAVITS on the introduction of S. 3935, Public Service Act amendments, are printed earlier in the RECORD under Statements on Introduced Bills and Joint Resolutions.)

PRIVILEGE OF THE FLOOR

Mr. KENNEDY. Mr. President, I ask unanimous consent that LeRoy Goldman, of the staff of the Subcommittee on Health, be accorded the privilege of the floor during the consideration of the health bills.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, Calendar Nos. 1012 and 1013 have been cleared on both sides, and I ask unanimous consent that they be considered at this time in sequence.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC HEALTH SERVICE ACT AMENDMENTS

The Senate proceeded to consider the bill (S. 3858) to amend the Public Health Service Act to improve the program of medical assistance to areas with health manpower shortages, and for other purposes.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that Calendar No. 1012, S. 3858, be temporarily laid aside, and that the Senate proceed to the consideration of Calendar No. 1013.

The PRESIDING OFFICER. Without objection, it is so ordered.

HEALTH SERVICES FOR MIGRANT WORKERS

The Senate proceeded to consider the bill (S. 3762) to extend the program for health services for domestic agricultural migrant workers, which had been reported from the Committee on Labor and Public Welfare with an amendment to strike out all after the enacting clause and insert:

That section 310 of the Public Health Service Act is amended by striking out "$30,000,000 for the fiscal year ending June 30, 1973," and inserting in lieu thereof "not to exceed $60,000,000 for the fiscal year ending June 30, 1973, $105,000,000 for the fiscal year ending June 30, 1974, $120,000,000 for the fiscal year ending June 30, 1975".

SEC. 2. Section 310 of the Public Health Service Act is further amended by striking "and" immediately before the clause designation "(ii)" in paragraph (1) and inserting at the end of such clause the following: "and (iii) premiums for a prepaid health care plan eligible for Federal assistance where such clinics or special projects so request. All such clinics, special projects, and prepaid health care plans shall provide out-reach and follow-up services;".

SEC. 3. Section 310 of the Public Health Service Act is further amended by inserting "(a)" immediately after the section designation and by adding at the end of such subsection the following new subsection:

"(b) There are hereby authorized to be appropriated $25,000,000 for the fiscal year ending June 30, 1973, $35,000,000 for the fiscal year ending June 30, 1974, and $40,000,000 for the fiscal year ending June 30, 1975, to enable the Secretary to assist in the provision of necessary hospital care to domestic agricultural migratory workers and their families."

SEC. 4. Section 310 of the Public Health Service Act is further amended by adding at the end of new subsection (b) the following new subsection:

"(c) In making grants under this section the Secretary shall give priority to those applicants whose policy-making body is composed of a majority of persons who are consumers of its services, where competing applicants appear to the Secretary of Health, Education, and Welfare to be equally qualified."

Mr. KENNEDY. Mr. President, this bill extends the Migrant Health Act through June 30, 1975. It provides comprehensive health care provisions, and provides as well that funding for hospital care be included in the migrant health program for the first time.

Today, with the migrant health programs we have on the books, we are providing health services for fewer than 10 percent of the migrant workers and eligible seasonal farmworkers in the country. We are spending an average of about $5.10 per migrant, in spite of the fact that their health needs, as with so many of the poor and unfortunate people of this country, are among the most critical in the country.

This measure steps up quite significantly the amount of resources available by providing authorizations of $60 million for fiscal year 1973, $105 million for 1974, and $120 million for 1975. That will actually double the authorization for next year over this year, but it is a needed program, and the testimony we had before our committee was that if we were to try to provide minimum standards for health care for the migrants, it would cost some $600 million; so $60 million is a bare minimum.

This measure also includes a separate authorization to help defer the cost of hospital services to migrant workers. That is an extremely important provision, because we have seen time and time again, during the course of our health hearings, where hospitals today are operating on such a thin line between bankruptcy and survival that they have refused to provide migrants with health care, because they cannot afford it. This measure would provide resources for migrant hospitalization. It would authorize $20 million in fiscal year 1973, $35 million for 1974, and $40 million for 1975.

Mr. President, for too long, the health needs of the approximately 1 million migrant agricultural workers in the Nation have remained unmet. Low economic and educational levels, forced mobility, and the lack of State resident status, as well as cultural and language barriers all serve to deny access to any health care service.

Government reports and private studies have convincingly documented the poor health of migrant farmworkers. For example, the infant mortality for migrants is 25-percent higher than the national average. Mortality rates for tuberculosis and other infectious diseases are 2½ times higher than the national rate. Hospitalization for accidents is 50 percent higher than the national rate. The average life expectancy for the migrant is under 60; for the average U.S. citizen, it is over 70.

Witnesses before the joint hearings held by the Senate Subcommittees on Health and Migratory Labor all concurred without exception, that there continues to be a need for a distinct, identifiable program to meet the special health needs of the migrant farmworker and his family. Although there are almost 900 counties in 46 States which have substantial numbers of migrant and seasonal farmworkers, at the current time, the Department of Health, Education, and Welfare finances projects in only 130 counties.

Perhaps no single group in our Nation continues to be as exploited and unserved as the agricultural migrant worker who harvests the food we consume daily.

A dozen years have passed since the television exposé "Harvest of Shame" told the Nation, as did Steinbeck a generation earlier, of the brutal conditions endured by the Nation's farmworkers.

Yet we still find migrant workers with incomes that average approximately $2,100. We still find migrant workers in substandard housing. We still find migrant workers denied the protection of the law.

These men and women continue to travel the stream working for subsistence wages because their own dignity and self-esteem forces them to seek work wherever it can be found rather than to resign themselves to public indigency. In reality, they are subsidizing the meals we eat, for their exploitation means lower costs to growers, savings which may or may not be translated into lower prices at the supermarket for the fruits and vegetables we buy.

The Migrant Health Act is a recognition that the Nation's farmworkers represent a considerable interstate resource.

Without them, there would be no peaches from Washington, no lettuce from California, no tomatoes from Ohio, no asparagus from Colorado, no citrus from Florida, and no cherries from Michigan.

The three major amendments proposed within the bill are a small effort to improve the health care of these citizens. They were included for the following reasons:

First. The bill for the first time specifically authorizes sums for hospitalization. Although the act has authorized the cost of hospitalization since 1965, the program has been unable to stretch the appropriations to cover this vital service. The witnesses have all testified that despite medicare and medicaid, less than

7 percent of the migrant and seasonal farm workers and their families receive hospital benefits.

Second. We have included a provision to permit projects which so request, to use funds for the payment of premiums for health services, where adequate outreach and follow-up services are provided.

This provision looks ahead to the day when it might be possible to enroll more and more migrant and seasonal farmworkers in an improved health care delivery system which serves the entire rural population.

Third. The act also provides for the Secretary to give priority to funding over those projects whose policymaking body is composed of 51 percent or more from the population being served. There are two basic elements which justify this amendment:

The overwhelming demonstration by consumer-based projects that they in fact are more effective in providing a higher quality and more responsive health care service system; and

The commitment Congress and all Americans have for local community control over those services which are designed to serve the people.

Mr. President, this is a good bill. It was reported by the committee unanimously, and it is one that the Senate should accept.

Mr. DOMINICK. Mr. President, I rise in support of S. 3762, which would authorize Federal funds for reimbursement of hospital expenses incurred by migrant workers and their families.

Residency requirements make many migrants ineligible for hospitalization benefits under State medicaid programs, even though they would otherwise be eligible under the income guidelines. This has led to two unfortunate results. First, some migrants and their families have been denied needed medical care; and second, since Government regulations require that Hill-Burton-assisted hospitals provide a "reasonable amount" of free care to persons unable to pay, paying patients at such hospitals have been forced to absorb the extra cost through increased hospital charges.

Mr. President, this legislation, which authorizes $20 million in fiscal year 1973, $35 million in fiscal year 1974, and $40 million in fiscal year 1975, will help alleviate these problems. Existing migrant health legislation provides for reimbursement of hospital costs as well as funding for outpatient health care. Unfortunately, however, due to inadequate funding for the overall program, no funds have yet been used for hospitalization. This does not make sense to me when hospitalization costs amount to more than one-third of total migrant health costs.

Mr. President, I am pleased with Senate passage of this bill today.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. KENNEDY. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. MANSFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

REVENUE SHARING ACT OF 1972

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate now proceed to the consideration of Calendar No. 1015, H R. 14370, so that it may become the pending business.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

> An act (H.R. 14370) to provide payments to localities for high priority expenditures, to encourage the States to supplement their revenue sources, and to authorize Federal collection of State individual income taxes.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

Mr. LONG. Mr. President, tomorrow I expect to discuss this bill, and this bill, of course, will be the pending business over the recess and when the Senate returns.

Mr. President, I ask unanimous consent that part 2 of the report, the "Supplemental Report Showing Distribution of Funds," be reprinted. This is a computer printout of the funds going to each of the localities, and a number of computer errors in the report need correction. The figures shown for individual cities and for county governments are correct, but many of the figures for county areas and for "total to all city governments" are not correct. I think it is important to the Members that his part of the report be reprinted so the correct figures will be available.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG. Mr. President, I will be prepared to discuss this bill tomorrow.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR H.R. 16233 TO BE HELD AT THE DESK

Mr. JAVITS. Mr. President, on H.R. 16233, entitled "Naval Reserve Midshipmen Students at State Maritime Academies and Colleges, Appointments," and so forth, which came over from the other body today, I have been requested, inasmuch as we have one of these State maritime academies in New York—other States have them, too, I understand; there are five—to discuss with the chairman of the Committee on Armed Services whether reference is really necessary or whether it is equitable to put the bill on the calendar.

As I understand, it is a matter which might be delayed because of the volume of work the Committee on Armed Services has and it really is not necessary. I will have no opportunity to do that, Mr. President, unless the bill is held at the desk. It just came over today. No one asked that it be held until I had this notice this evening. We cannot seem to get through to the Committee on Armed Services. They are occupied in a conference.

I have informed the majority leader of my purpose, and I ask unanimous consent that the bill may be held momentarily at the desk.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. I thank the majority leader.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Tht assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HUGHES TOMORROW, FOR TRANSACTION OF ROUTINE MORNING BUSINESS, AND FOR THE SENATE TO PROCEED TO THE CONSIDERATION OF H.R. 14370

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the remarks tomorrow of the distinguished Senator from Virginia (Mr. Harry F. Byrd, Jr.) the distinguished Senator from Iowa (Mr. Hughes) be recognized for not to exceed 15 minutes; that there then be a period for the transaction of routine morning business, for not to exceed 15 minutes, with statements therein limited to 3 minutes, at the conclusion of which the Chair lay before the Senate H.R. 14370, the revenue sharing bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR SENATE JOINT RESOLUTION 241 TO BE TEMPORARILY LAID ASIDE TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the unfinished business, Senate Joint Resolution 241, on tomorrow remain in a temporarily laid aside status, throughout the day, until the close of business tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS ON TUESDAY, SEPTEMBER 5, 1972

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the remarks of the two leaders on Tuesday, September 5, 1972, there be a period for the transaction of routine morning business, for not to exceed 30 minutes, with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR SENATE JOINT RESOLUTION 241 TO BE TEMPORARILY LAID ASIDE ON SEPTEMBER 5, 1972

Mr. ROBERT. C. BYRD. Mr. President, I ask unanimous consent that at the conclusion of routine morning business on Tuesday, September 5, 1972, the unfinished business, Senate Joint Resolution 241, be temporarily laid aside and that it remain in a temporarily laid aside status throughout the day of September 5.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the conclusion of the routine morning business on September 5, 1972, the Senate proceed to the consideration of S. 2087 and follow in sequence with the consideration of the other four bills which have been previously ordered for that date; that at the conclusion of H.R. 9222, the fifth of the five bills included in the previous order, the Senate proceed to the consideration of the second-track item, which will be the Revenue Sharing Act, H.R. 14370.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. COTTON. Mr. President, I have not interposed any objection, of course, to the unanimous-consent requests of the distinguished acting majority leader, and I am thoroughly aware of the plans that have been made.

I just want the record to show that it is my understanding that the revenue-sharing bill, which is of considerable importance and controversy, will be laid aside for five rollcall votes on five measures which, so far as I can see from examining them, probably are completely noncontroversial.

Am I correct in that, I ask the distinguished acting majority leader?

Mr. ROBERT C. BYRD. I think the distinguished senior Senator from New Hampshire is substantially correct. I would only make this observation: It will not be the revenue-sharing bill that will be laid aside. It will be the interim agreement, Senate Joint Resolution 241, which is the unfinished business. Revenue sharing will remain the second track item.

Mr. COTTON. The interim agreement is a matter of some substance.

Mr. ROBERT C. BYRD. Yes. The Senator is correct. The Senator is also correct with respect to his observation that there is probably little or no opposition to the five bills. There may be some problems in connection with one or two, but several Senators have indicated a desire to be recorded on these various crime bills by a yea-and-nay vote. That was one reason why yea-and-nay votes were ordered thereon.

Second, the leadership felt that it was necessary to get off to a good running start with good attendance following the postholiday reconvening of the Senate, so that it could get right on to the revenue-sharing bill and get some action thereon. I would anticipate a vote or some votes on amendments to that bill.

Mr. COTTON. On the revenue sharing bill?

Mr. ROBERT C. BYRD. Yes. I am quite sure there is an amendment which will be offered that day by the Senator from Arkansas (Mr. McCLELLAN). He will probably be prepared to call up an amendment which he indicated will be forthcoming. If that is the case, I would imagine there would be a yea-and-nay vote on that amendment.

Mr. COTTON. My point is this: I rather gather—incidentally, may I compliment the distinguished acting majority leader. I have never seen anyone more faithful in attending to the business of the Senate and ore zealous in striving to follow the business of the Senate and to see that it works and does not mark time. The Senator is fulfilling an excellent function because the tendency on the part of many of the public is to think that we are stalling and wasting time in Congress and I suppose it is natural for them to think that.

However, my recollection is that there was an announcement made that the joint leadership, both majority and minority, had agreed not to ask Members to come back immediately after the convention and prior to Labor Day, provided that Members would be most cooperative and came back quickly after Labor Day and be prepared to be here every day in the week and always available, which is praiseworthy, too.

I rather assumed that the setting of rollcall votes on five measures, some of which probably could be handled in a routine manner on the Calendar, is more or less an enforcement of that ultimatum, that Members be back here and be back promptly the morning of the day after Labor Day, with their sleeves rolled up and ready for business.

Mr. ROBERT C. BYRD. If I might appear to take slight umbrage to the use of the words "enforcement" and "ultimatum," I would have to agree with the rest of the Senator's statement.

Mr. COTTON. I will be glad to withdraw the words "enforcement" and "ultimatum" and simply substitute encouragement and perhaps the carrot method.

However, I simply want to say this, that it so happens—and again I always like to get this into everything I have to say at any time on the floor of the Senate—because of the absolute inadequacy of air service to New England and the complete failure of the Civil Aeronautics Board to deal justly by New England, if I were to be present and answering rollcalls on all these votes, I would be compelled to leave home on Labor Day and either spend the night in Boston and get an early plane or come down here and spend the night, because the first plane out of Boston is at 9 o'clock, the next one is at 12 and gets in here at 1:15.

So I hope that I will not be in ill repute with the leadership if I fail to arrive to answer some of these rather unnecessary rollcalls. It will be simply because I physically cannot arrive. I am not asking for any special consideration. I can sympathize with some younger Senators who are looking forward to future campaigns and who feel it necessary to be here whenever the whip is cracked. But so far as I am concerned, it is not going to be of serious import. But if I am not here for the first two or three of these votes, which undoubtedly will take place before I could physically be here, or if I am not here for any of the votes, come Tuesday, under those circumstances, or if I do not arrive until some future time in the week, I just will come as soon as I can and hope that when I do come it will be for the purpose of voting on something that is important and not something that is just used for the purpose of—I must not say enforcing, but encouraging me to get up in the middle of the night or the night before, or to take 2 days to get here to vote for benefits to survivors of police officers. I cannot imagine that there is a soul in the Senate that would think of voting against that bill. I cannot imagine that it would not be unanimous. On civil remedies to victims of activities prohibited by title IX of the Organized Crime Control Act, if I am not here to vote on that, I hope it will be understood that I am against crime, and that I am for police officers.

On the rehabilitation of addicts bill, if I should not be here to answer that rollcall, I want the record to show that I want to do everything I can to rehabilitate those addicted to narcotics. No. 4, the prosecutions for crimes committed aboard aircraft, heaven knows we are all for that. No. 5, to correct deficiencies in the law relating to counterfeiting and forgery. If I should not be here for that vote, I want the record to show that I am dead against counterfeiting and forgery. On all five of those bills, I just cannot picture a vote against them.

I think that by stating my position as being firmly against crime, firmly for the police, firmly against narcotics, dedicatedly against crimes on aircraft, and completely against counterfeiting and forgery, my reputation will not suffer if I do not get up in the middle of the night and drive to Boston in order to get a plane and get down here in time to vote on measures that would seem to me probably will pass without many votes against them. I just wanted this to show in the RECORD, that I am just not going to be bludgeoned into coming by that method.

I am going to be here, and I am going to be here to attend to the Senate's business. I will be here tomorrow. I will be back when I can get back on Tuesday. However, I might miss some of these votes. So I want to make my position clear.

I thank the distinguished acting majority leader.

Mr. ROBERT C. BYRD. Mr. President,

I have the feeling that a tactical error has been made on my part in allowing this epistle to fall into the hands of the distinguished senior Senator from New Hampshire (Mr. Cotton). However, I say this facetiously and I have no objection to its happening again.

Mr. COTTON. Mr. President, the Senator does not say that this is a classified document and that I have stolen it.

Mr. ROBERT C. BYRD. No. Never. May I also say that while I recognize the very, very gentle rapping of the knuckles—and in all good humor—which the distinguished senior Senator from New Hampshire has administered to the leadership, may I say that the program for Tuesday was agreed upon by the leadership on both sides of the aisle.

The distinguished Senator will, I believe, feel a little better about the whole matter if he is reminded that, while our prognostications cannot always be quite as pure as Ivory soap, we can be at least 95 percent sure that there will not be any rollcall votes tomorrow, which is 1 day's relief which we did not earlier anticipate.

The Senator does have difficult problems insofar as air service is concerned. I think his problems are somewhat unique in that respect, as compared with most other parts of the country. I hope that the votes that will occur on Tuesday, September 5, will not be an inconvenience to, or will not discommode the Senator, because I have the feeling that if he is back in the Chamber by 2 o'clock that afternoon, he will not have missed more than two rollcall votes. And it might be possible that he may not have missed any.

I do not want to be bound by what I have just said. But I have the feeling that it is a pretty fair statement. And the Senator from New Hampshire will never stand in ill repute with the leadership. Nor will he stand in ill repute with any Senator in this body. All Senators recognize the distinguished senior Senator from New Hampshire as being not only one of the most able Members of the Senate, but also as being one of the most conscientious and hardworking Members of this body. And he is certainly always to be commended for his conscientious efforts and for the splendid and most efficient work he does in the committees and on the floor.

I offer my apologies for the program for September 5, insofar as it may in some instances, I know, inconvenience Senators. Some of them may miss a few votes. However, as I say, there probably will not be any votes tomorrow. And I hope that by getting off to a good start on September 5, the Senate can realize its objective, and the House can also realize the joint objective of Congress, to adjourn sine die by the close of business on September 30.

That is something that may not be achievable, but at least we will try.

Mr. COTTON. Mr. President, may I say that I was not attempting to rap the knuckles of my friend, my very dear friend, the distinguished acting majority leader. I commend him because I have been in the Senate long enough, 18 years, to know something about the problems of the leadership. And I know that it requires a great deal of effort on the part of the leadership to perform their tasks. They have to do everything possible to expedite the business of the Senate.

I know that every time we turn around some Senators, who are only human, of course, rush up to the Senator and ask him to defer this or that business of the Senate because they have a speaking engagement or something else to attend to.

I know that if in the goodness of the hearts of the leadership they say that they will, they will soon be blamed because the Senate's business does not proceed rapidly enough. If they say no, some Senator might feel aggrieved because some particular consideration was not furnished to him.

At the very beginning of my remarks I expressed my appreciation for the Senator. I am very serious in saying that. I have never seen in all the years I have been here a leader who was more devoted and dedicated to expediting the business of the Senate than the distinguished Senator from West Virginia. If Senators sometimes say he does not spare them, it is equally true that he does not spare himself ever.

I am not really irritated particularly by this except that I think it is unquestionable that the Senate has gotten into the situation where mature men sometimes have to be treated like schoolboys. Something has to be done to make sure they get here promptly on the first morning of a week ready to do business. If business is going to be done, a Senator ought to be here and he ought to be here without that kind of prompting.

After all, all men are boys to some extent. And it is no disrespect to my distinguished colleague to say that this may well be true. I merely wanted to make sure that I know exactly what the situation is, and I want to make it clear that if I do not respond to the encouragement, it is because it is physically impossible for me to get here.

I just hope that the distinguished acting majority leader can give me some assurance that probably if I should miss the first two or three of these votes, I will not be in the unenviable position of having missed a vote that was so close that one vote would count. I cannot conceive of any votes against the bills. However, it might be so.

I thank the distinguished Senator for his courtesy. I assure him that what I have said is not in criticism of him. However, I do feel that it is necessary that the Senate has had to resort to this kind of expedient.

I am sure that the distinguished acting majority leader is doing a good job. However, he may have to do it for a while without me. However, he will have my prayers and my sympathy all the time I am gone.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator. May I say that whatever factors may have entered into the necessity for programing votes, as is the case here, the distinguished senior Senator from New Hampshire does not fall into the category of any of the problems which created that necessity. His diligence and attendance are always of the highest order.

Mr. COTTON. Mr. President, I thank the distinguished Senator.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the program for tomorrow is as follows:

The Senate will convene at 10 o'clock a.m. Following the remarks of the two leaders under the standing order, the distinguished Senator from Virginia (Mr. Harry C. Byrd, Jr.) will be recognized for not to exceed 15 minutes, after which the distinguished Senator from Iowa (Mr. Hughes) will be recognized for not to exceed 15 minutes, following which there will be routine morning business for not to exceed 15 minutes, with a 3-minute limitation on statements therein, after which the Senate will return to the consideration of the revenue-sharing bill, H.R. 14370. Opening statements and debate will ensue on that bill, which will be the second track item following our return on September 5.

Senate Joint Resolution 241, the interim agreement with the U.S.S.R., remains the unfinished business, and will remain the first track item following the Labor Day holiday. It had been hoped that some agreement might be reached with respect to the interim agreement, by which Senators could guide themselves with respect to knowledge of a final vote thereon in mid-September, and it may yet be possible to reach such an agreement this week. It might require an extraordinary amount of optimism to hope that such could happen, but at least I hope it will.

With the opening statements that will be made on the revenue-sharing bill, and the debate that will occur, I assume that that, together with clearance of the calendar of any unanimous-consent items thereon, would constitute the progress for tomorrow.

Mr. President, for the convenience of all Senators, I ask unanimous consent that a copy of today's majority whip notice be printed in the Record at this point.

There being no objection, the whip notice was ordered to be printed in the Record, as follows:

Whip Notice

August 17, 1972.

Dear Colleague: The Senate will convene tomorrow, Friday, at 10:00 a.m. Senator Harry F. Byrd, Jr., will be recognized for not to exceed 15 minutes, after which Senator Hughes will be recognized for not to exceed 15 minutes.

There will then be routine morning business for not to exceed 15 minutes (3-minute statements therein).

Following routine morning business, opening statements and debate will begin on the Revenue Sharing Bill, which will be the second-track item following our return on September 5. S.J. Res. 241 (Interim Agreement) remains the unfinished business—the first-track item—following the Labor Day holiday.

TUESDAY, SEPTEMBER 5

The Senate will convene at 10:00 a.m. There will be a period for routine morning business for not to exceed 30 minutes, with statements limited therein to 3 minutes. Upon the disposition of routine morning business, the following bills will be taken up, in the order shown and under the time limitations stated, with yea and nay votes thereon:

1. S. 2087 (Benefits to survivors of police officers)—1 hour on bill; 20 minutes on any amendment—a yea and nay vote has been ordered.

2. S. 16 (Civil remedies to victims of activities prohibited by Title IX of Organized Crime Control Act)—½ hour on bill; 20 minutes on any amendment—a yea and nay vote has been ordered.

3. H.R. 9323 (Amends Narcotic Addict Rehabilitation Act of 1966)—½ hour on bill; 20 minutes on any amendment—a yea and nay vote has been ordered.

4. S. 2567 (Prosecutions for crimes committed aboard aircraft)—1 hour on bill; 20 minutes on any amendment—a yea and nay vote has been ordered.

5. H.R. 9222 (Correct deficiencies in law relating to counterfeiting and forgery)—½ hour on bill; 20 minutes on any amendment—a yea and nay vote has been ordered.

Following the foregoing yea and nay votes, the Senate will go to the second-track item (H.R. 14370, Revenue Sharing Act); amendments will be in order; yea and nay votes can be expected.

REMINDER

1. There will be several yea and nay votes on Tuesday September 5, the first day of session following the Labor Day holiday. As you will note, the first yea and nay vote could occur as early as 11:30 a.m. (or before if all time is not used).

2. The Interim Agreement with the U.S.S.R. remains the unfinished business.

3. The Revenue Sharing Bill (HR. 14370) will be the second-track item daily upon our return until the bill is disposed of.

NOTE

Obviously, if Congress is to adjourn sine die by September 30—and this is a hopeful target date—committee work on H.R. 1 will have to be done during the days between the Republican Convention and the Labor Day holiday, even though the Senate will not be in session. Senator Long, the Chairman of the Finance Committee, has stated his desire and willingness to continue work during that period, and the leadership on both sides of the aisle urges full cooperation on the part of all members of the committee.

NOTE NOTE

It is important that, if possible, conferences be completed on bills authorizing appropriations as soon as possible, so that the appropriations bills can be acted upon as early after September 5 as the situation will permit.

NOTE NOTE NOTE

It may be necessary to hold some Saturday sessions in order to complete the work before final adjournment.

Since the Senate reconvened following the Democratic Convention, the following major pieces of legislation (often controversial) have been disposed of:

1. Foreign Assistance Authorization Act.
2. Minimum Wage.
3. Maritime.
4. Marine Mammals.
5. Extension of Civil Rights Commission.
6. Military Procurement Authorization.
7. Military Construction Authorization.
8. Agriculture Appropriations.
9. Freight Car.
10. Securities Exchange Act.
11. Export Control.
12. SALT.
13. SBA Disaster Loans.
14. Vocational, Rehabilitation and Education Assistance Allowance for Veterans.
15. Gun Control Bill.
16. No-Fault Insurance.
17. Airport and Airways Development.
18. American Revolution Bicentennial Commission.
19. Continuing Resolution.
20. Hurricane Agnes Disaster Relief Appropriation.
21. Child Nutrition Programs.
22. S. 32 National Science Foundation Research.
23. Various conference reports and other bills.

The following major pieces of legislation remain to be acted upon—one way or another—before sine die adjournment. They are not necessarily arranged in the order of their scheduling.

1. Interim Agreement on Offensive Weapons. (First and second track items upon return.)
2. Revenue Sharing.
3. Military Construction Appropriations.
4. Military Procurement Appropriations.
5. Foreign Aid.
6. H.R. 1 (Welfare).
7. Supplemental Appropriations.
8. Debt Limit Revision and Extension.
9. Various Conference Reports.

Hopefully, some other measures can be sandwiched in from time to time, as the situation permits. For example, H.R. 10729, Federal Insecticide, Fungicide, and Rodenticide Act.

ROBERT C. BYRD.

ADJOURNMENT TO 10 A.M.

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 10 a. m. tomorrow.

The motion was agreed to; and at 6:21 p.m. the Senate adjourned until tomorrow, Friday, August 18, 1972, at 10 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 17, 1972:

DEPARTMENT OF THE TREASURY

Jack Franklin Bennett, of Connecticut, to be a Deputy Under Secretary of the Treasury.

Warren F. Brecht, of Connecticut, to be an Assistant Secretary of the Treasury.

Frederic W. Hickman, of Illinois, to be an Assistant Secretary of the Treasury.

HOUSE OF REPRESENTATIVES—*Thursday, August 17, 1972*

The House met at 11 a.m.

J. C. Jones, pastor, Glencarlyn Road Baptist Church, Falls Church, Va., offered the following prayer:

O Lord our God, we begin this day aware of Thy presence and our need for Thy guidance. May Thy spirit bless the Members of Congress that they will keep their composure in difficult times, finding inner peace and becoming instruments in bringing peace to the world.

May each Member of our governing bodies be blessed with Thy wisdom to transform every privilege and opportunity into progress and blessings for all mankind.

We seek Thy help in the deliberations today and pray for Thy love to abound in our hearts for every cause that should claim attention.

Let us discipline our minds and actions that we will not grow weary in well-doing, but run the race set before us with patience and endurance. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 16254. An act making certain disaster relief supplemental appropriations for the fiscal year 1973, and for other purposes.

The message also announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 3824. An act to authorize appropriations for the fiscal year 1973 for the Corporation for Public Broadcasting and for making grants for construction of noncommercial educational television or radio broadcasting facilities.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 3441. An act to extend the traineeship program for professional public health personnel, and project grants for graduate training in public health under the Public Health Service Act; and

S. 3752. An act to extend programs for assistance to medical libraries.

CALL OF THE HOUSE

Mr. LANDRUM. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. BOGGS. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 334]

Abbitt
Abourezk
Abzug
Anderson, Tenn.
Ashbrook
Aspin
Badillo
Baker
Baring
Barrett
Betts

Terry
Thompson, N.J.
Veysey
Waldie

The SPEAKER. On this rollcall 326 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

RECESS

The SPEAKER. Pursuant to the authority granted to the Speaker on Thursday, August 10, 1972, the Chair declares the House in recess subject to the call of the Chair to receive the representatives of the U.S. Olympic team.

Accordingly (at 11 o'clock and 34 minutes a.m.) the House stood in recess subject to the call of the Chair.

RECEPTION BY THE HOUSE OF REPRESENTATIVES OF THE U.S. OLYMPIC TEAM, 1972

The SPEAKER of the House presided.

Mr. Clifford H. Buck, president, U.S. Olympic Committee; and Miss Cynthia Potter, Sgt. Raymond Russell, U.S. Marine Corps, and Mr. Wayne Wells, elected representative members of the U.S. Olympic team; entered the Chamber, escorted by the Doorkeeper (Hon. William M. Miller), and took the seats reserved for them.

The SPEAKER. Members will be in order.

My colleagues, may I begin my brief remarks by saying that we, as elected Representatives of the people of the United States, are proud that the outstanding young visitors who have come here today are, first of all, Americans. We are proud of their talents. We are proud of their dedication. We believe in their goals. We are confident of their victory.

We welcome them to the House of Representatives.

[Applause, the Members rising.]

The SPEAKER. The Chair is now pleased to recognize the distinguished majority leader of the House of Representatives, the gentleman from Louisiana (Mr. Boggs).

Mr. BOGGS. Mr. Speaker, Mr. Buck, my colleagues and members of the great American Olympic Team: I am happy to join with the distinguished Speaker and the distinguished minority leader, Mr. Ford, in welcoming to this historic Chamber the members of our team soon to begin competing in the Olympic games in Munich.

This is an ancient competition, dating back to the year 760 B.C., continuing until well into the Christian era and revived in 1896.

Our team has competed for many years, and has won great distinction. We are proud indeed that in this body we have two distinguished ex-Olympic champions, my colleague Bob Mathias and my colleague Ralph Metcalfe.

These games represent peaceful competition between nations promoting better than almost anything else good will and international understanding.

So I would say to the members of our team, some of whom I am proud to say are from my own State of Louisiana—sitting there in the gallery—that you go really representing us, our country, a great nation, and you go with the blessing and the good will of every Member of this body on each side of the aisle.

I might say it was an athletic event or a team event, a ping-pong team, which went to the People's Republic of China, which first opened contact with that nation after 25 years.

So, as I said at the beginning, we are happy to have you here. We are proud of you. We wish you Godspeed.

We shall be watching your performance.

Thank you.

The SPEAKER. The Chair now recognizes the distinguished minority leader of the House of Representatives, the gentleman from Michigan (Mr. Gerald R. Ford).

Mr. GERALD R. FORD. Mr. Speaker, our distinguished guests, and my colleagues: I join all 435 Members of the House of Representatives in welcoming our 1972 Olympic Team to the people's House, the House of Representatives.

In my 24 years in the House of Representatives I have been privileged to sit in the House and to hear from many, many distinguished guests. We have had heads of state. We have had our famous and heroic astronauts. We have had Presidents of the United States. We have warmly welcomed all such distinguished and honored dignitaries.

But I think I speak for all Members of the House when I say on this equally auspicious occasion each and every Member wishes to each and every one of you the best of luck to win those Gold Medals in 1972.

The modern Olympiad began in 1896, and we have had 20 since that time. On 17 out of those 20 occasions the United States has accumulated enough points to be recognized as the winner. On three occasions we have not been that successful.

But it is my judgment, after reading the papers of the trials and the competition in all of the events, that 1972 is the year for the United States in Munich.

As was mentioned by Mr. Boggs, two of our very distinguished Members of the House of Representatives, in their younger days, were Gold Medal Winners in the Olympics. Mr. Metcalfe, of my era was a distinguished member of the 400-meter relay team, along with Jesse Owens and two others. Bob Mathias was the winner of the decathlon in 1948, and again in 1952.

I can say, observing both Ralph Metcalfe and Bob Mathias, they are in pretty good shape today.

I might add, I hope the fact that Ralph Metcalfe and Bob Mathias as Members of the House of Representatives may be an inspiration for some of you. It seems to me that they are carrying on in the same great tradition that they did in 1936 and again in 1948 and 1952 by serving in the House of Representatives today.

With all sincerity, I urge that each and every one of you serve in the Congress; and, being a little prejudiced, I hope in the House of Representatives.

Along with the Speaker and the distinguished majority leader and all Members of the House on both sides of the aisle, we wish you the very best. The Olympics have contributed substantially—not only the games but also the competitors—to better world understanding.

As we move in 1972 and in the decades ahead to a hopefully improved and enlarged world of understanding let me say that each and every one of you by your competition can contribute to a better world in the years ahead.

Good luck and Godspeed!

The SPEAKER. The Chair now has the honor to introduce a colleague whom the Chair met in 1933, on the way to Europe, when he was going to participate in summer athletic events, having been on the Olympic team the year before. Later, in 1936, he was on that immortal relay team that broke the world record in the presence of Adolf Hitler.

A fine Congressman, a great athlete, and a great American, the Honorable Ralph Metcalfe of Illinois.

Mr. METCALFE. Thank you, Mr. Speaker.

My distinguished colleagues in the House of Representatives; a good friend of mine over many years, Mr. Clifford Buck; a very fine group of athletes representing the United States, America's finest, the Olympic Team to compete in the 20th Modern Olympic Games: I have a double pleasure this morning, for my good friend and colleague, Congressman Bob Mathias, said that, "I have to be out in the district tomorrow on congressional business. Will you please say a word for me?"

I am happy to do that, and to say to you, though he sits on that side of the aisle and I sit on this side of the aisle we have a common spirit of togetherness and something that has been carried over, and these athletes will also have that spirit when they return. It means that you accept an individual for what he is and the contribution that he is making.

My arch competitor during the 1930's, the great Olympic champion, Jesse Owens, and I are still friends. We play in the same foursome, although we play against each other. It is that sort of spirit that is so important to us.

Tomorrow and the couple of days thereafter you athletes will be embarking on a new and brilliant experience. You will be going to Munich, and I think it is wise to say to you now that the fine people of Germany are most anxious to have you. They are most anxious to have these Olympic Games. And they are also somewhat embarrassed and would like to remove the stigma that occurred in 1936. I would hope that you will not hear that any more.

If you get the full impact of your hosts, those on the Munich Olympic Committee and all of the Germans, it will be for you to remember Germany as it is today and to remember Munich. This is their goal and this is their purpose, for all of us can recognize the importance of the effort that has been put forth.

We refer to our villages as the Olympic villages. They refer to them as the oberwiesenfeld, and that means a complex of 740 acres for athletic and cultural olympiads. There will be art exhibits, the theater, concerts, orchestras, operas, ballet, and folklore festivals.

So, in addition to athletics, you will have the opportunity to see this Bavarian country, this country that aligns themselves with Vienna, and many of them would like to think of themselves as being Viennese, who have spent over $400 million in order to make your stay enjoyable and to remember it as you move along in physical life.

The main competition itself will be in the arena, a free form steel and plexiglass tent. They call it the "tent roof" tent, and under this cover is 90,000 square yards, which is equivalent to 14 football fields.

The Olympic stadium itself hosts 80,000; the sports hall 11,000; and there will be 9,000 seats for those who wish to see the swimming events.

After these games are over these facilities will be turned over to the people of Munich for housing, recreational, and cultural development—housing for some 16,000 residents, dormitories for 1,800, and there will be facilities in the elementary and high schools to accommodate some 8,000.

This is because you are going over there as a member of the U.S. track team, and other countries will be participating. I would urge you to view what you see there, to look at their mass transit system, to be able to ride on their subways, in which they take a great deal of pride, to be able to shop in the malls and to see the lack of automobiles in those malls.

Because you are going over there in the spirit of competition already you have achieved a goal in your life. I, for one, am not concerned as to whether or not you come back with the gold medal but rather what else you do come back with, that will be of lasting value.

Many people have asked me—and they will ask you, if they have not already done so—"What is your greatest experience?" I told them mine was in 1932, when I finished the 100 meters, in the final Olympic tryouts and I was pulled off to the side, and the gentleman said, "I want to take your measurements for your uniform on the Olympic Team." That to me was my greatest experience. I then knew that I would have the opportunity of representing my country and that I had made the Olympic Team.

So when you go to Munich, you go with our blessing and with our spirit. I would ask that you prepare yourselves so that you may be able to return to your families, to your community, some of the benefits that you are the recipients of, and the reason why you are the greatest that we have in the United States. You will come back assuming a role of leadership, helping to make this country a greater country than it is today, and then you will know that you have really gotten the full impact of being a member of the U.S. Olympic Team.

Our wishes, our prayers, our confidence go with you as you represent all of the people of the United States.

[Applause, the Members rising.]

The SPEAKER. Thank you, RALPH. I am sure that your words today will be an inspiration to the members of our great Olympic team, as your performance on the Olympic field was an inspiration, to all young Americans in the 1930's. We appreciate the historical perspective from which an Olympic's winner, now a great public servant, is able to review the past and present importance of these international games.

Now I have the honor of presenting Mr. Clifford Buck, who is Chairman of the U.S. Olympic Committee, Mr. Buck.

[Mr. Buck rose, to applause.]

The SPEAKER. Every member of this great team—and they occupy a major portion of this chamber—is a distinguished and an accomplished American. We would like to meet them all. We would like to hear from them all. But in the interests of time they, themselves, by their own election, have chosen representatives to speak for them.

I make that preliminary statement, because I want to emphasize that it is only a coincidence that the first person I am going to call on happens to be an alumnus of my university, happens to participate in a sport I participated in in my university, is a resident of my State, is one of the all-time all-American wrestling champions, and during his college years broke all records ever made at the University of Oklahoma.

I have the great honor, and take pride in it, presenting to you Mr. Wayne Wells, 1970 world champion wrestler.

[Applause, the Members rising.]

Mr. WAYNE WELLS. Mr. Speaker, distinguished Representatives: First of all I would like to just thank the whole Congress for being so wonderful not only to me but to the whole Olympic delegation from the United States, to allow us to come here today and just see all this. It is really great.

Personally, I would just like to again thank you, Mr. Speaker. We in Oklahoma are real proud of him, and I know he is real proud of the people of Oklahoma.

Speaking as a representative from the Olympic Team, I would just like to say that it is a tremendous honor to be a member of the Olympic Team and to go to Munich and to represent the United States of America. I would just like to pledge myself personally and as a representative of the team that we are going to go over there and do everything that we can to bring back a Gold Medal for every single person that makes the trip.

Thanks a lot.

[Applause, the Members rising.]

The SPEAKER. It is now my honor to introduce a young man who has distinguished himself in many ways. First of all, he is a member of the U.S. Marine Corps, and I think that is a distinction.

Second, I am told he is a sergeant in the U.S. Marine Corps.

And when you see him I know that you will agree that every private in every company that he has served in respected his authority.

He has been the 1969 light heavyweight interservice boxing champion, and the 1970 Pan American Games light heavyweight champion. On the boxing team representing us he will bring back the Gold Medal.

It is an honor to present Raymond Russell of the U.S. Marine Corps.

[Applause, the Members rising.]

Mr. RAYMOND RUSSELL. Mr. Speaker, on behalf of all of the Olympians, I thank you for this honor and the privilege of speaking before this distinguished legislative body, the Congress of the United States. We feel that it is most appropriate for this Congress to honor us today as the U.S. Olympic Committee was established when the 81st Congress passed Public Law 805.

You are the Representatives of all the people of this great Nation, and through you we want to thank all these people for their support, moral and financial support, and for enabling all of us to represent them in the 20th Olympiad in Munich.

One of the ideals of Baron De Coubertin—if I am pronouncing his name correctly—who was the founder of the modern Olympiads, was to "create international amity and good will, thus leading to a happier and more peaceful world."

So while all of us will seek to reach our highest level of accomplishment in our respective competitions, I pledge to you and the American people that our primary purpose will be to fulfill that ideal of the Baron's on the field of friendly strife; and we will extend the hand of friendship on behalf of the United States to all these men and women from all nations, with our fondest hope that we may contribute to a greater understanding that will lead to an everlasting peace throughout the world.

I thank you very much.

[Applause, the Members rising.]

The SPEAKER. I have saved the prettiest team member for the last. This distinguished young lady, chosen by all of her colleagues on our great team, and I belong to the smallest minority in America, the short people.

She is last only with respect to her stature. She has proven her talents are towering; she won all three outdoor AAU diving championships in 1971. She is certain to bring home some gold medals.

It is an honor indeed to present Miss Cynthia Potter, of Houston, Tex.

[Applause, the Members rising.]

Miss CYNTHIA POTTER. Mr. Speaker, Members of Congress, ladies and gentlemen: On behalf of the women's representatives of this 1972 Olympic Team I should like to thank you for giving us the time of yours today to receive us here.

I am proud to be representing the United States in Munich this month, and I would like to say that we will all do our very best.

Thank you very much.

[Applause, the Members rising.]

The SPEAKER. My colleagues and our guests, I want to thank those who have addressed us. They have been outstanding representatives of a wonderful team. I thank those who selected them for choosing such typical and outstanding young America athletes; I thank all of you again for coming here today.

This concludes the program. The House will stand in recess and will reconvene in 5 minutes.

The president of the U.S. Olympic committee and the three elected representative members of the U.S. Olympic team were escorted by the Doorkeeper from the Chamber.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker at 12 o'clock and 17 minutes p.m.

PRINTING OF PROCEEDINGS HAD DURING THE RECESS

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that the proceedings had during the recess be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

APPOINTMENT OF CONFEREES ON H.R. 3337, ACQUISITION OF VILLAGE SITE FOR PAYSON BAND OF YAVAPAI-APACHE INDIANS

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 3337) to authorize the acquisition of a village site for the Payson Band of Yavapai-Apache Indians, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Colorado? The Chair hears none, and appoints the following conferees: Messrs. ASPINALL, HALEY, EDMONDSON, ABOUREZK, SAYLOR, STEIGER of Arizona, and LUJAN.

APPOINTMENT OF CONFEREES ON H.R. 6797, DISPOSITION OF JUDGMENT FUNDS OF KICKAPOO INDIANS OF KANSAS AND OKLAHOMA

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 6797) to provide for the disposition of funds appropriated to pay judgments in favor of the Kickapoo Indians of Kansas and Oklahoma in Indian Claims Commission dockets Nos. 316, 316A, 317, 145, 193, and 318, with a Senate amendment thereto, disagree to the Senate amendments, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Colorado? The Chair hears none, and appoints the following conferees: Messrs. ASPINALL, HALEY, EDMONDSON, ABOUREZK, SAYLOR, STEIGER of Arizona, and CAMP.

APPOINTMENT OF CONFEREES ON H.R. 7742, DISPOSITION OF JUDGMENT FUNDS OF YANKTON SIOUX TRIBE

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 7742) to provide for the disposition of funds to pay a judgment in favor of the Yankton Sioux Tribe in Indian Claims Commission docket No. 332-A, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Colorado? The Chair hears none, and appoints the following conferees: Messrs. ASPINALL, HALEY, EDMONDSON, ABOUREZK, SAYLOR, STEIGER of Arizona, and CAMP.

APPOINTMENT OF CONFEREES ON H.R. 8694, DISPOSITION OF JUDGMENT FUNDS OF YAVAPAI APACHE TRIBE

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 8694) to provide for the disposition of funds appropriated to pay a judgment in favor of the Yavapai Apache Tribe in Indian Claims Commission dockets Nos. 22-E and 22-F, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Colorado? The Chair hears none, and appoints the following conferees: Messrs. ASPINALL, HALEY, EDMONDSON, ABOUREZK, SAYLOR, STEIGER of Arizona, and LUJAN.

APPOINTMENT OF CONFEREES ON H.R. 10858, DISPOSITION OF JUDGMENT FUNDS OF THE PUEBLO DE ACOMA

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 10858) to provide for the disposition of funds appropriated to pay a judgment in favor of the Pueblo de Acoma in Indian Claims Commission docket No. 266, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Colorado? The Chair hears none, and appoints the following conferees: Messrs. ASPINALL, HALEY, EDMONDSON, ABOUREZK, SAYLOR, STEIGER of Arizona, and LUJAN.

APPOINTMENT OF CONFEREES ON S. 3230, DISPOSITION OF JUDGMENT FUNDS OF ASSINIBOINE TRIBES

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 3230) to provide for the disposition of funds to pay a judgment in favor of the Assiniboine Tribes of Indians in Indian Claims Commission docket No. 279-A, and for other purposes, with a House amendment thereto, insist on the House amendment, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Colorado? The Chair hears none, and appoints the following conferees: Messrs. ASPINALL, HALEY, EDMONDSON, ABOUREZK, SAYLOR, STEIGER of Arizona, and CAMP.

INEQUITABLE TARIFF HURTS U.S. SMALL BUSINESS

(Mr. WOLFF asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WOLFF. Mr. Speaker, considering the critical state of the economy in general and the defense-related economy in the Long Island area in particular, I am deeply concerned about the fact that American small business defense firms are unable to compete in the Canadian market.

This situation has resulted from a seemingly inequitable tariff arrangement whereby Canadian defense firms can sell to the United States without import duty, while the U.S. firms' sales to Canada are subject to duty on all orders of under a quarter million dollars.

I believe that there is a close relationship between the economies of our two nations and I in no way wish to penalize the Canadian economy. However, I feel that the terms of the informal defense production understanding must be altered to reflect more clearly the severe unemployment in our Nation.

This must be considered by the appropriate officials involved in the ongoing bilateral talks on this agreement. All that we are asking is an even break for U.S. small business.

EXTENSION OF THE EMERGENCY EMPLOYMENT COMPENSATION ACT OF 1971

(Mr. SMITH of New York asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SMITH of New York. Mr. Speaker, I am committed to attempts to reduce the crucial unemployment situation that presently exists throughout the United States and particularly in my own congressional district. Latest reports available for the Niagara-Erie County area show the unemployment rate to be 8.2 percent for the Buffalo standard metropolitan statistical area—SMSA.

Public Law 92-224, extension of the Emergency Employment Compensation Act of 1971 allows for 13 weeks of additional unemployment insurance when the State's unemployment rate rises above 6.5 percent. Along with the 13 week extended benefits, this legislation recognized the suffering and hardship that many people are continuing to experience and recognized our need to provide assistance during this emergency.

The present unemployment rate in New York State is 5.95 percent which makes the State ineligible for extended emergency unemployment benefits. Yet, at the same time, there are pocket regions throughout the State, including Buffalo, town of Tonawanda, Erie County, Niagara Falls, North Tonawanda, and Niagara County whose unemployment rate exceeds the 6.5 percent cutoff level. Because of the inequities in the present legislation which prevents these people from receiving extended or emergency compensation, I am today introducing legislation which would allow any standard metropolitan statistical area to continue receiving benefits so long as the area's unemployment rate remains above the level prescribed by the present law.

I should be the first to point out, however, that unemployment compensation is not the final answer to those people who must receive it. But, it will allow them the assistance they need until we realize the training and the jobs that are so essential to our local and national economy.

I urge immediate consideration of the assistance offered by this legislation.

CALL OF THE HOUSE

Mr. RUTH. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. The gentleman from North Carolina makes the point of order that a quorum is not present.

The Chair will count.

Mr. RUTH. Mr. Speaker, I withdraw the point of order.

The SPEAKER. The gentleman may withdraw the point of order.

For what purpose does the gentleman from California (Mr. Hawkins) rise?

Mr. HAWKINS. Mr. Speaker, I object.

The SPEAKER. This is not subject to objection.

Mr. HAWKINS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. The Chair has just counted.

A quorum is not present.

Mr. O'NEILL. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 335]

The SPEAKER. On this rollcall, 357 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

EQUAL EDUCATIONAL OPPORTUNITIES ACT OF 1972

Mr. COLMER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1090 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. Res. 1090

Resolved, That upon the adoption of this resolution, clause 27(d)(4) of rule XI to the contrary notwithstanding, the House shall immediately resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13915) to further the achievement of equal educational opportunities, and all points of order against said bill are hereby waived. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Education and Labor, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider without the intervention of any point of order the amendment in the nature of a substitute recommended by the Committee on Education and Labor now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, and such substitute shall be read for amendment by titles instead of by sections. It shall be in order to consider without the intervention of any point of order as an amendment to the committee amendment in the nature of a substitute the provisions of section 406 of the bill H.R. 13915. At the conclusion of such consideration, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER. The Chair recognizes the gentleman from Mississippi (Mr. Colmer) for 1 hour.

Mr. COLMER. Mr. Speaker, I yield the customary 30 minutes to the minority, to the very able and distinguished gentleman, my friend from California (Mr. Smith); and pending that I yield myself such time as I may consume.

Mr. Speaker, if I may have the attention of the membership, I would like to make a few remarks that I regard as pertinent to the consideration of this matter.

First, Mr. Speaker, permit me to say for the benefit of the membership generally and, particularly for those who might be tempted to engage in some dilatory practices here, that we have been a long time in getting this bill, or any bill of this nature to the floor. As chairman of the Committee on Rules, and having the privilege that that committee possesses of calling up resolutions of this nature, under privilege, I have tried to cooperate with the leadership to the best of my ability, and I think with the approval of my committee—and we have arrived at this hour.

It could have been called up days ago.

Now I have an understanding, and if I am not correct about that, of course, I will be corrected, that this matter finally enjoys that high privilege, and to exercise that high privilege, this matter is considered now.

It is the purpose of this House by a resolution heretofore agreed upon that the Congress will recess tomorrow night, but if I understand the agreement that I have correctly, this matter having that privilege, is going to be pursued until its consummation and a final decision one way or the other.

This House will get out of here on schedule for the recess if the membership cooperates. If it does not, I am going to insist upon this privileged matter being pursued to the end, and I hope we may have the cooperation of the House.

Now, so there can be no confusion and in order to put the matter in correct perspective, this matter of forced busing for the purpose of achieving racial balance is possibly either first or certainly not more than second, if not of equal importance, depending on how you want to evaluate it, to the Vietnam war itself. The great majority of the people of this country, including the President of the United States, want to see an end to the war at the earliest practical date. They also want to see an end at the earliest date to this intolerable situation of taking children, transporting them up to 20, 30, or 40 miles, not to mention a half mile or a mile, away from their homes for the purpose of achieving racial balance in our schools.

Now, I think it is only fair to say that some legislative committees have been rather reluctant to take any action upon the bills that have been presented to them. There is a constitutional amendment that has been reposing in the committee headed by my friend, an able gentleman, the dean of this House, the gentleman from New York (Mr. Celler), who will be, according to the press, shortly leaving us, at the end of this term, and that will be a great loss to this body. But that committee has not seen fit to report out that amendment, nor has it seen fit to report out the President's recommendations on a moratorium that would hold this matter in abeyance until the Congress could finally enact a bill with some guidelines under its constitutional authority to stop, as I said, this intolerable situation.

Now, your Committee on Rules—a majority of them, of course, not always unanimous—had these three propositions before it: a constitutional amendment; the President's moratorium and the guideline version of the Committee on Education and Labor.

The Committee on Rules saw fit to—I use the word, yes, "bypass," I might as well use it—bypass the Judiciary Committee on the constitutional amendment and clear it to the floor. But, and I want this made plain now, it did not exercise authority or power possessed by it to bring out the President's moratorium. On the contrary, with some diligence and some patience, considerable patience, the Committee on Rules awaited action on the guidelines provision by the Committee on Education and Labor on the theory, of course, that if the guidelines legislation were enacted, then the moratorium which the President recommended would be unnecessary.

So today we have the Education and Labor Committee bill. I must confess that while the Rules Committee did not take this bill away from the Committee on Education and Labor, maybe a little prodding did contribute to the final reporting out of such a bill. So that is what we are considering here today.

It is not a bill that this House or even the proponents of some relief in this matter can agree upon in its entirety. It is not what I would prefer to have. It is too weak to suit me, just as it is too strong to suit some other people. So we come to the legislative process, which is historically in legislative matters approached and resolved in a compromise.

Before I leave that matter permit me to say if I may that this resolution on the constitutional amendment is still pending. It has been reported out. It is a privileged matter and could have been called up many days ago, but it was not called up for that reason that I mentioned earlier, and for the further reason that the time element is such that there could be no hope for relief in the immediate future, requiring as it does a two-thirds vote in this Chamber and in the other Chamber and ratification by three-fourths of the States. It is my honest opinion that the States would ratify, once given the opportunity. And again, if I had my choice I would prefer the constitutional amendment to this approach, because I think there could be no question then about its effectiveness or its constitutionality of course.

However, I want to emphasize that it has been cleared for floor action by my committee; and may be called up after we return from the congressional recess. In other words we could well be in the position of approaching this problem on two fronts.

From one end of this country to the other the people are deeply concerned about these court orders taking their children, from infancy, from kindergarten on through high school, and busing them, as I said a moment ago, 20 miles or more, or even a mile.

The purpose of this legislation, which I do not have time to discuss at any length but which will be discussed later, and explained possibly better than I could, is to stop that situation and to prevent the busing of children up to and through the sixth grade to any school, giving preference to the neighborhood school or the school next to that.

I do not like that phrase, nor do I like the limitation. I understand an amendment will be offered that would extend that provision beyond the sixth grade and through high school.

Sometimes I think my friend who put that provision in the bill must have been thinking about 75 or 100 years ago when people in the sixth grade had gotten up to 15 or 16 years of age. Today a seventh grader is pretty much in the infant class.

Regardless of that, the people of this country do not want their children taken away from the neighborhood school or the one closest to them and bused to these interminable ends. It is not good for the child and it is not good for the school.

We talk about quality education. How are we going to get quality education when they spend a great deal of the time transporting the students back and forth in buses?

There was a time when this affected only my particular section of the country, but the courts have now expanded and extended it, and it is no longer de facto or de jure. They are going to be bused whether they live in Michigan, as the Michiganders realize now, or in Maryland, or in California, the State of my friend, Mr. SMITH, where they started out on this expanded theory.

Remember this now: It was all right as long as it affected only a minority section of this country, to wit, the so-called South, but now the chickens have come home to roost, and it is affecting other sections.

Mr. Speaker, I would not be human if I did not admit that it is with some—well, at least I do not lie awake at night worrying or crying about some of my friends in the so-called North having to go through what we have been going through down in my section for some time.

Now, maybe they have not hit you yet, but it is just a question of time unless something is done about it. Mr. Speaker, I did not want to take all this time. I do want to follow that one thought, however, that I just made. I have not read it recently, but in my early high school days I seem to remember something about a man named Ulysses.

Ulysses, according to Greek mythology, did a lot of traveling. He came to an island that was inhabited and controlled by a giant of a man, a one-eyed giant, who subsisted on a flock of sheep. He gathered these sheep into his cave with him at night. When Ulysses' ship landed on the island, the giant captured him and the whole crew and ushered them into his cave. And each night, according to this mythology, if I remember it correctly, he took two of the crewmen for a change of diet from the sheep, dashed them to the ground, and consumed them. Ulysses pled with him but to no avail.

However, he did promise Ulysses that he would consume him last. Well, Ulysses conceived the ingenious idea of sharpening a club, and while the giant was asleep bashed in that one eye. Then when the sheep went out in the morning, the giant ran his hands, blinded as he was, across the back of the sheep. Ulysses outwitted him on that by tying the few remaining members of his crew under the bellies of the sheep. In that way they escaped. Now there may be some Ulysses around here that are waiting to be the last to have their particular areas go through what we have been going through but your time will come. I would not advise that you pursue that policy. In this connection, an amendment will be offered in simple fair play to provide that those districts, those schools that are already affected by this court procedure, can be reopened. Is that an unreasonable request? Or is that fairness?

Can anyone object to the people in California who are under this edict, or the people from Alabama, having the same treatment as the people of the rest of the country? I hope you will support it.

Mr. Speaker, there are so many other things I would like to say about this bill, but I cannot in good conscience and good practice usurp all of the time because I have promised some time to others.

Mr. Speaker, I hope that those who are interested in this objective and those who are interested in the objective of carrying out the scheduled vacation will stay on the floor and permit the House to work its will in this matter.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, first may I say that I think my good friend, the distinguished chairman of the Committee on Rules, the gentleman from Mississippi (Mr. COLMER) has made one of the most profound statements on the floor of the House in the presentation of this matter that I have ever heard. He has covered every single step of the history of this matter, and in my opinion it was very, very expertly and well done. I wish to associate myself with the remarks of the gentleman, particularly his request for the cooperation of the Members because, as I understand the schedule posted on the minority leader's desk, we have a number of bills that must be disposed of before we take our recess. Whether we have a pro forma session tomorrow or whether we have a long session tomorrow will depend upon how much work we are able to accomplish today on some matters that must be disposed of.

Mr. Speaker, this particular resolution, House Resolution 1090, provides for the consideration of the bill H.R. 13915. This is a bill for the further achievement of equal educational opportunities.

The first waiver of points of order has to do with clause 27(d)(4) of rule XI in view of the fact that the report was not available to the House for 3 days prior to the time that House Resolution 1090 was reported. All points of order are actually waived against the bill. In addition it provides for 2 hours of debate, to be equally divided between the chairman of the Committee on Education and Labor, and the ranking minority member.

In addition, Mr. Speaker, the bill is a committee substitute, so the rule provides for its consideration in the nature of an amendment.

Then it will be read by titles under the rule, instead of by sections. In addition, specifically, the rule provides that section 406 of the bill H.R. 13915 will be in order as an amendment. I am not certain whether or not we have to have that in the rule, because that provision was in the bill earlier. However we wanted to be certain that this could be considered. That is the provision that has to do with permitting previous cases to be opened up.

That happens to be my situation. I have no idea whether my city of Pasadena, Calif., would come back to open up this case and appeal it or not. I never did understand the decision, and I do not believe 1 percent of the people in my city understand why the decision was ever made; that is, the busing decision of some years ago. Actually, the Department just asked us if they could come out and study the city of Pasadena. We have no discrimination problems at all in the city of Pasadena. The blacks are just as welcome as anybody else. They live wherever they want to live. It happens that many of them, being friendly with one another, do live in the area in Pasadena known as Altadena. The houses are the same and the children live and play together. Pasadena has no ghettos and no slums. It is a fine city.

In fact, when the investigators went out there first they asked us for our cooperation. They indicated to us that they wanted to ascertain how we operated so successfully with the indication that it could help explain this to other parts of the country.

We cooperated in every way.

The next thing we knew, we were in court and neither the blacks nor the whites understand it.

The schools were precisely the same—the desks, the books, the lunch programs announced every Friday afternoon—everybody went to the school they wanted to, the neighborhood school mostly. But all of a sudden we were ordered to bus students from one area to another in order to have a balance of black and whites in each school.

We have several families—fathers and mothers, husbands and wives—both schoolteachers. The husband will teach in one school and the mother or the wife will teach in another.

Yet, their children are bused back and forth. The parents teach the same course and they do not understand why children have to be bused as the education is uniform in all schools in the city. They have explained it to me this way.

At the time this started, Pasadena, I am proud to say, my district, had as high an educational average as any congressional district with 12.4 years per person.

In any event, I have no idea—they have given me no indication whether they will appeal it. I would rather doubt they would appeal.

In any event, this matter is before us today. The Rules Committee has tried by a majority vote in the committee to bring something to the floor that Members can consider.

Mr. Speaker, I would urge the adoption of House Resolution 1090 so that we may proceed with the consideration of the bill, H.R. 13915.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield for a question?

Mr. SMITH of California. I yield to the gentleman.

Mr. PUCINSKI. Did I understand the gentleman correctly to say that the bill would be read by section? The rule provides that it be read by title. Am I not correct?

Mr. SMITH of California. Yes; it will be read by title instead of by sections. I thank the gentleman. I will correct my remarks.

Mr. PUCINSKI. I thank the gentleman.

Mr. SMITH of California. Mr. Speaker, I yield 5 minutes to the gentleman from Ohio (Mr. McCulloch).

Mr. McCULLOCH. Mr. Speaker, by what authority can the Congress enact a law which would deny a citizen the enjoyment of a constitutional right? By what authority can the Congress constrain a coequal branch, entrusted with interpreting the Constitution, to do what it has already declared unlawful?

In our hearts, Mr. Speaker, we know we do not have the authority to deny the enjoyment of constitutional rights or to tell the courts how to interpret the Constitution. Yet, H.R. 13915 would do just that. It would attempt to overrule Swann by overriding Marbury against Madison.

Do any of us seriously believe that the Supreme Court is going to accept this bill as law? If not, then what is H.R. 13915?

First, it is ineffective. It will not stop busing. Second, it thus holds forth a false hope to those who find constitutional commands inconvenient. It will frustrate and exacerbate—not relieve. Third, it is an attack on the courts. It will be a grave personal injustice to the judges, who true to the same oath we have taken, perform their duty and invalidate this legislation. They will bear the scorn of those who suffer the empty promise of H.R. 13915. Fourth, it is a message to the black community, to the blacks who favor busing and to those who oppose it, that the Congress is no longer committed to a policy of desegregation. The bill is a nullity but the impact of the message on the aspirations of blacks is real.

We live by symbols. By this action, the Congress would be taking down one flag and raising another. The whole land would understand. And no legal doubletalk, no rationalizations would ever explain it away.

A society is measured by how its majorities treat its minorities. Prior to 1954, the law that governed the land, although it condoned separation, at least promised equality. Then in Brown the Supreme Court made history by adopting as law what time had proved to be fact: That there would be no equality ever, so long as there was separation. H.R. 13915 promises neither to end separation nor to achieve equality. As a statement of principle of how the majority treats the minority, H.R. 13915 is less worthy than what Brown condemned.

Therefore, I oppose the rule. The bill is a bad bill. The sooner its death, the better.

Mr. SEIBERLING. Would the gentleman from California yield 1 minute for a question to the gentleman from Ohio?

Mr. SMITH of California. I shall be glad to yield 2 minutes to the gentleman from Ohio (Mr. McCulloch).

Mr. SEIBERLING. Mr. Speaker, I would like to commend the gentleman from Ohio, the dean of our delegation and the ranking minority member of the Judiciary Committee, for a very profound and very basic criticism of this bill. I should like to associate myself with his remarks.

I should also like to say that I intend at the appropriate time to offer an amendment or amendments which would declare that nothing in this bill shall authorize or require any educational agency or court to refrain from taking any action necessary to prevent a denial of equal educational opportunity to any person in violation of the 14th amendment to the Constitution of the United States.

Mr. McCULLOCH. Mr. Speaker, I thank the gentleman from Ohio for his comments, and I welcome his support.

Mr. BOLLING. Will the gentleman yield?

Mr. McCULLOCH. I yield to the gentleman from Missouri.

Mr. BOLLING. Mr. Speaker, I should like to associate myself with the statement and the position of the gentleman from Ohio (Mr. McCulloch). I should like to state further that when he leaves this Congress, this Nation will have suffered a grevious loss. Without the efforts of the gentleman from Ohio (Mr. McCulloch), this country would not, through its Congress, have taken the positions that it has taken in the last dozen and more years in support of equal treatment for all its citizens.

The gentleman from Ohio (Mr. McCulloch) has played as great a role in that effort as any two other people that I know.

Mr. McCULLOCH. I thank the gentleman from Missouri.

I yield back the balance of my time.

Mr. SMITH of California. Mr. Speaker, I yield 4 minutes to the gentleman from Illinois (Mr. Anderson).

Mr. ANDERSON of Illinois. Mr. Speaker, I am well aware of the desire of most and perhaps all of the Members of this body to quickly dispatch the business that is before us this afternoon, and yet I think it is appropriate to take this time that I had asked for before I knew what my colleague on the Rules Committee, the gentleman from Missouri (Mr. Bolling), was going to say. I asked for this time because I too wanted to pay a word of tribute to the gentleman from Ohio, the ranking member of the House Committee on the Judiciary (Mr. McCulloch. Because we are now in what most of us hope also are the closing weeks of this second session of the 92d Congress, I personally may not have as good an opportunity as this again to express to him the very deepest feelings that I have for him and his courage, and his capacity, and the constancy with which he has supported the cause of civil rights in this body and before the American people.

I do not quarrel with the constitutional analysis that he has just so very succinctly given us of this particular measure. I personally appeared and testified at great length before the House Committee on Education and Labor when that committee was conducting hearings on this bill in an effort to suggest to them some ways in which I thought they could draft a constitutional statute because I do not quarrel with the notion that many Members have that the courts on past occasions have in some instances committed some rather egregious errors in school desegregation cases.

I also believe that this Congress has the legal authority and the right to establish proper guidelines in cases of this kind. But I have thought long and hard since that testimony was given several weeks ago and I have pondered very carefully this legislation. I simply cannot believe that it comports with my understanding of what the 14th amendment and the Constitution say.

I voted to send this bill to the floor. I take a somewhat different position from the gentleman from Ohio on the rule. I did so because I thought this was such a grave public question that the Members of this body have the right to express themselves and to work their will on it.

I would also very frankly confess that I felt that in the case of this bill it had gone through the proper committee hearings, whereas the other bill we were being asked to report, the so-called Student Pupil Transportation Moratorium Act, had not been released from the committee of competent jurisdiction.

I personally feel it is only on very rare cases of very grave national emergency, such as the one we were confronted with in the national transportation strike, where the Committee on Rules should undertake to discharge the committee of competent jurisdiction from its consideration of a bill. So I voted to send this bill to the floor today, but I merely wanted to take this time to express my appreciation again to the gentleman from Ohio for pointing out with his excellent clarity and conciseness why this bill simply does not in its present form pass constitutional muster.

In his Currie lecture at Duke University earlier this year on the busing controversy, Prof. Alexander M. Bickel of Yale employed a very apt quotation by Alfred North Whitehead. In it Whitehead warns against allowing the symbolic elements in life to "run wild, like the vegetation in a tropical forest. The life of humanity can easily be overwhelmed by its symbolic accessories."

In 1972 busing has become the symbol of a vast and pervasive discontent with the failures of our educational system. No matter that it accounts for only 4 percent of the more than $47 billion expended annually for public schools or that only around 5 percent out of a total of 2.2 billion vehicle-miles in the school year 1970–71 was for desegregation purposes. The fact that every day 20 million children or over 40 percent of total public school enrollment travel daily on more than a quarter million familiar yellow schoolbuses and have done so for more than a half century without harm to either themselves or their educational careers is submerged by a tidal wave of public resentment because of some recent court-ordered desegregation plans.

And so today we threaten to overwhelm the forces of those who still believe in the cause of integration because of our complete preoccupation with this symbolic element. The real problem is that of inferior schools. The real problem is a continuation of racial isolation which is revealed in statistics for the 1970–71 school year which show that approximately one-third of all black students in 11 Southern States are attending all black schools. The real problem is also in the North because today more than half of the black population of our country resides in the nation's 50 largest cities which are located in the north and east and west as well as the south.

I am under no illusions about the passage of this bill. Recently I attended a meeting where I heard a lady tell her representative: "I don't care what the bill is. As long as it's against busing, vote for it." We do not discharge our duty, however, if we take an action today that merely attacks the symbol and not the problem. Nor do we discharge our duty under the Constitution if we adopt legislation that in conscience we believe is violative of both the spirit and the letter of our constitution. It is not that I believe that our courts are free from error in some of their decisions. Indeed in a lengthy statement before the House Education and Labor Committee when hearings were conducted on this very bill I freely conceded that I think in cases like those in Denver, Detroit, and Pontiac I felt the courts had erred. It is not that I feel that Congress is "totally without power to act and to prescribe reasonable guidelines for the courts to follow. But to legislate the complete proscription of a remedy which may be the only available remedy to guarantee equal protection rights under the 14th amendment to the U.S. Constitution as this bill would clearly do goes far beyond the legitimate constitutional prerogative of the Congress. Since Marbury against Madison we have held to the doctrine that the judicial feel that Congress is totally without in the judicial branch and that it has the power to determine the constitutionality of actions of the legislature. In the case of North Carolina State Board of Education against Swann which was decided a little over a year ago the U.S. Supreme Court struck down a busing ban as unconstitutional because it operated "to hinder vindication of federal constitutional guarantees."

In the other Swann case involving the Charlotte-Mecklenburg Board of Education the U.S. Supreme Court declared that in the disestablishment of formerly dual systems school boards and district judges must make "every effort to achieve the greatest possible degree of actual desegregation." The committee bill in section 403 of title IV clearly flies in the face of that test. Indeed the committee bill in my judgment possesses a patent internal inconsistency. For in title II, section 201, which defines "unlawful practices" and "denial of equal educational opportunity" it expressely says that "no State shall deny equal educational opportunity to an individual on account of his or her race, color, sex, or national origin, by (a) the deliberate segregation by an educational agency of students on the basis of race, color, or national origin among or within schools. Then in subparagraph (b) it prohibits the failure of an educational agency which has formerly practiced such segregation to take affirmative steps, consistent with title IV of this act, to remove the vestiges of a dual school system.

Anyone who is at all familiar with the facts in the Charlotte-Mecklenburg case realizes immediately that the committee bill would make it impossible to wipe out the remaining vestiges of a dual system by banning all busing in the elementary grades beyond the second closest school from the pupil's place of residence. So what the committee bill does is to pay lip service to wiping out the vestiges of a dual system while proscribing the only feasible and available remedy.

The adoption of this bill means the continuation of all black schools even in a district which once operated as a dual system. This point was freely conceded in testimony before the House Rules Committee.

When Congress undertakes to totally circumscribe the enforcement of a basic constitutional right that has been so adjudged for 18 years, can anyone seriously argue that we are not taking a great stride backward. Stripped of all its emotionalism we are confronted by this bill with two fundamental questions. Do we want to redefine the allocation of power between the judicial branch and the legislative branch of our federal system in such a way as to render it impossible for the courts to enforce basic constitutional rights? Do we want to go back more than 75 years to the discredited doctrine of Plessy against Ferguson that there is such a thing as separate but equal schools?

Mr. Speaker, I cannot in truth and conscience answer these questions in other than the negative. I have a deep reverence for our federal system and its basic doctrine of separation of powers. I believe that if we commit an act of retrogression by abandoning the goal of an integrated society, which this bill clearly does, we are only sowing the seeds of future despair and hopelessness for millions of black schoolchildren who deserve something more than continued racial isolation in the classrooms of our country. This bill is not the answer to inferior schools nor will it advance the cause of quality education. It is out of focus completely and it reflects only a sadly blurred image of the real problems that confront American public education. It is that will take us farther away from the goal of a society where men are not judged on the basis of race or the color of their skin. It will simply perpetuate and indeed exacerbate the tensions within our society that produced the convulsive reactions of the decade just passed. For all these reasons I cannot and shall not vote for this bill.

Mr. COLMER. Mr. Speaker, I yield 5 minutes to the distinguished gentleman from New York, the dean of the House (Mr. CELLER).

Mr. CELLER. Mr. Speaker, I yield to no man in my admiration for the gentleman from Ohio (Mr. McCULLOCH). He has consistently plumped for decent and good legislation and he has manifested at all times in the committee and on this floor and in all his labor as a Congressman patience, integrity, and wisdom.

I rise in opposition to the rule. The antibusing bill reported out by the Committee on Education and Labor cannot pass constitutional review. It is not so much against busing as against racial equality.

It deprives the Federal courts of their constitutional power to remedy deliberate, State-imposed racial segregation in public schools. But if Congress by statute cannot abolish a constitutional right, it cannot by statute abridge or restrict such rights.

The bill before us curtails fundamental constitutional tenets. Here busing is denied as a remedy. Denial of a remedy is denial of the underlying right.

If the Constitution can be split up as to schools, remember, ladies and gentlemen that that technique can be applied next to housing, then to voting, then to labor, and then civil rights can be cast into limbo.

The so-called antibusing proposal denies to the courts what may be in some cases the only effective remedy to desegregate schools and to secure equal protection of the laws. There is no court decision, there is no constitutional provision, which empowers the Congress so to act.

The Equal Educational Opportunities Act resurrects the doctrine of separate but equal and applies it to the elementary schools. It applies another standard to secondary schoolchildren. If our basic charter can be amended by mere statute, then we have indeed lost our fundamental civil liberties.

No such mechanical, inflexible, or far-reaching device will withstand judicial review. The Equal Educational Opportunities Act is merely an effort at short-term political gain. Even if the administration wants to lead us to Gehenna, must we follow?

The House of Representatives is not the place to abandon the national commitment to equal rights under the law. The Congress cannot use the courts to accomplish unconstitutional objectives.

The purpose of the proposed legislation is not to enforce the 14th amendment; it is not to foster desegregation of public schools; it is not to regulate the jurisdiction of Federal courts. Rather, its purpose is to suspend the equal protection clause and to roll back the progress so painfully won in schools throughout the Nation. It is only calculated to defer the busing issue until November.

And do not let the situation deceive you. It is a political ploy. It will take a year or so before a final decision is reached in the Supreme Court. The President knows that. When the case has reached the Supreme Court, the election will be over. He will have accomplished his political purpose. What is the political purpose? Votes. By that time, when the decision is reached in the Supreme Court, the public fever will have abated. Then what? We will have on our statute books a statute which is undoubtedly unconscionable and unreasonable.

I say, do not permit prejudice to becloud your wisdom. Do not let emotion overwhelm your logic. Do not allow your anger to control your actions.

Remember, he who rises in anger always sits down with a loss.

Mr. Speaker—

> There are many places still in this country where the schools are either white or Negro and not just schools for all children as the Constitution requires. In my opinion, there is no reason why such a wholesale deprivation of constitutional rights should be tolerated another minute.

So spoke the late Justice Hugo Black in 1969. The proposed "Equal Educational Opportunities Act" violates the fifth amendment to the Constitution by placing special burdens on minorities who would resort to the courts to obtain their constitutional right to unsegregated schools.

The proposed legislation violates article III of the Constitution by interfering with the judicial power of the Federal courts and particularly the Supreme Court by outlawing pupil transportation where unconstitutionally segregated schools are found.

Nor can the proposal be sustained as a means of enforcing the 14th amendment. Its clear purpose and its effect will be to perpetuate segregation in those schools now violating the constitutional mandate. It will roll back the desegregation that has heretofore been achieved only after many years of travail and perseverance.

Plainly, this bill is an effort to amend the Constitution by statute, and to repeal the equal protection clause as applied to public schools. It seeks to camouflage an antiequality purpose by an ostensible regulation of Federal courts.

Busing is not the issue, it is only the excuse.

More than 43 percent of all public school pupils ride a bus to school. Only that busing which will guarantee equal protection of the laws is under attack here, so it must be civil rights and not transportation which is at issue.

This bill panders to fears; fears that have been fostered by political opportunism. It falsely promises that the children of certain citizens will be immune from desegregation.

Mr. SMITH of California. Mr. Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. PRICE).

Mr. PRICE of Texas. Mr. Speaker, nearly two decades have passed since the Supreme Court handed down its momentous Brown against the Board of Education decision in 1954, which declared that "separate but equal" was merely another term for inequality.

Our Nation has since experienced many tense moments as we have sought to implement the process of desegregating our public schools and facilities. There have been some setbacks, but for the most part, we have made remarkable progress in giving greater meaning to the noble phrase embodied in our Pledge of Allegiance that we are "one Nation under God" and that we share one common destiny as one people.

I believe the great majority of Americans have come to accept the idea that true progress as a Nation is dependent upon domestic harmony and tranquility, and that we cannot have within our midst an alienated segment of the population which cannot share the spirit of belonging and pride in our common heritage and destiny. Freedom of choice, the neighborhood school, and open and free access to our public facilities are essential to our success in unifying our society. Unfortunately, there are those in positions of public trust who have overreacted; that is, they have attempted to impose solutions to our problems which have been as bad if not worse than the problems themselves. I am referring in this particular instance to the extraordinary and even incredible schemes of racial mixing that have been developed which have expanded the meaning of Brown again the Board of Education far beyond its original intent. For the first time in American history the schoolbus has become a symbol of oppression and has brought about the total disruption of neighborhoods, cities, States, and the Nation itself.

Public opinion polls tell us that the American people are strongly opposed to busing for the sake of achieving racial balance in our public schools. I for one completely concur as I do not feel that blending certain percentages of skin color in a classroom has anything to do with improving the quality of education for our children. Instead of spending money for schoolbuses, gasoline, tires, and salaries for busdrivers, we ought to instead be investing in new classrooms, better prepared teachers, and better teaching materials.

Mr. Speaker, I have personally introduced a constitutional amendment to prohibit the forced busing of schoolchildren; I have supported and have signed a discharge petition to wrench this important legislation from the Judiciary Committee where it has been held captive, and I have continued to speak out against Department of Health, Education, and Welfare regulations and court rulings which have only further aggravated the schoolbusing problem without offering any hope for an end to this ludicrous activity.

I applaud the decision by the House Rules Committee to take action upon the constitutional amendment prohibiting forced school busing by bringing this measure to the House floor for a vote. This is the only way the views of the people can be expressed and their judgment rendered on this important question.

Until the busing amendment can be voted upon and sent to the various States for ratification and approval, I strongly support any other legislation, including the President's proposed busing moratorium which will work to bring to a halt the further imposition of arbitrary, unreasonable, and pointless busing schemes which are dreamed up in the minds of social planners whose idea of freedom for the American people is that the American people shall be free only to do as they are told by the would-be savers of society.

I call upon this body to listen to the American people to whom we owe our office; we must stop the absurd busing of schoolchildren merely for the sake of achieving racial balance. It would make no more sense to bus children because of their religion or their sex or their nationality. The American people expect and deserve no less than that we shall represent them in truth in this the "people's house."

Mr. SMITH of California. Mr. Speaker. I have no further requests for time.

Mr. COLMER. Mr. Speaker, I am somewhat sympathetic with my two senior retirees and "lameducks," the gentleman from New York (Mr. CELLER) and the gentleman from Ohio (Mr. McCULLOCH), being in that position myself. The three of us have given the Members the benefit of our parting wisdom here. After many battles with them over the years, I somehow feel that the tide may be turning and public opinion may be swaying to the more realistic attitude that I have espoused in many previous battles.

I am sorry that I cannot agree with what was just said. I, of course, do not have the time to comment upon it, but I recall that my good friend and my very able and astute friend (Mr. CELLER) said toward the end of his statement that it would take a year to test the constitutionality of this proposed legislation. I recall that when he opposed at first the 18-year-old constitutional amendment as not being constitutional and then espoused it, that arrangement was made and the matter of testing its constitutionality was accelerated in the courts.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. CORMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 318, nays 72, answered "present" 1, not voting 41, as follows:

So the resolution was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Hébert for, with Mr. Rooney of New York against.

Mr. Passman for, with Mr. Reid against.

Mr. Caffery for, with Mr. Ryan against.

Mr. Long of Louisiana for, with Mr. Waldie against.

Mr. Anderson of Illinois for, with Mr. Conte against.

Until further notice:

Mr. Monagan with Mr. Baker.

Mrs. Hansen of Washington with Mr. Talcott.

Mr. Abourezk with Mr. Edwards of Alabama.

Mr. Leggett with Mr. Betts.

Mr. Hull with Mrs. Dwyer.

Mr. Boggs with Mr. Frelinghuysen

Mr. Carney with Mr. Springer.

Mr. Edmondson with Mr. McDonald of Michigan.

Mr. Ullman with Mr. Rhodes.

Mr. Lennon with Mr. Railsback.

Mr. McMillan with Mr. Keith.

Mr. Gallagher with Mrs. Heckler of Massachusetts.

Mr. Mathias of California with Mr. Michel.

Mr. Carter with Mr. Clancy.

Mr. Davis of Wisconsin with Mr. Pelly.

Mr. DANIELS of New Jersey changed his vote from "nay" to "yea."

Mr. CULVER changed his vote from "yea" to "nay."

Mr. ANDERSON of Illinois. Mr. Speaker, I have a live pair with the gentleman from Massachusetts (Mr. CONTE). If he had been present, he would have voted "nay." I voted "yea." Therefore, I withdraw my vote and vote "present."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

The SPEAKER. Pursuant to House Resolution 1090, the House resolves itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13915) to further the achievement of equal educational opportunities.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 13915, with Mr. UDALL in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Illinois (Mr. PUCINSKI), will be recognized for 1 hour, and the gentleman from Minnesota (Mr. QUIE), will be recognized for 1 hour.

The Chair recognizes the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the Equal Educational Opportunities Act is truly historic legislation. Its passage 18 years ago would have allowed our country to undertake an orderly removal of the dual school system without arousing all the resentments and animosities which are so visibly present among our people today.

The Supreme Court itself has stated in Swan that its own guidelines on busing are "incomplete and imperfect."

This act has as its basic purpose the laying out of "ground rules" regarding segregation in public schools. It defines for the first time in Federal law "equality of educational opportunity," and it absolutely bars a State from denying this equality to any individual. It also authorizes civil actions by the Attorney General and by persons being denied this equality.

The bill, however, makes crystal clear that the failure of an educational agency to achieve a racial balance of students among its schools does not constitute a denial of equal educational opportunity or a denial of equal protection of the laws under the Constitution.

Similarly the assignment of a student to the school nearest his place of residence is no such denial unless such assignment is for the purpose of segregation.

Those are the rules. Now people will know where they stand. School administrators will know what their responsibilities are to their students and to their teachers. And students and teachers will have a right to sue for an infraction of their rights.

But the bill also goes one step further. It also sets out precisely what will happen if a court or a Federal agency finds that a denial of equal educational opportunity or a denial of equal protection has occurred. Today there is no such uniformity of result among Federal courts and agencies. A particular judge in one State has ordered integration by television throughout the school district of a large city. Another judge in a different State has ordered the merger of three entirely distinct school districts. Yet both judges claim that they are remedying de jure segregation. No wonder the people are confused. No wonder we wind up with court cases dragging on for 10 or 12 years. No wonder our court calendars are becoming hopelessly bogged down with school matters. And no wonder our citizens are voting down school bond issues to show their disgust.

The bill before you will bring stability to our schools by requiring that all Federal courts and agencies must use the same systematic method for determining remedies in school segregation cases. This method is set out in section 402 of the bill. In fashioning their remedies courts and agencies must go to the first remedy listed in that section to determine whether that particular remedy corrects the unconstitutional situation. If it does not, then the court proceeds on to the second remedy and thereon down the list. The first adequate remedy or the first combination of effective remedies on the list must be used by the court or agency in correcting the unconstitutional wrong.

No student in sixth grade or under can be ordered bused beyond the school closest to his home or next closest to his place of residence. Nor can busing be ordered for students in seventh grade and above beyond the closest or next closest schools unless it is demonstrated by clear and convincing evidence that no other adequate remedy is available.

In no case, however, can school district lines be ignored or altered in prescribing any of these remedies unless these lines were established for the purpose, and had the effect, of segregating students.

I was pleased to read last week that the Fifth U.S. Circuit Court of Appeals in New Orleans has come close to requiring that the method which we set out in this bill be used by all Federal judges within that circuit in prescribing remedies. The court ruled in cases involving Austin and Corpus Christi, Tex., that the lower Federal court judges had to exhaust every other possible remedy before resorting to busing to desegregate schools.

That is precisely what we have done in this bill. We have set out with specificity the remedies which may be used in school segregation cases, and we have limited busing as a remedy of last resort.

The reasons we limited busing are twofold. First, we have been told by the head of the Civil Rights Office in HEW that substantial integration is possible within the neighborhood school concept and without a heavy resort to busing. Testimony presented on the study "school desegregation with minimum busing" buttressed this position. Twenty-nine urban areas were surveyed in this study and it was found that substantial integration could be achieved without busing any students who could otherwise walk to school.

Second, we came to the conclusion that courts were ordering excessive busing. In Raleigh, N.C., 40 percent of that school district's student population has now been ordered to be bused. This amounts to 22,000 additional students who are now being bused. In Little Rock, Ark., almost 30 percent of its students were ordered to be bused recently—23,000 additional students. And we have evidence that in every one of the 10 largest school districts showing the greatest percentage increases in busing there has occurred at the same time a flight from those school districts of white pupils from middle-income families as well as black students from middle-income families.

We want to bring stability to these school districts. And it is my hope that the bill before the House today will go a long way to achieve that goal.

The bill before you also earmarks from the Emergency School Aid Act up to $500 million for compensatory education programs in schools with high proportions of poor children. The bill provides that hopefully up to $300 in additional funds from this program be spent on the education of each educationally deprived child. This is the "critical mass" which the administration has told us is needed to assure results in compensatory education programs.

I would have preferred, and I voted in committee for, a provision making this "new" money instead of taking it from the Emergency School Aid Act. That act now authorizes a billion dollars a year to pay for desegregation ordered by Federal courts and to help pay for voluntary integration efforts undertaken by local school districts. Both of those purposes are eminently proper—the Federal Government ought to help pay for desegregation if it has been ordered through the Federal courts and we ought to be encouraging totally voluntary efforts at integration.

The committee instead decided to earmark up to half of the authorization under that act for compensatory education. But this was done with the clear understanding that the administration would ask for the full billion dollar authorization for ESAA this year. Since this act was an administration proposal, this full funding should offer no problems.

Mr. Chairman, the bill we have brought before this House today is a balanced bill. It sets out an orderly process for the determination of remedies in school integration cases and it provides that if any minority students are left in schools with high proportions of poor children they will have extra funds spent on their education to afford them equal opportunities for quality education.

The distinguished gentleman from Ohio (Mr. MCCULLOCH), principal sponsor of this bill, asked by what authority does Congress deny a constitutional right. If you read this bill carefully, you will find we are not—I underscore—not, taking away any constitutional rights; we are spelling out remedies.

I believe that this act represents the best we in Congress can do at this point in time, and I urge my colleagues to support it.

Constitutional experts who have argued in favor of the constitutionality of this type of legislation:

Charles Bork, Yale Law School;

Charles Alan Wright, University of Texas Law School; and

Archibald Cox, former Solicitor General of the United States.

REGARDING CONSTITUTIONALITY

Congress is not denying anyone any constitutional rights. It is merely spelling out remedies.

Congress has explicit power under section 5 of the 14th amendment to pass legislation to enforce that amendment. And the U.S. Supreme Court has recently held in Katzenbach against Morgan that, since Congress has far greater fact-finding and interest-weighing ability than the courts, Congress therefore could by legislation bar an activity as being in contravention of the 14th amendment although the U.S. Supreme Court had earlier upheld that activity as constitutional.

Specifically, the Court said in Morgan:

> Correctly viewed, Section 5 is a positive grant of legislative power authorizing Congress to exercise its discretion in determining whether and what legislation is needed to secure the guarantees of the Fourteenth Amendment.
>
> It was for Congress, as the branch that made this judgment, to assess and weigh the various conflicting considerations. . . . It is not for us to review the congressional resolution of these factors. It is enough that we be able to perceive a basis upon which the Congress might resolve the conflict as it did.

BRIEF SUMMARY OF THE LEGISLATION

The purpose of the Equal Educational Opportunities Act is to provide Federal financial assistance for educationally deprived students and to specify appropriate remedies for the orderly removal of the vestiges of the dual school system.

The Federal financial assistance for educationally deprived students is obtained by amending the Emergency School Aid Act to earmark $500 million of the annual authorization of appropriations for compensatory education programs in schools with high proportions of low-income students. These funds will be administered through State plans submitted by State educational agencies.

Regarding the removal of the vestiges of the dual school system, the bill prohibits denials of equal educational opportunities by the States and authorizes civil actions by aggrieved individuals and by the Attorney General when such denials occur. The bill specifies, however, that the failure of an educational agency to achieve a racial balance of students among its schools is not a denial of equal educational opportunity or equal protection of the laws. Similarly the assignment of a student to the school nearest his place of residence does not constitute any such denial unless such assignment is for the purpose of segregation.

Lastly, the bill prescribes remedies which Federal courts and agencies may use in correcting denials of equal educational opportunity and equal protection of the laws as regards education. These remedies are listed in a specific order of priority which courts and agencies must abide by in formulating remedies. No transportation, however, can be prescribed by any such court or agency, pursuant to this listing, for a student in sixth grade or below other than to the school closest or next closest to his or her place of residence. Nor can transportation be prescribed for a student in seventh grade and above beyond the closest or next closest school unless it is demonstrated by clear and convincing evidence that no other method will provide an adequate remedy. In no case, however, can school district lines be ignored or altered unless they were established for the purpose, and had the effect, of segregating students. School districts may voluntarily, though, go beyond the limitations set out in this bill.

I include the following:

SECTION-BY-SECTION ANALYSIS

Section 1. Short title

This section provides that the act may be cited as the "Equal Educational Opportunities Act of 1972."

Section 2. Policy and purpose

Subsection (a) of this section declares it to be the policy of the United States that all public school children are entitled to equal educational opportunity without regard to race, color, sex, or national origin, and that the neighborhood is an appropriate basis for public school assignments.

Subsection (b) states it to be the purpose of the act to authorize concentration of resources under the Emergency School Aid Act on educationally deprived children and to specify appropriate remedies for the orderly removal of the vestiges of the dual school system.

Section 3. Findings

Subsection (a) contains a number of congressional findings:

(1) The maintenance of dual school systems where pupil assignments are made solely on the basis of race, color, sex, or national origin denies the equal protection of the laws.

(2) Many local educational agencies have been required to reorganize their school systems, to reassign students, and to engage in extensive student transportation for the purpose of abolishing dual school systems and eliminating their vestiges.

(3) The implementation of desegregation plans which require extensive student transportation has in many cases required local educational agencies to expend large sums, thereby depleting their resources for the maintenance or improvement of the quality of the education they provide.

(4) Transportation of students which creates serious risks to their health and safety, disrupts the educational process with respect to such students, and impinges significantly on their educational opportunity, is excessive.

(5) The risks and harms created by excessive transportation are particularly great for children in the first six grades.

(6) Court guidelines for fashioning remedies to dismantle dual school systems have been incomplete and imperfect and have not established a clear, rational, and uniform standard for determining the extent to which the local educational agency is required to reassign and transport its students to eliminate the vestiges of a dual school system.

Subsection (b) provides that the foregoing reasons make it necessary and proper for Congress to specify appropriate remedies for the elimination of the vestiges of dual school systems pursuant to the powers granted in the Constitution.

TITLE I—ASSISTANCE

Section 101. Amendments to the Emergency School Aid Act to permit concentration of resources on educationally deprived students attending schools enrolling high concentrations of students from low-income families

This section contains a series of amendments to title VII of the Education Amendments of 1972—the Emergency School Aid Act. In general these amendments provide for Federal assistance to enable State educational agencies to make grants to local educational agencies which adopt and implement plans to provide basic instructional and supportive services for educationally deprived students in schools having a high proportion (as determined by the Assistant Secretary) of students from low-income families, and to provide such services for educationally deprived students who, under an approved plan, transfer from such schools to other schools in which a lower proportion of students are from low-income families. For convenience, in this analysis these new plans are referred to as "newly authorized programs," and the students to be served thereby are referred to as "newly included educationally deprived students."

Subsection (a) amends section 702(b) to add to the stated purposes the purpose of aiding newly included educationally deprived students in overcoming their educational deprivation.

Subsection (b) amends section 706(a)(1) which specifies the local educational agencies which are eligible for assistance. The amendment would include among eligible agencies those which adopt and implement newly authorized programs. The amendment specifies that grants and contracts for local educational agencies eligible under the new provision will be made by the appropriate State educational agency.

Subsections (c), (d), (e), and (f) amend various provisions of the title to repose in State educational agencies the authority to act with respect to grants to and contracts with local educational agencies for newly authorized programs.

Subsection (f) also makes a number of additional changes in section 710(c).

1. There is added to the factors to be considered in determining need for assistance in the case of applications for newly authorized programs, consideration of the extent to which newly included children are enrolled in schools which enroll a high proportion of their children from low-income families.

2. New criteria are added to be applied in approving applications for newly authorized programs. The first of these is the extent to which the program is likely to meet the special educational needs of newly included educationally deprived students. The second is the extent to which the program constitutes a comprehensive approach to meeting the special educational needs of the newly included educationally deprived students. Third, the Assistant Secretary is authorized to prescribe criteria to assure that the funds made available to a local educational agency will be used for carrying out programs for the provision of basic instructional and supportive services for newly included educationally deprived students. These criteria must be designed to insure that the State educational agencies, in approving applications for newly authorized programs, will give priority to local educational agencies which are implementing plans provided for in existing law as well as a newly authorized program and that the funds available under this title to a local educational agency for a newly authorized program will be adequate to meet the needs of the students. The subsection also provides that nothing in the title authorizes assistance which would encourage or reward the transfer of a student from a school in which students of his race are in a minority to a school in which they are in a majority, or which would increase racial or economic isolation in the schools.

Subsections (g) and (h) make technical amendments to reflect the fact that grants for newly authorized programs will be made by State educational agencies.

Subsection (i) adds four new definitions to title VIII.

1. "Basic educational services" will mean instructional services in mathematics or language skills meeting standards prescribed by the Assistant Secretary.

2. "Basic supportive services" means noninstructional services (including health and nutritional services) prescribed by the Assistant Secretary.

3. "Low-income family" means a family having an income below the low-income factor.

4. "Low-income factor" means the low-income factor as defined for purposes of title I of ESEA.

Subsection (j) adds two new sections to the title.

New section 721 makes it clear that nothing in the title will alter the amount a local educational agency is eligible to receive under title I of ESEA, or otherwise modify any provision of that title.

New section 722 sets forth requirements for State plans in connection with the newly authorized programs. Subsection (a) of the new section provides that applications by local educational agencies for assistance in carrying out newly authorized programs must be submitted to their State educational agencies for approval.

New subsection (b) provides that a State may receive payments for the purpose of assisting local educational agencies to carry out newly authorized programs if it submits to the Assistant Secretary a State plan which (1) recommends to the Assistant Secretary the amount of funds apportioned to the State under section 705 which will be reserved within the State for applications under subsection (a), (2) sets forth criteria for establishing priorities for the approval of applications for newly authorized programs which the State educational agency determines will be most effective in carrying out the purposes of the title, (3) provides the usual requirements with respect to fiscal control and fund accounting procedures, and (4) provides assurances that the State educational agency will evaluate the effectiveness of the assistance made available for the newly authorized programs and make appropriate reports to the Assistant Secretary.

The Assistant Secretary will determine the amount of the funds apportioned to each State under section 705 which will be reserved for newly authorized programs, approve a State plan which meets the requirements of this section, and give an opportunity for a hearing to the State agency with respect to his actions which affect it.

It is further provided that the aggregate amount of funds reserved, from the funds apportioned to the States under section 705, for making payments to States under this section shall be up to $500 million for each fiscal year.

Subsection (c) contains the usual provisions for judicial review of the Assistant Secretary's final action with respect to approval of State plans.

Subsection (d) directs the Assistant Secretary to make payments to State educational agencies which have approved State plans for carrying out those plans and for making payments to local educational agencies. Not exceeding 5 percent of the amount reserved for newly authorized programs may be reserved by the State to meet its costs of administration of the plan.

TITLE II—UNLAWFUL PRACTICES

Section 201. Denial of equal educational opportunity prohibited

This section prohibits a State from denying equal educational opportunity to an individual on account of race, color, sex, or national origin by—

(1) deliberate segregation by educational agencies on the basis of race, color, sex, or national origin among or within schools;

(2) failure of educational agencies which formerly practiced deliberate segregation to take affirmative steps, consistent with title IV, to remove the vestigates of their dual school systems;

(3) assignment by educational agencies of students to schools, other than the ones closest to their homes, where the assignment results in a greater degree of segregation of students on the basis of race, color, sex, or national origin than would result if the students were assigned to the schools closest to their homes which provide the appropriate grade level and type of education;

(4) discrimination by educational agencies on the basis of race, color, sex, or national origin in connection with the employment of school faculty and staffs;

(5) transfer by educational agencies of students from one school to another if the purpose and effect is to increase segregation of students on the basis of race, color, sex, or national origin; or

(6) failure by educational agencies to take appropriate action to overcome language barriers that impede equal participation by students in instructional programs.

Section 202. Balance not required

This section states that the failure of an educational agency to attain a balance, on the basis of race, color, sex, or national origin, of students among its schools does not constitute a denial of equal educational opportunity, or equal protection of the laws.

Section 203. Assignment on neighborhood basis not a denial of equal educational opportunity

This section declares that, subject to other provisions of the title, assignments of students to schools nearest their homes which provide appropriate grade level and type of education are not a denial of equal educational opportunity or of equal protection of the laws unless the assignments are for the purpose of segregating students on the basis of race, color, sex, or national origin, or the schools to which the students are assigned are located where they are for the purpose of so segregating students.

TITLE III—ENFORCEMENT

Section 301. Civil actions

Any individual who is denied equal educational opportunity, as defined by the act, may institute a civil action in the appropriate U.S. district court for appropriate relief. The Attorney General may also institute such civil actions on the behalf of any such individual.

Section 302. Jurisdiction of district courts

This section provides that the U.S. district courts shall have and exercise jurisdiction of proceedings brought under the preceding section.

Section 303. Intervention by Attorney General

This section authorizes the Attorney General to intervene in actions brought by individuals under section 301.

Section 304. Suits by the Attorney General

This section prohibits the Attorney General from bringing civil action under section 301 until he has given the affected educational agency notice of the conditions which constitute a violation of the act, and has certified to the court that he is satisfied that the educational agency has not within a reasonable time undertaken appropriate remedial action.

Section 305. Attorneys' fees

This section gives the district courts discretionary authority to allow the prevailing party in actions instituted under the act (other than the United States) a reasonable attorneys' fee as part of the cost and provides that the United States shall be liable for costs to the same extent as a private person.

TITLE IV—REMEDIES

Section 401. Formulating remedies; applicability

This section requires Federal courts and agencies to seek or impose only such remedies for denials of equal educational opportunity or equal protection of the laws as are essential to correct the particular denials which have occurred.

Section 402. Types of remedies

Under this section, in formulating a remedy for a denial of equal educational opportunity or of equal protection of the laws, which may involve directly or indirectly the transportation of students, the Federal court or agency concerned shall consider and make specific findings on the efficacy in correcting such denial of the remedies listed below, and shall require the implementation of the first of such remedies or the first combination thereof which would remedy the particular denial.

The remedies referred to are the following:

(1) Assigning students to schools closest to their homes which provide appropriate grade level and type of education, taking into account school capacities and natural physical barriers.

(2) Assigning students to schools closest to their homes which provide appropriate grade level and type of education, taking into account only school capacities.

(3) Permitting students to transfer from a school in which a majority are of their race, color, or national origin to a school in which a minority are of their race, color, or national origin.

(4) Creating or revising attendance zones or grade structures without requiring transportation beyond that described in section 403.

(5) Constructing new schools or closing inferior schools.

(6) Constructing or establishing magnet schools.

(7) Developing and implementing any other plan which is educationally sound and administratively feasible subject to the provisions of sections 403 and 404.

Section 403. Transportation of students

Subsection (a) prohibits Federal courts and a agencies from ordering pursuant to section 402 (d) or (g) the implementation of a plan that would require the transportation of any student in the sixth grade or below to a school other than the school closest or next closest to his home which provides the appropriate grade level and type of education.

Subsection (b) provides that no Federal court or agency shall order pursuant to section 402 (d) or (g) the implementation of a plan requiring transportation of any student in the seventh grade or above to a school other than the school closest or next closest to his home which provides appropriate grade level and type of education for such student, unless it is demonstrated by clear and convincing evidence that no other method set out in section 402 will provide an adequate remedy for the denial of equal educational opportunity or equal protection of the laws that has been found by such court or agency. A plan pursuant to section 402 shall only be ordered in conjunction with a development of a long-term plan involving one or more of the remedies set out in section 402. If a district court orders that implementation of a plan requiring transportation beyond that described in this subsection, the court of appeals shall grant a stay of the order until it has reviewed such order.

Subsection (c) prohibits Federal courts and agencies from requiring directly or indirectly the transportation of any student where it would pose a risk to his health or constitute a significant impingement on the educational process with respect to such student.

Section 404. District lines

In formulating remedies under section 401 or 402, the lines drawn by a State, subdividing its territories into separate school districts, may not be ignored or altered except where it is established that the lines were drawn for the purpose, and had the effect of segregating children among public schools on the basis of race, color, sex, or national origin.

Section 405. Voluntary adoption of remedies

This section makes it clear that the act does not prohibit plans of desegregation, otherwise lawful, which are at variance with the standards set out in this title, and that Federal courts and agencies may approve plans which go beyond what can be required under this title, if the plan is voluntarily proposed by the appropriate educational agency.

TITLE V—DEFINITIONS

This title contains definitions of terms used in the act.

The terms "educational agency," "State educational agency," and "local educational agency" are given the meanings assigned in the Elementary and Secondary Education Act of 1965.

The term "segregation" is defined to mean the operation of a school system in which students are wholly or essentially separated among the schools of an educational agency on the basis of race, color sex, or national origin or within a school on the basis of race, color, sex, or national origin.

The term "desegregation" is given the meaning assigned that term by section 401 (b) of the Civil Rights Act of 1964.

An educational agency shall be considered to have transported a student if it paid any part of the cost of his transportation.

TITLE VI—MISCELLANEOUS PROVISIONS

This title repeals section 709(a)(3), of the Emergency School Aid Act which provided for a program of grants to local educational agencies for planning and constructing integrated education parks.

Mr. DELLUMS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. One hundred five Members are present, a quorum.

(Mr. QUIE asked and was given permission to revise and extend his remarks.)

Mr. QUIE. Mr. Chairman, I know this is about as controversial legislation as this body has ever considered. I am glad that we are considering the question of busing all by itself, rather than hampering other legislation, because of the emotionalism of the subject.

When President Nixon made his recommendation for both a moratorium and the Equal Education Opportunity Act, I took a look at the Equal Education Opportunity Act, and I could see in that a great opportunity to remove some of the emotionalism that exists about this subject throughout the country. That emotionalism, I believe, stems from the crosstown busing of our elementary schoolchildren more than anything else.

People do not like to have their children bused—sometimes, if they have to go to the closest school. We ran into that in Minnesota in the redistricting of the rural school districts, but they got used to it. They knew it was necessary for improving the quality of education. While people do not like the idea of busing their children to any great distance to high school if they do not have to, it really should not be too onerous because we all are willing to send our children all the way across the country and sometimes out of the country to go to college, and so if a 19-year-old can go that far, an 18-year-old should not find it too difficult to attend a high school some distance away if it is necessary.

But, when it comes to the elementary schoolchildren, we know that that is what raises the anxiety of parents more than anything else, to go into a community that is strange and foreign to themselves. Some people make the claim that people are objecting to this only because of race. I recognize that some people do object to it because of race, but to say that everybody objects to it for that reason I say is utter nonsense.

There are people who do not want their children—I would say this is most of them—to go to a foreign community when they start in the first grade, no matter what the race of the people is in another community. Also, I doubt whether it is good education to attempt to educate children in the elementary school in isolation from their community. Let us, using as an example, the studies that were made in the preschool level Headstart program; it was found abundantly clear there that you had no visible improvement in the child if you left the parents out of the development of the child, nor did you have successful improvement in the educational development of the child. The parents must play a part in it; the community must play a part in it.

When you look at the improvements in education for the disadvantaged child, you will find that exists where the communities are involved in the improvement of the child and the parents are as well. There is no way you can, if you bus them long distances, when you bus them the way across the city as in many cases they are doing, to some place else, I think is bad education.

So, in this legislation we give them the, I believe justifiable, position that it is just the crosstown busing of elementary schoolchildren.

The question may come to your minds then, Can we do that? Can we prohibit that kind of busing as we do here, limiting it to requiring the elementary schoolchild to go no further than the closest school or second closest school and still protect the constitutional line?

I think that is the big question before us. I think if anybody has any reservations about the constitutionality of this legislation, section 403(a) is the one that a person could have reservations about.

I came down on the side of feeling section 403 is constitutional and I do it for this reason. It is that the Congress has some tools to provide remedies to unequal educational opportunities that is not afforded to the court, and one is the power of the purse. In this legislation we add $500 million of money to go to those areas where there is a concentration of lower income students—the only means we now have of deciding who is educationally deprived—in order to improve their education even though they might live in an area where to go to the second closest elementary school does not provide for an integrated education.

Mr. RANGEL. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I will yield to the gentleman if he will let me finish my statement. I will take some time additional to do so and I will yield to the gentleman. I will not cut him off.

Mr. Chairman, the question also comes whether we want integrated schools throughout America, and I do not believe that is what the courts are saying and what the majority of the people are saying, that they want every school to be an integrated school. I think the courts have said de jure segregation is wrong. When the States have required segregation of the schools it is wrong.

But when people because of the housing patterns live with others of their own race and there is not a school close enough to accomplish desegregation, then I think we will have to do the best we can.

When I went to school in Minnesota I went only with white children. In fact almost all of them were of Norwegian descent as well, so I guess I went to a segregated school. My children attend a public school and they are in an integrated school and they attend with black children and oriental children and children of all national origins. I think they have a better opportunity because of that. I like the idea that they can attend with people of all races. But if they were not living close enough to do so I think it would be completely unwise to take my children in Montgomery County and bus them into Washington just so they could have that experience, because education is more than that experience.

I learned to know people of other races after I got out of both elementary and secondary school. I guess Members can tell from my actions here that I do not have any animosity toward people of other races. I have seen people here who voted against urban housing. I voted for it. I found those individuals who did it on constitutional grounds rather than out of animosity toward people of other races. So I will not judge people on how they vote on legislation.

Besides improving the quality of education by putting $500 million additional money in for compensatory education and besides laying down some standards for the remedies that can be used by the courts in bringing about desegregation, we also provide in title II for the first time what is a denial of educational opportunity, and I believe we list them here, what has been laid down by the courts as a denial of educational opportunity, and we even go further than that.

I think we ought to be aware of the fact that we do go further than just what the Court has laid down. For certain we know that in subsection (f) of section 201, which states:

> The failure by an educational agency to take appropriate action to overcome language barriers that impede equal participation by its students in its instructional programs—

That certainly goes further than what the Court has said so far.

So here we have a piece of legislation which I believe will eliminate the worst emotions against schoolbusing, for improving the quality of education for disadvantaged children, and the country can still eliminate unconstitutional segregation. I believe that is the kind of legislation this country needs.

Mr. RANGEL. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from New York.

Mr. RANGEL. Mr. Chairman, I thank the gentleman for yielding.

I fail to understand the question of constitutionality on this legislation as the gentleman has explained it. As I understand it, the legislative branch of the Government has said it has the power of the pursestring and has taken $500 million for compensatory items and therefore has provided to the Supreme Court remedies other than busing.

If that is in fact so, how does the gentleman square away the fact that this legislation still restricts the Supreme Court in its opinion, in its mandate to desegregate? If in fact it believes it is necessary to use busing for students from 1 to 6 years old, I do not see how it squares away with the fact that the Congress controls the pursestrings on the constitutional question.

Mr. QUIE. As I look at it, when the Congress looks at what the Court has said, they do not even propose to bus, so far as that would impinge on the educational process, if it is permitted that elementary schoolchildren be bused across town, rather than to leave them in their own home areas. I believe, and every proponent of the legislation believes, this is permissible.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. QUIE. Mr. Chairman, I yield myself 3 additional minutes.

Secondly, since we then would provide the additional money, it is conceivable to me that the courts, recognizing that, would say, "There we can provide for equal educational opportunity."

It appears to me the question here is equal educational opportunity for the children.

Mr. RANGEL. If I accept that we are giving the Supreme Court more to work with, that still does not deny the fact that the legislation restricts what the Supreme Court can do.

Mr. QUIE. That is correct. I believe we do have the power to restrict the remedies. I do not believe the Congress can take action which will deny constitutional rights, but I believe we can restrict the actions of the court provided we still leave the remedies to protect constitutional rights.

Mr. RANGEL. My question is, if the Supreme Court finds it is necessary to bus a child in order to fulfill the mandate of the U.S. Constitution, does not this legislation prohibit it from doing that in certain cases?

Mr. QUIE. I do not believe the court will find that is what Congress has done.

Mr. RANGEL. The gentleman must admit there is a serious constitutional question involved in this legislation.

Mr. QUIE. There is a serious constitutional question involved, as I said, and I feel we are being constitutional here.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from New York.

Mr. CELLER. Will the gentleman explain what is meant by the term "closest or the next closest" school. You will recall that Justice Burger, in the Swann case, indicated that conditions varied so widely that in terms of traveltime, because of travel patterns, good highways and accessibility, that the school closest geographically may not be the nearest in terms of travel.

Mr. QUIE. I recognize that is what Justice Burger said. At that time they did not have the opportunity to utilize the additional assistance we provide in this legislation. Also, he said, as I recall, that he referred to the closest school. He did not refer to the second closest school to the residence. Whether that would give them sufficient opportunity to eliminate the vestiges of a dual school system in Charlotte I do not know.

Mr. CELLER. Chief Justice Burger, speaking for a unanimous Supreme Court in Swann, declared:

> Maps do not tell the whole story since noncontiguous school zones may be more accessible to each other in terms of the critical travel time, because of traffic patterns and good highways, than schools geographically closer together. *Conditions in different localities will vary so widely that no rigid rules can be laid down to govern all citizens.*
>
> * * * * *
>
> We find no basis for holding that the local school authorities may not be required to employ bus transportation as one tool of school desegregation. *Desegregation plans cannot be limited to the walk-in school.*

Thus, H.R. 13915 may in fact require assigning children to less accessible schools and cause longer rides on schoolbuses.

Now, suppose the closest school or next closest school were a segregated school, or a school located in a segregated neighborhood? Can the Government mandate school assignments in racially segregated neighborhoods? What would they do then?

Mr. QUIE. There is no requirement, as I read the decision, that in every school they have to have a racially balanced situation. As I read it, the only time when they are mandated to remove a segregated system is when that was caused by the dual school system.

Mr. CELLER. Suppose the neighborhood itself is segregated, is it the aim of the bill to mandate school assignments in such neighborhoods?

Mr. QUIE. What does the gentleman mean by "segregated"?

Mr. CELLER. Suppose it is a ghetto, where racial groups are congregated and constitute a preponderant majority of the inhabitants? If establishment of such assignment zones is the goal, every Member must acknowledge the patent unconstitutionality of the bill.

Mr. QUIE. The courts have not ruled that a segregated school is de facto unconstitutional.

The CHAIRMAN. The time of the gentleman from Minnesota has again expired.

Mr. QUIE. Mr. Chairman, I yield myself 2 additional minutes.

Mr. Chairman, I promised to yield to the gentleman from Illinois (Mr. PUCINSKI) and I yield.

Mr. PUCINSKI. In the gentleman's reply to the gentleman from New York (Mr. RANGEL), the gentleman was correct. In Katzenbach against Morgan the Supreme Court said, in interpreting section 5 of the 14th amendment:

> Correctly viewed, section 5 is a positive grant of legislative power authorizing Congress to exercise its discretion in determining whether and what legislation is needed to secure the guarantees of the 14th Amendment.

Mr. QUIE. I thank the gentleman for his contribution.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I am glad to yield to the gentleman from North Carolina.

Mr. JONAS. The gentleman from Minnesota in response to the chairman of the Committee on the Judiciary is absolutely correct. Chief Justice Burger stated in the Charlotte case, in the Swann case, the following and I quote him:

> If we were to read the holding of the District Court to require as a matter of substantive Constitutional right any particular degree of racial balance or mixing that approach would be disapproved and we would be obliged to reverse.
>
> The Constitutional command to desegregate schools does not mean that every school in a particular community must always reflect a racial composition of the school system as a whole.

Your response to the chairman is absolutely correct as I read this decision.

Mr. QUIE. I thank the gentleman.

Mr. DELLUMS. Will the gentleman yield?

Mr. QUIE. I yield to the gentleman from California.

Mr. DELLUMS. I thank the gentleman for yielding to me. I listened to the gentleman very closely and especially to the opening statements that he made about the concern of American families with regard to busing their children into, and I quote, "strange and foreign communities." I would like the gentleman to respond to this question. Is it not your opinion that one of the tragedies of America and one of the reasons for the lack of humanity and justice in this country is because too many individuals, groups, sections of communities, and total communities are perceived by too many people in this country as either foreign or strange? Would the gentleman respond to that?

Mr. QUIE. Yes; I agree with you that there has been a tendency in the last perhaps 30 years from what I have been able to observe of people tending to live together in the same economic level—not just race, but economic level as well, with houses being constructed in housing programs in areas where they are all of the same income level, which tends to make people of that strata to live and associate with each other, and then others become foreign. I do not think it is wise to use schools to try to break this up. I came from a rural community where a rich man and the poorest person practically lived next door to each other and associated with each other. I think that is healthy.

It was a misfortune that there were no people of the black race there. It would have been a better mix. The conception of America from the beginning was to have that mix, and I am as concerned as you are about, but I do not want schools to force the little children, and I am talking about the elementary schools, to pay the penalty for what the adults have done.

If you could have corrected it, then we ought to look at it, but I have seen studies to show that it does correct the problem you have.

The CHAIRMAN. The time of the gentleman has expired.

Mr. QUIE. Mr. Chairman, I yield myself 2 additional minutes. I yield to the gentleman from California (Mr. WIGGINS).

Mr. WIGGINS. I thank the gentleman for yielding. In section 201 of title II of the bill, the word "assignment" of students by an educational agency is used in subparagraph (c) and the word "transfer" is used in subsection (e). Would you please explain what difference is intended by the use of those two words?

Mr. QUIE. Assignment in subsection (c) and transfer in subsection (e)?

Mr. WIGGINS. Yes.

Mr. QUIE. As I see it, and here we are talking about title II, the unlawful practices and denial of equal educational opportunity, to go through them first, they are the most glaring examples of segregation and deliberate segregation for the reasons that were laid out by the courts very clearly.

Then in (c) when there is an assignment by an educational agency of a student to a school other than the closest school, and you know there are times when he would be required to assign them, then you should not do it in such a way that it will increase the degree of segregation. When it comes to the transfer down at the bottom here, we go to whether it is voluntary or not.

Then you go to whether it has the purpose or effect. You cannot transfer if it has neither the purpose nor effect of bringing about an increase. So I think you are dealing with two possibilities of the local school agencies moving a child from one school to another.

Mr. WIGGINS. I understand that the provisions of the two subsections are different, but what I want to know is whether the committee meant any real difference by the use of two different words, "assignment" and "transfer?"

Mr. QUIE. I doubt that there was any.

Mr. WIGGINS. Accepting that response, I now would like to turn to section 401 on page 35 of the bill.

The CHAIRMAN. The time of the gentleman from Minnesota has again expired.

Mr. QUIE. Mr. Chairman, I yield myself 2 additional minutes.

Mr. WIGGINS. Mr. Chairman, if the gentleman will yield further, on line 16 of that section, the language "particular denials of equal educational opportunity" is used, and I would like the statement of the gentleman as to what is intended by the use of the word "particular."

Perhaps I can frame my concern more precisely; I would like to know whether or not the use of the word "particular" is intended to foreclose class actions?

Mr. QUIE. I could not tell the gentleman, but I doubt that would be the case. The question never came up, so I have not checked it with counsel at all, but I doubt that it would.

Mr. WIGGINS. Is it accurate to say that there is no conscious intent to foreclose class actions?

Mr. QUIE. Not at all, that is correct.

Mr. CORMAN. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from California, and then I will not ask for any more time.

Mr. CORMAN. Mr. Chairman, I want to inquire whether or not this bill attempts in any way to restrict the court's ability to make a determination that the segregation is de jure. Is that still left entirely to the jurisdiction of the court as to finding of fact? Is that correct?

Mr. QUIE. That is correct.

Mr. CORMAN. And I assume this bill does not in any way deny a child remedy, if there is de jure segregation, is that correct? Or is it intended in any way to change a child's right that he now has to be protected from de jure segregation?

Mr. QUIE. That is right, but it does put a limit on the remedies that the court can use, and that limit is in section 403(a).

Mr. CORMAN. Then the court may order an end to de jure segregation?

Mr. QUIE. That is correct.

Mr. CORMAN. The point is that if the child moves further than one more school zone, then he must be ordered to walk rather than ride a bus; is that correct?

Mr. QUIE. No; it is just that he will not be ordered to go.

Mr. CORMAN. Then you do change the right of a student to be protected from de jure segregation in this bill?

Mr. QUIE. No; we do not change the right. We do put a limit on the remedies. They will have to use other remedies to bring it about. The same thing is incorporated in the authority act.

The CHAIRMAN. The time of the gentleman from Minnesota has again expired.

Mr. PUCINSKI. Mr. Chairman, I yield 5 minutes to the gentleman from Washington (Mr. MEEDS).

Mr. GARMATZ. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Maryland.

Mr. GARMATZ. Mr. Chairman, I would like to include a letter, at this point of the debate, as a perfect example of mail that I have received in opposition to H.R. 13915:

AUGUST 15, 1972.

Hon. EDWARD A. GARMATZ,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN GARMATZ: I write out of the utter frustration of someone who has followed closely the emergence of busing as the superficial solution to integrating the public school systems throughout this nation. I am opposed to busing and I feel the vast majority of Americans both black and white, share this view.

The voyage of the past 200 years cannot be eradicated by forcing today's children to pay for yesterday's mistakes.

Massive busing of students ignores the basic purpose of the public school system which is to provide the best possible education to every child regardless of race, color or creed. The priority of the next Congress very clearly is to provide nothing less. And this can be done without busing which disrupts family and community life, without the risks created to the health and safety of our children and without seriously threatening the quality of education dispensed within our public schools.

Busing today is being used as the "easy answer" to achieving integration. What disturbs me about these solutions of convenience is that they often become excuses for doing too little about giving people the educational tools they need to compete in today's world. They become justifications for failing to assure equal employment opportunities for all of our citizens and for failing to give our people decent housing so they may live as human beings.

In some areas where racial busing has been instituted, administrators are discovering that the cost of buses and hiring drivers has siphoned funds from programs that would improve the quality of public school education. It is removing funds that could be put to better use by providing programs that adequately prepare a child to take his place in the world with dignity and with full confidence that he or she can compete equally.

The nightmare of busing is with us today because past national administrations and past Congresses have failed to come to grips with problems of guaranteeing equal opportunity across the board. Because the government has side-stepped and neglected this significant issue, we are now faced with a divisiveness regarding busing that is creating serious polarization within our society.

How many times have you heard politicians pass the buck by telling their constituents, "you can't fight the court"? But we can change all this. The House of Representatives is now pursuing deliberations on House Bill 13915. This Bill provides at least a beginning toward a rational uniform method for establishing guidelines on busing. To prevent an incredibly chaotic situation this fall as the result of eleventh hour pupil reassignment, redrawing school boundaries and providing buses, I would urge the following amendments to House Bill 13915:

To make guidelines in the Bill applicable to the 1972 school year.

Wherever busing orders are pending or are issued after August 1, 1972, the appropriate school authorities will have until the beginning of the 1973 school year to implement fully the new guidelines.

To require that all costs involved in integration-oriented busing be borne by the federal government.

I would further urge each and every member of the Congress to make a personal commitment to truly equal opportunity for all of our citizens in the areas of employment, housing and education. Only when this commitment is fully realized and fully implemented can we avoid collision courses with polarizing remedies such as busing and forever bury the dualism that has been the great American tragedy. And with it let us bury once and for all, the popular but erroneous myth that we are powerless against the courts.

Sincerely,

WERNER FORNOS.

Mr. MEEDS. Mr. Chairman, I would like to take just a moment at the outset to set the record straight on a couple of things that have transpired.

First of all—the holding in Katzenbach against Morgan was precisely the opposite of what the gentleman from Illinois indicated or intimated that it was.

The gentleman from New York is precisely correct—the fifth amendment cannot be used to restrict the due process clause of the 14th amendment. That is precisely what Katzenbach against Morgan decided.

So if this were to be interpreted, as I clearly think it is—a restriction on rights granted under the 14th amendment—it would certainly also be held improper under the fifth amendment.

Second, I would probably agree with the gentleman from Illinois that there is not too much argument about the constitutional issue in view of the witnesses who appeared before the committee. I would disagree with his interpretation of that, however.

The fact is that with the exception, I think, of two witnesses who appeared before the committee, every single witness—every single expert witness—every professor of law, every lawyer who appeared and testified on the constitutionality of this bill said unequivocally that it was unconstitutional.

So I think that the record ought to be amply clear on that.

I do not think it should be necessary for me to establish credentials in objectivity on this issue. But let me just try, briefly.

I am not one who feels that we, in the Congress, do not have the power to establish guidelines. Indeed, I think we do have the power to establish guidelines in this Congress—and I think we should have done so a long time ago.

Had we done so, and done so properly, we would not be at this impasse.

I am not one who felt that we could not require a stay. In fact, I worked in the higher education conference and on the modified Broomfield amendment, as the gentleman from Minnesota will tell you, and I believe that we, in the Congress, do have a right and the power—and I believe that the Broomfield amendment is constitutional to stay the orders of courts.

But that is not the issue with which we are here met.

I am also not one who believes that busing is the total answer to the problem of desegregating our society. But, in some instances—and the gentleman from California (Mr. CORMAN) was precisely correct.

In some instances, where there are still situations of de jure segregation, this bill will absolutely prohibit a remedy which would otherwise be available, and thus flies directly in the teeth of Brown against Board of Education.

It is unfortunate that we cannot separate the emotional issue of busing and dispassionately here today discuss the constitutional issues. Because it seems to me that a deliberate reflection on this bill will show very clearly that particularly section 403 is absolutely unconstitutional.

For 18 years ago, the U.S. Supreme Court held that the separate but equal doctrine was inherently unequal and every Supreme Court Justice since that time has taken a position foursquare for enforcing the constitutional remedies with regard to that.

The hypothetical that the gentleman from California used shows that black children in the sixth grade, in some instances, are going to be deprived of the constitutional guarantee enunciated by Brown against Board of Education.

As noted by the Supreme Court in the Swann opinion it is unconstitutional, where a plan assigning children to schools nearest homes "may fail to counteract the continuing effects of past segregation and hence be constitutionally unacceptable." Section 403 will fail to counteract the continuing effects of past segregation and as such is patently unconstitutional.

And finally, section 403 flies in the teeth of one of the oldest and most famous cases that our Supreme Court has ever decided—the case of Marbury against Madison, decided in 1803, and written by Chief Justice Marshall.

Every act of the Congress must be measured against the Constitution. When they conflict the Constitution must prevail. Chief Justice Marshall said, "It is a proposition to plain to be contested that the Constitution controls any legislative act repugnant to it."

Indeed it is a proposition to plain to be contested. Otherwise of what use is the Constitution. If the Congress can override the Constitution by the mere passage of legislation is serves no valid purpose and must be described as the futility of our forefathers.

The institution which measures legislation against the Constitution is the Court. To hold differently would be to allow the legislature to arrogate unto itself power which would badly overbalance the balance of power.

As Chief Justice Marshall said in Marbury against Madison, "Were it otherwise" it would reduce "to nothing what we have deemed the greatest improvement on political institutions, a written constitution."

Mr. Chairman, if this House is hellbent on denying a right guaranteed by the Constitution, let it do so straightaway by a constitutional amendment rather than by indirection. I want no part of either—but most of all I want no part of this bill which prohibits remedies and provokes confrontation.

Mr. QUIE. Mr. Chairman, I yield 5 minutes to the gentleman from Georgia (Mr. THOMPSON).

Mr. THOMPSON of Georgia. Mr. Chairman, today is the day that many of us have been looking forward to for a long time. For the first time we have an opportunity, in substantive legislation, to write into permanent law some provisions which will guarantee to all schoolchildren, black or white, that they are not going to be shoved around—moved around—shifted around—because of their race, color, or creed.

In the past we have added to appropriation bills which, of course, have a very limited term, certain restrictions on busing, attempts to achieve racial balance, and so forth. The bill today concerns me because I believe it takes as a basic premise the fact that we are going to have busing. Then it begins to limit the amount of busing that is going to be allowed. In one instance it states that there will be no busing of students below the sixth grade. In other instances it states there will not be busing to achieve racial balance if it is detrimental to the health of the individual.

I believe the time has come in America when we should stop classifying students as black or white students, with their race to determine where they are going to school.

I will offer at the appropriate time an amendment to do this. I sincerely believe that this amendment will withstand the challenge of the court, because we as a Congress are granted in the Constitution under the 14th amendment, section 5, the power to implement the provisions of the 14th amendment.

Now, in implementing the phrase, "equal protection of the law," we can certainly state that in order to provide equal protection for all children, white as well as black, we are not going to force a child out of a school which some call a superior school and into a school which some call an inferior school because the racial balance is not correct, and in order to correct that particular balance.

Those of you who may feel that this would allow for discrimination, I would like to set your fears aside. If the court finds that in any area a school body is being designed for racial purposes—let us take, for example, that a school district is drawn with a corridor 2 miles long and at one end there is a solid white constituency and the people have drawn it along that line and the student body is 100 percent—I personally think the court would be fully justified in coming in and saying, "You are assigning those children—that district was drawn—for the purpose of having all whites in there. Therefore, the assignment is based upon race, color, or creed."

I think my amendment would, in effect, prohibit that, but by the very same token my amendment would prohibit any school board, court, or anyone else from coming in and stating, "this is a white school although the entire neighborhood is white, and this is a black school, although the entire neighborhood is black, and we find that you are going to have to have busing in order to break up this racial pattern."

Now, when you get right down to the nitty-gritty of it, that is exactly what is happening throughout the entire country. We are stressing beyond all reasonable realm the idea that we must force a racial balance on the people. We are getting away from the concept that we in America should consider each American as an American and as an individual. We should forget about his race, his color, or his creed, certainly so far as assignments to schools are concerned.

There is nothing in this amendment which would allow any person to specifically try to draw a school district so as to perpetuate a segregated district, or on the reverse side, so as to perpetuate or require a racially balanced district. In effect, you would not be able to consider race for school assignments. I think the amendment has great merit and I urge your support when it is offered.

Mr. PUCINSKI. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. HAWKINS).

Mrs. ABZUG. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred and two Members are present, a quorum.

The Chair recognizes the gentleman from California (Mr. HAWKINS).

Mr. HAWKINS. Mr. Chairman, certainly in this debate busing is not the issue. I know of no one who simply advocates busing as such, and I think that the division in this House is not between those who are opposed to busing but rather between those who oppose constitutional rights and those supporting our Constitution. Education often requires that some children be bused, and I am of the opinion that those who have been strongy opposed to busing would go along with that particular finding. Over 60 percent of the children of this Nation are bused, and I see no prohibition in this bill that would prevent these children from being bused. It is only with respect to busing for school desegregation that the issue is raised. This constitutes less than 3 percent of those who are being bused so that the issue boils down to that 3 percent. Busing for the purpose of achieving racial balance, despite what has been said by some of the previous speakers, is not and never has been required by the courts. I would submit that those, including the chairman of the Rules Committee, who are so concerned about the distance the children are being bused, that they are suggesting that children in the rural areas who necessarily are being bused are necessarily therefore receiving an inferior education. If so, then half the children in America are receiving an inferior education, and that kind of education should be declared unconstitutional.

The issue really is equal rights. This question of constitutional rights cannot be brushed aside so easily by this Congress as it has been in the action by the Rules Committee and in the action by those sponsoring this legislation if their efforts were to succeed.

I think it should be remembered we are not dealing with the elite private schools but we are dealing with public tax-supported schools, and all who pay taxes can demand equal treatment, and those who do not want to give this equal treatment but to use the schools for their individual elite uses certainly stand against the decision of Brown in 1954.

But quite apart from the constitutional issues, there are several issues it seems to me that are present in this bill which perhaps are just as serious.

First. Those advocating this bill are in opposition to respect for law and order, which in my opinion is just as important in the classroom as it is on the street. By this legislation we are condoning school officials who have deliberately violated the law, and we are now not only going to condone but also to reward them. It seems strange a group pledged to uphold the respect for law and order would encourage those who would advocate lawlessness by condoning public officials who have deliberately violated the constitutional mandates.

Second. This legislation is in direct contraventon to the principle of States rights, and the concept of home rule, and even of the President's policy as he enunciated it a few months ago of returning power to the people in local communities. Yet in this proposal we intend to lodge more power at the Federal level and in effect make the Federal Government a Federal school board which is going to intervene in the policies and practices of local school boards and tell them what to do.

Third. It creates a fiscal deadlock. Something has been said about the money which this bill allocates. It merely juggles money which was appropriated in other bills and allocates it for purposes in this bill, money which will be expended whether this bill becomes an act or not.

So it is not new money. It is taking money away from a bill which was just signed into law 2 months ago, which the administration offered to us, which we accepted, and which had bipartisan support in this House.

Mr. MITCHELL. Mr. Chairman, will the gentleman yield?

Mr. HAWKINS. I yield to the gentleman from Maryland.

Mr. MITCHELL. I want to take this opportunity to associate myself with the remarks being made by my distinguished colleague. It seems to me he is pointing up the kinds of hypocrisy which caused a young black American to write these lines, "My country, 'tis of the, sweet land of bigotry."

Mr. Chairman, I rise to oppose the Equal Educational Opportunities Act of 1972. I view the findings in this bill as factually unsupportable, obfuscating, and often misleading. I shall limit my remarks to sections 3(a) (4) and (5) on page 20 of H.R. 13915 which suggest that transportation of students creates risks to health and safety and disrupts the educational process, especially for children enrolled in the first six grades.

These findings contain the insidious implication that it is busing for desegregation that leads to all these dastardly dangers. This just does not follow. If 43.5 percent of the Nation's schoolchildren are bused and they experience no excesses, then busing cannot be any less safe for the 3 percent of the Nation's kids who are bused for desegregation. And it just cannot be that school authorities have been jeopardizing the safety and health of children since they decided to use the bus in 1919.

It is pure demogoguery to suggest that busing is not safe. It is the safest mode of transportation. It beats even walking or riding in the parent's car. As a report of the National Safety Council shows, accident rates in 1968–69 for boys riding schoolbuses was 0.03 per 100,000 student days compared with 0.09 for walking; for girls, 0.03 when riding a bus and 0.07 when walking to school. In that same year, the occupant death rate per 100 million passenger miles was 0.06 for schoolbuses as compared with 0.24 for regular buses and 2.40 for automobiles.

Not only as safe as safe can be, busing is speedy and efficient. Trips are rarely long. The average traveltime is 20 to 30 minutes. An hour or more would be out of the ordinary. A trip of half an hour or so would not bring the pupil home much later than if he walked from a neighborhood school. In Richmond, Va., for example, the desegregation order called for an average bus ride of about 30 minutes. In Hoke County, N.C., desegregation actually shortened the bus ride 15 minutes. In 11 cities surveyed by the NAACP legal defense fund, the length of an average trip increased 15 minutes more in only two and remained the same before and after court-ordered desegregation in six.

In fact, busing is used to insure the safety of children. In Roanoke, Va., the school system used 20 newly purchased school buses not only to comply with their desegregation order, but also to bus kindergarten children who last year had to travel via unsafe streets. In Virginia, during this last school year, 66,110 children otherwise ineligible for State-reimbursed transportation because they lived within walking distance of their school were nonetheless bused. The reason—safety.

In fact, elementary schoolchildren are sometimes bused further than high school students. In Charlotte-Mecklenburg, N.C., the system as a whole, without regard to desegregation plans, scheduled more elementary schoolchildren than high school children for busing, 4- and 5-year-olds having to travel the longest routes. The same is true for Florida, in Duval, Hillsborough, Pinellas, Manatee, and Orange Counties, where the majority of kids bused are in elementary school.

Apparently, local education officials do not share the same alarmist views as the authors of this bill. They deem busing essential in protecting the health and safety of schoolchildren for traveling.

Some proponents suggest that busing disrupts by deterring kids from taking part in extracurricular activities. This should not happen. Students in remote rural areas have been riding buses for years without giving up after-school activities. A lot of districts provide an "activity" bus; one that is scheduled to leave an hour or so after school ends for the day, so that students can participate without having to walk home.

And last of all, may I remind my colleagues of the Lambda Study. This important report, commissioned but never released by HEW, concludes that additional busing to provide almost complete desegregation can be as little as one-third to one-quarter of the amount estimated by conventional rule of thumb techniques.

This election year has stampeded this Congress into a wild rush to report the bill out of committee and to get it passed. We have trampled over the reams of testimony, completely ignoring evidence arguing for its defeat. I call upon my colleagues to resist the thundering hooves of those who would cast aside the

Constitution and listen to their inner reasons in these times of hysteria and prejudice.

Mr. HAWKINS. I appreciate the contribution by the gentleman.

Mr. Chairman, already we have in the Emergency School Act, passed a few months ago, prohibited the use of Federal education funds for transportation of students or teachers to overcome racial imbalance or to achieve desegregation. So those Members who are so anxious for political reasons to get a vote against busing have already had that opportunity. If this also is passed, the question arises as to which one of these prohibitions is going to prevail.

We are just creating hostility, confusion and chaos in the schools of our country. The bill should be defeated.

Mr. QUIE. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. Wiggins).

Mr. WIGGINS. Mr. Chairman, I thank the gentleman for yielding.

The purpose of my taking the well at this time is merely to gain a better understanding of some language in title II of the bill which troubles me.

The committee report, Mr. Chairman, starts off by saying that the principal purpose of this bill is to end the last vestiges of dual school systems in our country. Yet I am not convinced that it is confined to that purpose. So I ask the gentleman from Illinois (Mr. Pucinski) and the gentleman from Minnesota (Mr. Quie) to give me their attention for a moment, so that I may inquire about the meaning of section 201(c) on page 32 of the bill.

As I read that section, Mr. Chairman, it speaks of an assignment by an educational agency to another school which results in a greater degree of segregation.

My first question is: Is it required that the assignment be motivated by a purpose to discriminate?

I yield to the gentleman from Illinois for an answer.

Mr. PUCINSKI. The answer is "yes." There must be an intent to discriminate.

Mr. WIGGINS. Does the gentleman from Minnesota agree with that interpretation?

Mr. QUIE. Yes; I would agree.

Mr. WIGGINS. That being the case, I should like now to pinpoint a particular problem in my State, and perhaps in other States as well.

We are struggling with bilingual education programs in California. I am sure other States are doing likewise.

If a school district should feel compelled to assign a youngster of a national origin group—in my illustration, a Mexican-American—to a different school so as to take advantage of uniquely qualified bilingual education instructors in that school, would it be an unlawful act even though the assignment would increase the degree of segregation by national origin in that school?

Mr. PUCINSKI. If this school provided the particular type of education which this child needed, as spelled out in line 17 of subsection (c), this would not be a violation. The test would be whether it is providing the type of education that this child needs. If that is the only school which can provide the bilingual education and the child needs that bilingual education it would not be considered a violation. However, this explanation assumes that there is no systematic discriminatory activity by the school district against these school children.

Mr. WIGGINS. I should like to get the concurrence, if he does concur, of the gentleman from Minnesota in that interpretation of subsection (c) of section 201.

Mr. QUIE. It would be my understanding, because that is where we have the "appropriate grade level and type of education" wording.

The bill specifies "the appropriate grade level and type of education." If that is the only place you can get that type of education, it would certainly be permissible.

Mr. PUCINSKI. Will the gentleman yield further?

Mr. WIGGINS. Yes, I yield to the gentleman.

Mr. PUCINSKI. I might call the gentleman's attention to line 16 further to fortify the position you have taken here. The words are "providing the appropriate grade level and type of education for such student."

Mr. WIGGINS. Yes, I read that language, but what I am trying to accomplish by my questions is to have this interpretation by the two leaders on this bill made clear. I now understand the prohibition against assignment which may result in a degree of segregation higher than that which would be the case without the assignment is not barred absolutely if the intent is not to discriminate and if it is necessary in order to achieve an appropriate type of education for the student.

Mr. PUCINSKI. That is correct.

Mr. THOMPSON of Georgia. Will the gentleman yield?

Mr. WIGGINS. I yield to the gentleman.

Mr. THOMPSON of Georgia. I thank the gentleman for yielding. It appears to me the phraseology is very clear. There is a prohibition if the assignment results in a further degree of segregation. You may well have, and you do have a grade structure and type of education, but you may well have within that area the same type of education in this group, but yet he wants to go there. It seems to me that is a prohibition resulting in a greater degree of segregation which would prevent the assignment based on race.

Mr. PUCINSKI. Mr. Chairman, I yield 4 minutes to the gentlewoman from New York (Mrs. Chisholm).

Mrs. CHISHOLM. Mr. Chairman, first of all, I think it is very important that we correct some of the errors that were made here earlier this afternoon, because busing is not really the issue. Over 73 percent of the young people in this country are bused to other schools for reasons other than for the purposes of desegregation. So busing is nothing new.

We are dealing with a bill that offers no sound solution to the inequities in education that deprive our children of learning experiences necessary for their development. The solution here offered, and solution is hardly the word for it in my mind, is blatantly political and is without a shred of educational relevance. It is an insensitive ploy to placate and appease parent voters who are overwrought with imagined and unsubstantiated fears about integration.

The children of the parents, who object so vehemently to busing, meet others of different races and nationalities with more calm and wisdom than we have seen their elders exhibit since busing became a household word this election year. We have not seen one iota of hard evidence, not one shred of sound testimony which proves that children undergo psychological and sociological damage by riding a bus to school. Is not the elementary age the best time for children to learn that there are others in the world a bit different from them but no less human?

I am dismayed over the subterfuge perpetrated by calling this bill an equal educational opportunity measure. It is not. Even the minimal provisions of title I of the original H.R. 13915 have been watered down in the legislation currently under consideration.

We are left with an antibusing measure designed to fit an election bandwagon rather than any substantive national need.

Busing has been blown up beyond all perspective on all levels and in every fashion. It is beyond credibility to consider busing of such paramount importance that Congress must take action not once but two or three times in one session. Particularly when there are so many other measures that deserve, and are not getting, congressional attention this year. Welfare reform, strong water pollution control legislation, day care, are all relegated to the wings while busing remains center stage.

Less than 2 months ago the President signed the higher education bill as enacted by Congress. Its stringent busing provisions received much more congressional and public scrutiny than some of the real educational advances it in fact contained. As a result of its passage, school integration plans due to go into effect in September are now subject to postponement and further acrimony.

Having already taken this action, the Congress continues to belabor the issue. What more is necessary? The victim—the American child—has been knocked down—must he be kicked, also?

For the benefit of the Democratic Members of the House, let me remind them of the plank adopted by the delegates to the convention in Miami:

> Transportation of students is another tool to accomplish desegregation. It must continue to be available according to Supreme Court decisions to eliminate legally imposed segregation and improve the quality of education for all children.

The statement introducing the plank on education says:

> America in the 1970's requires . . . masses of educated people—educated to feel and act, as well as to think . . . Education must prepare students not just to earn a living but to live a life—a creative, humane and sensitive life.

These are sentiments which I share wholeheartedly. Moreover, it should be clear to Members of Congress after years of community and public involvement that learning to live a "creative, humane and sensitive life" cannot be done in isolation. One of the basics of quality education is exposure to the many sides of our multiracial society. Following decades of discrimination, if busing is the only fiscally responsible means presently available to achieve school desegregation it should not be prohibited. Of course, some parents fear that their children will be transported to poorer schools; the very existence of this fear, however, reflects some sad truths about our school systems. I agree with Father Hesburgh that substandard schools should be bulldozed. The League of Women Voters of the United States has testified that their local experience also bears out Father Hesburgh's contention that when active concerned white parents have children in previously black schools a miraculous transformation takes place as elected public officials respond to their political clout.

I would like to speak briefly to that part of the bill which I consider most damaging.

Court-ordered transportation of an elementary school student beyond the school closest or next closest to his home would be absolutely prohibited. Even secondary school integration by transportation is effectively barred: the delaying tactics made possible through requiring proof that no other remedy would work could make plans for desegregation drag on for years with the added onus that court orders shall be delayed pending appeal. The patience of Job would be tried by such procedures—and pupils presently in school would probably be grandparents before the problems were resolved.

Finally, there are going to be attempts here today to amend the bill to include a section, wisely deleted by the Education and Labor Committee, which says that if a school system so chooses, court orders or Federal agency desegregation plans intended to end segregation "shall be reopened and modified to comply with the provisions of this act." The bill even without this gem of an amendment is a Pandora's box—add it and the bill would be a Pandora's trunk.

The whole question of what constitutes legitimate court and agency procedure in specifying desegregation plans would be open to doubt, and many school systems would very likely apply to reopen past decisions for further argument, with the strong possibility that a system could revert to its prior segregated state.

Eileen P. Simmons, quoted in an editorial in the Gainesville, Fla., Sun on July 29, 1972, tells of the desegregation uproar in her so-called tolerant home of Minneapolis—compared to the integrated tranquility of her current home in Tallahassee. She notes, and I quote:

> President Nixon has ordained that busing is intolerable now, in the stifling spring of 1972. Our Chief of State has ordained that separate does not necessarily mean unequal. . . .
>
> How, then, do we explain to our children that what was necessary in the South is no longer necessary in the North? . . . They ask us which is more evil, the inconvenience of the white majority for a few years, or the unequal educational opportunities of the non-white minority for a hundred years?
>
> Our children counter with the truth that the Supreme Court in 1954 proclaimed that separate IS unequal. Is the President of the United States, the upholder of the Constitution, advocating disobedience or, at the very least, the ignoring of the law of the land?

Well yes, he is and so is the House of Representatives if it passes this bill.

Mr. STEIGER of Wisconsin. Mr. Chairman, I yield 5 minutes to the gentleman from Texas (Mr. COLLINS).

Mr. BURKE of Florida. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I will be glad to yield to the gentleman from Florida.

(Mr. BURKE of Florida asked and was given permission to revise and extend his remarks.)

Mr. BURKE of Florida. Mr. Chairman, I rise in support of H.R. 13915, the Equal Educational Opportunities Act, which declares the policy of the United States to be that: First, all children enrolled in public schools are entitled to equal educational opportunity without regard to race, color, or national origin; and second, the neighborhood is an appropriate basis for determining public school assignments.

In my two decades of serving the people as an elected official, first on the local level, and now on the national level, I do not believe that I have witnessed a more persistent, emotional issue than the controversy over the busing of children to achieve racial balance in our public schools.

In March of this year, when Florida became the first State to hold a referendum on the subject, 74 percent of the people of Florida by their votes indicated they opposed the busing of students and indicated their support for a constitutional amendment to prevent it.

It is interesting to note also that Florida is not alone in voting its opposition to school busing. National polls have also consistently shown a strong resentment by the people in almost every part of the Nation to the busing of students. Even the delegates to the National Black Political Convention, which was held in Gary, Ind., voted overwhelmingly against busing and in favor of the concept of local neighborhood schools.

I, too, favor the right of freedom of choice and the concept of the neighborhood school, but I favor also an honest concept of an equal educational opportunity for all. In the 91st Congress, I, like many others, introduced, and which I reintroduced again in the 92d Congress, a joint resolution which would amend the Constitution of the United States to prevent the busing of schoolchildren from their neighborhood schools, except with the consent of their parents. I have also introduced H.R. 9865, which would, if enacted, preserve the right of students to attend their neighborhood schools.

President Nixon, on March 16, 1972, on national television, made two proposals for resolving the present busing dilemma. H.R. 13915, which is before us today, proposes equal education for all. H.R. 13916, which is still in the Committee on Education and Labor, proposes a moratorium on busing.

To be frank, I honestly do not feel that these proposals are strong enough to overcome the resistance of the people to the thoughtless disregard of their rights displayed by the Federal courts in their social reform decisions or by the bureaucrats. All efforts prior to now have been frustrated by either one side or the other. The problem would have been further on the road to a solution, if the courts had heeded the various amendments passed by the Congress as part of some educational appropriation bills forbidding the use of Federal funds for the purpose of busing to achieve a racial balance. Regrettably this has not been the situation for the reason, that as usual, the courts indulged in sociological legislation rather than adjudication as it should.

With the 92d Congress drawing to a close, the suggested constitutional amendment against busing has little, if any, chance of enactment. I am a signer of the discharge petition to bring it to the floor for a vote, but this petition has been circulating for months and it still lacks the necessary two-thirds of the signatures to bring it out. Also, we should recall that, last fall there was a successful discharge petition effort when the prayer amendment was forced to the floor for a vote, yet many of the two-thirds of the Members of the House who signed the discharge petition did not vote for the measure on the House floor, and it was defeated. If the necessary two-thirds will not sign the discharge petition, what chance is there of getting a favorable vote on the House floor? Mr. Chairman, even if it was passed by the House, I doubt if it would be passed by the Senate, and even it was passed. and was then ratified by the needed 38 State legislatures, I fear that the children presently being bused might well be adults.

Mr. Chairman, I strongly favor the constitutional guarantee of the protection of the rights of the minorities, but I have never felt that the protection of the rights of the minorities calls for completely disregarding the equal rights of the majority. People are reasonable, but, if we take the position of to hell with the feelings of the majority, then such an approach, I feel, will not solve many of our existing social problems, but, will, instead, only lead to further polarization of the races, and, further, divisions, fear, and distrust in our society.

The real question is, Are we really interested in the proper and equal education of all children or are we busing our children solely for political reasons to achieve racial balance? Those who disguise the busing of students as a means of better education, either ignore the fact, or do not realize whether by ignorance or design, that busing is intended to dismantle the dual school system, and it does so to the detriment of families, communities, and the children themselves, in whose welfare the courts and the bureaucrats purport to have an interest.

I support H.R. 13915, because I honestly believe that all children enrolled in public schools are entitled to an equal educational opportunity without regard to race, color, or national origin, and that the neighborhood is the appropriate basis for determining public school assignments.

I feel also that busing of students is wrong and does not and will not solve the problems of segregation. I, therefore, urge my colleagues to vote for passage of H.R. 13915, to put an end to the frustration of our American families, without further sociological, legislative meddling of the courts with public education.

Mr. COLLINS of Texas. Mr. Chairman, as my friend mentioned before, busing is certainly not the main issue. The real issue is education. Every time a family moves into a new neighborhood down in Texas invariably the first thing the mother asks is, "What is the school in our neighborhod like?" School is the primary thing they talk about when they choose where they are going to live. And then when the youngsters come home from school the first thing mother asks is "What happened in school today?" And, "What is the news with your teacher?" and school is the most integral and most important element of a child's life, and does more to develop a youngster than anything else.

So when we are talking about busing and when we are talking about quality education we are talking about education—the most important factor of all in the future of America.

I want to talk a while about quotas, because basically quotas is what we have gotten into in talking about busing. Buses haul kids from the country into town, that is true, but when we talk about busing today we are not talking about bringing the kids from the country into town, we are talking about busing to work out quota systems for various schools.

A couple of weeks ago I received a letter from the Secretary of HEW, Elliot Richardson, in answer to my specific question, I said, "Do we have a quota system for schools in HEW?" And he very definitely said, "There is no quota system, we have no student quotas of any type."

You can well understand why HEW does not have quotas, because in my State of Texas the largest minority are Mexican Americans, and yet right beside us, if you went over in Louisiana and started talking about who were the minority, they would tell you that the French are the minority. Or if you continued right up beyond us and asked who were the minority in Oklahoma they would start talking about the Indians.

I have talked to citizens in the North, and I have visited Northern cities. I was in Chicago the other day, and there was a Polish community. In Cincinnati I found a German community. In Boston—and I lived there for a while—I found an Italian community, and I found also that they had an Irish group. People of different racial groups sometimes live together, but when they live together they should have the right for their children to be able to go to school together.

We are talking about equal opportunity, and we are talking about equal opportunity for all children. When we really get down to basic facts the problem is that some children, when they enter the first grade, are not as well prepared as other children. That has nothing to do with race, economic conditions, religious background, or anything, but some of them are not just as well prepared in academic readiness.

That has nothing to do with race, ethnics, religious background, or anything. But some of them are not just as well prepared.

In this busing system we have developed, we have tried to shuffle children. If I may, I would like to tell you of a telephone conversation I had the other day. I called to talk to a businessman friend of mine, down in Dallas. He was not in the office but the secretary said that he would be back in a minute. While waiting I asked her, "What is the news down in Dallas? What is important?" She said, "I will tell you, Congressman, what is the most important thing in the world. They have slowed my child down in his education. My youngster is in the third grade, a real, real bright young boy. Last year he was in the advanced class and every day he was up and eager and he wanted to get to school 15 minutes early." She said, "I never saw such enthusiasm and a desire to learn. Then this year they started a busing system and they have now leveled it down to where the class is moving about a grade below their previous academic level. He is moving so slow—he has lost his enthusiasm and he has lost his joy for education.

"Now my other child is just an average student. This one had a great opportunity to go someplace—he could have been a scientist or gone into research. What they are trying to do is to pull him down."

The way America became great is by moving everyone up together. We never get anywhere trying to figure how we are going to bring some people down while we bring others up. Everybody needs to move forward together.

In all the legislation we work on this year, nothing will be more important than to improve equal educational opportunities for all students.

Mr. PUCINSKI. Mr. Chairman, I yield 4 minutes to the gentleman from New York (Mr. BADILLO).

Mr. BADILLO. Mr. Chairman, I certainly agree with the previous speaker that the purpose of having a democracy in America is to move all of the people upward to the point where they constitute a part of the majority.

But I believe that the legislation that is pending before us today does not do that. I believe the Congress has discovered 18 years too late that it had a responsibility to implement the Supreme Court decision in Brown against Board of Education, but that it is not discharging that responsibility by this legislation.

What we are doing today is that we are seeking to follow the discredited and deceitful pattern of refusing to accept the decision in Brown against Board of Education that was established by all the Southern State legislatures over a period of 18 years—the deceitful and discredited pattern that did not work for them—and which is not going to work for Congress either.

The Supreme Court never said in 1954, or since, that we had to have busing. All that the Supreme Court said was that steps had to be taken with all deliberate speed to end separate even though equal systems of education in this country.

For years, State legislatures in the South sought to nullify that decision, with the support of the Governors of the Southern States. They tried techniques that are proposed in this bill, and all of those techniques failed—and they are going to fail when they come up for review now, if they are approved by this Legislature, since it makes no difference whether it is a State legislature or the Congress of the United States that seeks to nullify the Constitution—it cannot be done in either case and the U.S. Supreme Court will not permit it.

It is sad that instead of taking action, even 18 years too late, to implement the decision of the Supreme Court, we are seeking to avoid and to nullify that decision. We are seeking to do this by incorporating in this legislation findings of fact that everyone in this Chamber knows are not true. For example, we know it is not true that segregation has virtually been ended and that only vestiges of segregation remain and yet we seek to give this falsehood the status of a fact. We know that it is not true that busing has depleted the financial resources of schools of this country and, yet, we insist on embodying this statement into law as if by making it a law, we make a falsehood a fact. We cannot do that.

We also seem to want to ignore facts—because we provide that the neighborhood is an appropriate basis for determining public school assignments, but we refuse to recognize that the most important fact in making up a neighborhood is the housing pattern of that neighborhood. We refuse to recognize that the way in which segregation is preserved in this country is by allowing county officials to so arrange the zoning codes so that housing for low- and lower- and middle-income people cannot be built in a community—and in that way we preserve the patterns of segregation in housing and in education throughout the country.

If we really want to move toward equal educational opportunities, we shall have the opportunity today because I will propose amendments and others will propose amendments to recognize that we cannot provide for a neighborhood unless we provide for the total community, including the housing patterns.

If we want to move toward the one America that the gentleman before me referred to, then we will provide that one of the things that the country must look to, one of the things that all the governments in all of the respective counties and municipalities and States must do aside from building magnet schools and building educational parks is to remove the barriers in zoning conditions to have housing for lower-income people and for people of all ideas.

Mr. STEIGER of Wisconsin. Mr. Chairman, I yield 2 minutes to the gentleman from North Carolina (Mr. MIZELL).

Mr. MIZELL. Mr. Chairman, I shall take this only to point out to the committee that at the proper time I shall offer an amendment under title IV, section 402, subsection (c), in subsection (c) the language says: "permitting students to transfer from a school in which a majority of the students are of their race, color, or national origin to a school in which a minority of the students are of their race, color, or national origin."

I think this is the most discriminatory legislation that has been proposed by the House since I have been here. I do not think the House wants to be on record as favoring language that favor children of one race over another as proposed in this section. I intend to offer an amendment at the proper time, to make it fair, and equitable for all students.

Mr. PUCINSKI. Mr. Chairman, I yield 1 minute to the gentlewoman from Massachusetts (Mrs. HICKS).

(Mrs. HICKS of Massachusetts asked and was given permission to revise and extend her remarks.)

Mrs. HICKS of Massachusetts. Mr. Chairman, I rise in support of H.R. 13915, Equal Educational Opportunities Act which would place permanent prohibitions and restrictions on busing. It also proposes funding to equalize educational opportunities in schools that cannot be integrated. I feel that while this bill does not go far enough in banning forcible busing, it is a step in the right direction with its busing restrictions and prohibition. This bill would reserve $500 million appropriated under the Emergency School Aid Act to enable State educational agencies to make grants to local educational agencies which adopt and implement plans to provide basic instructional and supportive services for educationally deprived students. Under the bill any individual who is denied equal educational opportunity as defined by the act may institute a civil action in the appropriate U.S. district court for appropriate relief. The bill does not restrict voluntary school desegregation proposals put forth by a school district.

Our country is a government of the people, for the people and by the people, and there are constitutional limitations on the amount of coercion that the Government can exercise over its citizens. Throughout our history, the judicial branch has served as a guardian of the people, seeking to guarantee that the other two branches did not exceed their limitations. The main purpose of our judicial system is to give certainty to the law so that citizens know what the law is. Today, however, we are threatened by the judicial branch itself. In the important matter of education, our courts have caused great confusion. Federal district judges seem to have different ideas as to the interpretation of the U.S. Supreme Court decisions regarding busing. Local school boards do not know what to do. Parents do not know what to expect.

I cannot accept judicial dictatorship which forces children to be pawns in a social struggle. Force without justice is dictatorial.

Twenty years ago, this Nation committed itself to removing discrimination from its educational systems and I support this commitment. Yet, busing is itself an example of discrimination—the forcible assignment of certain students to certain schools solely because of their racial background.

Recent court decisions, which order children to be forcibly transported over separate, well-defined county or city geographic and political boundaries to be educated in a city or county that is foreign to them, have created chaos and disorder in the community and traumatic experiences for the children. These decisions are said to create neighborhood schools, but they are in someone else's neighborhood. Parents, regardless of race, fear that if their children can be forcibly taken from them and bused miles away into unfamiliar often hostile neighborhoods, then the courts shall have all the powers to decide all things that are best for their children. The erosion of parental control is the erosion of the fundamental human freedoms.

Reason and commonsense are the lifeblood of the law. Forcible busing completely defies both reason and commonsense and is based entirely on speculation and idealistic concepts of social engineering.

What a senseless indictment has been place on a single race—the implication that because one is black, one can learn only through the process of osmosis—sitting next to a white child.

Children who live under ghetto conditions, under socioeconomic conditions that are not conducive to learning need quality education in their neighborhood schools with low pupil-teacher ratios, more professional and paraprofessional personnel to offer guidance in the form of practical instruction with emphasis on the basics as reading, writing and arithmetic and one's own worth, they need compensatory educational programs to compensate for the sense of insecurity the children have developed by living under these conditions. Let us invite self-help to clean up the inner city so it will be safe and more inviting. Let us give higher per pupil expenditure in city ghetto schools where children begin life with so many handicaps. Let us give full funding to the title I program, let us bring the resources to where the children are. Let us leave education in the hands of the educators.

Busing advocates say that 20 million children are bused in the United States, but they fail to mention that this is voluntary busing and usually to the neighborhood school.

Busing advocates say that busing will mean an easing of racial tensions between the black and white communities. Sadly, this is not so. The controversy itself has caused immeasurable bitterness and strife because forcible busing occurs in the world of reality not the world of theories.

Busing destroys the neighborhood school concept which is more than a mere tradition. Neighborhood schools are a time-honored and meaningful force for community well-being. Busing destroys the neighborhoods themselves and causes the school districts to become more black as the white flight takes place. This leads to the decline of the inner city and the problem we face then is resegregation.

I believe in quality integrated education, but it can never be achieved by forced measures. I have never supported inferior education for any child. Quality education is what is at stake in this controversy. We cannot let "antibusing" become a disguise for racial prejudice or intolerance, but neither can we let the plans for busing endanger the rights of our children. We cannot let the concept of racial balance dominate the picture if quality education is thereby sacrificed. Do not use busing as a smokescreen to hide deficiencies in an inferior school where some children are left behind. No child should attend an inferior school, but inferiority should be remedied at its source.

As Members of Congress, representing the people of this Nation, we must respect the will of our constituents, and they do not want forced busing. According to the latest Gallup poll, three out of four people in all areas of the country were opposed to forcible busing, that is 76 percent of the American public are against forcible busing and 47 percent of blacks are so opposed.

We must turn our efforts away from massive busing schemes and toward developing better programs in the schools which will provide our children with the tools for creating a better society for us all. Confront that one directly and busing becomes what it should have been all along—merely a means of voluntary transportation.

Mr. STEIGER of Wisconsin. Mr. Chairman, I yield myself 3 minutes.

Mr. Chairman, I would hope that there are yet some like myself who find ourselves in an ambivalent position about this bill.

I voted to report it. I am persuaded that in fact the Congress does have the responsibility and in fact the authority to undertake some guidance to the court on what can and should be done in this area. I am convinced that the tragedy of even the House's consideration of this bill is the byproduct of neglect by the Congress in not having moved some time ago, after Brown against Board of Education, before the whole issue became so impossibly emotional so that no degree of rationality is possible today.

Neglect, yes, by the Congress; and neglect, too, by courts and by school boards; by local units of government across the country in dealing with the problems of racial segregation; and abuses by the Court in having gone too far. On balance, then, the fact that this bill comes to this House today is a tragic commentary on the failure of all of us as Members of the Congress, political leaders, courts, judges, leaders of all kinds in our communities, that we are forced to deal with this kind of bill under these kinds of circumstances.

Having voted to report the bill, I would, I think, vote for it on final passage if no amendments are adopted, but I must say in all honesty, Mr. Chairman, that if we put back in the reopener, if we attempt to provide a total prohibition against busing, then this bill is both unconstitutional and unacceptable to this one Member.

I would hope that amendments of that kind would not be adopted in this Chamber today, that it would be possible for the Congress of the United States to responsibly exercise an authority and jurisdiction that I think it has, but I fear greatly that any effort to either oppose or support this bill on an all-or-nothing basis, or on the basis that it is the panacea of the world, or that it will be the end of the world, depending on one's point of view, does nothing to enlarge but will hamper the attempt to implement the goal of equal educational opportunities.

I would hope the Members of this body would think long and hard before we adopt amendments which will gut the bill.

Mr. DENNIS. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I yield to the gentleman from Indiana.

Mr. DENNIS. Mr. Chairman, if we assume that the bill is constitutional in its present form—and that is a debatable question.

Mr. STEIGER of Wisconsin. Yes.

Mr. DENNIS. But I agree with the gentleman and I think it is constitutional. If we assume that, what makes it unconstitutional, to put in the reopener, the effect of which, as I understand it, would merely be to treat all jurisdictions the same.

Mr. STEIGER of Wisconsin. Mr. Chairman, I would say to the gentleman from Indiana that my feeling on that amendment, and obviously it hinges on what the language is that is contained in it, is in effect it allows us to go back and reopen cases which were settled, where there was a clear-cut pattern of de jure segregation. I would not want to see us get into that position. I think that opens the door to some frightful possibilities in attempting to uphold the Constitution. It is for that reason I oppose the amendment.

Mr. MAZZOLI. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I yield to the gentleman from Kentucky.

Mr. MAZZOLI. Mr. Chairman, I thank the gentleman for yielding and I wish to associate myself with the gentleman in his remarks and the statement he just made. As it came out of the committee, many of us had difficulties with this bill. We felt it was constitutional as it was written, although others of good faith did feel otherwise. But, if the House strips it of the money and adds the reopener, which is a backward step in civil rights and human relations, this bill would become unsupportable in this Member's opinion.

Mr. FRENZEL. Mr. Chairman, this bill has the elements of a good compromise; that is, it does not satisfy strong-minded people on either side of the issue.

It has elements of danger, also. There are constitutional doubts—as there are on any bill involved with personal rights—and there are doubts as to whether it will change the current situation enough. It is worth reviewing the current situation. This country has struggled manfully to divest itself of dual school systems. The courts have lead this effort. One desegregation tool originally considered temporary has been massive busing. As court ordered busing has spread from dual-school areas to points all across the Nation, people have become more and more dissatisfied, and more and more upset. We are seeing these feelings in my own area now, just as we have seen great objection to consolidation-compelled busing in rural Minnesota during the past 15 years. But, in Minnesota, our people knew what was going to happen. In many cities across this country, various courts have applied various remedies. Whole cities, and whole areas, live under the shadow of unknown, unpredictable, pending court decisions.

This bill seeks to deal with legitimate concerns without destroying traditional human rights guaranteed by our Constitution. That is a difficult tightrope act, indeed.

The bill sets guidelines for remedies in the case of de jure segregation. It lists remedies by priority for sixth grade and under busing cannot be farther than the second nearest school suitable for the particular student. For over sixth grade, busing is lowest priority remedy, to be used only when other remedies are exhausted.

The remedies, and their priority, are calculated to bring some order out of the uneven mix of court decisions. It is clearly provided that districts may voluntarily adopt any remedies in any priority sequence.

The bill is euphemistically titled "The Equal Educational Opportunities Act of 1972." One of its important purposes is to provide financial assistance for educationally deprived students. The Federal assistance estimated to be about $300 per pupil would come from the Emergency School Aid—Desegregation—Act, and be used for compensatory programs where there are heaviest concentrations of poor children. Compensatory programs are limited to "basic instructional services," and do not include frills or brick and mortar.

School district boundaries are protected unless the boundaries have been drawn to discriminate. This provision embodies the features of my bill introduced back in November 1971.

This bill also provides for definitions of unlawful, discriminatory practices, and for enforcement of the act through civil actions, either instituted by the Attorney General, or in which he may intervene.

The bill has imperfections. It will not satisfy people of strong conviction on both sides. But it will do something.

It will establish order in a chaotic situation. It will establish guidelines. If, as alleged, it is a backward step, it is a step least abusive to minorities who have suffered the effects of segregation.

Despite constitutional questions, it does less violence to the Constitution than other proposals. Unless it is passed, other remedies, such as the constitutional amendment—now not favored by the administration—may prevail as substitutes.

Anything less would not restore order. Anything more may alter cherished, constitutional rights. I hope the bill is passed without substantial amendments, so that we may move on to other compelling matters instead of being embroiled in this issue again and again.

Mr. PUCINSKI. Mr. Chairman, I yield such time as he may consume to the gentleman from Virginia (Mr. Downing).

Mr. DOWNING. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I think my feelings on this subject are well known. I will not dwell on them longer. I think the bill in its present form is imperfect, but with the adoption of certain amendments I could support it wholeheartedly. One of those amendments is the one the gentleman in the well just referred to, and that is the "reopener." If we do not adopt that amendment I think it would be the most unfair thing we have had since the Voting Rights Act of 1964, which completely excluded seven States in the South from being able to pass their own voting laws. The reopener is important and I do hope this House will see fit to pass that.

Mr. Chairman, the forced busing of children over long distances over hazardous roads and streets to obtain racial balance has literally torn some of my constituency asunder—particularly in the Hampton and Newport News area of Virginia.

The people are bitterly protesting—and rightly so in my opinion—that their rights as citizens are being compromised.

I do not view this as a part of the racial controversy but I do admit that, in the minds of some, it is an outgrowth of that problem. The harshness of the Federal Court mandate affects both blacks and whites adversely. Several months ago I had a black constituent telephone me complaining bitterly that his young son was being forced to attend a school some 20 miles away when there was an excellent school within walking distance of his home. He told me, "When my wife and I selected our home in this city, we selected it with regard to the proximity of the church and the school. We now have a fine home within walking distance of both of those places. How is it, Mr. Downing, that they can force my son to attend a certain school? What rights do the courts have to tell me where my child should go to school?" I told him that the courts had decided that the busing of students to maintain racial balance was an indispensable tool in obtaining the goal of integration. He said, "I want none of it."

These Federal court decisions have disrupted the lives of many Americans. They have added to the cost of providing a child with inferior education. I am told that the quality level of education in schools where attendance has been forced has generally deteriorated. And do these judicial edicts really accomplish integration? There is evidence proving otherwise. There are facts of record where forced integration has resulted in massive desegregation and thus we are back to the old unwanted unitary system.

I know of at least one case in Georgia where a school which was formerly 30 percent black and 70 percent white is now 70 percent black and 30 percent white. In my opinion, if we prolong this, we will gradually undermine one of the great institutions of this country, and that is the free public school educational system.

I do not condemn my colleagues if they believe this to be a political issue, or a regional issue or an emotional issue. I do believe, however, that they have misjudged, in many cases, the hidden but true feelings of most Americans black and white regarding this matter.

Most Americans cannot afford private schools with their superior educational facilities. They have to rely on the public school system their taxes provide for them. They do not object to integration—in fact many welcome it—but not as the cost of education.

I do not know what your personal feelings are on this matter. But even though you are seriously dedicated to the proposition that this is a necessary tool in order to accomplish integration. I ask you please look at the havoc and unrest it has caused and ask yourself. "Is it worth the cost? Have we not gone too far?"

Some say that the passage of the legislation will "roll back" the progress made since the historic Brown decision. In my opinion the only "rollback" will be a return to the principle enunciated in that famous case.

The thrust of the Brown decision was that no child should be involuntarily assigned to a certain school because of his race.

The courts, since then, in trying to implement this decision have built up an inverted pyramid of judicial precedents so that now our school districts are being required to assign students to a particular school solely because of his race.

I sympathize with our beleaguered Federal judges in their zeal to uphold the Constitution of the United States, they have, in some cases unwittingly chopped away at the very foundations which hold it up.

The Richmond, Va., decision was a case in point here, the presiding judge ordered the merger and consolidation of several school districts, cutting across the county and city boundaries, and ignoring the responsibilities of the individual subdivisions of the State. Had this decision not been struck down by a superior court, it is logical to assume that another Federal court could order the merger of northern Virginia school districts with the school districts of the District of Columbia and parts of Maryland based on the Richmond precedent.

The Detroit, Mich., case is another case of judicial frustration. There, I am informed that the presiding judge actually ordered the State treasurer of Michigan to purchase several million dollars worth of buses for the school districts of Detroit without even extending the courtesy of asking the Michigan State Legislature to authorize and appropriate such funds. Fortunately, this decision was swiftly struck down by the next appellate court within a matter of hours.

The city of Norfolk, Va., which has no school buses, has been ordered to bus thousands more students. The local transit company, which previously bused the students, had insufficient buses, and could not possibly provide the additional busing required by the courts. To complicate matters further, the bus company is ceasing business operations as of this summer. Must the city of Norfolk buy buses? If so, with what? That city is as financially strapped as the other great cities of our Nation.

The extremes we are reaching can no longer be tolerated by patience and good humor. They are now realistically dangerous. Never has, as the oft-repeated phrase, "throwing the baby out with the bath water" been so apt.

Some famous man once said, "A fool learns by experience; a wise man by the experience of others." In other words, you do not have to put your finger in the flame of a candle to know that it burns and pains. Thus, you have profited by the experience of others.

What we, who have experienced the agonies of forced busing, are trying to tell you is that it should not happen to you.

I urge you to favorably consider this legislation.

Mr. STEIGER of Wisconsin. Mr. Chairman, I yield 5 minutes to the gentleman from Virginia (Mr. SCOTT).

Mr. SCOTT. Mr. Chairman, I appreciate the gentleman yielding and would like to associate my remarks with those which have just been made by my colleague, the gentleman from Virginia (Mr. DOWNING). As far as the reopening of court cases is concerned, I have heard the comment made that we would be going back to de jure segregation, but if we get to thinking about the case in Richmond, in Henrico and Chesterfield Counties, we have never before, to my knowledge, had any place in this country where the courts have abolished the political subdivision lines. This is not a question of segregation. This is a question, at least in the Richmond area, of taking children out of the city and putting them into the adjoining counties and children in the counties and putting them into an adjoining city.

Mr. Chairman, let me commend the chairman of the Rules Committee, Mr. COLMER, for his action in bringing this matter to the floor of the House today.

I know the bill came out of the Committee on Education and Labor, but I just wonder if it would have, without the action of our Rules Committee in holding hearings on the various antibusing proposals. Its action, in my opinion, indicated some antibusing legislation would be brought to the floor and encouraged the favorable action by the Committee on Education and Labor.

In any event, I believe that the people's Representatives should have an opportunity to vote on a matter such as this general subject.

In a poll of my own district I found that, of the 50,000 replies which came back, 7 percent favored the busing of children for the purpose of obtaining racial balance, and 91 percent were opposed to busing under any circumstances to bring about a racial balance.

If we believe that the ultimate will in this Republic rests with the people collectively, we have an obligation to favorably vote on this legislation or any other reasonable bill that would prohibit busing of children.

We are proud of the fact that we live in a nation where the people govern, where this ultimate will or sovereignty resides. Regardless of any other factor, if we are here, Mr. Chairman, to represent the American people, to carry out their desires, then we must preserve the neighborhood schools.

Families want to decide for themselves where they will live, where they will work, where their children will attend school. This is a part of our democratic society.

I am convinced of the deep resentment felt about the use of children as pawns to bring about social reform.

We might ask, "What does a family consider when it purchases a home?" They consider where the school is, where the church is, where the market is, who their neighbors are. They purchase an environment in which to raise a family. They do not want their children taken into a foreign environment.

I would prefer for us to have a constitutional amendment before us today. I still hope that the chairman of the Rules Committee will bring that up after the recess is over, regardless of what action is taken on the matter before us in the House today.

We have heard the chairman of the Judiciary Committee and the ranking minority member of that committee talk about this measure being unconstitutional; yet they refuse to bring out a measure which would amend the Constitution to obtain similar results. I am not aware that the Supreme Court has ever held an amendment to the Constitution to be unconstitutional. So that is the way it could be done, if we have any reservations about the constitutionality of this bill.

I believe the bill has a number of defects in it. I do not like the concept that busing is to be prohibited only for children in the sixth grade and below. I would like to have the amendment adopted which I understand will be offered by the gentleman from Georgia (Mr. THOMPSON). This would prohibit all busing for the purpose of racial balance. I should like to have the amendment adopted that will be proposed by the gentleman from North Carolina (Mr. RUTH) that would permit us to reopen the Richmond-Henrico-Chesterfield case, in the event the Supreme Court does uphold the Federal district court. As you may recall the Circuit Court of Appeals for the Fourth Circuit has reversed, the district court but we know an effort will be made to have that reviewed by the Supreme Court on certiorari.

Mr. Chairman, I am going to vote for, and I urge the support of this body for, any measure which comes before this House which will prohibit the busing of schoolchildren for the purpose of bringing about racial balance. I urge a favorable vote on the bill before us and any perfecting amendments to strengthen it.

Mr. CONYERS. Mr. Chairman, I rise to make a point of order. There are so few Members in the Chamber. Mr. Chairman, that I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Eighty-one Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 337]

Wiggins

Accordingly the Committee rose; and the Speaker having resumed the Chair, Mr. UDALL, Chairman of the Committee of the Whole House on the State of the Union reported that that Committee, having had under consideration the bill H.R. 13915, and finding itself without a quorum, he had directed the roll to be called, when 374 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

Mr. PUCINSKI. Mr. Chairman, I yield 5 minutes to the gentlewoman from Oregon (Mrs. GREEN).

Mrs. GREEN of Oregon. Mr. Chairman, H.R. 13915 has the form and the appearance of a bill to limit busing arising out of court ordered transportation of racially different students from one school to another. The bill purports to do so by limiting the ability of the courts to order such transportation. In fact, this bill H.R. 13915 should greatly increase the busing discord, because it strengthens the jurisdiction of the court to order the troublesome transportation.

Mr. Chairman, because of the lateness of the hour, I am not going to take the full 5 minutes, but it seems to me, unless amendments are adopted to strengthen this bill so that, in fact, we have more than the appearance of doing something about busing that the bill would be unacceptable. Therefore, I hope that the amendments that will be offered by the gentleman from North Carolina will be approved by this House and we can, once and for all, get this busing controversy behind us.

Mr. PUCINSKI. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan (Mr. O'HARA).

Mr. O'HARA. Mr. Chairman, I rise in support of H.R. 13915.

Mr. Chairman, when I came to Congress 14 years ago, there were children being bused to distant schools because of the color of their skin. In much of the South, black children were being taken to black schools, white children to white schools—even when other schools were closer.

I opposed that, Mr. Chairman. I opposed it then and I am proud of the fact that I played a small part in the enactment of much of the civil rights legislation that has helped to correct that situation.

Today, Mr. Chairman, we find black and white children once again being assigned to schools on the basis of the color of their skin, this time by Federal judges in the North and in the South. Mr. Chairman, I oppose racial assignment to schools. I oppose it today just as I opposed it 14 years ago.

To my mind, Mr. Chairman, the Constitution, the 14th amendment and the equal protection clause require that public institutions be colorblind; that a person neither be favored nor discriminated against because of the color of his skin; that the color of a man's skin may make no difference in determining where he works, where he lives or where he goes to school. I firmly oppose racial assignment of students, no matter what its motive, as contrary to the spirit and the letter of the Constitution.

I support this bill, Mr. Chairman, even though it does continue to permit some busing—and I am opposed to all racial busing—because this bill is the best remedy available at this time and because it contains some very good provisions. Section 203 of the bill makes it clear that it is the intention of the Congress that if a school system operates on the basis of racially nondiscriminatory neighborhood attendance areas, that it is not subject to a court order of any kind. And section 404 makes it clear that children are not to be bused across district lines, nor are school districts to be altered, to carry out a desegregation order.

These are two very important provisions, and their prompt enactment is essential.

Finally, Mr. Chairman, I shall, at the appropriate time, offer an amendment to cure the principal defect of the bill and strike out the limited busing authority still found in it. I hope that those who share my opposition to racial busing will support my amendment, and that that amendment will be adopted.

Mr. WILLIAM D. FORD. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from Michigan.

Mr. WILLIAM D. FORD. Mr. Chairman, I rise in support of this legislation.

Mr. PUCINSKI. Mr. Chairman, I yield 3 minutes to the gentleman from New York (Mr. SCHEUER), a member of the committee.

Mr. SCHEUER. Mr. Chairman, this is a difficult day for many of us. There are not many Members in Congress who do not have serious reservations about the use of busing. I for one do not regard busing as the be-all and end-all device for providing equal education opportunity for our kids. It is not a simplistic answer, and in many cases it is an undesirable expedient. Father Hesburgh, the Chairman of the Civil Rights Commission, made amply clear the limitations of busing and some of the problems it creates in his most eloquent testimony before our committee.

But we are here faced with a basic challenge to the Constitution—and the separation of the powers of the three branches of Government; under our Constitution, when the Supreme Court of the United States or a Federal court orders busing as a remedy to give meat and substance to a constitutional right, there simply is nothing we can do about it, and, indeed, nothing we should try to do about it.

The gentlewoman from Oregon (Mrs. GREEN) complained that we are fortifying the right of the courts to mandate busing. The fact of the matter is that, regardless of what we do or say here this afternoon, we can neither diminish the right of the Court to order busing, nor can we add to the right of the Court to order busing to protect a constitutional right. Where the Court is providing a remedy to give life's breath to a constitutional right, there is no way we can affect that, and there is no precedent for the hope that we can diminish the remedy that our courts can provide to protect constitutional rights.

Mr. DENNIS. Mr. Chairman, will the gentleman yield?

Let me read some language from Katzenbach versus Morgan because I do not think it has been read this afternoon.

Concerned with the dissent's charge that the decision would justify congressional cutbacks in the amendment's basic guarantees, the majority opinion included a footnote:

> Contrary to the suggestion of the dissent . . . § 5 does not grant Congress power to exercise discretion in the other direction and to enact "statutes so as in effect to dilute equal protection and due process decisions of this Court." We emphasize that Congress' power under § 5 is limited to adopting measures to enforce the guarantees of the Amendment; § 5 grants Congress no power to restrict, abrogate, or dilute these guarantees.

Now I suggest that here this afternoon we are engaging in a very dangerous, destructive exercise. If we pass this bill containing these limiting parameters on the right of the Supreme Court to provide appropriate remedies for constitutional rights—we will not succeed in affecting the rights, powers and authority of the Court one iota, for they will strike down what we do here. But we will succeed in further poisoning the atmosphere in this country, and further embroiling the Court in the emotional political processes of an election year.

Mr. PUCINSKI. Mr. Chairman, I yield 4 minutes to the gentlewoman from Oregon (Mrs. GREEN) since the gentlewoman's name was mentioned by the preceding speaker.

Mrs. GREEN of Oregon. Mr. Chairman, I yielded back a few minutes just a little while ago because I thought we could save time, but since the gentleman from New York has raised questions, let me make the statement I intended to make.

Mr. Chairman, H.R. 13915 has the form and appearance of a bill to limit busing arising out of court-ordered transportation of racially different students from one school to another—busing. The bill purports to do by limiting the ability of the courts to order such transportation.

In practice, H.R. 13915 should greatly increase busing discord because it strengthens the jurisdiction of the courts to order the troublesome transportation. It nowhere denies jurisdiction to the courts in regard to busing; its expression of preferences in regard to limitation on busing is nullified by ratification of the courts' authority to order busing when the courts think it necessary for constitutional reasons.

Title II accepts and codifies the more advanced judicial legislation on desegregation of school systems. Section 201 (b), for example, requires affirmative action programs. Section 201(d) prohibits discrimination for race, et cetera in employment if it denies equal educational opportunity. For example, superior teachers may not be employed if they do not conform to such racial categories as courts may require.

Section 201(e) prohibits transfer of students if the transfer increases segregation by race, and so forth, even though the transfer may be educationally desirable.

Section 202 does not prohibit administrative striving for racial, and so forth, balance. It simply does not require it.

Section 203 confirms judicial authority to transfer students away from neighborhood schools in order to accomplish desegregation of races, and so forth.

Title III gives a legislative basis for jurisdiction to district courts, where they would otherwise have to construct it themselves out of the Constitution. The hundreds of judges who now view with reluctance the assumption of responsibility, based on a reading of the Constitution alone, requiring intervention in school district decisions will now have congressional authorization to do so. Private individuals may institute suits to carry out the provisions of this act—a right which now has to be constructed out of the Constitution. Section 305 authorizes the courts to allow attorneys fees "as part of the costs" if the plaintiff prevails. Such fees and costs may be very substantial. The possibility of reimbursement should encourage litigation.

Title IV authorizes judicial intervention in school administration by congressional ratification of the techniques which the courts have constructed for themselves out of their reading of the Constitution. This act does not indicate a different reading by the Congress of the Constitution.

It may be argued that section 403(a) does constitute a different reading by Congress of the Constitution. Section 403(a) prohibits transportation of any student in the sixth grade and below to a school other than the school closest or next closest to his place of residence. The provision does not expressly include the usual exception that such transportation is authorized if necessary to avoid a denial of equal educational opportunity—see section 403(b) dealing with students in the seventh grade and above. The argument would fail because section 403(a) does expressly refer to section 402 which describes the basis of the courts' jurisdiction as the provision of a remedy for denial of equal educational opportunities. That reference brings into a reading of section 403(a) the authority for a court to order additional transportation if necessary to avoid a denial of equal educational opportunities.

Section 403(a) does constitute a decision by Congress that consideration of a student's health overrides the 14th amendment. The decision is not likely to offend the courts. Section 403(a) also prohibits transportation of a student which "constitutes a significant impingement of the educational process with respect to such students." The language is meaningless; any transportation is a "significant impingement."

Section 404 confers congressional approval of judicial reordering of school district lines in the situation in which courts are beginning to assert interest—where lines were drawn for the purpose of segregation.

In summary, the bill strengthens judicial intervention in school administration by giving congressional approval to the body of law which the courts have worked out as grounds for intervention and by giving congressional approval to the means by which the courts may intervene to accomplish their purpose. Specifically it constitutes congressional approval of court-ordered busing.

Some may argue that therefore this bill is harmless: It simply accepts as law what courts say to be the law. Logically this may be so, but the world of reality operates on considerations that go beyond conceptual logic. At present most judges are reluctant to interpose themselves into difficult and controversial questions of drawing school boundary lines, faculty selection, crosstown busing of students, and overriding school district boundaries. At present, in order to do so, judges must draw forth authority directly from the Constitution. They must read that specific authority into words of broad meaning such as "equal protection." Reasonable men can differ in application of those words to specific situations. The result is that now a plaintiff has to "fish" for a judge whose views predispose him to rule the plaintiff's way. This bill is a plaintiff's bill. It provides a legislative basis acceptable to all judges to act in situations in which now most judges act cautiously and with reservations.

Second, there is a real probability that many of the judicial opinions that now trouble us will eventually be overruled by the courts themselves on the ground that they are unwarranted assumption by the courts of authority that, under the Constitution, properly belongs to the Congress and to State legislatures. The effect of this bill is to foreclose the possibility of that reconsideration by the courts themselves. It gives congressional approval to the decisions of aggressive judges in areas in which, in my view, the courts are not competent to make decisions.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio (Mr. MCCULLOCH).

Mr. McCULLOCH. Mr. Chairman, I ask the Members of this body who have from time to time stated their belief that a constitutional amendment was necessary to stop busing ordered by courts to enforce the equal protection clause to vote their belief. I know that we may differ on what is the best social policy for our country, but likewise we can agree that H.R. 13915 is unconstitutional. I am confident that a majority of the Members of this body believe that this bill is repugnant to the Constitution.

The Judiciary Committee held 20 days of hearings on busing proposals this year. We heard 130 witnesses. We received countless statements. Yet, as far as I know, no Member of Congress voiced the opinion that this bill or anything like it was constitutional. All who made their thoughts known agreed that only a constitutional amendment could stop busing to overcome segregation.

Over a hundred legal scholars voiced their opposition while only one made known his support. Constitutional doubts have been raised from the very beginning, but the majority report raises not a finger in reply. Because it cannot. The case simply cannot be made. This bill is not the product of a detached good faith effort to learn the law and enforce it.

For the Supreme Court has already told us that we cannot pass an antibusing statute. North Carolina tried it, and the Supreme Court unanimously struck it down in North Carolina Board of Education against Swann.

The Court said:

> [I]f a state-imposed limitation on a school authority's discretion operates to inhibit or obstruct the operation of a unitary school system or impede the disestablishing of a dual school system, it must fall; state policy must give way when it operates to hinder vindication of federal constitutional guarantees.

If the State legislature could not limit busing, how can we? The Court said that—

> All reasonable methods [must] be available to formulate an effective remedy.

The Court said that busing was a reasonable method, one that could not be eliminated.

Does Congress have some power to override or contract constitutional rights which State legislatures do not have? Well, I had always thought that no legislature, State or Federal, could limit rights guaranteed by the Constitution. That Congress cannot was stated expressly in Katzenbach against Morgan, a case that acknowledged Congress broad power to implement the Constitution.

What reason did the Court give for invalidating the antibusing statute? The Court said:

> It would inescapably operate to obstruct the remedies granted by the District Court in the Swann case.

That is quite interesting in view of the admission of one of the managers of the bill that the remedies granted by the district court in the Swann case could not be implemented under the bill in the

Charlotte-Mecklenburg school system where the case arose.

I suppose some may try to slip away from the hard truth by pointing out that Swann condemned as inadequate plans which "assign pupils to schools nearest their homes," that the Court probably meant the closest school, and that the bill would allow assignment to the second closest school, thereby escaping unconstitutionality. Or it may be argued that Swann said that "desegregation plans can't be limited to the walk-in school," but the bill would permit busing to the walk-in school, thereby proving that reasonable busing is permitted and only unreasonable busing is forbidden. But these are not arguments that will convince any court, and it is the courts that will determine whether this bill is to be given effect.

Once it becomes clear that the bill does flatly contradict decisions of the Supreme Court based upon its interpretation of the Constitution, the argument is made that although Congress cannot abridge constitutional rights, it can limit the remedial powers of the Federal courts, and that is what this bill really does.

Certainly, Congress has limited the remedies that a Federal court could give in particular cases. But never like this. In all prior instances, Congress had either made certain that other effective remedies were available, such as in Cary against Curtis or ex parte McCardle or had limited the remedy where it had already constitutionally limited the right, as with the anti-injunction provision of the Norris-La Guardia Act.

The history leading up to the enactment of the Norris-LaGuardia Act should not be overlooked. By the Sherman Act, labor unions were subjected to the antitrust laws. Their activities were considered a "restraint of trade." Public outcry led Congress to exempt unions from antitrust coverage in the Clayton Act. But the courts did not get the message; they continued to enjoin labor union activities, some of which we now readily recognize as protected by the first amendment. Therefore, in order to further the policy of the Clayton Act which exempted labor from the Sherman Act, Congress enacted the Norris-LaGuardia Act. It limited remedial powers of the Federal courts; yes. But only to bring them into line with a validly enacted restriction of the substantive rights.

Obviously, where Congress creates the right, it can take it away. In such a case I cannot see any reason why Congress must repeal the right rather than restrict the remedy. Thus the Norris-LaGuardia Act does not justify this bill; rather it demonstrates a critical distinction.

Congress can tell the Federal courts not to enforce rights that Congress created or even rights that States created in conflict with Federal policy. The Voting Rights Act of 1965 illustrates the latter.

However, Congress cannot tell a Federal court not to enforce the Constitution in an actual case over which it has jurisdiction. Marbury against Madison taught us that. This means that Congress cannot tell Federal courts how to decide cases that hinge upon constitutional interpretation. See United States against Klein.

Once the Federal courts are granted jurisdiction over the subject matter, the courts must decide the cases according to the law of the land. Judges likewise take an oath to uphold the Constitution. Congressionally enacted limitations—"obstructions," as Swann put it—on the powers of the courts to reach the result required by the Constitution are null and void.

Congress cannot use the courts to mouth Congress' interpretation of the Constitution. That is what this bill does. It would not work.

In asserting that the bill is unconstitutional, I do not assert that every line is unconstitutional. But viewed as a whole, almost all of the language is an elaborate attempt to camouflage, with meaningless words of balance, section 403, which limits busing.

Title I's purpose and effect is to take dollars already authorized to assist school districts with desegregation efforts and transform them into dollars for the promotion of separate but equal education for blacks. Perhaps I am too kind in stating that the effect would be to give an "equal" education to blacks. As the gentleman from Florida (Mr. PEPPER) stated during the Rules Committee hearings on this bill: If it takes $300 million to provide compensatory education just in the State of Florida, how can $500 million suffice for the whole country?

Also it should be noted that title I funds do not necessarily flow to black children who are denied a better education by title IV. No judge is authorized, after he decides for the black plaintiff on the merits but denies him any remedy, to make him a dollar grant for compensatory education. The substitute for the reality of being bused to a better school is displaced by the theory that Government will someday provide compensatory education. Does this comport with the command of Green and of Alexander to provide equal opportunity "now" and "at once?"

Title II states—and misstates—some of the present law of desegregation. Section 405 indicates that title II is not binding upon school districts. The only requirement is that they obey the law. A bill that requires "lawful" action with no guidelines or sanctions is hardly worth enacting.

Title III is procedural. Title IV limits busing. Title V defines terms. Title VI is miscellaneous.

So when you take away the restatements, the procedure, the definitions, and the miscellaneous, what is left is a limit on busing, which is unconstitutional, and a rechanneling of funds away from desegregation toward separation with better living conditions, which is shortsighted.

Moreover, the limit on busing is illogical in view of the committee report's reliance on the so-called Lambda study. That study suggested that it was possible to achieve more integration with less busing. If so, why limit busing? Why not simply establish a list of priorities making busing the remedy of last resort? If the committee believes this assertion, why does not it act accordingly? Why must it prohibit in section 403 what it claims is made unnecessary by section 402?

Section 403(a)—which is the heart and soul of this elaborate disguise—flatly prohibits busing beyond the second closest school where younger children are involved. It is interesting to note that the Charlotte-Mecklenburg school system bused its youngest children the farthest before it was ordered to employ busing by the Federal court. Moreover, testimony before the Judiciary Committee made clear that desegregation is critical for younger students and that if desegregation is obstructed in lower grades, integration for higher grades will tend to produce racial tension. But this flat inflexible rule—which prohibits busing for desegregation even where school boards require more busing for other reasons and which thus discriminates against integration—is recommended nonetheless.

Section 403(a) is significant only when it operates to stop busing; that is, only when the Lambda report on which the committee relies is wrong and only when it is unconstitutional. But section 403(a) is why we are here. Nevertheless, I hope that other assaults on the Constitution are not overlooked. Section 203 would allow a State or local educational agency to defend against an action alleging segregation by showing that some other agency of the State caused the problem. This contradicts the 14th amendment which declares that—

> No *State* shall . . . deny . . . equal protection of the laws.

This contradicts the holding of the fourth circuit in Brewer. This contradicts the holding of the Supreme Court in Gaston County against United States that one State agency cannot raise as a defense the constitutional violation of another State agency.

An even more glaring disregard of the Constitution is section 404. It would attempt to reverse a decision of the Supreme Court not even two months old. In Wright against Council of the City of Emporia the Supreme Court held invalid the establishment of a separate school district where the effect but not the "dominant purpose" of such establishment was to frustrate desegregation. Section 404 by requiring "purpose and effect" rather than "purpose or effect" runs afoul of the Wright case.

The bill would sail a rocky course, tacking back and forth between the unnecessary and the unconstitutional. It will undoubtedly run aground. It is not seaworthy, and it should not be launched.

Mr. PUCINSKI. Mr. Chairman, I yield 3 minutes to the gentleman from New York (Mr. RANGEL).

Mr. RANGEL. Mr. Chairman, having been forced economically to live in a segregated community all my life, I am not sufficiently sophisticated to really understand the true values of integration. Certainly when I was in Korea it did not make me feel any better that I was being shot at next to some white soldier rather than being shot at next to a black GI. Nevertheless, I do recognize that in certain parts of this country many have been denied the right of a quality education based on color.

It seems to me as we search our consciences we will come to the conclusion that we are really not talking about the inconvenience of busing for our children because America has learned to understand and appreciate the value of inconveniences if indeed the search is for a better quality of life and a better education. The real tragedy is what is happening to middle America, how we take somebody and overtax him and underpay him and allow him the false security to believe he is better than someone else just because of the color of his skin. I daresay there are many black people who can afford to send their children to a private school who would not dare to send their children to the inferior schools located in some white communities which believe they are superior because they exclude blacks.

Indeed, the chairman of the Rules Committee was so correct when he said that the chickens have come home to roost. There are Members of this House who are paying for buses to leave Harlem in New York to go into the South to demonstrate and articulate against injustices committed against blacks there who will today vote against the black kids in the North to prevent them from entering these communities and getting an education.

It seems to me what we are doing now is playing a very tricky game and a very emotional game.

This is a game which we, as lawmakers, cannot afford the luxury of.

I cannot tell the Members how many times I have wanted to seriously change the Constitution. Many Members of this House, when they were emotionally involved with the Member who was the former chairman of the Committee on Education and Labor, my predecessor, threw out the Constitution emotionally at that time, to say that he should be excluded.

Now we are taking a very serious risk. Now because of the inconvenience, because of the emotion of your constituents, you are going to determine whether or not the Constitution is going to be flexible enough for you to do what you really want to do.

But I suggest to you that you are opening up the doors, because already you find it difficult, as lawmakers, to explain to any kids in your district what happened to the warmaking powers of the Congress. You can mumble, but you cannot declare yourselves to be the body that declares war in these United States any longer.

And now we have reached the point where the President of the United States is asking you to restrict the powers of the U.S. Congress. I submit that once again the chickens will come home to roost.

Mr. Chairman, the Association of the Bar of the City of New York has concluded that the administration's so-called Equal Educational Opportunities Act, as well as the Student Transportation Moratorium Act it is also proposing, are "unconstitutional as well as most unwise." I can only concur most emphatically with that judgment.

In a report prepared by the Committees on Federal Legislation and Civil Rights of the association, it was concluded that the legislation "would have the effect of condoning and indeed fostering continued segregation in schools."

The report specifically analyzed the administration's original proposals, but many of the arguments it contains apply equally to H.R. 13915, the so-called Equal Educational Opportunities Act. To refer to this legislation by that title is indeed callously misleading. Contrary to its title, the bill does nothing whatsoever to promote equal educational opportunities; instead it would place very serious inhibitions in the way of the courts in dealing with unconstitutional school segregation. In some instances, it would prevent the courts from providing an effective remedy for denial of equal educational opportunity.

The Bar Association of New York, in opposing the predecessor of H.R. 13915 in the form originally proposed by the administration, said—and I quote:

> There is no doubt that it would, in many instances, remove the only effective remedy for the violation of an individual student's constitutional rights. We think that the proposals are in violation of the Fifth Amendment to the Constitution. Moreover, we think that, even if free of constitutional infirmities, such legislation should have no place on the national agenda.

Mr. Chairman, the report of the association should be read by every Member of this body, and I include it at this point in the Record:

The Administration's Proposed "Anti-Busing" Legislation

(By the Committee on Federal Legislation and the Committee on Civil Rights of the Association of the Bar of the City of New York)

The Administration has introduced two bills—the "Student Transportation Moratorium Act" (STMA), and the "Equal Educational Opportunities Act" (EEOA)—which would severely restrict and in a number of cases eliminate entirely the use of increased busing by Federal courts as a means of alleviating racial separation in the schools. They would be applicable whether that separation constitutes *"de jure"* segregation deliberately imposed by governmental authority or *"de facto"* segregation arising out of other factors, such as segregated housing patterns. We believe that the proposals are unconstitutional as well as most unwise. On June 8, 1972, Congress completed action upon, and sent to the President for approval, and on June 23, 1972 the President approved an education bill into which there had been interpolated, in the final stages of Congressional action on the bill, certain provisions relating to busing. Among other things, these provisions would delay, until all appeals were exhausted or until July 1, 1974, the effectiveness of district court orders requiring the "transportation or transfer" of students for the "purpose of achieving a balance among students with respect to race, sex, religion or socioeconomic status." While these provisions appear to be less restrictive than the totality of the Administration's anti-busing proposals, we believe that similar Constitutional and policy objectives apply to both.

I. PRELIMINARY ANALYSIS

Set forth below is a summary of the principal provisions of the proposed legislation together with a preliminary discussion of the Constitutional and policy problems raised thereby.

The Administration's two bills purport to rest on certain legislative findings as to students' rights to desegregation, the current status of school desegregation, and the asserted excess of pupil transportation ("busing") for the purpose of desegregation. The STMA seeks to halt implementation of all new orders for desegregatory pupil busing until the enactment of the EEOA or until July 1, 1973.

Both bills purport to find that educational agencies have been required to implement excessive pupil busing, thereby diverting funds from use in improving educational quality (STMA § 2, EEOA § 3). The EEOA contains legislative findings to the effect that the elimination of dual school systems has been "virtually completed," they assert that great progress has been made toward elimination of the vestiges of those systems, and that excessive busing causes disruption and substantial hardship to school systems and creates serious risks to student health and safety. (§ 3(a)). Neither bill directly defines excessive pupil transportation but both suggest that Fourteenth Amendment requirements have been exceeded.

EEOA § 403(a) prohibits an order for the busing of pupils in the sixth grade or below which exceeds the average daily distance or the average daily time of travel or the average daily number of such students transported in the preceding school year. In computing these averages, however, the Court is directed to disregard busing resulting from the student's change in residence, his or her advancement to a higher level of education, or his or her attendance in a new school. To the extent that this section serves to define excessive busing to mean only busing directed pursuant to an order requiring racial desegregation, it is plainly discriminatory and in violation of Constitutional guarantees.

It should be noted that the prohibition of § 403(a) apply regardless of how short the distance or time involved, or how small the number transported, so long as any one of these is greater than in the preceding year. Moreover, this section would operate to prohibit or restrict most other desegregation remedies, such as pairing, rezoning or educational parks, since these usually indirectly involve some increased busing.

EEOA § 403(b) has similar provisions for students in the seventh grade or higher but provides that such transportation cannot be ordered in the absence of clear and convincing evidence that no other method set out in § 402 will provide adequate remedies. Moreover, busing orders for students in the seventh grade or higher are explicitly made subject to § 407 which provides that all such orders expire after five years. In addition, such orders must be part of a long-term plan involving the other remedies provided in § 402, and all transportation orders are to be stayed upon timely application to a court of appeals. EEOA § 403(c) contains additional language that pupil transportation shall not be ordered if it poses a risk to the health of students or constitutes a significant impingement on the educational process. This merely repeats current judicial doctrine.[1]

The assertion in the bills that transportation funds are diverted from other educational uses (STMA § 2(a)(6); EEOA § 3(a)(5)), neglects the consideration that desegregation is itself a goal of education. Moreover, it is far from clear that funds used for transportation would be used for other purposes. In varying degrees, the states reimburse local school districts for providing school transportation and, given the relatively smaller number of students transported because of desegregation, it is

---

Footnotes at end of article.

unlikely that the amount of funds "diverted" is significant.

In any event, the claim of excessiveness in desegregation of transportation does not withstand scrutiny. The Department of Transportation recently reported that the annual increase in desegregation of transportation accounts for less than 1% of the total number of students comprising the annual increase.[2] The Department of Health, Education and Welfare has estimated for the eleven southern states during 1967–1970 a 3% increase in busing for all purposes, including desegregation.[3] By any comparison, therefore, desegregation accounts for a statistically insignificant amount of transportation for the 43.5% of the total public school enrollment, or 18,975,939 pupils, transported daily.[4] Part of the reason for this minimal increase has been the reluctance of Federal courts to order busing except where it has been constitutionally required. Furthermore, desegregation often rationalizes a transportation system by eliminating segregated busing.

By asserting that transportation "impinges" on the educational process (STMA § 2(a)(2); EEOA § 3(a)(5)), the bills ignore the fact that bus transportation may enhance education by making available larger facilities for use by a greater number of students and by reducing the danger that walking may pose to younger children. A recent report of the National Safety Council indicates that the accident rate for boys transported by school bus is .03 per 100,000 student days compared with .09 for walking. For girl students, the accident rate is .03 when riding a bus and a .07 when walking.[5]

EEOA §§ 101–102 permit the Department of Health, Education and Welfare to provide funds for compensatory education for disadvantaged students. These provisions clearly seek to make attractive the segregated schools perpetuated by the bill's impediments to busing. Implicit in this is a rejection of the holding of Brown v. Board of Education[6] that a segregated education is inherently unequal as a constitutional matter. Moreover, there are no reliable data which demonstrate that compensatory education is sufficient to overcome defects in educational background or to compensate for the denial of constitutional rights to desegregation.

EEOA § 202, which provides that the failure to achieve racial balance in the schools is not a denial of equal protection or equal educational opportunity, exceeds the provisions of the 1964 Civil Rights Act which merely defined "desegregation" as not meaning pupil assignment to overcome racial imbalance.[7] The bill fails to explain the distinction between a denial of "equal educational opportunity" and a denial of "equal protection." The term "balance" is also not defined.

EEOA § 203 supplements § 202 by providing that the assignment of students to neighborhood schools is not a denial of equal educational opportunity unless such assignment is "for the purpose of segregating students on the basis of race, color, or national origin . . ." or the school to which children are assigned was located "for the purpose of segregating students." This language appears to be at odds with constitutional requirements as outlined by the 4th Circuit Court of Appeals in Brewer v. School Board of the City of Norfolk, Va.:[8]

"If residential racial discrimination exists, it is immaterial that it results from private action. The school board cannot build its exclusionary attendance areas upon private racial discrimination. Assignment of pupils to neighborhood schools is a sound concept, but it cannot be approved if residence in a neighborhood is denied to Negro pupils solely on the ground of color." (footnotes omitted)

EEOA § 404 purports to validate lines drawn by a state, dividing its territory into separate school districts, except where it is established that the lines were drawn for the purpose and have the effect of segregating children. Only when a test requiring both wrongful purpose and effect is met can remedies under § 401 or § 402 be permitted. This would appear to mark a backward step in applying the Fourteenth Amendment. Courts have held that a consistent course of conduct resulting in segregation supports an inference of discriminatory intention; in short, from the effect of segregation the Fourteenth Amendment supports an inference of wrongful purpose.[9]

It is a cornerstone of our constitutional system that Congress may not impose its interpretation of the Constitution upon the courts.[10] But just as "Congress may not authorize the States to violate the Equal Protection Clause"[11] Congress may not impose its view of a constitutional violation upon the court where that view restricts the full measure of a constitutional guarantee.

EEOA § 402 directs that in formulating a remedy "for denial of equal educational opportunity or denial of equal protection of the law," a federal court or agency may no longer simply adopt the necessary remedy but must weigh and "make specific findings on the efficacy in correcting such denial" pursuant to a descending order of preferability of various remedies, the last and least of which is pupil transportation. The vice here is that needed flexibility of the courts' traditional equity powers would be severely hampered where most or all of the specified remedies in a given case would be necessary to achieve maximum school desegregation. Plainly the severe restriction on the use of busing, without its outright prohibition, is an attempt to deal with the unanimous decision upholding busing in *North Carolina State Board of Education* v. *Swann*.[12] In lieu of a direct ban on busing, EEOA seeks to make its utilization difficult by requiring the exhaustion of all other remedies prior to any busing. This, too, does not accord with constitutional doctrine. A unanimous court held in *Swann* v. *Mecklenburg Board of Education*:[13]

"Desegregation plans cannot be limited to the walk-in-school. . . .

"District courts must weigh the soundness of any transportation plan in light of what is said in [this opinion] above. It hardly needs stating that the limits on time of travel will vary with many factors, but probably with none more than the age of the students. The reconciliation of competing values in a desegregation case is, of course, a difficult task with many sensitive facets but fundamentally no more so than remedial measures courts of equity have traditionally employed."

Equity's traditional powers to fashion an appropriate remedy are constitutionally compelled where the questions in issue relate to fundamental rights. A unanimous court so held in *Davis* v. *Board of School Commissioners of Mobile County:*[14]

"Having once found a violation, the district judge or school authorities should make every effort to achieve the greatest possible degree of actual desegregation, taking into account the practicalities of the situation. A district court may and should consider the use of all available techniques including restructuring of attendance zones and both contiguous and noncontiguous attendance zones . . . The measure of any desegregation plan is its effectiveness."

The scheme proposed by EEOA § 402 would impose virtually insuperable barriers before complete school desegregation could be achieved. To achieve an appropriate remedy, plaintiffs would be obliged to prove the inefficacy of a host of other remedies with all attendant expenses and without necessarily yielding any definitive answer. This negative feature of the EEOA is reinforced by § 305 which provides that attorneys' fees may be collected by the prevailing party other than the United States and that the United States shall be liable for costs to the same extent as a private person. Section 305 is clearly aimed at civil rights plaintiffs because § 406 provides that educational agencies may reopen a court order or desegregation plan to achieve compliance with the EEOA.

To permit the recovery of attorneys' fees against civil rights plaintiffs is to reject the rationale of Title II of the 1964 Civil Rights Act as interpreted by *Newman* v. *Piggie Park Enterprises, Inc.*[15] where the court stated that a plaintiff under Title II of that act obtains an injunction not for himself alone but also as a "private attorney general." In fact the 1964 Civil Rights Act and the 1968 Fair Housing Act provide that attorneys' fees are recoverable by plaintiffs under certain circumstances in accord with the public-interest nature of such litigation.[16]

The prospect that a plaintiff may lose a civil rights action and therefore be required to pay substantial attorneys' fees would have an "in terrorem" effect on attempts to vindicate civil rights. The problem is highlighted by other provisions of EEOA which make it likely that decrees heretofore obtained by civil rights plaintiffs will be reopened.

Moreover, to allow a court to charge attorneys' fees to an unsuccessful plaintiff is quite contrary to the spirit of American justice which has not allowed the taxation of costs so high as to discourage plaintiffs from commencing litigation to obtain what they deem to be their rights.[17]

EEOA § 405 permits voluntary adoption of remedies going beyond those provided in the Act, a permission not likely to be availed of in the absence of vigorous enforcement, which this bill makes virtually impossible.

EEOA § 406 permits the reopening of court-ordered desegregation plans to conform them with the provisions of the bill. While this is arguably permissible under the usual doctrine that equity decrees are always subject to review because of change of circumstances, this is in fact an invitation to reverse the school desegregation of the past eighteen years, particularly in school districts where desegregation has long been achieved. Presumably in such districts, the alleged disadvantages of pupil transportation have long since been overcome. It is cynical in the extreme, therefore, to permit new rounds of litigation where successful adjustment to constitutional order exists.

II. CONSTITUTIONALITY OF LEGISLATION IN LIGHT OF ITS EXPLICITLY RACIAL BASIS

Recent Supreme Court decisions have made it clear beyond doubt that "compensatory" discrimination in a variety of respects (pupil assignment, faculty assignment, site-selection, etc.) is not only permitted but *required* where necessary to correct the effects of past unlawful segregation.[18] Among the remedies specifically so sanctioned by the Supreme Court in its most recent opinion, in the *Swann* case, is the use of a pupil-transportation plan to achieve integration where this is not otherwise attainable.[19] As the preceding analysis of the bills indicates, there are very serious Constitutional objections to legislation of the type proposed, in the following specific respects:

A. Denial of any increased busing in certain cases

It is clear from decisions of the Supreme Court that operation by any state (or its local subdivisions) of dual educational systems for the races is a violation of the Fourteenth Amendment and that the Federal Courts are obliged to grant plaintiffs who succeed in establishing such violations remedies which effectively remove the burden of such practices from the plaintiffs and those similarly

---

Footnotes at end of article.

situated.[20] It is also clear that in some cases it may be impossible to effectuate such relief without the issuance of an order which among other things calls for some modifications of and/or additions to the presently obtaining patterns of pupil transportation within the school district(s) affected.[21] Although Section 5 of the Fourteenth Amendment invests Congress with the power to implement its guarantees with appropriate legislation,[22] it cannot be seriously contended that the prohibition of busing by the proposed legislation is authorized by Section 5: the Supreme Court has stated that that Section does not include the power to contract the scope of the Amendment.[23] If a school system is in violation of the Fourteenth Amendment with respect to its students in the sixth grade and under, and if a judicial decree ordering a certain amount of busing (within the limits set by Chief Justice Burger for the Court in *Swann*)[24] is the appropriate remedy for such violation, it is difficult to see how any Act of Congress can validly destroy the plaintiffs' right to such a remedy. The Supreme Court has in one of the *Swann* cases held that a state may not by act of its legislature forbid the assignment of pupils on a racial basis or the transportation of pupils so assigned.[25] Chief Justice Burger, speaking for a unanimous Court, made the following statement about the need for busing as a remedy in such cases:

" . . [A]n absolute prohibition against transportation of students assigned on the basis of race, "or for the purpose of creating a balance or ratio" will . . . hamper the ability of local authorities to effectively remedy constitutional violations . . . [B]us transportation has long been an integral part of all public educational systems, and it is unlikely that a truly effective remedy could be devised without continued reliance on it."[26]

The Supreme Court also has recently affirmed without opinion a three judge Federal District Court opinion to the same effect where the racial imbalance complained of was considered by the lower court to be *de facto* rather than *de jure*.[27] The Supreme Court declared in one of the original *School Desegregation Cases*[28] that the Federal Government is by virtue of the due process clause of the Fifth Amendment bound equally with the states to refrain from segregation in public education. Accordingly, it seems clear that any Act of Congress which purports to deprive the Federal courts of the power to remedy Constitutional violations of the type complained of in *Swann* must be a violation of that Amendment, and therefore invalid.

B. Definition of the scope of equal protection

The reasons discussed above which prevent Congress from denying to the Federal courts power to remedy particular violations of the equal protection clause appear sufficient also to render ineffective any attempt by Congress to narrow the definition of what constitutes such a violation. There are some Federal court decisions to the effect that racial imbalance within schools does constitute a violation of equal protection, whether produced by or merely passively acquiesced in by the local school authorities;[29] there are also numerous decisions holding that the assignment of students on a "neighborhood" basis does not necessarily insulate school authorities from successful attack on the ground of improper discrimination.[30] If Congress cannot limit the scope and effect of the Fourteenth Amendment in general, it certainly cannot do so by a mere declaration that certain acts do not constitute violations of that Amendment's guarantees, if the acts in question would—in the absence of such legislation—be held improper as violations of equal protection.

C. Limitations upon, and delay of, court orders of pupil transportation to implement racial desegregation

As noted above, the Supreme Court has held that a state may not constitutionally prohibit any attempt to implement racial integration by means of pupil transportation.[31] As the Federal government is subject equally with the states to the requirement that it refrain from invidious racial distinctions in the field of education,[32] the principle of such decisions should apply equally to Acts of Congress. It might be argued that those provisions of the proposed legislation which merely stay the effectiveness of integration orders and require the courts to utilize busing only as a remedy of last resort are not the functional equivalent of such "anti-busing" statutes, because they merely impose certain procedural burdens upon the employment of such a remedy without actually prohibiting it. However, this argument is answered by another recent series of Supreme Court opinions involving racial discrimination.

In *Reitman* v. *Mulkey*,[33] the California Supreme Court had invalidated a newly-adopted provision of the state's constitution prohibiting any interference with the individual's right to dispose of his property to whomever he should in his discretion see fit, on the ground that in the context of an existing state Fair Housing Law such an amendment was designed to permit and even foster the practice of racial discrimination in the sale of property within the state. The Supreme Court upheld the California court's judgment, on the ground that it could not say that the California court had erred in finding that the state had by adopting this constitutional provision involved itself in a significant degree in private discrimination.

By itself, *Reitman* could perhaps be explained away as judicial deference to the fact-finding of a lower court. In *Hunter* v. *Erickson*,[34] however, the Court in order to reach a similar result had to reverse the Supreme Court of Ohio. The city of Akron, Ohio, had previously adopted a fair housing ordinance, generally forbidding discrimination on the ground of race or color in the sale of private housing. Later, by a majority of the voters in a general election, the city adopted a charter provision requiring that any ordinance (including the one already on the books) regulating the sale or lease of property on the basis of race or color be approved by a majority of the voters at a general election before taking effect.

Striking down this charter provision, the Court stated plainly that the "explicitly racial classification" was the defect. The Court conceded that Akron could simply have repealed its fair housing ordinance, and that it could also validly have chosen to subject city ordinances in general to such a requirement of voter approval. What the city (which unquestionably wielded "state power," the Court noted) could *not* do was to place "special burdens" on racial minorities in securing the benefits of law under the political process. The majoritarian character of the provision did not render it immune, since as the Court pointed out "the majority needs no protection against discrimination."[35]

Although both *Reitman* and *Hunter* involved discriminatory burdens on the minority's resort to the legislature, not the courts, it appears that the same principle should apply to the proposed busing legislation. To the extent that this legislation would impose an arbitrary stay on the implementation of court orders, or require plaintiffs to bear a burden of proof not borne by plaintiffs in analogous suits not involving racial discrimination, it would appear to put members of the affected minority at a distinct disadvantage in securing their rights by the litigation process. Such a racial classification bears a "far heavier burden of justification" than is normally borne by legislation;[36] whether this burden could be met is extremely doubtful. Particularly in light of the provision which would permit the reopening of past integration orders and require their modification to comply with the proposed legislation (Section 406), the apparent intent of the proposed Equal Educational Opportunities Act—and its likely effect, whatever the intent—would appear to be the undoing of much of the remedial action taken during the last 18 years[37] and a definite impairment of future plaintiffs' ability to secure the remedies to which, under the original *School Desegregation Cases* and succeeding opinions, they may be entitled. As this would constitute a substantial intervention by the Federal government against the interests of members of racial minorities, we believe it would amount to a denial of due process of law, under the Fifth Amendment to the Constitution.

III. CONGRESSIONAL CONTROL OVER JURISDICTION OF FEDERAL COURTS

Proponents of the proposed legislation have argued that it merely restricts the jurisdiction of Federal courts, denying or limiting the use in these courts of a particular remedy, and that Congress has clear power to do this under Article III of the Constitution as well as existing case law.

Article III of the Constitution vests the judicial power of the United States in the Supreme Court "and in such inferior Courts as the Congress may from time to time ordain and establish." It provides among other things that the judicial powers shall extend to "all Cases. . . . arising under this Constitution." It gives the Supreme Court original jurisdiction in certain specified cases and provides that that Court shall have appellate jurisdiction "with such Exceptions and under such Regulations as the Congress shall make." The few cases arising under this Article have made it clear that the Congress has substantial power to restrict the jurisdiction of the Federal Courts, including the appellate jurisdiction of the Supreme Court. *Ex Parte McCardle*.[38] In *McCardle*, Congress had enacted a statute withdrawing jurisdiction from the Supreme Court to hear appeals in habeas corpus cases. The statute was passed during the pendency of a particular appeal, with the deliberate intent to prevent Supreme Court review of the case. The Supreme Court upheld the power of Congress to do so, and dismissed the case, citing the provisions of Article III of the Constitution, giving Congress the power to make exceptions to the appellate jurisdiction.

But the *McCardle* case, assuming *arguendo* that it is still good law,[39] does not stand for the proposition that Congress has unlimited power to prevent the Supreme Court from considering Constitutional claims. The Supreme Court retained the power to issue writs of habeas corpus in the exercise of its original jurisdiction. The withdrawal of appellate jurisdiction therefore merely closed one avenue and did not prevent access to the Court. Indeed, within months after the *McCardle* decision the Court held that it had the power in the exercise of its original jurisdiction to resolve the substantive issues raised by the *McCardle* case. *Ex Parte Yerger*.[40]

Aside from the *McCardle* case, there appears to be little authority to support Congressional interference with the courts in enforcing the Constitution.

While the Emergency Price Control Act of 1942 prohibited the Federal District Courts from reviewing the validity of regulations made pursuant to the Act, the legislation also established a special court, the Emergency Court of Appeals, to adjudicate these controversies. Its decisions were made reviewable by the Supreme Court. That legislation was upheld because it preserved a full remedy in the Federal Courts. See *Yakus* v. *United States*[41] and *Lockerty* v. *Phillips*.[42]

The line of cases under the Norris-LaGuardia Act,[43] which declares that the Fed-

---

Footnotes at end of article.

eral Courts have no "jurisdiction" to issue injunctions in certain labor disputes, do not involve Constitutional matters. That Act therefore does not purport to deny the right to an injunction to vindicate Constitutional rights.

In the present situation it is apparent that in many cases, as a practical matter, no effective alternative to busing exists in carrying out the mandate of *Brown* v. *Bd. of Education* [44] to desegregate schools where segregated residential patterns exist. In many such situations, the denial of busing as a remedy will constitute the denial of any effective remedy in redressing the unconstitutional condition of segregated schools. Thus, while purporting only to prohibit or restrict a particular remedy, Congress would in fact be requiring the courts to reach a particular result at odds with previous court decisions as to what is Constitutionally required.

Article III has to be read with the rest of the Constitution, and, as shown above, we believe that the proposed legislation clearly violates the Fifth Amendment. Leaving aside the question of whether or not Congress may take away from an individual the opportunity to obtain a judicial determination in a Federal court of constitutional rights, it can scarcely be seriously contended that, under the guise of limiting the jurisdiction of the Federal courts, Congress may do indirectly what it may not do directly, that is, restrict the scope of the Fourteenth Amendment.

In short, as stated by Professor Bickel, the proposed legislation is "plainly aimed not at regulating jurisdiction, but at mandating a desired result. The power of Congress to regulate judicial jurisdiction has never been held to enable Congress to change specific Constitutional results. It should not be, and cannot be—not consistently with *Marbury* v. *Madison*." [45] It seems abundantly clear that Article III is not to be interpreted to allow such a result.

IV. POLICY CONSIDERATIONS

As is evident from the preceding analysis, the effect of the proposed bills would be not merely to "chill" the impetus towards desegregation generated by court decisions since *Brown*, but, by reopening past decrees, actually to roll back much of the progress already made. Regardless of constitutional considerations, we think that this is indefensible as a matter of public policy. The net result of such legislation could only be further to divide our nation, to encourage racial strife, and to interfere with the realization of what are generally recognized to be desirable educational goals.

While it is recognized that such is not the intention of all of the proponents of the proposed legislation, we think that this would be its essential effect. Moreover, as pointed out above, statistics show that the evil sought to be remedied—allegedly excessive busing—is more apparent than real. We think the problems which concededly may exist in particular instances with long distance or massive busing are better dealt with in individual cases than by any attempt to establish general legislative restrictions on the use thereof.

Moreover, even assuming that Congress had the constitutional powers thus to constrict the jurisdiction of the Federal courts, we think such interference with the role of the judiciary is both unwarranted and unwise. It would tend to place the legislative and judicial branches in conflict, and to impair the Supreme Court's historical role as the final arbiter of constitutional matters.

CONCLUSION

We strongly oppose this legislation. Regardless of intent, it would have the effect of condoning and indeed fostering continued segregation in schools. There is no doubt that it would, in many instances, remove the only effective remedy for the violation of an individual student's constitutional rights. We think that the proposals are in violation of the Fifth Amendment to the Constitution. Moreover, we think that, even if free of constitutional infirmities, such legislation should have no place on the national agenda. Accordingly, for all of the foregoing reasons, we urge that the proposed legislation be rejected.

Respectfully submitted,

[45] Bickel, What's Wrong with Nixon's Busing Bills?, The New Republic, April 22, 1972, at 21.

Mr. PUCINSKI. Mr. Chairman, I yield 2 minutes to the gentleman from Michigan (Mr. Conyers).

Mr. CONYERS. Mr. Chairman and my colleagues, this bill is more than an attack on the courts, though it is that.

It is more than a challenge to the integrity and the independence of the judiciary, and it is that as well.

It is more than a distortion of the balance of powers of the three coequal brances, but it is that also.

It is more than a step toward undermining respect for the highly vaunted theory of law and order, and it does that as well.

But above everything else it seems to me it is a sacrifice of the Constitution of the United States on the altar of political expediency.

I do not believe that we should disgrace ourselves in this body by enacting this legislation.

Perhaps it is more than wishful thinking that I believe I can penetrate the deception and sometimes the hysteria about busing with an appeal to reason, but I wish to speak to you nevertheless because I believe it is our duty, mine and yours, those of us who took the oaths to uphold the Constitution, to consider that we are making a hypocritical mockery of that most precious of documents, for this bill would declare that Congress and not the courts shall determine what constitutes a denial of the equal protection of the laws.

I do not think that anyone seriously believes, as has been asserted in this well, that this bill strengthens the ability of the courts to order the approval of busing. It is a refutation of Marbury against Madison's pronouncement over 169 years ago that "it is emphatically the province and duty of the Judicial Department to say what the law is," a pronouncement that has been regarded as an indispensable feature of our constitutional system.

Even the Eisenhower-Nixon administration regarded it as such. In 1954, when the Government was asked to submit a brief in the Brown case, it stated that the issue of school segregation was "a question not of legislative policy but of constitutional power—and it is a question which under our system of government must ultimately be determined by this Court."

The Court, of course, did determine the question. It decided that State-imposed segregation in public schools was a denial of the equal protection of the laws. And in the 18 years since, the courts have gone on to determine what constitutes a dual school system and to fashion remedies to dismantle it.

But from now on we shall look not to the courts but to the Equal Educational Opportunities Act of 1972. It tells us what constitutes a dual school system and what remedies are appropriate to dismantle it. And it directly contradicts what the Supreme Court has been mandating since 1954.

The Green case held that school authorities are charged with the affirmative duty to take whatever steps might be necessary to convert to a unitary system. The bill before us says that their only duty is to take those steps of which Congress approves. And Congress says it does not approve of busing, even though it knows that that is often the only step by which desegregation can be achieved.

The Swann decision held that local authorities could be required to employ bus transportation as one tool of school desegregation, saying: "Desegregation plans cannot be limited to the walk-in school." The bill before us would limit desegregation plans to the walk-in school system.

Swann also made it clear that the assignment of pupils to schools nearest their homes is not appropriate in a system that has been deliberately constructed and maintained to enforce racial segregation. The bill before us takes as its basic premise the principle that the neighborhood is an appropriate basis for determining public school assignments.

Some would have us believe that all of this is justified as "appropriate legislation" under section 5 of the 14th amendment. That is simply not true. Congress' power under section 5 is limited to adopting measures to enforce the guarantees of the amendment. It grants Congress no power to restrict, abrogate, or dilute those guarantees. As the Supreme Court said in *Katzenbach* v. *Morgan*, 384 U.S. 641, 651 n. 10 (1966):

> Section five does not grant Congress power to exercise discretion—to enact 'statutes so as in effect to dilute equal protection and due process decisions of this Court.'

Yet that is precisely what this bill would do. It would deny citizens the equal protection of the law which the 14th amendment guarantees them.

In effect, then, passage of this measure would signal that, as far as this body is concerned, the Constitution is no longer the supreme law of the land.

Mr. PUCINSKI. Mr. Chairman, I yield 2 minutes to the gentlewoman from New York (Mrs. Abzug).

Mrs. ABZUG. Mr. Chairman, all who have spoken in opposition to the bill, as I do, have indicated that the Congress has no power to substitute itself for the courts. But, more than that, the Congress has no power to deprive the people in this country of the protection of the 14th amendment. I concur with their arguments and state that this bill is unconstitutional. But few of us have spoken to the fact that this bill is really an assault upon the children of this country—not just black children, but all the children of America.

There is nothing in this bill which will improve the educational opportunity of one single child in this country. Its content is a mockery of its title. It will not provide a penny of new money to alleviate the shocking and inadequate conditions in our inner city schools.

The proponents of this measure come to us and claim that they have written a bill that will end busing and provide funds for nonbusing desegregation remedies. They claim that busing is not a suitable remedy for the problems of racial isolation, and they purport to substitute this bill as a viable alternative to the remedies that the courts have found necessary to end segregation and protect the 14th amendment rights of schoolchildren.

But let us look at what they really offer us as a solution. They offer us a new bill that will divert funds from a desegregation bill already passed by this House earlier this year. They offer us a bill that will divert the first $500 million of the ESAA appropriation and use it in this bill for "compensatory education" programs.

I guess we are supposed to forget that the ESAA bill already authorizes these funds for desegregation purposes. And I guess we are also supposed to forget that the sponsors of this bill have consistently voted against increasing appropriations for title I ESEA, the statute passed by the House 7 years ago to provide funds for compensatory education programs.

We are told by the President of the United States on nationwide television that we need a remedy for desegregation that does not include busing. We were also told on that memorable broadcast that up to $2½ billion could be spent to achieve this goal.

We as a body responded to the President's message. When the Labor-HEW appropriations bill came to the floor, this House voted overwhelmingly to increase the funding of title I and title V ESEA and other education programs. The President asked for funds to pay for quality education and this body responded. We now find out in this bill that we misread Mr. Nixon's intentions. He really didn't want more money to provide quality education for children in segregated schools. He not only is supporting a bill that would prevent busing to improve educational opportunities he has vetoed the appropriation bill that would go some of the way toward improving schools in poor neighborhoods.

What this bill will do is quite clear. It will—in the unlikely event that it is held to be constitutional—end any hopes we may have of providing real educational opportunity to all of our children. It will destroy entirely the desegregation process and substitute for that effort what is nothing more than a public relations gimmick. I believe it is clear that what the President and his supporters really desire to do is to give us a bill with the title "equal educational opportunities" that would, in fact, consign millions of children to an unequal future and destroy their educational opportunities. We need an educationally integrated system so that we can provide a society which fulfills the needs of all of its people for clothing, housing, recreation, and hope. We must open up the educational process so that we can provide for all children the expectation of an equal education and equal access to the tools for a decent future and a decent life.

This bill is a mockery and a fraud, and behind it are those who hide their feelings of racism in this country.

I am shocked to hear some Members of this House state that they support this bill because they oppose discrimination on the basis of color. It is hard for me to understand how remedies designed to end and to rectify discrimination on the basis of color can be said to constitute such discrimination themselves. This claim—and this bill—are utterly fraudulent.

Mr. QUIE. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. Biester).

Mr. BIESTER. Mr. Chairman, I rise to associate myself with the very thoughtful and forceful remarks of the gentleman from Wisconsin (Mr. Steiger) when he took the well just prior to the last quorum call. This debate is indeed the fruit of neglect; neglect by all of us. And having failed to set guidelines in the past we must admit that some courts have gone too far. The bill is the product of compromise. I hope that the balance of that compromise will not be upset by a reopener amendment. I will oppose such an amendment. Again, Mr. Chairman, I congratulate the gentleman for his candor and his clear statement setting forth the extent to which all of us share a heavy measure of responsibility.

Mr. PUCINSKI. Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan (Mr. O'HARA).

(Mr. O'HARA asked and was given permission to revise and extend the remarks he made earlier.)

Mr. PUCINSKI. I yield such time as he may consume to the gentleman from Texas (Mr. GONZALEZ).

Mr. GONZALEZ. Mr. Chairman, I intend to vote against this bill. I intend to do so because it contains many provisions that have not been adequately explained or explored, many provisions that are patently unwise, and on the whole represents an action of dubious merit and even more dubious effectiveness. We are dealing in this bill with a serious question—yet this bill is at best politically inspired expedience, and expedience that sacrifices principle at that.

I realize that there are serious objections to school busing as a means of achieving integrated education. Yet there is no need for us to attempt to resolve that question here and now, through this bill. The Supreme Court has yet to rule on the controversial school busing decisions.

The essential thing that we ought to be remembering is that we have an obligation to provide equal educational opportunity for every citizen of this land. It is their right to have it and our responsibility to give it. This bill is anything but a step toward providing equal opportunity—it is a lie on its face. It will not be easy to achieve justice and equal opportunity—nobody ever said it would be. The demands of the time are for cool heads and clear thoughts, and not for the kind of expediency that this bill represents. It is shameful that this legislation was dreamed up as a political expedient, and that its hasty consideration has been encouraged by the fanning of passions, even by the President, who should know better. So great are the passions that this bill comes before us in a most irregular manner, a manner which denied the committee having jurisdiction over it a chance to fully study its meaning, its ramifications, and what it would and would not do.

How are we to know, for example, what the full import of the provision to pay attorney's fees for court challenges might be? Are we setting up a system whereby one arm of the Government will in effect be suing another, both at taxpayer expense? Are we throwing the doors open to a sea of litigation that will only further exacerbate the fears and tensions of communities across the land, and which might indeed cause the breakdown of schools themselves? Would this provision unwittingly only further ensnare and entangle the country in a problem that vexes us all? I say that this is the kind of question that has not been answered and cannot be answered by the kind of procedure we have seen today, and by the kind of procedure that wrenched this bill from the committee before consideration could be completed.

There is an inevitable day when this House must accept its responsibility, if not today, then sometime in the future. I urge that we face our responsibility today, and seek out sensible legislation, legislation that really would provide equal educational opportunity. We can only begin by defeating this bill, standing up against expedience and demagogery, and working with serious hearts and clear minds toward making our schools truly equal, truly the engine of democracy, and truly the hope of the future—not the center of bitter, needless, hopeless controversy.

Mr. PUCINSKI. Mr. Chairman, I yield myself such time as I may consume. This will finish a good debate. We have been trying to be eminently fair in distributing the time so as to give everyone a chance to express his views. I listened to this debate with great interest, but I must say I am depressed at the degree of misunderstanding that exists on the part of so many Members in this chamber on this legislation. This is no assault on the judicial system; this is no wholesale revision of the American Constitution; this is no denial of rights to any citizen. What this legislation attempts to do is to end the cruel practice of making children the pawns of a social system which refuses to change its ways. It is all right to bus kids all over America; it is OK. Go ahead and let them get up at 5 or 6 o'clock in the morning. They are only children who have no one to protest to. It is okay to shake up the whole school system all over this country. The thing that somewhat depresses me is the degree to which some Members of this Chamber are willing to go to give up their rights as a coequal branch of the Government. I have heard throughout the debate on this bill, and I have heard throughout the testimony on this legislation before my subcommittee time after time witnesses saying that this is a responsibility that rests only with the courts.

As if the courts stood supreme above all. And I suggest that those who propound this argument——

Mr. CONYERS. Mr. Chairman, would the gentleman yield?

Mr. PUCINSKI. I shall not yield. I have yielded all afternoon.

I suggest to those who propound that argument, they ought to read the Constitution and recognize the fact that in this country we have three coequal branches of government, the Executive, the Legislative, and the Judicial. And we in this Congress have a constitutional responsibility. And had we carried out this responsibility 18 years ago after the historic Brown decision, you would not have the chaos you have in America today, and you would not have the complete disillusionment of the American citizens where bond issue after bond issue are being voted down one after another all over the country. Americans have lost faith in the public school system simply because of the fact that the courts keep undermining it.

The gentlewoman from New York who just spoke in the well stood here and said that we are voting congressional restrictions on court-ordered busing. But the gentlewoman has no qualms about the courts putting some 2,000 school districts in this country under their jurisdiction. Where are the crocodile tears for those people?

I say to you this: This is an honest bill, it is a bill brought to the House to bring some order out of chaos in this whole business of busing.

The gentlewoman from New York said a moment ago, "Why, nobody is going to get any better education." That is not true. We are providing in this bill a half billion dollars of additional money to children in the highest concentrations of poverty, and this is in addition to the $1.8 billion already in the pipeline under title I. And so there is $2.3 billion that is going to be spent for compensatory education for those youngsters. Add to that another half billion dollars in the emergency school bill, which we voted on a few weeks ago, so we are now talking about some $2.8 billion to help youngsters here in these schools, and schools undergoing integration.

So I say to you this bill does not deny anyone anything. What it attempts to do is to set up an orderly procedure so that you are not going to have one court make a decision this way over here, and another court make a decision this way over here. You are also going to give school administrators some idea of where we all stand.

On the question of constitutionality I say that the Founding Fathers of this country had a greater faith in the Congress than some of the Members I heard express opinions in the well today.

Section 5 of the 14th amendment, has been interpreted by the courts as a positive grant of legislative power authorizing Congress to exercise its discretion in determining whether and what legislation is needed to secure the guarantees of the 14th amendment.

So I say to you, Mr. Chairman, this is sound legislation. I hope we are not going to emasculate it here with mischievous amendments that will make it difficult for the majority to support.

Now that is obvious—it is not an appropriate basis—it is the opposite.

If you really want to make some order out of chaos in this country and set some ground rules that the courts can follow—and the courts admit themselves that the rules are imperfect, then I suggest you vote for this bill—vote for this bill which I am sure will be widely hailed by millions of Americans who are now living in the shadow of doubt as to precisely where they stand on this issue.

Mr. CONYERS. Mr. Chairman, will the gentleman yield for a question?

Mr. PUCINSKI. I yield to the gentleman for a question.

Mr. CONYERS. I thank the gentleman for yielding.

Is this Government in which we have three coequal branches, is it not the responsibility of the Federal judiciary to make final determinations about the laws? Is that not a prerogative that is reserved to them rather than to us?

Mr. PUCINSKI. That is correct.

Mr. CONYERS. So, we are not diminishing our authority if we were to yield to the rulings of the court which have been established in the Swann case and the Marbury against Madison case. The court made those decisions.

Mr. PUCINSKI. There is nothing in this bill that is contrary to anything in the Swann case.

Mr. CONYERS. May I point out there is no court decision that has ever required that children in grades 1 through 6 be precluded from ramifications of a decision that might involve busing.

Mr. QUIE. Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan (Mr. BROOMFIELD).

Mr. BROOMFIELD. Mr. Chairman, I rise to express my support of this measure, to offer my suggestions on how it could be further improved and to emphasize once again my firm conviction that the answer to the problem of unequal educational opportunities is to improve inferior schools rather than merely reshuffling the children who must attend those schools.

Amidst all the hue and cry about forced busing, one thing stands out clearly. Busing is a self-defeating and futile remedy for the problem of unequal educational opportunities. Even probusing advocates have admitted that it is a remedy of last resort. Nevertheless, they would have us believe, that busing, though distasteful, is a remedy; a remedy which the American people must swallow.

I personally feel that busing is not a viable remedy. We must seek and implement remedies which do not carry the costs, in terms of money, time, disruption, and hardship that busing almost by definition creates.

I am further disturbed, Mr. Chairman, by the obvious lack of uniformity in the application of busing orders by various courts throughout the Nation. I am unable to discern any trend much less rhyme or reason from the maze of conflicting busing decisions handed down by courts responding to very similar fact situations. Some, such as those in Detroit and Richmond, have attempted to order extensive cross-district and cross-county busing. Others have ordered limited citywide busing. Still others have shunned busing as a solution altogether.

If the Equal Education Opportunities Act does nothing else, it is worthwhile for the simple reason that for the first time there will be clear and definite guidelines for all the courts to employ for all sections of the country.

This measure will limit busing of children below the sixth grade only to their closest or next closest school. For those over the sixth grade busing can only be implemented if and when several alternatives have been tried and have failed to equalize educational opportunities.

Mr. Chairman, while I am glad to see these beginning steps taken to restrict busing it seems to me that the distinction drawn between elementary and high school busing is both arbitrary and unnecessary. If we realize, as those of us from the State of Michigan have learned from hard experience, that busing is a failure then why should we restrict its use only at the elementary school level. Therefore, I intend to support any effort to amend this measure to remove that arbitrary distinction.

Mr. Chairman, I would like to commend that section of this bill which repeals the authorization of funds for the planning or construction of educational parks. As many of you already know I have long opposed this idea and was disappointed that these funds were authorized in the first place. Many of my constituents have expressed very legitimate concerns about educational parks. I am happy to see that these fears will now be dispelled.

Another extremely important section of this legislation is that which assures the integrity of school district lines. As such, no busing can be planned which would ignore or alter existing school district lines unless it can be proven that they were drawn with the purpose and object of creating segregation.

Recent litigation in Detroit and Richmond have attempted to wipe out school, municipal, and even county lines. I sincerely hope that this measure, if passed, will lay to rest the notion that our children can be bused without regard to city or county borders.

On the other side of the coin, Mr. Chairman, the Equal Eductional Opportunities Act faces up to the very real problem of unequal schools in this country. Rather than shifting students from good to bad schools which seems to be the basis of the busing philosophy, this bill provides hard and desperately needed cash which is specifically earmarked for inferior schools.

This money, $500 million in the committee bill, must be spent on improving the mathematics and language skill of pupils. This money will not go into increased salaries, maintenance or capital expenditure costs. It will go directly toward improving the child's educational skills. That is as it should be since we are dealing with an educational problem.

This money which is to come from previously authorized moneys, will have a strong impact on poorer school districts. I would only add that this sum may not be adequate to significantly affect the level of the vast majority of inferior school districts.

I intend to support an amendment which would increase the amount of money to be authorized for the purposes of this bill. I have been in Congress too long to think that money is the final or total answer to any situation. However, it is a vital and necessary ingredient. There is no doubt that judged by any standard there is a great deal of room for improvement. As such, the funds in this bill should be roughly commensurate with the size of the challenge which faces our educational system.

In conclusion, Mr. Chairman, I wish to endorse once again the purpose and intent of this bill. Today, we have an opportunity to build on the antibusing legislation originally sponsored by myself, Mr. ASHBROOK and Mrs. GREEN last November.

As a matter of fact, Mr. Chairman, only this week the Justice Department has assured the people of Detroit that the Broomfield antibusing amendment does apply to the Detroit case. They have assured us that my amendment to delay court ordered busing pending appeal is indeed constitutional. I think the Justice Department should be commended for its diligence and efforts on behalf of this moratorium and the people of Michigan.

I feel very strongly, especially in light of the recent actions and assurances by the Department of Justice, that we can effectively control busing through the use of legislation. This measure before us today represents another milestone in that effort.

While I have signed the discharge petition to the constitutional amendment to ban busing and while I am heartened to see that it is now eligible for floor consideration, I believe that legislative action remains the most efficient and best means to end the problem of forced busing once and for all. However, should this legislation become stalled or fail to eliminate forced busing, I will lend all of the energy at my disposal toward the passage and eventual ratification of the constitutional amendment.

Mr. PUCINSKI. Mr. Chairman, I yield 1 minute to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I should like to answer some of the arguments just made.

This bill is very hard to construe because it is a deception. It is a fraud. But if it does anything at all, it purports to express the following proposition:

If the curing of a constitutional violation requires a painful remedy, the bounds of constitutional rectification may be so constricted as not to include that remedy.

That is precisely what this bill says—if it says anything. I am not sure it says anything. But I can say, if that is its purpose, its purpose is unconstitutional. If that is not its purpose—it does not prohibit busing.

Mr. GONZALEZ. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman.

Mr. GONZALEZ. Mr. Chairman, I will address my question either to the gentleman from Illinois, the chairman of the subcommittee or to the gentleman from Texas, because they are referring to court decisions and legal expertise.

Is it true that the Supreme Court has yet to rule on this precise point that this bill is addressing itself to?

Is my understanding correct that all of these decisions that the bill is really worried about are inferior court decisions and not Supreme Court decisions, and that the Supreme Court has not really dealt with this subject matter?

Mr. PUCINSKI. For the information of the gentleman, so far as the Congress having the right to set rules and regulations and exercising its legislative responsibilities under the 14th amendment, that has been spelled out in the Supreme Court decision in Katzenbach against Morgan.

So, the court has addressed itself to the question of whether or not the Congress has the right to pass legislation on the protections of the 14th amendment. That is precisely what we are doing in this bill.

Mr. QUIE. Mr. Chairman, I yield 3 minutes to the gentleman from Indiana (Mr. DENNIS).

Mr. DENNIS. Mr. Chairman, I had not intended to participate in this debate and I do so only because it seems to me that we have been making some too broad statements here about the matter of constitutionality.

Several very distinguished Members have asserted flatly that this bill is unconstitutional. Now they may be right. I concede that, but it is not that clear—it is a very debatable proposition—whether the bill is unconstitutional or not.

Whether you like the bill or not, that is another question to which I am not at the moment addressing myself.

Let me read to you what the Supreme Court said in Katzenbach against Morgan:

> Correctly viewed, Section 5 (of the Fourteenth Amendment) is a positive grant of legislative power authorizing Congress to exercise its discretion in determining whether and what legislation is needed to secure the guarantees of the Fourteenth Amendment.

Now then, that is Congress which can determine what legislation is necessary to secure the guarantees of the 14th amendment, according to the Supreme Court.

Mr. Justice Harlan said in his dissent:

> In effect the Court reads Section 5 of the Fourteenth Amendment as giving Congress the power to define the substantive scope of the Amendment. If that indeed be the true reach of Section 5, then I do not see why Congress should not be able as well to exercise its Section 5 "discretion" by enacting statutes so as in effect to dilute equal protection and due process decisions of this Court.

Professor Bork of Yale Law School says this:

> It is difficult to see how any judge or scholar committed to the principle of *Morgan* could fail to conclude that the President's busing proposals are constitutional.

Personally, I, myself, have never bought Katzenbach against Morgan as necessarily being good law. It amuses me just a little bit to see how some of my liberal friends, who regard it as a great case, now want to get away from it when it is not to their advantage.

Where I think you can uphold the constitutionality of this bill better than by Katzenbach is simply by saying that we are dealing under section 5, as we can deal, with the regulation of the remedy, and we are not affecting the constitutional right.

We are just talking about how and to what extent and under what circumstances we can utilize certain remedies, how and to what extent the court can utilize certain remedies; and I do not think you have to buy Katzenbach to say that; but if you do buy Katzenbach it is very hard to see why Congress in one case can say that the State of New York cannot set up literacy tests and yet we cannot here say what we want to put in this legislation.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Chairman, this debate on Katzenbach is so good that I will not yield my time back, but I will yield a minute to the distinguished chairman of the Judiciary Committee.

Mr. CELLER. Mr. Chairman, I thank the gentleman for yielding.

I wonder if the gentleman from Indiana read the footnote in the case he referred to, which reads as follows:

> We emphasize that Congress' power under Section 5 is limited to adopting measures to enforce the guarantees of the Amendment; Section 5 grants Congress no power to restrict, abrogate, or dilute these guarantees.

Any other reading of section 5 would conflict with the objective to secure equal protection guarantees against a hostile Congress. To read section 5 of the 14th amendment to ignore the command of fifth amendment that the Federal Government, including the Congress, as well as the States, is bound by the equal protection clause.

Mr. DENNIS. Mr. Chairman, I would say to my distinguished chairman that of course he has correctly read the footnote, which I think Justice Brennan—I cannot tell, but I think he may have put it in because Justice Harlan had pointed out to him in the section which I read a moment ago the danger from his point of view—from Justice Brennan's point of view—of where he was going; so he put that in.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. QUIE. Mr. Chairman, I yield 1 minute to the gentleman from Indiana.

Mr. DENNIS. Mr. Chairman, Mr. Justice Brennan put that footnote in to protect himself. Let me read to my chairman what Professor Bork says. I am sure he is familiar with it:

> It is . . . improbable that the Court could make that gratuitous limit stick.

That is the footnote he is talking about.

> The Court's own argument in Morgan requires a congressional free hand. Congress is assigned power because of its superior ability "to assess and weigh the various conflicting considerations." That competence, though the opinion does not spell the point out, resides in Congress' superior ability to gather information on a nationwide scale and to make the judgments of degree necessary to frame a general rule in certain areas. That being admitted as a reason to permit the Congress to extend the meaning of the constitutional guarantee, there is no case for denying Congress the power, on the same grounds, to say that its information and judgment indicate a Court-made rule is not necessary to the effectuation of the guarantee.

Mr. QUIE. Mr. Chairman, I yield myself 1 minute. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, I believe this has been a very successful debate on this issue. I am delighted that the chairman of the Judiciary Committee is here. This proves precisely what we have been saying all afternoon. It is not necessary to say that this bill is going to be tested. Of course it is, and the courts will have ample opportunity to give their attention to this law and to interpret it in their way. The gentleman is correct.

But the argument that we have heard here all day long is that we should not be legislating, that this is not our function. I say that is a completely erroneous argument as sustained in Katzenbach against Morgan.

Mr. MOORHEAD. Mr. Chairman, I fear the way H.R. 13915 has been drafted, it could be construed as a racist bill.

In the 20-page substitute bill the words "race" or "racial" appear 15 times.

I do not believe these explicit references are necessary to remedy the legitimate complaints of the American people who want quality education for their children.

The overwhelming majority of American people are not racists but they are concerned about education.

I think they object to having their children taken involuntarily from what they consider to be a superior school and sent to what they consider to be an inferior school.

They understand other parents who wish to transfer their children from an inferior to a superior school.

I understand and share these feelings and I am sorry that the committee could not translate this concern into language which will not exacerbate the division between white and black Americans.

The fact that this can be done is shown by the language of section 101(a) of the substitute bill which provides funds to—

> (4) to aid educationally deprived students enrolled in schools enrolling a high proportion of students from low-income families (or transferring from such schools to schools enrolling a lower proportion of students from low-income families) in overcoming their educational deprivation.

If the balance of the bill had been drafted in this nonracial, nonemotional way we could have before us constitutional legislation which those of us who truly believe in equality of educational opportunity could support.

Mr. NEDZI. Mr. Chairman, I support H.R. 13915.

In my judgment, the quality of public education is directly related to two essential elements: First, sound policies, and second, public support.

Arbitrary orders of the Federal courts requiring cross-district busing in pursuit of racial balance, have created, as we all know, tremendous chaos, and resistance in every place where the issue has been pressed.

Cross-district busing is a bad policy. Not only that, but the prospect of cross-district busing has withered public support for education and severely damaged public school systems.

The essential thrust of H.R. 13915 is to prohibit cross-district busing and to severely limit the free-wheeling use of busing as a court-ordered tool. The bill, steered through the Education and Labor Committee by three knowledgeable and responsible specialists in education, MARVIN ESCH, JAMES G. O'HARA, and WILLIAM D. FORD, a bipartisan trio of Michigan members, is designed to be a stronger version of the antibusing proposal advanced by the administration.

The bill would preserve existing school

district boundaries. It further provides that children in the first six grades could be bused only to the nearest or next-nearest school in their own school district. Further, the controversial education parks provision of the higher education bill would be repealed.

The overwhelming opinion of the majority of thoughtful citizens of my State is that the turmoil caused by the busing decisions of Judge Roth and others must be resolved by a prohibition on busing. Then and only then can we return to the matter of improving our Nation's educational system.

The point must be stressed: If courts insist on busing, chaos is insured for years to come. If busing is prohibited, the affected States and the Nation can finally return to other business in the educational field.

The bitter irony of this controversy is that busing to achieve racial balance is a half-baked theory that will not produce educational improvement. To persist in a bad policy which brings public resistance and turmoil would be the height of folly.

It is in the national interest, then, that H.R. 13915 be supported by the House of Representatives.

Mr. CHAMBERLAIN. Mr. Chairman, I rise in support of the bill, H.R. 13915, the Equal Educational Opportunities Act of 1972, which provides guidelines to the courts for enforcing equal educational opportunities and equal protection of the laws under the 14th amendment. I agree with my colleagues, Mr. QUIE of Minnesota, and our distinguished minority leader, Mr. FORD, that the courts have carried too heavy a burden in cases involving the use of busing in school desegregation. It is the responsibility of the Congress to enforce guarantees of equality by suitable legislation. It is up to Congress to provide other remedies from which the courts may choose; up until now their only recourse to school desegregation has been to bus schoolchildren. In my judgment this bill does this in a responsible way.

I am against creating hardships for children in the name of equal opportunity. In November of last year, I introduced a resolution, House Joint Resolution 983, the companion measure to Senator ROBERT P. GRIFFIN's resolution, which proposes an amendment to the Constitution that would prevent pupils from being assigned or transported to public schools on the basis of their race, color, religion, or national origin. Such a hardship as sending children a greater distance from home out of their communities to distant schools has been imposed in my own State by Federal court.

The Supreme Court, in the Swann case in April 1971, recognized that care must be taken in transporting students so as not to impair their safety and health. This bill today precludes court or Federal officer ordered busing in the transporting of elementary pupils except to their nearest or next nearest elementary school, as it does for secondary school pupils unless it is demonstrated by clear and convincing evidence that no other method will provide an adequate remedy.

In my own district, results of my annual questionnaire showed that 82 percent said "no" when asked if they favored busing to achieve racial balance in schools. Recent Gallup polls have shown similar results, indicating strong opposition to busing programs.

During the past few weeks when I spent a great deal of time in my district, I found my constituents voicing the same intense concern as heard from other citizens over the busing issue. They were almost unanimous in their opposition to court-ordered busing. While they feel very strongly about this question, I found also reasonable and fair thinking, and I am satisfied that this opposition does not spring from bigotry or racial prejudices. Simply, we all are concerned about the well-being of children. It is evident that no enlightening experience is gained by a child who is transported from his neighborhood to distant and strange locations. Rather busing impedes, if not destroys, cooperative and educational efforts of parents and schools.

Mr. Chairman, everyone I have talked with at home is strongly in favor of children in all sections of our cities attending schools of substantially equal quality. They support equal financing for schools and are prepared to pay the costs of upgrading schools which are inferior. They also support adequate financing for all schools at every level: local, State and Federal. But, they view forced busing as a waste.

The overriding question then is whether compulsory busing achieves the goal of equal educational opportunities and equal protection of the laws or whether school children are merely being used in an attempt to attain this goal. During my years in the Congress, I have always subscribed to the American ideal of equal opportunity for every man, woman, and child to achieve whatever level of accomplishments his talents may earn for him. I have always supported the goal of equality I feel we all must share, and my votes on civil rights make this very clear. I have voted for the Civil Rights Acts of 1957, 1960, 1964, and 1968, as well as the Voting Rights Act of 1965 and 1970.

The busing issue, however, has inflamed public opinion against our courts and against our public educational system. During the primary election last week, two bond issues in Detroit were lost because of the busing issue. This is happening in other cities, too, and this adds to the mounting evidence that court-ordered busing has the effect of damaging our educational process. If this method of enforcing equal educational opportunities is permitted to continue, not only will confidence in public education be destroyed, but also the public educational system. Certainly, crosstown busing destroys the opportunity of building any sense of community into the school program, which is so essential to the success of these programs, particularly for preschool and elementary school children. Without the much needed public support for education and parent involvement, there will be no public education for our children.

Therefore, Mr. Chairman, I urge passage of H.R. 13915, the Equal Educational Opportunities Act, which provides Federal financial assistance for educationally deprived students and specifies appropriate remedies for the orderly removal of the vestiges of the dual school system.

Mr. ROSTENKOWSKI. Mr. Chairman, I rise in reluctant support of H.R. 13915, the Equal Educational Opportunities Act of 1972. This bill, which has been the subject of much controversy since its introduction a few months ago, will indeed bring about a degree of clarification on the role of busing in the education of America's school children. Unfortunately, I believe that too much attention is being given to the issue of "to bus, or not to bus" as one prominent commentator has termed the question. For if we here today are truly concerned about equal educational opportunities, we will concern ourselves with the problem of inadequate schools, inferior facilities and the need for innovation rather than continue the emotional debate on the subject of busing of schoolchildren.

For, in my opinion, if the original purpose of busing was to improve the quality of education for all our young people, whether they be black or white, whether they live in the inner city or in the suburbs, then I feel that busing has been a failure. It has created much hardship for all those involved and certainly has had an adverse effect on the children who have been forced to spend hours a day traveling to and from a distant school.

The hardship to the children, the wasted time in transit, the forced elimination of postschool activities and the not unsubstantial cost, are all reasons why I believe that we must look for another way to help better the quality of education. For busing students back and forth in search of that magical percentage of racial balance has done little but impose frustration on all concerned.

But, if nothing else has come from this endless litigation and legislation, I am convinced that it has made the vast majority of Americans admit for the first time that the quality of all our schools is not as high as we would like to believe. It has made them admit that there is a considerable difference between the schools of the inner city and the schools in the more affluent surburbs. The universal acceptance of that fact might very well be the first step towards eliminating that difference of opportunity.

As a member of the Committee on Ways and Means, I for one, am very interested in several suggestions about new means of financing public schools. Hopefully they will signify an effort to bring about greater equality, both in teachers and in facilities, than presently exists. For only by upgrading our schools and restructuring educational financing, will we be able to achieve true equality.

So today as we consider this legislation, I hope that the members of this body will concentrate on looking ahead, on finding new solutions to the problems in our schools, rather than talking about looking back, back to the days when America had a system of education that was inherently unfair and inherently unequal. I hope that we can spend our time and our efforts finding a permanent cure for the disease rather than belaboring the discussion on one of its less successful attempted remedies.

Mr. NIX. Mr. Chairman, this legislation before us, H.R. 13915, is unconstitutional because it seeks to substitute a legislative policy for a finding of constitutional right by the United States Supreme Court.

There has been no allegation of corruption or a fatal defect of judicial process made by the sponsors of this legislation, therefore, I must conclude that they base their attack on the jurisdiction of the Federal Court system because they disagree with the decisions of the United States Supreme Court.

The decisions this bill is directed against, the Brown against Board of Education case in 1954 and the Swann against Charlotte-Mecklenburg Board of Education decision in 1971, were both unanimous decisions. I think it is safe to predict that this legislation will be held unconstitutional. It is fair to say that this exercise in futility will provide more heat than light.

Since the Swann case is the law, I would like to point out what the Swann case did.

First, the Swann case reaffirmed the Brown decision of 1954 and then took the position that the time for action in ending segregation in education was now, since the deliberate speed pace was no longer adequate to protect constitutional rights.

Second, it restricted its impact to segregation resulting from State action in the drawing of school district boundaries.

Third, it characterized school busing as one tool to be used in the breakup of segregated education. The Court pointed out that the importance of school busing arose from the fact that it was the schoolbus which had transformed American education from the "one-room schoolhouse" to "consolidated schools."

Fourth, the Court established that the right to attack school busing and the assignment of children to schools could be done on the basis that the education of the children involved was being diminished or that the health of the child was threatened as the result of the distance of such trips.

What do the sponsors find so offensive to them in the Swann decision? Their objection has to be that the courts will take any action at all. This bill has as its keystone the protection of school district lines as drawn up by local authorities. It seeks to do this by limiting remedies for unconstitutional State action as to segregated education. Therefore, if rights are established, remedies cannot be found to make such rights effective. In return to those Americans who lose their rights, the spending of Federal conscience money is provided for in the form of an investment in local school construction. The provision for such spending alone is an admission of the defective character of this legislation.

The heart of this proposal is the substitution of construction of new facilities as a new remedy for those who establish in court that their children are being injured by a segregated school system. This provision is 402(e) of the bill. The constitutionality of such an approach was condemned in Brown against Board of Education by a unanimous Court in 1954. The Court had found that segregated education, so-called separate but equal education, was inherently inferior. Therefore, the Court concluded that new construction designed for minority group students did not cure the unconstitutionality of inherently unequal education.

A fair summary of the position of the sponsors of this bill is that while segregation in the South is unconstitutional, segregation in the North is not, since this is the only difference between their interests and the Swann situation.

I say to those parents who are concerned about the 3 percent of the school busing done in the United States for purposes of racial balance, that their best protection is still the court system. It is the courts that can examine, on a case by case basis, disputes between individuals. It is the Supreme Court of the United States which has provided a standard for the protection of those students who are being bussed against their parents' will. That standard is one of education and health, which are matters of proof. If the busing of children is bad in certain situations, such could be demonstrated to the courts.

But, even for these concerned parents this obviously unconstitutional legislation can add no protection. It may delay progress for a time, but it only puts off until tomorrow problems which have to be faced today. It supplies general rules and promises that cannot be kept, for reasonable decisions in the courts are based on real problems and facts rather than emotion.

The enactment of unconstitutional legislation with the foreknowledge that the courts will strike it down is not a harmless gesture. The very passage of this legislation will set race relations back 10 years. The path we take backwards today will have to be traveled again, if this bill is enacted. H.R. 13915 is an unnecessary trip into the past. It seeks to allay present fears but only provides for future anxiety. Its enactment cannot help its sponsors' constituents. It will harm their future and the future for all of us. I ask that the House reject H.R. 13915.

Mr. DERWINSKI. Mr. Chairman, I support H.R. 13915 and consider this to be long-overdue legislation.

The solution to the problem of providing proper educational opportunities for all students will not be solved by an emphasis on these programs which arouse emotional responses. It is obvious that court edicts on busing have increased racial tensions and have not contributed to educational improvements. The practical alternative to continued court orders and the resulting controversy is prompt congressional action on this measure.

This issue has been debated across the country in growing intensity as court edicts, tending to ignore majority thinking of the public and especially that of parents of schoolchildren, create turmoil, confusion, and problems in our schools which are facing a monumental enough assignment of providing education for millions of students in our public schools.

It is my judgment that most Members have their minds made up as we go into this debate: they also have their minds made up over the positions they will take on the amendments that will be offered. Therefore, I will deliberately be brief and reemphasize my support of the neighborhood school concept, my interest in quality education for all students, and I also reemphasize my feeling that the busing of schoolchildren merely for the sake of racial balance is negative rather than positive policy.

May I also reemphasize my belief that it was and is wrong to bus children on a mandatory basis except to provide sound education. The obligation of our institutions of learning is to provide the finest possible education for the students under their jurisdiction. To give integration priority over sound educational administration creates more problems than it solves and works to the detriment of the student, the teacher, and the taxpayer.

In closing these brief remarks, Mr. Chairman, I will make other points during the debate on amendments. I believe this bill deserves to and will receive overwhelming support in the House. I trust that the other body will give it priority attention immediately after the congressional recess.

Mr. HARRINGTON. Mr. Chairman, I rise in opposition to H.R. 13915, the so-called Equal Educational Opportunities Act of 1972. It is a distortion of the highest magnitude to attempt to clothe a bill which seeks to retard our progress toward genuine equality for all Americans, one which attempts to negate the Federal Court's power to remedy school segregation by busing, with such an upright, just and equality ringing title. It should be entitled what it really is, "an antibusing, anti-integration" bill.

The intent of the framers of the bill to dilute the guarantees of the 14th amendment is nowhere more evident than in section 202 of the measure. This section states:

> The failure of an educational agency to attain a balance, on the basis of race, color, or national origin, of students among its schools shall not constitute a denial of equal educational opportunity, or equal protection of the laws.

This provision would in effect impede further school desegregation efforts. This measure if adopted would take us back to the days before Brown against Board of Education, when racial segregation in schools was the law of the land.

What does this legislation do, Mr. Chairman? It does not really provide any new funds to upgrade our economically inferior schools. The $500 million that this bill would redirect to provide basic instructional and supportive services for students in schools having a high proportion of students from low-income families has already been appropriated under the Emergency School Aid Act.

The thrust of the legislation would be to place permanent prohibitions and restrictions on the use of busing to achieve racial balance in our schools. It would permit busing only as a last resort to end segregation. Even when busing is the last resort to end school segregation, the bill absolutely prohibits the busing of students enrolled in the first 6 grades. It is at this age, however, that school desegregation is the most successful.

H.R. 13915 also represents the most far-reaching legislative assault on the independence of the Federal judiciary. It is an attempt to reverse the prointegration decisions of the Supreme Court, and represents a blatant disregard of the separation of powers.

I urge all my colleagues who seek quality education for all to join me in voting against this bill.

Mr. DRINAN. Mr. Chairman, I rise in opposition to H.R. 13915. This bill is titled the "Equal Educational Opportunities Act." Never has a bill been more inaccurately labeled. This measure will frustrate equal opportunity and in many cases render it impossible.

The chairman of the Leadership Conference on Civil Rights, Roy Wilkins, has said that our action on this bill will be "one of the crucial civil rights votes of the past 10 years." The lines are well drawn. Some of us will vote to restrict the ways in which desegregation can be accomplished. Others, myself included, will vote against this bill because we will not sanction, in the name of busing or any other slogan, a continuation of existing, purposefully segregated public schools.

Mr. Chairman, I have previously spoken out in this Chamber on busing. I have indicated as forcefully as I know how why this issue is in reality a mere disguise for other issues too dark to be discussed in the company of civilized men.

I have indicated that measures such as this bill are, in the view of many if not most constitutional experts, unconstitutional. And I have tried to demonstrate that passage of legislation such as this will undermine the delicate but hitherto unshattered balance of responsibilities among the executive, legislative, and judicial branches.

We do not approach the issue of busing in a vacuum of social policy; rather, we approach it in the context of the fulfillment of a national goal shared by nearly every American of good will. That goal was described as follows by President Nixon in his March 24, 1970, statement on school desegregation. The President stated:

> It is clear that racial isolation ordinarily has an adverse effect on education. We also know that desegregation is vital to quality education—not only from the standpoint of raising the achievement levels of the disadvantaged, but also from the standpoint of helping all children achieve a broad-based human understanding that increasingly is essential in today's world.

When we speak of the use of busing as a means to accomplish that goal, we do not suggest that busing is the only such means, nor that it is the best means under all circumstances. Many other techniques have been and are used to desegregate schools. Schools have been integrated by changing the grade structure of the system, by redrawing attendance zones, by multischool pairing, and by the construction of new facilities. Indeed, as we approach a society in which equal opportunity is afforded in the fields of housing and employment as well as education, it is highly likely that such alternate techniques will predominate even more than they do today.

Moreover, limitations on the use of busing are specifically sanctioned by the Supreme Court, which, in Swann, stated in plain language that "busing will not be allowed to significantly impinge on the educational process."

It is also imperative to note that when we urge the use of busing to achieve integration in some circumstances, we are not advocating the introduction of a new, dangerous, or untested activity. To the contrary, as Mrs. Lucy Wilson Benson, the president of the League of Women Voters of the United States, Dr. William T. Coleman, Jr., president of the NAACP Legal Defense and Educational Fund, Incorporated, and others have testified, busing and public education have traditionally been inseparable in our country. In fact, historically, busing "was an important strategic device in maintaining racial discrimination and segregation in the public school," according to Dr. Coleman. A 1967 pamphlet prepared for HEW, "Race and Place; A Legal History of the Neighborhood School," details the pervasive use of busing to promote segregation.

Between 1954 and 1969 our national fleet of school buses grew from 150,000 to 238,000 for reasons wholly unrelated to desegregation. Setting forth statistics supplied by the Departments of Health, Education, and Welfare and Transportation, Mrs. Benson has shown that in the 1960–61 school year, when there was virtually no busing employed to facilitate integration, 13,106,779 public school children out of a total public school population of 36,281,000 rode a total of 1.5 billion miles on buses. That year, 186,000 school buses were used at a total public expense of $505,754,515. In the 1970–71 school year, 40 percent of our public school children—65 percent when you include those using public transportation—rode to school each day for reasons that have nothing to do with school desegregation. Thus, in the 1970–71 school year, 19,617,600 public school children out of a total public school population of 45,905,000 rode a total of 2.2 billion miles on buses. The 256,000 vehicles were used at a total public expense of $990,000,000.

Other statistics demonstrate that 18 million students were bused to school, at public expense, and for reasons unrelated to desegregation, in 1969–70, and that "accidents were proportionately and considerably fewer than those associated with any other form of home-to-school transportation, including walking," according to the testimony of Dr. Coleman before the House Judiciary Committee.

As the editors of the Nation have so aptly pointed out:

> Antibusing, not busing, is the issue. Busing is a familiar, long-tested technique; there is nothing inherently unfair or arbitrary about it. . . . It is absurd to say that "compulsory busing has failed" when it has so seldom been fairly tested.

The law of the land does not compel—indeed, it does not permit—extreme busing plans. There is specific judicial protection against any unreasonable busing decisions given by Chief Justice Burger in the Swann decision of April 20, 1971, and I cite the very language of the Chief Justice:

> We find no basis for holding that the local school authorities may not be required to employ bus transportation as one tool of school desegregation. Desegregation plans cannot be limited to the walk-in school.

Chief Justice Burger goes on to say:

> Busing will not be allowed to significantly impinge on the educational process.

The Chief Justice went on to define what unreasonable busing is, and these are his words:

> When the time or distance of travel is so great as to risk either the health of the children or significantly impinge on the educational process——

Mr. Chairman, the circumstances in which this bill comes here today—plucked from the proper jurisdiction of our conscientious Education and Labor Committee and forced to the floor by some members of the Rules Committee—are particularly unfortunate. That such a procedure, undermining the appropriate working of the committee system, could be allowed indicates to me once against that we must have comprehensive reform of the procedures of this House.

I for one intend to continue to make such reform a top priority.

I insert in the Record at this point three highly relevant letters I have received from the AFL–CIO, the United States Catholic Conference and the Leadership Conference on Civil Rights, in opposition to this bill. I endorse these views completely:

American Federation
of Labor and Congress
of Industrial Organizations,
Washington, D.C., August 15, 1972.

Hon. Robert F. Drinan,
U.S. House of Representatives,
Washington, D.C.

Dear Congressman Drinan: The AFL–CIO strongly opposes the enactment of H.R. 13915, the Equal Educational Opportunities Act of 1972. The title of this legislation is as misleading as the claim of its proponents that the bill is simply an anti-busing measure.

H.R. 13915 is an unconstitutional, anti-desegregation, anti-court proposal that does not provide a penny of new money for equal educational opportunity.

The legislation proposes, in the guise of regulating the courts' jurisdiction, to deprive the courts of the power to enforce the 14th Amendment through busing orders designed to eradicate the last vestiges of the segregated "dual school system. The bill does not merely suggest court guidelines. It rules out the remedy of transportation in situations where transportation is the only remedy for the violation of constitutional rights.

In the case of students in the sixth grade or below, the bill prohibits transportation beyond the "closest or next closest school" even if busing beyond such a school is essental for the protection of the 14th Amendment rights. Yet, as AFL–CIO President George Meany pointed out, March 22, 1972: "The rights in question are those of individual school children and once lost for any school year cannot be recaptured."

Nor is there any attempt in this legislation to provide new funds either for compensatory education or for non-busing desegregation remedies. Instead, the first $500 million appropriated under the Emergency School Assistance Act is to be transfered to this program. ESAA funds, of course, already are authorized for desegregation purposes.

The lack of new funding, coupled with the potential veto of the Labor-HEW appropriations bill with its increase in ESEA Title I monies, makes a mockery of the declared purpose of H.R. 13915.

Earlier this year, the AFL-CIO called upon the Congress to defeat the conference report on Higher Education because of the anti-civil rights Broomfield amendment. We were told, then, that passage of the Broomfield amendment would block any further anti-civil rights legislation. The Higher Education Act now is law and—still—the Rules Committee is rushing H.R. 13915 to the floor in its determination to enact an even harsher measure.

On June 28, 1972, the AFL-CIO testified in opposition to H.R. 13915. As we said in our testimony:

"In 1954, the labor movement hailed the Brown decision as 'historic'. Like all fair-minded Americans, we recognized the inequities of the dual school system. It has now been almost two decades since that widely hailed decision. We have made progress, but there is still a long way to go. The AFL-CIO has been in this battle for progress at every step of the way.

"Just as we have fought hard to implement the Brown decision, we will vigorously oppose all efforts to retreat. The AFL-CIO believes that H.R. 13915 represents such a retreat."

Sincerely,

ANDREW J. BIEMILLER,
Director, Department of Legislation.

UNITED STATES
CATHOLIC CONFERENCE,
Washington, D.C., August 10, 1972.

DEAR CONGRESSMAN: On behalf of the United States Catholic Conference, I would like to advise you of the position the Conference has taken with respect to three so-called "anti-busing" measures that may soon be acted upon by the House of Representatives:

H.J. Res. 620, the proposed Constitutional amendment;

H.R. 13915, the Equal Educational Opportunities Act; and

H.R. 13916, the Student Transportation Moratorium Act.

The U.S. Catholic Conference strongly opposes each of these bills. The issue of racial relations is fundamentally a moral one, as the Catholic bishops of the United States have often pointed out. One aspect of that issue is the right of all children to equal educational opportunity. To secure that right, busing, while certainly not a total solution, may in some instances be a helpful and indeed a necessary instrument.

Enactment of any of these measures would be a serious setback to the quest for racial justice and equal educational opportunity. It is our ardent hope that the Congress will recognize the inconsistency of these proposals with the constitutional mandate to desegregate the nation's schools and with the good faith efforts being made to implement that mandate.

We urge you to vote against each of these bills, should they reach the floor of the House.

Sincerely yours,

Most Rev. JOSEPH L. BERNARDIN,
General Secretary.

LEADERSHIP CONFERENCE
ON CIVIL RIGHTS,
Washington, D.C., August 15, 1972.

DEAR CONGRESSMAN: This Thursday, August 17, you will be called upon to cast one of the crucial civil rights votes of the past ten years. The House is scheduled to consider H.R. 13915, the Equal Education Opportunities Act. We urge you to vote against it.

You are probably already acquainted with the reasons why organizations like the 127 national groups that participate in the Leadership Conference on Civil Rights oppose this bill. We have testified against this measure in the House and Senate and we have sent letters to members of Congress expressing our views. Little purpose is served by repeating at length, our objections to this bill. Putting the matter as briefly as possible, we are appalled by a measure that seeks to restrict the federal courts in their deliberations so that, in many instances, the courts would be prohibited from prescribing remedies for desegregation even when they felt these remedies would best serve the purposes of justice. We think such restrictions are plainly unconstitutional. How can a court uphold a right if it is denied the use of all possible means for protecting that right?

But we ask you to look beyond the bill for a moment and consider how it appears to millions of the nation's minority groups, who look to Congress and the federal courts to secure their rights for them. For almost twenty years, we who believe in winning our rights through the democratic process have been able to point to measurable progress brought about by laws and court decisions and have counseled patience. I do not believe we can do that any more.

Consider what a black person sees, who look at H.R. 13915. First, the name: The Equal Educational Opportunities Act! At once that person is reminded of the olden days when the doctrine in Southern schools was "separate but equal."

The whole tenor of H.R. 13915 is designed to confirm that suspicion. Now that there has been a significant increase in school desegregation, a bill appears that seeks, under the guise of setting guidelines, to restrict the ways in which desegregation can be accomplished. Busing is to be the last means possible. I will not dwell on what emotions buses and busing stir in the breasts of black people—veterans of the Montgomery boycott, the Freedom Rides and more than a century of riding in the back. They are also veterans of the long rides that took them to segregated schools. It is difficult for them to understand why Congress, after taking little note of that, is suddenly roused to action now that white parents have begun to complain about busing meant to accomplish constitutionally-required desegregation.

And what does this bill do for those of us alarmed at restrictions that can only slow down and perhaps reverse the process of desegregation? It throws us a sop: $500 million for compensatory education. Even President Nixon, who is not noted for his generosity in matters of education, asked for $1 billion. Not only is that $500 million too little, it isn't even new money. It is taken from the Emergency School Aid Act and can only weaken the effectiveness of that law. Once again, we get a strong impression here of the old days, when the schools were separate, sure enough, but the black schools were underfunded shacks, and the white folks never got around to working on the equal part. Those were the days, and we are reminded of them again, when every grudging concession was calculated to be demeaning and an insult.

Don't tell us this bill is needed. It is not. The courts on the whole have been careful and moderate in their handling of desegregation plans. We see and recognize one thing. The Congress that, in the series of civil rights laws passed in 1957, 1960, 1964, 1965 and 1968, appeared to be offering us equality has pulled back frightened, now that the full dimensions of what is needed to achieve equality are beginning to emerge.

Faced with this situation how can we do anything but despair? How can we place our trust in Congress today if this bill passes? We cannot and will not forget those who are joined in trying to push this terrible bill to enactment.

We urge you to stand with the laws Congress has enacted thus far, resist attempts to stampede the House into rash and destructive action, and vote *against* H.R. 13915.

Sincerely,

ROY WILKINS, *Chairman.*

Mr. PREYER or North Carolina. Mr. Chairman, I am firmly convinced that the final solution to the problem of successfully integrating our school system must be forged by us in Congress and by our local communities—and not by the courts. It must be an answer that is reasonably acceptable over the long pull to the broad majority of both blacks and whites. It must be an answer that applies equally to all sections of the country—the North and West as well as the South.

If our school systems and our cities are to survive over the long run, we must recreate a set of educational conditions which can be reasonably justified to our citizens as deserving of our support. This means no less than a stable, integrated school system delivering an equal educational opportunity of highest quality to every child. Integration temporarily achieved by the mere mixing of bodies, and then lost through resegregation, is not the solution to our problems. The gradual abandonment of urban public education by the middle class can only lead to a gradual deterioration of our public educational system.

It is both evil and illegal to say to a child: "You cannot attend this school because it is a white school." But how much better is it to say: "You must attend this school because it is integrated and we need you for racial balance." The ideal is a situation in which race is irrelevant to assignment.

Preoccupation with mathematical precision, unfortunately, is not the way to achieve that ideal.

I, along with others, have worked for several years on a bill aimed at these objectives. The results are embodied in H.R. 13552 introduced by Congressman UDALL and me. I am convinced that in the long run something like this bill will pass—perhaps in the next session of Congress. I shall continue to work for it. The present bill before the House, even if passed, is no final solution. Frankly, the support is not there for our bill at this time. Opinion is still polarized in Congress between all-or-nothing solutions. Liberals and civil rights forces still refuse to recognize how heavily damaging extensive busing is to our public school system and to our social fabric. They continue to see it primarily as a matter of white racism. While a small number of parents may be diehard segregationists, I submit that the majority of them are conscientious and sincere, and are genuinely concerned for the welfare of their children and for their children's rights as they may perceive them. These are good citizens who, by and large, have faithfully supported public education and who have provided the resources to nourish it. They have also accepted integration as right and just. But they are heartsick to see the deterioration in the quality of our schools and what it means for the future of their children. We must reassure the disadvantaged minority but also the advantaged majority that their children will not become victims of wholesale relocations. We cannot jeopardize the education and life chances of one child in the interest of improving others. We must level up, not down.

Our present system is not doing this. Liberals and civil rights advocates must realize that our present system of achieving educational equality through busing is not working. Instead of burying their heads in the sand and denying this, they should seek alternative ways of achieving their goals.

In the long view of history, the United States will be judged to have made a great effort—one unprecedented in the history of mankind—to bring the black man into the mainstream of society. But the effort is failing in its present form.

The effort, as far as school desegregation is concerned, has been both a success and a failure. It has been a success in that the principle of legal, official segregation has been denied everywhere. The legal structure that embodied it has been destroyed and the idea repudiated. For moral as well as historical reasons, all of the United States stand firmly for the principles of racial equality. This has been a considerable achievement. But the effort has been a failure in pushing beyond the abolition of official segregation to increase integration in schools. Because racial segregation in public schools is both foolish and wrong does not necessarily mean that school integration through racial balance is wise and just. The actual integration of our schools on a significant scale is an enormously difficult undertaking. Our efforts to solve it in a mechanical racial balance formula is failing. Instead of denying this, we should find better ways to reach the goal of truly one society.

The present bill, the Equal Educational Opportunities Act, does not fully achieve these objectives but it is a step in the right direction. It applies largely to the North and West and not to the South, to those areas which have not yet integrated rather than to those that have already integrated. But it does recognize that this is a problem that Congress should take action on and not leave it all to the courts. This represents the first comprehensive bill from Congress on the subject. It is encouraging that we in Congress are at last recognizing our responsibility to act. Also, one section of the bill does endorse the philosophy of alternative solutions to busing: It says that before a court can order busing, it must first try other remedies such as neighborhood schools, pairing and clustering, revision of attendance zones and construction of new schools. Thus the committee bill has incorporated a major part of the philosophy of the Preyer-Udall bill.

Finally, the bill says to the courts: "You have gone too far too fast—stop, look, and listen."

Mr. PODELL. Mr. Chairman, through almost two decades as a Congressman and State legislator, I have fought for every child's right to a free, quality education. I still fervently believe that all children should be treated equally before the law. I also look forward to the time when children of all races, religions, and backgrounds will be integrated in a quality school system. Indeed my young son attends an integrated, local public school in New York.

However, current efforts to attain quality, integrated education with busing will fail. I am presently and have always been opposed to the mandatory and involuntary busing of schoolchildren for the purpose of meeting racial and ethnic quotas.

I have voted against involuntary busing both times the issue has been before the House of Representatives. I will vote against it here today, by voting for the Equal Education Opportunity Act.

The busing of schoolchildren into strange neighborhoods is a serious threat to their health and safety. From current research that I have seen, most schoolbuses are inferior vehicles, so that the use of existing schoolbuses exposes our children to many potential safety hazards and dangers.

These dangers are the sort of thing that parents like myself had attempted to avoid when we bought our homes. I know that in my own case the fact that there is a nearby, quality public school was an important factor in the purchase of my home.

Moreover, there is no satisfactory evidence that busing aids the educational process. Most recent educational research shows that in many cases busing hurts educational progress.

Although proponents of busing argue that it helps race relations, I believe that, in fact, it increases racial tensions. The poor child is forced to compete with students who have been provided with early educational enrichment and are better prepared. Stiff classroom competition and middle-class affluence may well overwhelm the poor child, decreasing the child's motivation to learn, and creating additional resentment and a new generation of racial tension.

Equally important is that this Nation's heritage of a free quality neighborhood public school system is at stake. In school districts in my area, busing results in two schools under one roof, as white middle-class students who are educationally prepared are placed in honor classes and the deprived students are placed in other classes.

Additionally, busing plans require several billions of dollars for the purchase of buses including drivers, maintenance, and so forth. That money would be far better spent on improving education and building additional classroom space. Particularly at a time when school systems are in dire financial straits, we should not require them to waste money on busing.

Indeed, the fact is that, under current law, when a poor child is bused into a middle-class neighborhood, that school does not receive any of the Federal funds—including title I funds—that are allocated to deprived school areas.

Mr. Chairman, racial reconciliation and quality education are among the fundamental issues facing this Congress. I believe my position will guarantee both of those goals.

Mr. VEYSEY. Mr. Chairman, there is a broad consensus in this country that we must become a single society and at the same time that we must provide quality education for all our people regardless of race. Ever since the 1954 Brown decision the public schools have been the institutions we have looked to first to accomplish these goals. In the years since Brown we have made great progress in breaking down the legal barriers separating the races. Most of the public now accepts the desirability of integrated schools and will cooperate in their creation. But there is a point where this cooperation ends. That point is reached when the program to integrate the schools begins to have an adverse effect on the education children receive.

Since reliable research studies like the Armor report have concluded that we are at that point today, the issue has become how to achieve quality education and a single society at the same time. We must find a way to achieve both. If we force people to choose between the two they are going to opt by huge majorities for the more visible benefits of education.

The bill before the House today is a conscientious attempt to achieve both of these goals. It is based on the premise that integration and quality education are not mutually exclusive, that they are attainable, and attainable with the consent of all the people. But to attain our goals we will have to listen to all the people and be willing to reflect their views in the legislation we pass. This kind of reconciliation is exactly what a representative legislature is supposed to do. No one can force solutions to tough social problems down the throats of the voters in a democracy. The public does not have to stand for it and it will not.

Recently we have seen a number of courts try to impose integration programs on unwilling communities by judicial fiat. The courts have no legislative guidelines to rely on and have ordered a series of different solutions to similar fact situations. The mandatory nature of these decrees and their negative impact on the educations of both majority and minority pupils have led to loud and determined resistance across the country.

In Detroit the public has responded by simply refusing to vote the necessary funds to carry out the court orders. In other cities and States the principal reaction has been to push for an amendment to the U.S. Constitution outlawing busing as a means to achieve racial balance. Both these reactions put us further from our ultimate goals. But just as importantly, both of them lead right back into this Chamber.

In a democracy there is no way to avoid the necessity of the elected representatives of the people working out some plan acceptable to the voters. If we do not face up to our responsibilities and pass a systematic and cohesive legislative policy in this area, we will find ourselves forced to try to make policy piecemeal through bailout funding bills and short-term tactical amendments to the Constitution.

This is the time. This is the bill. While this bill was originally proposed by the President, it now bears the clear imprint of your Committee on Education. It represents months of hard work, debate, and conflict resolution.

It is no accident, for example, that the bill contains both guidelines and substantial aid for underprivileged children. At one point the committee had decided that the public call for action in this area demanded a quick and simple set of integration guidelines, rather than the balanced bill proposed by the President. The compensatory education title of the bill was stricken, and my motion to reinstate it failed. The later restoration of this aid program is an example of the kind of reasoned debate that has characterized the committee's consideration of this emotional measure.

The guidelines in the bill result from research which finds that busing does not work as either a tool to achieve improved education or a vehicle to lessen tensions between the races. But once we recognize this, we have an obligation to provide the kind of programs that can accomplish these goals. As Secretary Richardson pointed out, careful and concentrated compensatory education programs can crack through the educational barriers of the past. Based on analyses of California's title I programs, the Secretary concluded:

> There is strong evidence that well planned and administered compensatory education programs which provide additional services for basic learning at a critical mass level of $250–$300 per pupil, over and above regular educational expenses do improve the achievement of slow learning children.

The bill authorizes $500,000 per year to be added to ESEA title I moneys in the neediest schools to produce long hours of skilled compensatory help in basic subjects like mathematics, language, and basic supportive services like counseling, nutrition and health. No funds can be used for overhead, major capital investments, or general salary increases. I am pleased that the committee recognized the value of this title and reconsidered its rejection of the aid program. We also added a clear assurance that nothing in this bill is to alter the amount of a grant a local educational agency is eligible to receive under ESEA title I.

One other aspect of the bill merits comment. Section 201 establishes for the first time an express requirement that schools take affirmative action to overcome language barriers that impede equal participation by students. This provision especially aids Mexican Americans whose language and cultural barriers have been ignored for too long. Provisions like this are essential to achieving true equality of educational opportunity for all our citizens.

I believe this bill merits wide support. But your committee is not holding it out as the final word on the subject. It is open to amendment and improvement.

Let the people's elected representative speak. Let us write our people's priorities into this bill and give the courts the guidance they need. No one can do this job for us. If we refuse to do it, the people will find representatives who will.

Mr. KOCH. Mr. Chairman, I will vote "no" today on this bill. The bill on its face is unconstitutional and seeks to prevent the courts from taking those actions they believe necessary to uphold constitutionally protected rights. I have listened to the debate and when it is all said and done, it is clear that the purpose of this bill is to frustrate the efforts of the courts to assure quality education for all children when that necessitates busing.

There is no one in this Chamber today who advocates busing for the sake of busing. I, along with every one of you, agree that busing is the least desirable technique for ending the ghetto school with its educational deficiencies. Much to be preferred are other methods of pupil assignment—such as zoning, pairing, site selection, and construction of new schools. The courts are well aware of the alternatives and have normally imposed busing only in those cases where all else has failed. Too often, the failures occurred when local authorities refused to cooperate with other reasonable proposals. Where a court errs as it will, since judges are not infallible, there is the right of appeal and it should and will be taken by concerned parents. But we must not strip the court of using each and every technique—including busing, when appropriate, to accomplish the goal of quality education for all children.

Mr. ANNUNZIO. Mr. Chairman, last week, the Committee on Education and Labor reported out H.R. 13915, Equal Educational Opportunities Act, which promises once and for all to quell the perennial fall madness of racial student busing that has justifiably outraged concerned parents, school officials, and the American public, generally, for all too many school terms. This well-conceived legislation provides a check against the immoderate and misguided social policymaking penchant of the Federal courts in the sensitive school desegregation area.

In one of the most important decisions in its history, at least in recent history, the U.S. Supreme Court, in Brown I, declared that State-imposed racial segregation in public education was contrary to the equal protection clause of the 14th amendment. The principle enunciated in the Brown decision was that the Constitution prohibits States from using a child's race or color as a basis for assigning him to the public schools. And yet, despite the clarity and unmistakable significance of the constitutional mandate laid down in Brown, the courts have over the last 18 years retrenched to pre-Brown days. We are now told by the Court in Swann, that our Constitution not only permits, but demands assignment of pupils to public schools on the basis of race in order to achieve a preconceived racial mix.

Judges, school officials, and parents alike are in a state of near total confusion over the extent of the constitutional obligation imposed upon the schools in this respect. This confusion is understandable given the palpable inconsistency of the cases. For example, one school district in Cincinnati, Ohio, was told that the existence of all-black schools is of no constitutional consequence, while more recently, school officials in Detroit and its surrounding suburbs were told that the attendance of their children at schools within the school district of their residence is a constitutional transgression.

But what does this ill-begotten and misguided reformist approach by the Federal judiciary mean in human terms? It means the abolition of the neighborhood school as a source of emotional security and social stability at a time in the child's life when these values are of greatest significance to healthy personality development. It means uprooting the child from his home, family, and friends and transporting him many miles each day, and in some cases for many hours, in order to achieve an artificial racial balance in the public schools. It means that staggering financial expenditures, which might more wisely be channeled to improving the quality of educational facilities available to all students, must instead be diverted to attain a utopian goal of racially numerical exactitude. The recent order in the Detroit case, for instance, affects an overall student population of 780,000 in 53 separate school districts. If implemented, the lower court order would require the purchase of 295 buses at an approximate cost of $3 million in order to shunt roughly 300,000 students about the traffic clogged Detroit area.

An additional social cost of the unrelenting reformist policy of the Federal judiciary in this area; namely, the loss of people's confidence in the organs of government, becomes apparent as one considers the sentiments and firm conviction of a majority of the American people on this issue. A reient Gallup poll indicates that 69 percent of the American people—North and South—oppose compulsory busing of children to achieve desegregation. Furthermore, teh Gallop analysis indicated that sizable proportions of blacks oppose busing.

Even these patterns of disruption to individual lives and community organization might be justifiable upon some basis of demonstrable improvement in the educational product of the public schools. This has not been the case, however. Early research studies, most notably the Coleman report on equal educational opportunity, did suggest that black students attending schools in white neighborhoods did better educationally than black children attending black neighborhood schools. These study results were seized upon as the basis for a massive busing movement that education and social leaders saw as the panacea that would help solve the Nation's racial and poverty problems.

Recent followup studies on the Coleman data, however, indicate that the statistical sampling techniques used in the original study failed to adequately account for various socioeconomic factors unrelated to the school of attendance. It now appears that quality of home environment is most directly related to educational achievement. Similarly, studies carried out within the White Plains, N.Y., and Berkeley, Calif., systems, both of which voluntarily adopted desegregation plans calling for extensive student busing, demonstrated only modest educational gains among blacks.

In short, the results heralded by the reformers have not been attained, even where busing was carried out within school systems of manageable size and with the support of parents and school administrators. The results are obviously bound to be less encouraging where the attempt is made to homogenize school populations of many tens, or even hundreds, of thousands in an atmosphere of extreme ill will.

For all of these reasons, the majority of Americans, white and black, oppose the busing of their children to schools outside the home neighborhood in pursuit of an illusive and ill-defined racial balance. They are outraged by the intrusive manipulation of their children as pawns of social reform by the Federal courts. They want to be able to decide for themselves where they as a family will live, where they will work, and where their children will attend public schools. And they want equal educational opportunity for all regardless of race, creed, or color.

The committee reported version of H.R. 13915 represents an enlightened congressional response to the overriding national need for a clear, rational, and uniform Federal policy with regard to public school desegregation. This legislation would provide school officials and the courts with a comprehensible—and what is equally important, a predictable—standard against which to determine a school systems obligation under the 14th amendment. In so doing it would once more restore a measure of reason and sanity to the conflict and confusion engendered by the case law and go a long way toward correcting the arbitrary results of unhampered judicial discretion. Uniform standards, applicable alike to North and South, emphasizing the social and educational advantages of the neighborhood school, and well defined limitations on the use of mass student busing can only serve to enhance the benefits to be derived from the public school experience. Coupled with the provision for infusion of additional Federal funding for compensatory education in poor and disadvantaged schools, this legislative package will assure every student in the country the equal educational opportunity mandated by Brown I and desired by the American people for their children.

Mr. FINDLEY. Mr. Chairman, this bill is significant for a number of reasons. It is a bill dealing with civil rights. That is beyond question. Were it not for racial discrimination in schools in the past and present, this bill would not be before us.

The word "busing" cannot conceal the fact that the root issue is racial.

The basic question is not that of discrimination and hardship caused by busing.

For many years students in my home county in Illinois have been bused for many miles. Many travel 20 miles a day, perhaps more. Buses became commonplace during the consolidation of school districts immediately after World War II. In the prewar years small schools, even the ancient one-room schools, were numerous.

Busing was not always accepted with rejoicing. There is still some grumbling in the dead of winter about climbing on buses about dawn or sooner and returning at dusk or later. But few, if any, today would wish to return to the old system of small neighborhood schools. Buses are the symbol of better quality education in Pike County, and perhaps in many other areas too.

This bill aims to restrict the use of buses as a means of ending racial discrimination in schools.

It is notable for another reason.

It marks, in all probability, the end of an era. It may be the civil rights swan song for two distinguished Members of this body, men who have symbolized advancement in civil rights as much as any other citizens of my knowledge.

I speak, of course, of two great citizens, BILL McCULLOCH, of Ohio, and EMANUEL CELLER, of New York.

In the 12 years I have been a Member of this body, this Chamber has been the scene of many a major battle for the advancement of civil rights. These two men, one of the party of Jackson, the other of the party of Lincoln, have always—to the best of my recollection—stood together and voted together on all these historic issues.

Fortunately, almost all of these major pieces of legislation in the civil rights field have been progressive. They have represented advance. Mr. McCULLOCH and Mr. CELLER have, therefore, been consistently on the affirmative side, in favor of advance.

This bill is an exception. In my view it represents a step backward, not one forward. I, therefore, expect those great stalwarts in the battle for civil rights to vote negative when the time comes.

And that I say with sadness—sadness because neither man will likely be in this body next year, and sadness, too, that their civil rights swan song must by necessity occur in connection with backward legislation. This legislation is unworthy of either the party of Jackson or Lincoln.

Almost 200 years after the Declaration of Independence declared that "all men are created equal," we again stand at the threshold of deciding just how far we are willing to go to implement that noble ideal. In times past, the Republican Party has stood to the fore, sometimes at terrible sacrifice to keep the hope expressed in the Declaration shining before all men. Abraham Lincoln expressed it this way:

> The Declaration of Independence gave liberty not alone to the people of this country, but hope to all the world, for all future time. It was that which gave promise that in due time the weights would be lifted from the shoulders of all men, and that all should have an *equal* chance. This is the sentiment embodied in the Declaration of Independence. . . . I would rather be assassinated on this spot than surrender it.

Lincoln never surrendered that hope and guiding principle "that all should have an equal chance." He was, in fact, assassinated because of it.

It is important that 200 years after that noble ideal was first penned, 100 years after Lincoln died for it, the Republican Party which he helped to found should now stand resolutely for the idealism he espoused.

Whatever else the bill before us today accomplishes, its main effect will be to restrict the opportunity for many children across the Nation to have an equal opportunity to secure a quality education.

When votes are cast I hope the party of Lincoln will be well represented in the negative column.

Mr. FRASER. Mr. Chairman, never during my time in Congress did I expect to see us dashing headlong toward repeal of Brown against Board of Education, as we are doing tonight.

The patently unconstitutional nature of section 402 is reason enough to oppose this misnamed Equal Educational Opportunities Act. But the harm caused by section 402 is only compounded by the school assistance title which makes a shambles of our efforts in the Higher Education Act to aid desegregating school districts.

Three districts in my State that are developing desegregation plans—Minneapolis, St. Paul, and Duluth—could very well loose $1 million in emergency school aid that they were expecting to receive under the Higher Education Act.

Until appropriations are made and guidelines are written, we can not know for sure what H.R. 13915 will mean for each district in terms of Federal aid. But one thing we do know for sure is that this legislation seriously undercuts efforts throughout the country to break down the barriers to racial separation.

Many civic, religious, and labor organizations share my concern about this ill conceived measure. On the national level, the AFL–CIO has been particularly vigorous in its opposition to H.R. 13915. The following letter from Andrew Biemiller outlines the national labor organization's objections to the bill:

AMERICAN FEDERATION OF
LABOR AND CONGRESS OF
INDUSTRIAL ORGANIZATIONS,
Washington, D.C., August 15, 1972.

Hon. DONALD M. FRASER,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FRASER: The AFL–CIO strongly opposes the enactment of H. R. 13915, the Equal Educational Opportunities Act of 1972. The title of this legislation is as misleading as the claim of its proponents that the bill is simply an anti-busing measure.

H. R. 13915 is an unconstitutional, anti-desegregation, anti-court proposal that does not provide a penny of new money for equal educational opportunity.

The legislation proposes, in the guise of regulating the courts' jurisdiction, to deprive the courts of the power to enforce the 14th Amendment through busing orders designed to eradicate the last vestiges of the segregated "dual school system." The bill does not merely suggest court guidelines. It rules out the remedy of transportation in situations where transportation is the only remedy for the violation of constitutional rights.

In the case of students in the sixth grade or below, the bill prohibits transportation beyond the "closest or next closest school" even if busing beyond such a school is essential for the protection of 14th Amendment rights. Yet, as AFL–CIO President George Meany pointed out, March 22, 1972: "The rights in question are those of individual school children and once lost for any school year cannot be recaptured."

Nor is there any attempt in this legislation to provide new funds either for compensatory education or for non-busing desegregation remedies. Instead, the first $500 million appropriated under the Emergency School Assistance Act is to be transferred to this program. ESAA funds, of course, already are authorized for desegregation purposes.

The lack of new funding, coupled with the potential veto of the Labor-HEW appropriations bill with its increase in ESEA Title I monies, makes a mockery of the declared purpose of H. R. 13915.

Earlier this year, the AFL–CIO called upon the Congress to defeat the conference report on Higher Education because of the anti-civil rights Broomfield amendment. We were told, then, that passage of the Broomfield amendment would block any further anti-civil rights legislation. The Higher Education Act now is law and—still—the Rules Committee is rushing H. R. 13915 to the floor in its determination to enact an even harsher measure.

On June 28, 1972, the AFL–CIO testified in opposition to H. R. 13915. As we said in our testimony:

"In 1954, the labor movement hailed the Brown decision as 'historic'. Like all fair-minded Americans, we recognized the inequities of the dual school system. It has now been almost two decades since that widely hailed decision. We have made progress, but there is still a long way to go. The AFL–CIO has been in this battle for progress at every step of the way.

"Just as we have fought hard to implement the Brown decision, we will vigorously oppose all efforts to retreat. The AFL–CIO believes that H. R. 13915 represents such a retreat."

Sincerely,

ANDREW J. BIEMILLER,
Director, Department of Legislation.

Mr. O'NEILL. Mr. Chairman, I would like to place in the RECORD the study made by my staff—legislative—and interns concerning busing, as follows:

STAFF STUDY

In summation, the points raised in this paper represent a mere smattering from the several hundred pages of testimony, documentation and reports which exist on the subject of busing.

The basic point is simple however. Busing is necessary to achieve integration, as it is the only tool which can overcome segregation which occurs through housing, dual educational systems, and discriminatory school assignment based on the mythical neighborhood concept.

As was pointed out in the report, it is only when busing is spoken of in a racial context that opposition becomes manifest. To the millions of children (and their parents) who are bused daily in our cities and rural areas, busing has never been an issue. We cannot allow the progress made in the last two decades to evaporate over an issue like busing. The President's program is an insult to the record of civil rights legislation accumulated in the last decade, and represents a return to the doctrine of separate but equal, a system of apartheid which has been ruled unconstitutional. There is no evidence of any kind that busing is detrimental to the health, welfare or educational capabilities of children, and where there is such evidence, the courts have stated that busing need not be used. Our entire education concept is meaningless without integration, and thus without busing.

BUSING—THE REAL ISSUE

Busing is nothing more than camouflage. The fundamental issue is integration and school desegregation. Historically, this battle has already been fought, with *Brown* v. *Board of Education* as the landmark decision denouncing once and for all times the corrupt doctrine of "separate but equal." As Donald Morrison (President of the National Education Association) has said: "The current controversy over school busing is surprising to those of us who have devoted our lives to public education. The school bus has been a major factor in improving the education opportunity of hundreds of millions of American children during the 1st half century." Busing has always been a part of the American educational scene, woven into the fabric of our system since 1869. In that year, Massachusetts enacted a law authorizing the spending of public funds to carry children to and from school. By 1900, 18 states had some sort of pupil transportation law, and by 1919 pupil transportation at public expense was legal in all 48 states. The basic impetus behind this movement was the desire to achieve equal education through consolidation of school centers in rural areas which formerly relied on inferior one-room school houses, and the emergence of compulsory attendance laws based on the belief that the welfare of the states required all children to obtain some education. Through the improvement of our road and highway systems, and the increase in the number of motor vehicles, the number of school districts dropped by 75 percent following WWII.

The figures

Busing for desegregation purposes is but a small percentage of the busing which goes on daily in this country. For millions of American children who live too far from any school to walk, the institution known as the neighborhood school is not and never has been a reality. According to Administration sources, while about 40 percent of the nation's school children are bused to school, at most 1 or 2 percent of this total are bused for desegregation purposes. These figures make school busing the greatest single transportation system in the country. Eighty percent of the school districts in the nation maintain one or more vehicles for pupil transportation, with some districts having fleets of more than 500 vehicles.

Busing is greatest in rural states. In Maine, West Virginia and Missouri, more than 60 percent of all students are bused to school daily. In many areas great pride is taken in the busing programs—as an essay written by the State Board of Education on Pupil Transportation in North Carolina notes "As long as we accepted a narrow and limited education . . . the States discharged this responsibility primarily through . . . a small school within walking distance . . . but demands on the school for a broadened program have increased . . . these and other factors have resulted in transportation of pupils to and from school becomes one of the most important of the auxiliary activities of the school."

Busing is by no means limited to rural areas. Busing in urban areas is uniquely suited to overcome problems of overcrowded cities, which pose safety and problems for millions of commuting students. School busing is not even the necessary evil it has been depicted; more correctly, it is an essential convenience.

In light of the foregoing discussion, certain myths concerning busing may be exploded. *First,* busing does not break with past tradition, on the contrary it constitutes part of the American educational fabric. *Second,* that busing is the exception and neighborhood schools the rule can no longer be maintained, with the number of school children now at 19.6 million, 42 percent of whom are transported daily by bus. In fact, in some of the most virulent anti-busing pockets of the nation, there has long been a disregard for neighborhood school patterns. (See *Charlotte Mecklenburg* decision.) *Thirdly,* critics maintain that until recently, busing has not been motivated by social beliefs of principles of egalitarianism. This is blatantly false. The underlying assumption of busing, and the early busing statutes, was that education was required for the social welfare of the country, offering a chance for social advancement and betterment. The dual system of the South would never have been possible without the school bus. Under the dual system, buses for blacks and whites often traveled the same routes. *Fourthly,* that busing is "bad" for children. Except when desegregation is involved, this point is rarely made. Every year, millions of school children sojourn from all over the nation to the Capitol and other historic places, traveling often for several hours. This has never been held to be detrimental to a pupil's health. *Lastly,* that busing is a financial burden on the community and the nation. Ironically, the busing which eliminated the one-room school house was thought to be a saving to the community. Furthermore, busing, where used to achieve desegregation, results in a saving in that it replaces two bus systems with one.

In any discussion of busing, it is important to consider the Administration's proposals on busing, both from an intellectual standpoint, and from a practical constitutional one. Adoption of the President's plan would send us back almost 20 years to a time before *Brown v. Board of Education.* For much of the period since *Brown,* opponents of the decision have successfully avoided and delayed its enforcement. Only recently has the decision gained momentum. Politically, the President is taking advantage of fear and apprehension over the busing issue. The President is encouraging Congress to react to busing in a panic, as though they were the key issues, where he should be exercising leadership to calm the public and call on the Legislative Branch to deal with busing as one aspect of a comprehensive program for ending dual systems.

One of the greatest areas of argument is that busing destroys the concept of "neighborhood schools," which is supposedly so fundamental as to be sacrosanct. According to Donald E. Morrison, President of the N.E.A. "By and large, with the possible exception of school in small towns, the 'neighborhood school' is a mythological institution which does not exist. In our cities and outlying suburbs the attendant areas of schools are constantly changing to adjust to population shifts, new school construction, and new school programs. Thus, schools in those areas do not serve clearly defined 'neighborhoods' regardless of whether that term is understood to mean a particular geographical area or community with an identity of interest." The same theme was sounded by Samuel S. Sheats appearing before the House Judiciary Committee: "Even in public school systems, junior and senior high schools are rarely neighborhood schools, but serve a broad area, and clearly private and parochial schools are not neighborhood schools, generally located only incidentally with respect to geography."

Quality education

Quality education is another phrase, like neighborhood schools, which is constantly bantered around, but which has little, if any meaning. In the President's March message on busing, during which time he proposed a "moratorium" on school busing, a plan was put forth calling for quality education as the answer to problems of segregation and inadequate educational opportunity. Quality education should mean integrated education. However, on two other occasions the President vetoed important appropriations bills which proposed to do exactly what President Nixon suggests, increasing funds for education. Furthermore, the $2.5 million which the President has supposedly added to the education budget, has already been authorized by the Congress for existing programs. It is mere deception to claim that lumping together of $2.5 billion from the present Title I and emergency desegregation funds will in any way relate to the Administration's already questionable commitment to desegregation or quality education. Quality education is in reality a euphemism for a return to the separate but equal doctrine developed in *Plessy v. Ferguson,* and later repudiated in *Brown.*

H.R. 13915—The Equal Educational Opportunities Act

H.R. 13915, the "Equal Educational Opportunities Act of 1972" declares in its findings that the dual system of education has been virtually disestablished. This conflicts with school enrollment figures furnished by the Department of HEW which illustrate that in the 1971–1972 school year approximately one third of all black students in 11 States are attending nearly all black schools (those with 80 to 100 percent minority enrollment).

Cost: Figures supplied by the Secretary of Transportation show that total cost to school busing, including capital expenditures, in 1970–71 have been $1.5 billion. According to the September Office of Transportation figures, the amount of annual increase in school busing is attributed by the Department to the following causes:

Population growth, 95 percent.
School centralization, 3 percent.
Safety factors, less than 1 percent.
Desegregation, less than 1 percent.
Other factors, less than 1 percent.

It is obvious from the figures that desegregation, accounting for less than 1 percent in the increase in the amount of school busing, is only subordinately responsible for such increased costs. While these figures reflect national aggregates, they give an accurate national picture of busing, which is what is desired for purposes of evaluating legislation having a national scope and effect.

Moreover, a yearly expenditure of $1.7 billion on busing is a relatively small fraction of the total national expenditure on public elementary and secondary education, which totals $45 billion. Furthermore, the annual cost increase attributable to more school busing for desegregation purposes in 1971 is but a smaller fraction of the total national education outlay. Special legislation is not required for such a small outlay.

At the core of the anti-busing legislation is the myth that the abolition of dual system requires extensive transportation of students. *As mentioned earlier and substantiated by the Secretary of HEW testifying before the Senate Select Committee on Equal Educational Opportunity in August 1970, there has been more busing of students to preserve segregation than to implement desegregation plans.* He supported his statement with a study done by the Department of HEW which reported that in 300 counties in the South, only seven were required under desegregation plans to increase busing, the remaining 293 districts would have had the same, or less busing. Busing for purposes of desegregation can result in less pupil transportation. In Alabama, busing to desegregate has resulted in one million fewer miles than the previous year under segregation. Length of time which is spent on the buses has also been reduced. Before the *Charlotte-Mecklenburg* decision, pupils averaged over an hour on the bus; after desegregation, bus trips were reduced substantially. The *Richmond* decision would call for average bus rides of about 30 minutes which is less than the current average in an adjacent district involved in the decision.

One cannot overemphasize that only when busing is used for purposes of desegregation does it evoke a public outcry. That a great deal of busing can be tolerated, and through deliberate choice of the parents, was illustrated by statistics on public and private school busing published by *South Today* in 1970. The *South Today* article surveyed pupils at 10 segregated private schools and found that the number of pupils bused averaged 62 percent and that the average distance traveled was 17.7 miles each way. By contrast, public schools in the eight states in which these private schools are located were busing less than half the enrollment an average of 10.1 miles each way. Thus more private school students were being bused, and they were traveling an average of 7.6 miles more than pupils at public schools.

Mr. HORTON. Mr. Chairman, I will cast my vote against H.R. 13951. At the outset, I want to make very clear that I have consistently opposed forced busing as a solution to racial isolation. Busing is a bad solution from an educational, a social, and a financial standpoint. In line with this position, I have voted for the strongest possible antibusing provisions offered under the Emergency School Aid Act. These provisions, now part of the new higher education law, include a guarantee that no court busing decisions can be implemented until the school district in question has had the opportunity to exhaust every possible means of appeal. When these provisions were being considered by the Congress, I made a very comprehensive statement detailing my reasons for feeling busing is not the answer to the school segregation problem since it places the full burden for social integration on schoolchildren and school systems.

I said at that time that Congress had abandoned its responsibility for contributing to the solution of segregation. Ever since the Supreme Court decision on the Brown case of 1954, Congress has failed in its duty to enact affirmative legislation to strictly limit the use of massive busing plans by the courts on a case-by-case basis. At the same time, however, it was incumbent upon the Congress to do more than merely tell the courts what they could not do. It was equally important that such legislation provide meaningful alternatives that would lead to the improvement of educational opportunity for disadvantaged and minority children.

The bill now before us, which is misnamed the Equal Educational Opportunity Act of 1972, does accomplish the first goal, albeit in a negative way. It does not, however, do anything in the way of providing the means for the improvement of urban school systems, the sorry state of which is at the heart of the school desegregation problem. I feel that this bill should be improved to include provisions of congressional policy that would realistically face the hard question of providing adequate Federal funds that could produce a real impact on the learning improvement of disadvantaged youngsters. In this way, we would go beyond treating the mere symptoms and address ourselves directly to the problem.

Mr. Chairman, my statement of April 14, 1972, was critical of the President's proposed Equal Educational Opportunity Act of 1972 because it added absolutely no new money for positive purposes which would counter the prohibitions against busing contained in the President's bill and H.R. 13915. Instead of providing even as much as the President recommended, H.R. 13915 cuts the level of funding by 80 percent and at the same time virtually guts the emergency school aid program which Congress passed just this year and which the President has signed into law. An amendment was offered by Mr. Hawkins to put some of the money recommended by the President back into H.R. 13915 and I voted in favor of this amendment. The defeat of the Hawkins amendment makes the title of this bill even more meaningless since it virtually assures the continued failure of Congress to provide the kind of alternatives to busing which even those who are most staunchly opposed to busing could support. Quoting from my statement of April 14:

> If Congress and the President are to step in to relieve the understandable dissatisfaction which inconsistent court busing rulings have brought about, then we have a duty to at least provide the alternatives and the monies, which will realistically replace busing as a solution to the serious problem of unequal educational opportunity and racial isolation.
>
> When I am called upon to vote on the moratorium bill, I shall very carefully weigh, not only the feelings of my constituents, who are seriously divided on the question, but also the prospects for positive legislation which will make the moratorium worthwhile from an educational standpoint. There should be no moratorium, bad as the present situation is, if it will only turn out to be a cheap substitute for an anti-busing Constitutional Amendment.

In addition, Mr. Chairman, the House has added an amendment during this debate which would allow those court orders and school desegregation plans already in effect under title VI of the 1964 Civil Rights Act to be reopened and modified to comply with the bill. HEW Secretary Richardson, in testimony before the Senate Education Subcommittee in March of this year, stated that 100 recently desegregating school districts might conceivably be able to ask for reductions in desegregation programs if Congress were to adopt a provision permitting prior court orders to be reopened. I have stated in the past that whatever the attempted solutions agreed upon for the busing crisis, they should in no way force or encourage a retreat from desegregation progress in areas where desegregation programs have been successfully implemented, and have gained a significant degree of public and parent acceptance.

For these reasons, Mr. Chairman, I cannot accept H.R. 13915 as a responsible solution to the busing dilemma. We are not faced with the emergency situation that confronted us only a few months ago. We now have strong antibusing language in the law, and we should proceed with responsible legislation that truly provides the alternatives and the moneys to replace busing as a solution to unequal educational opportunity. H.R. 13915 fails to meet that challenge.

Mr. HOGAN. Mr. Chairman, earlier in today's debate on H.R. 13915, I referred to a letter which I had sent to the Prince Georges County School Board relating to the busing controversy in my district. I insert this letter in the RECORD at this point:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 17, 1972.

Lt. Col. CHESTER E. WHITING,
President, Prince Georges County Board of Education, Adelphi, Md.

DEAR COLONEL: Because I have been deeply involved at the Congressional level with busing legislation and because of the tremendous number of pleas I have received from constituents, I am taking the liberty of communicating with you on the proposed busing plan for Prince Georges County.

Since August 1, 1972, particularly, my office has been deluged with telephone calls, letters and telegrams concerning the proposed plan which I am informed will be presented at the August 21st meeting of the Board of Education.

I have received petitions and have been invited to meetings by individuals and groups, virtually all of whom are opposed to the idea of establishing a racial balance in our schools at the expense of quality education. These contacts all clearly confirm the results of my questionnaire (with a return of 33,752 responses) which disclosed that 88% of my constituents oppose busing for racial balance.

In my opinion, the U.S. District Court at Baltimore has placed an impossible burden on the Prince Georges County School Board. The Court orders the Board to file with the Court by 10:00 a.m. August 22, the report it receives from the Lambda Corporation "along with to the fullest extent practical . . . the Board's own plan for student attendance, faculty and administration."

The Lambda Corporation report, I understand, is a status report providing no detailed schedules. When available at a later date the schedules will be based upon somewhat different criteria from the Board's staff plan. How could the Board seek views from the public and give its staff report the thoughtful study and deliberation which the situation warrants let alone compare it with the schedules of the Lambda Corporation in such a short time?

The Court orders the Board to "commence and pursue diligently" its own plan to bring the Prince George's County school system into total compliance with the Brown-Swann standards "*to the fullest extent practical*" by September 5, 1972. The Court itself clearly indicated that it might not be possible to complete this complex work in such a short time when it said "if that is not feasibly possible, then to bring the system into such compliance in part *to the fullest extent practical* by that date."

The Court then stated that "the burden of establishing the need for any delay or delays in whole or in part shall rest upon defendants."

I recommend that the Board instruct its attorney to send a copy of the Lambda Corporation status report to the Court on August 22 without comment, approval or disapproval, explaining that there was no time available to study and assess the report and comply with the Court's order. It would seem to make no sense at all to submit the Board's staff plan without taking advantage of any desirable ideas which might be gleaned from the Lambda report.

I further recommend that, at the Court hearing set for August 25 for the purpose of considering the report which is due August 22, the School Board's attorney be instructed to move for a continuance because of the foregoing facts and because Congress is at this time legislating in this very area.

Since enactment of federal legislation might make the Court's ruling moot, it would seem to be reasonable for the Court to grant such a continuance until Congress has acted. To do otherwise would subject the School Board to considerable expense and subject thousands of parents and children to inconvenience and disruption of their lives.

Congress has been wrestling for months with what constitutes the "Brown-Swann standards." The courts do not take a uniform position on this matter. I am confident that Congress will enact legislation in the immediate future to clarify this very confusing situation. There are three proposals pending in Congress which could affect this situation:

1. A Constitutional amendment (which I am supporting) which would prohibit busing for racial balance. This, of course, if passed by Congress and signed by the President, would require ratification by ¾ of the states.

2. A moratorium on court-ordered busing until July 1, 1973, to give Congress "a breathing spell" to enact remedial and clarifying legislation regarding busing.

3. Clarification of desegregation standards as in the "Equal Educational Opportunities Act of 1972", H.R. 13915. This latter proposal is scheduled for House action by August 17. An amendment will be offered to this bill (which I am supporting) to prohibit busing which has been previously ordered by the courts.

Obviously these matters would have a bearing on the decision and actions of the Court and the School Board. I continue to be amazed at the magnitude of the problem faced by the Prince George's County School Board. It would be far easier to achieve "racial balance" in the schools of the District of Columbia and Baltimore City. Even combining the City of Richmond, Virginia, and two adjoining counties is no more difficult than the Prince George's County problem. When one looks at the area covered by the Prince George's County school system (larger than Baltimore, Washington and all the area in between) and the present Prince George's County school bus fleet (larger than the combined fleets of suburban Washington's three public transportation firms), it is unbelievable that one could view the problem of student assignments of 165,000 pupils as simple to be resolved in a few hours.

I urge the members of the Prince George's County School Board to point out these matters to the United States District Court. An ill-considered decision at this time would create unbelievable confusion and may interfere irreparably with the education of children and disrupt the lives of their families.

Sincerely,

LAWRENCE J. HOGAN,
Member of Congress.

Mr. BIAGGI. Mr. Chairman, I rise in support of this legislation as the best means of restoring some sanity to the education of our children. I do not believe that this bill will in any way lessen the progress this country has made to eliminate the remains of segregation in our educational systems. In fact, it will strengthen these systems by upgrading the quality of education in the poorer schools.

This Nation was committed to ending segregation by the Supreme Court decision in the case of Brown against the Board of Education of Topeka. Subsequent decisions and actions by the Congress have strengthened our resolve to guarantee equality under the law for all Americans regardless of race, color, creed, or country of origin.

Integration must succeed 100 percent. Many tools were tried over the years to eliminate the barriers and artificial controls established in our society to keep the races separate. Busing was one of them. And while there are many well-meaning people who still feel busing is an essential tool, there are many others who agree that the millions of dollars spent have not been productive.

For the many who suffered under the curse of segregation, busing offered a hope for equality and equal opportunity. Yet even when it has failed, for some it still survives as a symbol of hope and for others a vehicle to exploit politically. But survey after survey throughout the country has indicated that busing is not the answer and that most people are opposed to it.

But a mother is a mother, whether she is black or white, Spanish or Italian. She wants her child near her. She wants her child to have a good education in a neighborhood school, to succeed in life and be happy. For many, busing does not do this. Perhaps for those deprived children bused to the best schools in town, there is an advantage. But what does a mother tell her children when they report that they feel even more acutely deprived side by side with a well-off child?

And what does a mother say to her child who must remain in the disadvantaged school because he was not chosen to be bused? And what does the mother of the well-off child say when her son or daughter is bused to an educationally deprived school to make room for those bused in? Is sitting next to a white child the only way for a black child to get a good education? That is an insult to the black community.

Clearly the answer cannot lie in presenting the charade of success through numerical balance when in the hearts and minds of those affected their life is a series of conflicts both emotional and physical.

Moreover, there is a movement among blacks, chicanos, Puerto Ricans, and other ethnic and racial minorities to fight for their own identities to control their own destinies. An important aspect of this fight lies in controlling the education of their children. This they cannot do when the courts limit their numbers to a minority in all schools as dictated by the population.

However, in all this discussion, in all the charges levied on both sides, we have lost sight of the objective of busing and the other tools of integration. What we really are seeking is quality education. Every one of us here in this Chamber want our children and all the children in America to be the best educated in the world. We are already falling behind other countries in terms of literacy in our population. Let us not fail our children in providing them with the tools to succeed in life.

Quality education, though, is more than just a good school. It is good teachers and good programs and a good environment in which to learn. To provide the atmosphere for a better education I intend to vote for the amendment that will be offered by the gentleman from California (Mr. HAWKINS) to increase the funding for this measure to $1.5 billion. This Nation has failed its children by not providing the economic means to better all its schools. This commitment will provide that means and will develop within the institutions the ability to give every child the best education possible.

I think it is significant to note that there are many in this Chamber tonight that will vote for those increased funds when in the past they would never even consider it. Whatever their motive, it has committed more people to providing the wherewithal to better our childrens' education.

What we are seeking is the best education possible. To put millions of dollars into transportation will not build a better educational system. This bill will put the dollars where they will do the most good, in the neighborhood school.

This bill will permit a child to develop his total being. He will be close to his family and his daily environment. He will be able in many cases to rely on his own power to get to school. He will spend his time after school in developing his athletic prowess or his emotional and mental well-being or getting a part-time job—not in riding a bus.

We have committed millions of dollars to the highway trust fund, to mass transit, to the airports and airways, to merchant ships and pipelines, all to move men and goods more quickly.

Yet we are willing to stand here today and advocate busing our children for hours on end in pursuit of some numerical balance for a better life. That is no life for an adult, let alone a child. Let us make each school in and of itself an institution we can be proud of. Let us see that every American has the opportunity to grow and develop to his maximum both mentally and physically. Life is too short to spend it in a bus.

Mr. EDWARDS of California. Mr. Chairman, H.R. 13915 represents the largest step backward in civil rights that I can recall in the 10 years that I have served in Congress.

It is a frontal attack on the 14th amendment and an unwarranted and frightening intrusion by the legislative branch on the proper authority of the judiciary.

It is in my view clearly unconstitutional.

I do not believe that transportation is the only, or necessarily the best means available to local educational agencies to meet constitutional obligations to desegregate. But it is a remedy which should be available to the courts.

In 1971 the Burger Supreme Court without dissent, followed its predecessors and affirmed a desegregation order which included busing.

Bus transportation has long been an integral part of all public educational systems, to deny Federal courts this tool is to render illusory the constitutional promise of equal protection.

Mr. QUIE. Mr. Chairman, I yield back the balance of my time.

Mr. PUCINSKI. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. Pursuant to the rule, the Clerk will now read by titles instead of by sections the committee amendment in the nature of a substitute printed in the bill as an original bill for the purpose of amend.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Equal Educational Opportunities Act of 1972".

POLICY AND PURPOSE

SEC. 2. (a) The Congress declares it to be the policy of the United States that—

(1) all children enrolled in public schools are entitled to equal educational opportunity without regard to race, color, sex, or national origin; and

(2) the neighborhood is an appropriate basis for determining public school assignments.

(b) In order to carry out this policy, it is the purpose of this Act to authorize concentration of resources under the Emergency School Aid Act on educationally deprived students and to specify appropriate remedies for the orderly removal of the vestiges of the dual school system.

PARLIAMENTARY INQUIRY

Mr. PUCINSKI (during the reading). A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. PUCINSKI. Mr. Chairman, is it in order to move that the paragraph be considered as read and open to amendment at any point?

The CHAIRMAN. It is not in order to make such a motion at this point. It is in order to make an unanimous-consent request.

Mr. PUCINSKI. Mr. Chairman, I ask unanimous consent that this paragraph be considered as read and open to amendment at any point.

Mrs. ABZUG. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard. The Clerk will read.

The Clerk concluded the reading of the section.

AMENDMENT OFFERED BY MR. ASHBROOK

Mr. ASHBROOK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ASHBROOK: On page 19, section 2(a)(2), line 3 and 4, delete the language contained therein and substitute the following:

"(2) the neighborhood is the appropriate basis for determining public school assignments."

Mr. PUCINSKI. Mr. Chairman, we have examined this amendment. We have no objection to accepting it.

The CHAIRMAN. The gentleman from Ohio is recognized for 5 minutes in support of his amendment.

Mr. ASHBROOK. Mr. Chairman, I am glad the gentleman from Illinois has indicated his support.

I say for the purpose of legislative history that it is not the intention of the author, as I believe I could not do it if I so intended, to make the neighborhood school the exclusive basis for pupil assignment. Some have indicated their opposition because they believe my amendment in stating the neighborhood is the appropriate basis rather than that a neighborhood is an appropriate basis that this would be exclusive. This is not so. I offer it merely because I believe the congressional intent would indicate the neighborhood school is where we start. This does not mean we can have that exclusively, that there can be no other concept. But I believe it does add strength to our congressional position when we say the neighborhood is the appropriate basis rather than the neighborhood is an appropriate basis. Throughout the rest of the bill we indicate the circumstances where we would have the neighborhood concept. At the same time we do not say it is the exclusive basis for pupil assignment. We start with the neighborhood school concept. The word appropriate should be equated to normal rather than exclusive.

Mr. QUIE. Mr. Chairman, if the gentleman will yield, with that explanation that it will not be exclusive, I accept the amendment.

Mr. ASHBROOK. I thank the gentleman.

Mr. CELLER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I do not think the membership realizes the facts with reference to the number of students that have used the buses to desegregate. In the most recent school year, 1970–1971, it was 43.5 percent or 19 million pupils who rode a bus to school. School districts which were desegregating showed an increase of 205,000 pupils transferred.

This represents only 1 percent of 19 million student transported daily at public expense.

In some communities where little or no busing previously took place, desegregation has meant more public transportation.

Mark ye well: Only a little more than 1 percent of all students transported in the last school year were transported to desegregate. The facts do not justify antibusing legislation, restrictions on the courts, and attempts to curtail constitutional rights of our citizens.

Antibusing forces indeed contend that rides are too long and schedules too rigorous.

Indeed there has been more busing of students to preserve segregation than to implement desegregation.

In some 300 counties in the South only seven were required to increase busing to desegregate. The remaining 293 districts had the same or less busing. See the HEW report of 1970.

In Sturgis, Miss., black pupils were bused 93 miles daily to attend a segregated school.

Until 3 years ago black students in an Atlanta suburb were bused 75 miles to attend segregated schools.

Before the Swann decision pupils averaged over an hour on a bus in Charlotte, N.C. When desegregation was ordered the bus trips were cut substantially.

Desegregation in Alabama has resulted in 1 million fewer miles than the previous year.

Where there have been hardships, HEW acknowledged to a Judiciary Subcomittee that many of the hardships could be eliminated with additional buses and transportation funds.

Is school busing a pressing national issue?

The Democratic platform reads in part:

> Transportation of students is a tool to accomplish desegregation. It must continue to be available according to Supreme Court decisions to eliminate legally-imposed segregation and improve the quality of education for all children.

A recent poll taken by the Republican Platform Committee indicates that interest in school busing is ebbing; 58 percent responding indicated that the issue was "not very important".

The facts are that school busing for desegregation is not an issue that merits Federal legislation of the character before the House today. There are not accurate estimates of the amount of pupil transportation that is attributable to desegregation, but all agree it is an infinitesimal portion of the 19 million students, or 43.5 percent of total enrollment, who are bused to school daily.

This "Un-Equal" Educational Opportunities Act robs minority children of what legally is theirs.

State enforced racial segregation is constitutionally prohibited. It must be eliminated "root and branch." If no other remedy is adequate and transportation is needed to vindicate the right—no State or Federal statute can limit the remedy.

Denial of the remedy—denies the underlying right.

The right to attend an unsegregated public school is personal and present. It belongs to primary as well as secondary school pupils.

The right is secured under the 14th amendment and the fifth amendment against impairment by the States or the Federal Government.

The right to unsegregated schooling cannot be postponed until a child reaches secondary school. It cannot depend on going to the "closest school," whatever that may mean. And where the "closest school" is located in a racially segregated neighborhood the Government cannot reenforce segregation and lock minorities in inferior schools.

Busing has become a slogan replacing—"freedom of choice"—"States rights," or "never," which symbolized earlier resistance to enforcement of equal protection of the laws.

Regrettably, some new recruits have joined the ranks of those who traditionally have opposed the struggle for equal rights. These newcomers in the campaign against equality resent being labeled "segregationists" but that is their burden.

Make no mistake about it, those who would urge enactment of this bill or any other bill to delay, curtail, deny or obstruct desegregation of the public schools oppose equal protection of the laws for all our citizens. They would divide, not unite, our citizens. Such actions constitute segregation.

For these reasons I do not believe this bill merits favorable consideration.

Mr. RANGEL. Mr. Chairman, I rise in opposition to the amendment. I should like to ask a question. Is the proponent of this amendment still in the House?

Mr. ASHBROOK. I am still a Member; yes.

Mr. RANGEL. Sir, when you strike out the word "an" and substitute "the" in the sentence you are talking about, does that mean now that the neighborhood will be the sole and exclusive appropriate basis for determining public school assignment?

Mr. ASHBROOK. No. As I tried to indicate, I will say in my answer to the gentleman from New York, what it merely says is that we start with the neighborhood school. That is the appropriate basis, not the exclusive basis. The word "appropriate" certainly would be likened to normal, not exclusive.

I believe the congressional intent would then say, yes, in the nature of assignment of students the neighborhood is the normal, appropriate school.

In sections 403 and 404, later in the bill, or on dual school systems, the neighborhood school may not be appropriate in all cases.

I think that is what we are saying, and that is my intention. I am certainly not trying to slip something in. You start with the neighborhood school being a normal and appropriate place to assign a student. If you have a dual school system or the system denies equal protection under the law, then in that case the neighborhood school would not be appropriate.

Mr. RANGEL. But under the existing language in the bill, if the neighborhood is an appropriate basis for determining the public school assignments, one would suspect we could use other bases in determining assignments. However, when you say "the," it does seem to restrict the discretion on public school assignments.

Mr. ASHBROOK. I would say I am trying to put the neighborhood schools up a notch. "An appropriate" basis could mean almost anything. It is meaningless that way. When you say it is "the appropriate" basis, you tie it into the rest of the language and you tie it into the intention of the Congress and the legislative history not to make it exclusive. You say in the assignment of students you start with the first appropriate basis, and that is the neighborhood. If there are other reasons like 401 and 402 or a dual system, then it is not an appropriate basis, and it is not exclusive. I am not trying to slip in a neighborhood school amendment which would make it exclusive.

I am simply saying, and I hope the Members will agree, if we say "the neighborhood school," that would be better, but all things being equal, that is the appropriate basis for the assignment of the student.

Mr. RANGEL. I am not suggesting the gentleman is attempting to slip anything over on us, but I am suggesting it does make a difference as to whether you use "an" or "the." If your intention is really to bring up the neighborhood concept a notch, what you will be doing actually is restricting it to the neighborhood, and making it really the sole area used in determining where children will be assigned to schools. It is very important. I am certain the gentleman will agree that if he did not think it was important, he would not have offered it as an amendment.

Mr. ASHBROOK. That is right. I say as it stands now, the word "an" is meaningless. The gentleman will agree with that, I am sure.

Mr. RANGEL. It makes a lot of sense to me, and that is why I support the existing language.

Mr. ASHBROOK. But it would not be possible as the gentleman indicated, because where there is a dual school system, the children are not given equal educational opportunities. In that event the neighborhood school system might not be appropriate. The rest of the bill indicates that.

Mr. SCHEUER. Will the gentleman yield?

Mr. RANGEL. I yield to the gentleman.

Mr. SCHEUER. I think many of us will agree the neighborhood school is the appropriate one unless there are overriding considerations to the contrary.

Mr. ASHBROOK. Precisely what we say.

Mr. SCHEUER. Would you agree that there is a constitutional right to a remedy?

Mr. ASHBROOK. Where you have a dual school system or denial of equal educational opportunity, then in that case it would not be appropriate, but for legislative history it is not my intention to make it exclusive. I think it should be primary, the initial basis for pupil assignment, but not exclusive.

Mr. SCHEUER. I agree with that, but therefore I ask my colleague, will you accept as a part of the amendment, after assignment, changing the period to a comma, and adding the language, unless the implementation of such is, making it clear that we agree the neighborhood school is the legitimate basis?

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. MEEDS. Mr. Chairman, I rise in opposition to the amendment. Despite the assurance of the gentleman from Ohio, and, I am sure, he is acting entirely in good faith, it seems to me there is no reason to change the word "an" to the word "the" unless the purpose is to make it an exclusive basis. If the gentleman from Ohio will look further in the bill, as I am sure he has done, he will find that, while we do look at the neighborhood as the closest and most proximate basis, there are still instances of guidelines which go beyond that.

If we at that point change the word "an" to "the," it seems to me we further restrict ourselves so that the further guidelines enumerated later in the bill become meaningless and cannot be used.

I know that may not be the intent and the purpose of the gentleman, but the fact is that words means what they mean to say. And when you change the word "an" to the word "the," the legislative history is going to be clear that you want to restrict it. And for that reason I oppose the amendment.

Mr. CONYERS. Mr. Chairman, I move to strike the requisite number of words, and rise in opposition to the amendment.

Mr. Chairman, this question has been discussed thoroughly in the Supreme Court, and I would like to read the precise sentence from the Swann decision which made at it clear that using the neighborhood school as a basis may not meet the constitutional requirements of equal educational opportunity. Mr. Justice Burger noted in the Swann case, and this appears in the very discerning Additional Views of the gentleman from Washington (Mr. Meeds) and the gentlewoman from Hawaii (Mrs. Mink) that a plan assigning pupils to schools nearest their homes "may fail to counteract the continuing effects of past school segregation", and hence be constitutionally unacceptable.

Now, I would ask the author of the amendment what are you going to do in the instance of a black child in an inner city location who is now confronted with language that now reads that his neighborhood school is now an appropriate basis for determining public school assignment when in the sentence just above in this bill it says that all children enrolled in public schools are entitled to equal educational opportunities without regard to their race, color, sex, or national origin?

I think this poses a very serious conflict.

Mr. ASHBROOK. Mr. Chairman, if the gentleman would yield, I would say to the gentleman from Michigan that the question he raises was answered before. I hope the Congress states as a matter of policy that the neighborhood is the appropriate basis for pupil assignment. It certainly is not the sole or exclusive basis. In the Burger decision which the gentleman cited, the neighborhood may not have been the appropriate basis. We are not saying it is the exclusive basis.

Mr. CONYERS. But is not the gentleman from Ohio aware that that is not an appropriate basis, even if they might have a neighborhood school assignment?

Mr. ASHBROOK. Well, if there is a present dual school system, a local segregated school, it would not be the appropriate basis.

Mr. CONYERS. I suggest we are moving in the face of a long series of decisions that have very clearly established that the neighborhood is not an appropriate basis for determining public school assignments, and certainly is not the sole appropriate basis because this would be locking in all the children in the segregated schools automatically unless they could somehow show there was some exception to which they might apply.

Mr. ASHBROOK. Would it not be just as easy to start the other way, to say the neighborhood is the appropriate basis for the assignment of students unless these things the gentleman espouses are present?

Mr. CONYERS. Would the gentleman be willing to offer an amendment in this respect?

Mr. ASHBROOK. It is my understanding, and my statement and my belief, that the rest of the bill would take care of the situations the gentleman is talking about. But if the gentleman would feel better with that amendment I would not have any objection. However, I do not think we should waste a great deal of time debating it. I understand the concern of the gentleman.

Mr. ECKHARDT. Mr. Chairman, if the gentleman will yield, I might add that on page 36 is an instance in which an appropriate basis is quite obvious, in (c) on page 36 it says:

> (c) permitting students to transfer from a school in which a majority of the students are of their race, color, or national origin to a school in which a minority of the students are of their race, color, or national origin;

Mr. HUNGATE. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I had not sought to take a position on this controversial issue at this time, but I will never dodge a fight. If by busing you mean that system whereby countless young children in remote areas across our Nation have been transported to improved facilities where they can enjoy a hot lunch program and take part in music and athletic activity and study foreign languages and advanced mathematics and science courses not available to them in the sparsely furnished one room schoolhouse; then I support busing wholeheartedly.

But if by busing you mean that heartless and inhuman doctrine whereby young people—infants, mere babes—are snatched from their mother's bosoms against their will to be hauled like cattle from before the break of dawn until after dark over countless miles to strange surroundings far from their own neighborhood and playmates for the mere purpose of satisfying some sociologist's statistical need—then I oppose it.

This is my position, sir. I think the question is crystal clear and I will not equivocate.

Mr. SEIBERLING. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I am inclined to oppose this amendment for the obvious reason, as stated by the gentleman from Washington, that the rule of construction of statutes is that you do not even go to the legislative history if the wording is clear. When you strike out the word "and" and put in the word "the," it says it is the appropriate basis. The word "the" excludes other bases which might be appropriate.

It just so happens that I live in an area where my kids, all of them, have been bused 9 miles each day to and from school ever since they started school. That was the nearest school.

I do not know how big a neighborhood can be, but that strikes me as getting pretty big.

Now I do not want to see us produce no legislation on this subject. I happen to think it is appropriate for the Congress of the United States to spell out some guidelines for the courts in administering the 14th amendment to the Constitution.

Also I happen to think there are some provisions in this bill which are plainly unconstitutional, and at the appropriate time I will offer amendments to clean that up.

But I submit to the gentleman from Ohio (Mr. Ashbrook) that the change that he proposes is a change in substance, stating the policy of this bill, and it is a change which in certain circumstances such as the ones I have mentioned completely obfuscates the definition of the word "neighborhood."

There are some rural schools where they have to drive 50 miles a day to get to school. So what is your definition of "neighborhood?"

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. SEIBERLING. I yield to the gentleman.

Mr. ASHBROOK. Does the gentleman believe as a matter of policy that the neighborhood school is the proper basis for the assignments of students?

Mr. SEIBERLING. I think the neighborhood school, all other things being equal, is an appropriate basis.

Mr. ASHBROOK. Is that not exactly what the amendment says?

Mr. SEIBERLING. This says the appropriate basis, and I submit that where you say it is an appropriate basis, you have covered the situation adequately. If you change it to "the"—you completely restrict it to that basis and not others.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield further?

Mr. SEIBERLING. I yield to the gentleman.

Mr. ASHBROOK. I think the gentleman from Texas (Mr. Eckhardt) further illustrated the point I was making—the entire bill constitutes a decision in some ways of what is appropriate and what is not appropriate and what is an educational right or opportunity and what is a dual school system.

We state that as a general policy. Then we have other limitations—we have other factors.

I think the gentleman in his response said—"Yes, the neighborhood school is an appropriate basis—all things being equal."

Mr. SEIBERLING. That is not what it actually says. If you revised the whole sentence, it would be different.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. SEIBERLING. I yield to the gentleman.

Mr. ECKHARDT. To finish my statement—what I was trying to point out is—the appropriate basis—sometimes. Some other times another appropriate basis exists as, for instance, the will of the student. If he is a minority student in a school which has a majority of his race, the appropriate basis is his desire.

So the term "the appropriate base" is simply not meaningful in all instances. That is the point I was making.

Mr. SEIBERLING. I concur in the gentleman's statement.

Mr. DELLUMS. Mr. Chairman, I move to strike the requisite number of words.

The **CHAIRMAN.** The gentleman from California is recognized for 5 minutes.

Mr. DELLUMS. Mr. Chairman, I think it is very clear in the colloquy that using the term "the appropriate" or "an appropriate"—given the maker of the amendment's response to previous questions—points to the fact that this amendment is totally irrelevant, because what the gentleman is saying is that if "the" is not exclusionary, and "an" is not exclusionary. Therefore, I can only arrive at the opinion that the motivation for this amendment is strictly political, which goes to the question not only of this amendment but to this entire piece of legislation.

Mr. Chairman, let us face reality. The only reason we are here couched in fear and paranoia on this issue is simply because of the selfish and self-centered self-aggrandizement of many of the elected officials on this floor of Congress who lack the courage to assume the moral and political leadership of this country. They are following the paranoia, irrationality, and racism of millions of people in this country.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. DELLUMS. I will not yield, Mr. Chairman.

Mr. ASHBROOK. Mr. Chairman, the gentleman will not yield?

Mr. DELLUMS. Mr. Chairman, I will appreciate the gentleman's not interrupting me. It is my time.

Mr. Chairman, the fact of the matter is that every single one of us on the floor of this Congress could die tonight—some of us of a heart attack. What would the rest of us do? Run to the Speaker to find out where we would be on the seniority list?

Mr. Chairman, the point I am trying to make is that it is totally irrelevant whether many of us come back to the U.S. Congress next year or not. What I would suggest to you is vote your conscience, not vote your district. Do not be concerned with whether you can get reelected. Do not vote on the basis of self-aggrandizement or whether you commit political suicide. I urge you to not engage in political expediency. These are the considerations before us—nothing else.

Mr. Chairman, many of our liberal friends who are saying to us, "I am with you 99 percent of the time, but I cannot go with you now"—I say to them, we do not need you when you cannot come through in the clutch. We do not need you if you cannot come through in the clutch.

If you have any political spirit and any political heart, any political leadership, any political integrity, you would come to the floor of this Congress and not vote whether you come back to Congress, but vote your integrity and concern for this country, because if you do not come back to Congress, because you could die before November anyway, who would care? What would happen in this country if you would pass on? What would happen if 435 of us did not come back to the U.S. Congress? Life would go on. Stop placing so much importance upon your reelection, and start placing importance on principle.

We should be guided by morality in this country, by human values in this country, and by a philosophy in this country that speaks to the human needs of all the people.

Busing is not and has not ever been the critical question in America, but our problem is the fear and the trepidation of politicians walking willy-nilly through their congressional districts, smiling, shaking hands, and opposing busing, but saying on the other side, "I am liberal, but I cannot vote for this, because if I do they will send a real racist to Congress."

Well, maybe they should send us a real racist. Send us some real racists, and then we will know what we are dealing with. We do not need people who are not willing to come into this well and stand up on their integrity as human beings and be counted on the moral issues of these troubled times.

Let us help the people who deserve education in this country, people who have the right to education in America. That is the reality we ought to be dealing with.

On both sides of the aisle there are too many people here, both men and women, who are frightened to death to face the reality of this amendment.

This amendment is politically inspired. This entire legislation is politically inspired. Let us vote for the people, whether they are black, brown, yellow, red, or white, and stop playing the dangerous expedient games we are playing on the issue of busing.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. ASHBROOK).

The question was taken; and on a division (demanded by Mr. HAWKINS) there were—ayes 70, noes 39.

TELLER VOTE WITH CLERKS

Mr. CONYERS. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. CONYERS. Mr. Chairman, I demand tellers with clerks.

Tellers with clerks were ordered; and the Chairman appointed as tellers Messrs. ASHBROOK, RANGEL, PUCINSKI, and MEEDS.

The Committee divided, and the tellers reported that there were—ayes 254, noes 131, not voting 47, as follows:

[Roll No. 338]

So the amendment was agreed to.

Mr. PUCINSKI. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time to merely advise the Members that we have about 30 amendments pending, many of them substantive, many of them not very substantive, and it is the present intention to go through with this legislation until we finish, regardless of what time of the night we complete our work. We hope we can do that. I hope that the Members will at least take under consideration that, as we debate the various amendments, and some of these are very important, very substantive, and have important meaning to the bill, but I would just hope that we can discipline ourselves in a manner in which we can, without resorting to a limitation of debate—and it is not our intention to do so—as I said earlier, when we started that it was our intention to give everybody a chance to speak—but I would hope that the Members would keep that in mind—that there are some 30 amendments, many of them, as I say, very substantive, which will require substantial debate.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from New York.

Mr. CELLER. The gentleman, of course, has the right to ask that the Committee rise at any time.

Mr. PUCINSKI. The gentleman, to the extent that he has anything to say about it, has the intention to move along with this legislation, and finish it some time tonight.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 3. (a) The Congress finds that—

(1) the maintenance of dual school systems in which students are assigned to schools solely on the basis of race, color, sex, or national origin denies to those students the equal protection of the laws guaranteed by the fourteenth amendment;

(2) for the purpose of abolishing dual school systems and eliminating the vestiges thereof, many local educational agencies have been required to reorganize their school systems, to reassign students, and to engage in the extensive transportation of students;

(3) the implementation of desegregation plans that require extensive student transportation has, in many cases, required local educational agencies to expend large amounts of funds, thereby depleting their financial resources available for the maintenance or improvement of the quality of educational facilities and instruction provided;

(4) transportation of students which creates serious risks to their health and safety, disrupts the educational process carried out with respect to such students, and impinges significantly on their educational opportunity, is excessive;

(5) the risks and harms created by excessive transportation are particularly great for children enrolled in the first six grades; and

(6) the guidelines provided by the courts for fashioning remedies to dismantle dual school systems have been, as the Supreme Court of the United States has said, "incomplete and imperfect," and have not established, a clear, rational, and uniform standard for determining the extent to which a local educational agency is required to reassign and transport its students in order to eliminate the vestiges of a dual school system.

(b) For the foregoing reasons, it is necessary and proper that the Congress, pursuant to the powers granted to it by the Constitution of the United States, specify appropriate remedies for the elimination of the vestiges of dual school systems.

Mr. PUCINSKI (during the reading). Mr. Chairman, I ask unanimous consent that this section be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

Mr. MITCHELL. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk concluded the reading of the section.

AMENDMENT OFFERED BY MR. BADILLO

Mr. BADILLO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BADILLO: On page 19, strike lines 20 through 24 inclusive and on page 20, strike out lines 1 through 3 inclusive.

Mr. BADILLO. Mr. Chairman and Members of the Committee, we are now in the section of the bill that makes findings of fact. It is very important that whatever else we do with respect to the rest of the bill, that we be very precise in our findings of fact, because the findings of fact that are included in this bill are put in to ensure that the courts upon reviewing this bill would consider the statements involved as binding and not reviewable

However, we cannot, just because we say so, find something as a fact that is not true.

I submit to you, that the finding of fact which is the subject of my amendment contradicted by the facts as they exist in our country and by the facts as they were brought out in the committee.

The specific findings says:

> The implementation of desegregation plans that require extensive student transportation has, in many cases, required local educational agencies to expend large amount of funds, thereby depleting their financial resources available for the maintenance or improvement of the quality of educational facilities. * * *

Now that just is not true, as a nationwide situation. It may have happened in one or two cases, but the facts which are brought out in the committee report indicate in many cases, in fact, the opposite took place and in many cases there was less busing rather than more busing as a result of a court desegregation order.

In Alabama, for example, desegregation orders resulted in a decrease of 1 million passenger-miles. In Mississippi, 318,095 schoolchildren were bused to maintain segregated schools; but only 292,472 were bused when segregation was ended. The same situation—a decline in the number of children bused and the number of miles transported—resulted after desegregation orders were entered at Charlotte, in Richmond, in Leon County, Fla., and elsewhere.

As a matter of fact, Secretary of Transportation, John A. Volpe, has said the less than 1 percent of the annual increase in busing costs can be attributable to desegregation orders.

The fact is that this finding is not based on reality. We have to be very exact about the findings because once the law is passed, these findings of fact will become the first items that will be taken up by the courts in determining whether or not this law is to be upheld.

I submit to you, as we begin considering this legislation, we should begin to take reality into account. If we do that, we will move to strike this provision of the law because it does not correspond to the facts as they exist in our society today. It is for this reason that I seek by this amendment to strike out totally the wording of this subsection.

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the findings of the Congress are very important to establish the rationale for the rest of this legislation.

I am not going to take the time of the House at this time to substantiate each of these findings. They are in the hearings. Some of them are in the report. I have additional data here which you are perfectly welcome to examine at the table.

We can show you that in Little Rock, Ark., the increase in busing was 27 percent from 1970 to 1971 at a tremendous cost.

In San Francisco City in California, there was a 19-percent increase.

You might be interested in seeing the flight of white children from that school system in California—7,500 white children left.

In Hillsborough County, Fla., there was an increase of 19 percent and a flight of 4,000 children and so on down the line.

We had tried to make a case in this bill, in the findings. These are statements that can be corroborated. The gentleman's effort to strike this language would indeed delete from the bill the rationale for the rest of the bill. Therefore, I hope that the Committee will reject the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. BADILLO).

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. BADILLO. Mr. Chairman, I demand tellers.

Tellers were refused.

So the amendment was rejected.

Mr. DINGELL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of H.R. 13915 because it assures equality of educational opportunity while curbing busing pursuant to court orders. Some view the question of enforced busing as involving support or opposition of a particular racial group. As Representative of the 16th District of Michigan, I wish to report that nearly all citizens of my district, regardless of race or color, oppose enforced busing.

This legislation, substantially similar to that suggested last year by the President, is a long stride toward full educational opportunity. It provides for this while narrowly circumscribing the powers of courts to engage in counterproductive enforced busing to achieve racial quotas or racial balance.

While I believe this to be a good bill, and a long step in the right direction, I still feel strongly that a constitutional amendment is needed to lay to rest this most divisive and unnecessary question of enforced busing so that we may begin the orderly process of affording all our children, without regard to race or color, equal access to high-quality education in their neighborhood schools. Certainly this approach is urgently required if this Nation is to have the steady supply of outstanding young Americans to carry on its affairs.

ENFORCED BUSING TO ACHIEVE RACIAL BALANCE IS WRONG

In my memory no issue has so outraged all the citizens of Michigan or of the 16th Congressional District of Michigan, which I represent, as does busing to achieve racial balance. In the case now affecting the Detroit metropolitan area, civil case No. 35257 in the eastern district of Michigan, U.S. district court, Judge Stephen Roth proposed to bus some 350,000 children in, through, and around 53 school districts in the tricounty area of Wayne, Oakland, and Macomb.

The cost, which has not been finally calculated with precision, has been estimated as high as $100 million a year by the two Detroit daily newspapers. Hundreds of buses traveling 20 to 30 miles per trip will move students far from the security of their neighborhood, from their parents, and from familiar surroundings. The plan in the words of Judge Roth's order would "require development of transportation on a vast scale" and would require acquisition of 1,606 vehicles.

School programs of extracurricular activities would suffer, or be eliminated in their entirety. Band, athletics, debating, clubs and other activities to expand young minds and provide them with valuable experience will be denied to all who are bused into schools far from home. A large additional class of deprived students will be created. They will be fully integrated in their deprivation; blacks and whites alike undergoing hardship together for no gain to anyone. Parent-teacher organizations and the wholesome interest flowing therefrom would no longer be the useful tool of school improvement. These organizations would no longer benefit by programs of mutual enrichment to the schools, children, and parents of those involved in enforced busing.

SOME OUTRAGEOUS RESULTS OF THE BUSING CASE IN THE DETROIT METROPOLITAN AREA

Self-willed and arrogant Judge Roth proposes to mandate the legislature to appropriate funds and to order State and local officials to expend money in contravention of the laws and constitution of the State of Michigan. Judge Roth has even taken steps to contravene the contracts of teachers with the school districts by proposing to move teachers from system to system without regard for contracts, seniority, retirement, health benefits, or other constitutionally protected rights.

Judge Roth has even taken steps leading toward effective merger of suburban school districts with the Detroit system and cross-district busing without either hearings or opportunity to be heard by the suburban districts or their citizens on questions of fact or law. This, without so much as a finding of discrimination on the part of a single suburban school district, some of them 20-some miles from Detroit.

Judge Roth has ordered cross-district busing of pupils, transfer of teachers, complete change in local and State financing practices, teacher contracts and tenure, and curricula for some 780,000 students in 53 school districts.

But for the actions of our colleague, **William S. Broomfield** of Michigan, and a group of bipartisan Members of Congress, of whom I am proud to be one, in sponsoring the provisions of what is now section 803 of the Higher Education Act Amendments of 1972, Public Law 92–318, all these effects of Judge Roth's orders would be moving toward completion. I am pleased to report that the U.S. Court of Appeals for the Sixth Circuit, exercising the responsibility imposed upon it, has stayed the actions of Judge Roth pending appeal. Nevertheless, Mr. Chairman, this is only a delay. It will protect the people I serve from the outrages threatened in this matter only during the pendency of appeal. It is now necessary for the Congress to legislate further and final assurance.

SHORT ANALYSIS OF H.R. 13915

H.R. 13915 among other things provides for:

First. Utilization of $500 million in authorized emergency school aid funds to assure upgrading of educational opportunities for educationally deprived children.

Second. Defines and prohibits denial of educational opportunities to all children.

Third. Prohibits enforced merger of school districts.

Fourth. Allows enforced busing for racial balance only after all other remedies and methods have been exhausted.

Fifth. Prohibits enforced busing of children below grade 7 beyond the school nearest or next nearest their home.

Sixth. Prohibits busing hurtful to the education or health of the child.

H.R. 13915 IS FAIR TO ALL

The legislation expressly outlaws the old and properly rejected "separate but equal" doctrine and other defined racial discriminatory educational practices. Discriminatory practices which were once used to deny quality education to large numbers of our children will not be tolerated under the legislation.

H.R. 13915 prohibits enforced busing except where there is no other way of eliminating racially discriminatory educational practices.

The thrust of H.R. 13915 is affirmative. It would correct discriminations practiced in the past, give full educational opportunity to all, eliminate counterproductive and divisive methods tried by the courts out of frustration, use effective methods which assist the efforts to adequately and equally educate all our young people, and would not squander scarce resources or jeopardize the educational and physical well-being of our young.

CONSTITUTIONAL AMENDMENT STILL NEEDED

However, it should be evident that H.R. 13915 does not completely eliminate busing. Accordingly, it becomes clear that other and further legislative steps are required. The statute itself although soundly drawn, in my opinion, still requires constitutional interpretation by the courts. While I feel satisfied H.R. 13915 will pass all constitutional tests, I believe that any residual doubts on this point must be resolved at the earliest time. Accordingly, I feel it is desirable and necessary that prompt and favorable consideration be given House Joint Resolution 620, a constitutional amendment providing that no child be required to attend a particular school because of race or color.

ELIMINATION OF EDUCATIONAL PARKS

H.R. 13915 has provisions in it repealing laws authorizing Federal assistance for State and local construction and maintenance of educational parks. While this concept may be desirable and innovative, public acceptance has been lacking for it. Broad opposition and a number of serious questions about the need and operation make elimination of these provisions advisable at this time.

SHORT HISTORY OF THE DETROIT CASE

It appears appropriate to relate this legislation to the Detroit case before Judge Roth, referred to earlier.

In that case, Judge Roth, after initial findings of discrimination in the Detroit case, moved to implement a metropolitan plan of desegregation involving 53 school districts in the Detroit area. Many of these are in the district I represent. None of the school districts was heard on either factual or legal questions involved, nor was there any findings of racially discriminatory practices involving any suburban school district.

Nevertheless, Judge Roth moved to compel initial purchase of some 295 buses as the first step to implement the broad plan which he promulgated, leading to busing of thousands of children for racial balance.

The cost, as mentioned above is so large that precise estimates are lacking. Variously estimated in the daily press at as high as $100 million per year, the prospects, are that it would be a hideously expensive and wasteful program.

The worst criticism of this proposal is that after the moneys are dissipated, the students are benefited not at all in terms of education. The only result of this massive program of enforced busing would be altered and disordered school systems full of bewildered children far from home, family, and security.

MICHIGAN LAW AND CONSTITUTION PROVIDE STRONG PROTECTION OF EQUAL OPPORTUNITY IN EDUCATION AND ALL PUBLIC PROGRAMS

In Michigan, the laws and constitution prohibit discrimination on grounds of race in all matters, housing, public accommodations, schools, education, employment and transportation, and all activities sanctioned by State law. Certainly Michigan's strong legal bulwarks against discriminatory governmental actions in all areas, coupled with the strong provisions of Federal law on these points make this plan proposed by Judge Roth most unnecessary and undesirable. In other States, Federal actions, both statutory and judicial, have largely eliminated the evil results of the old separate but unequal school systems which did so much to destroy dignity in generations of black Americans. I believe that the time is now here to go forward affirmatively to abate and eliminate any remaining abuses and discriminations through devices which positively and immediately benefit the children concerned. Let us use methods which more directly attack the remnants of former racial abuses.

This bill, H.R. 13915, provides the mechanism for that beginning.

LET US MEET THE REAL NEEDS OF OUR CHILDREN

Inadequate education is a problem not peculiar to the children of any racial group. Children of low income groups living in rural areas, the big cities and in the suburbs are faced with school systems, schools, teachers, curriculums and classrooms which do not meet their needs and which do not turn out well-educated graduates. All parts of the country are faced with a continuing school crisis.

The problem of providing adequate education to all our children is often one of imbalance of funds and funding from one school district to another. School taxes, raised by taxing real property vary greatly from school district to school district. I do not believe it proper for the Federal Government to intrude into local financing devices or to meddle in local school administration. However, Federal and State assistance is desperately needed to bring education up to uniformly high standards.

Other needs are for better qualified teachers and for adequate special and remedial educational programs for both gifted and backward students. Oversized classes and overworked teachers are a major deprivation of many students. Old and inadequate facilities and lack of modern teaching methods and devices create hardships to many students. Lack of the most advanced materials, curricula and facilities are a major problem in meeting the needs of minority and deprived children. Special programs to advance education by involving parents, and special programs in reading, English, and mathematics are urgently needed.

Let us begin working to meet these and other needs of all our children. If we do so, the need to bus children to achieve racial balance will be revealed as illusory.

I pledge myself to the great goal of equal educational opportunity. I will continue in the future, as in the past, in all efforts to make useful contributing citizens of all our children. I believe we have a special duty to make sure we do not deny opportunity and useful citizenship to our black citizens. We must assure that the mistakes and deprivations of former generations will not be visited upon any of the children of this generation. Let us go forward together then to this great national goal. Let us, however, go forward not only in the spirit of harmony, but in the spirit of wisdom. Let us suit the means to the great goal. Let us not be misled from successful accomplishment here by false and counterproductive means such as enforced busing and enforced school district merger. These devices only deny real progress and waste scarce resources. In important studies of its effect on our young people, busing has been proven to have accomplished nothing.

Let us use more effective and less divisive means to provide for the quality education of our young.

AMENDMENTS TO BE OFFERED

I will support an amendment to be offered to make the legislation before us apply to previously decided cases. I believe that all should be treated alike, and certainly, where it becomes our national policy that enforced busing is wrong in areas which might be afflicted in the future, the same criteria should apply to all other cases, past and present.

I intend to offer a "separability clause" amendment which will protect other parts of the bill in the event that some parts are declared unconstitutional.

I warn my colleagues that the bill before us, although clearly constitutional in my opinion, treads close to the narrow line of constitutionality or unconstitutionality. I hope the House will approach the problem of strengthening amendments with care, and for this reason I offer what I view as a most important amendment to afford the needed protection against constitutional failure of the whole legislation.

I intend to listen carefully to the debate and examine the amendments offered with care, and to try, in concert with my colleagues, to work out the strongest and fairest legislation possible.

The law and the Constitution in my view require only that treatment of citizens be without regard to race or color. The Constitution is colorblind and imposes the same responsibility on all our governmental actions. I do not read Brown against School Board or any of the other school cases as requiring equal racial quotas or transportation of students long distances. It is my hope that the Congress will today take steps making plain that we are for equality of educational opportunity for all of our children and opposed to racial quotas, racial preferences, and governmental imposed hardships which afford no good to any citizen or group of citizens.

AMENDMENT OFFERED BY MR. CONYERS

Mr. CONYERS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CONYERS: Page 20, strike out lines 12–19 and insert:

(6) The Federal district courts in the exercise of their equity jurisdiction, and the courts of appeal and the Supreme Court in the exercise of their respective appellate jurisdiction, have established general guidelines for fashioning remedies to dismantle dual school systems, and in particular with regard to student transportation, the Supreme Court has said that "an objection to transportation of students may have validity when the time or distance of travel is so great as to risk either the health of the children or significantly impinge on the educational process."

Mr. CONYERS. Mr. Chairman, the purpose of this amendment is to replace the incorrect and misleading statements in sections 3(a) (6) which infer that there has been an incomplete and imperfect remedy fashioned to dismantle dual school systems.

I would like to point out that there have been in the courts a series of rather rational decisions that are much more than incomplete and imperfect that would make this finding of fact inaccurate. I would think that we would want to correct it with the suggested language that I have produced in this amendment.

In 1955, in the second Brown decision, the Supreme Court determined that it was proper for District Courts to exercise their equity jurisdiction with its traditional flexibility to fashion specific remedies for each factual situation in school desegregation cases. That line of reasoning has been reiterated time and time again up to the leading 1971 decision in the Swann against Charlotte Mecklenburg unanimous decision of the Supreme Court with the decision being written by Chief Justice Burger.

It stated that the conditions in different localities will vary so widely that no rigid rules can be laid down to govern all situations, and to me, this seems to me much more than an incomplete and imperfect guidelines that have been established.

But, in the exercise of appellate review functions, the court has established general guidelines to the district courts. The statement in section 3(a)(6) that the Court has said its guidelines were incomplete and imperfect is taken wholly out of context, because after using those words in the Swann decision, the Court proceeded to set forth many appropriate guidelines.

With regard to student transportation, the Court has stated:

> The scope of permissible transportation of students as an implement of a remedial decree has never been defined by this Court and by the very nature of the problem it cannot be defined with precision. No rigid guidelines as to student transportation can be given for application to the infinite variety of problems presented in thousands of situations.

But, the Court did, however, announce a general guideline as to how much student transportation was permissible.

Mr. Chairman, I think it is a guideline that few of us would quarrel with because it is stated that an objection to transportation of students may have validity when the time or the distance of travel is so great as to risk either the health of the children or significantly impinge upon the educational process. In my judgment this standard is most reasonable and effective and yet it does not jeopardize the full realization of the constitutional rights of minority group children seeking equality of education. So I urge that the substitute amendment in place of the language in section

3(a)(6), so that we will accurately have a finding of fact that is consonant with the decisions that have come from the courts thus far. I urge support of my amendment.

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to the amendment. Mr. Chairman, the amendment offered by the gentleman from Michigan is completely contrary to the language in the bill now. The language in the bill now is there to establish a rationale for the rest of the bill. We quite properly point out the multiplicity of decisions and we quite properly quote the Supreme Court as stating in Swann that the guidelines are incomplete and imperfect. So what we are proposing here is that we use this as a basis for the legislation.

Earlier I told the House that the multiplicity and the diversity of decisions all over this country is one of the factors that has created the chaos. I pointed out in one district the court ordered the use of television to overcome desegregation while in another court jurisdiction the court arbitrarily, in Richmond, Va., merged three separate school districts and ordered massive busing.

So it is this multiplicity of court decisions and general chaos that exists that we are trying to correct in this legislation. This section 6 sets down a specific reason why the legislation is necessary. I would hope that the amendment would be rejected.

Mr. QUIE. Mr. Chairman, I rise also in opposition. I would add to what the gentleman from Illinois said, and I concur with him completely, that the language of the amendment offered by the gentleman from Michigan, where he lists the expression of the court and objection to transportation of students, may have validity when the time of travel is so great as to risk the health of the children or significantly impinge on educational process, but it is written into section 403(c) of the bill as now part of the remedies and it is therefore taken care of.

Mr. CONYERS. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Michigan.

Mr. CONYERS. I thank the gentleman for yielding.

I wondered why the committee chairman said this amendment was completely opposite and inconsistent to the purposes of the bill. The reason why I included it is that if we are stating findings of fact here, I was trying to suggest that findings of fact as expressed in paragraph 6 as it now stands is very inconsistent. The court language and the language of the bill later on is far more accurate.

Mr. QUIE. Mr. Chairman, the gentleman from Illinois has especially pointed out in the gentleman's amendment it says the court has established general guidelines for providing remedies. The language of section 3(a)(6) is more accurate.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, I am glad the gentleman called attention to this language, because this is language completely contrary to what we have in the bill, when the gentleman from Michigan says the Federal district courts have fashioned general guidelines. I might say his reference to the language on transportation is cosmetic and does not mean anything in this section. The guts of his statement is this section that they have established general guidelines, which is completely contrary to the facts.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. CONYERS).

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. CONYERS. Mr. Chairman, I demand tellers.

Tellers were refused.

So the amendment was rejected.

The CHAIRMAN. If there are no further amendments to be proposed to this section, the Clerk will read.

The Clerk read as follows:

TITLE I—ASSISTANCE

AMENDMENTS TO THE EMERGENCY SCHOOL AID ACT TO PERMIT CONCENTRATION OF RESOURCES ON EDUCATIONALLY DEPRIVED STUDENTS ATTENDING SCHOOLS ENROLLING HIGH CONCENTRATIONS OF STUDENTS FROM LOW-INCOME FAMILIES

SEC. 101. (a) Section 702(b) of the Emergency School Aid Act is amended by striking out "and" at the end of clause (2), striking out the period at the end of clause (3) and inserting "; and" in lieu thereof, and adding at the end of such section the following new clause:

"(4) to aid educationally deprived students enrolled in schools enrolling a high proportion of students from low-income families (or transferring from such schools to schools enrolling a lower proportion of students from low-income families) in overcoming their educational deprivation."

(b) Section 706(a)(1) of such Act is amended by—

(1) inserting "(or, in the case of a local educational agency described by clause (E) of this paragraph, the appropriate State educational agency)" after "Assistant Secretary";

(2) striking out the period at the end of clause (D) and inserting "; or" in lieu thereof, and

(3) adding at the end of such section the following:

"(E) which has adopted and is implementing, or will, if assistance is made available to it under this title, adopt and implement a plan (either as a part of any plan described in clause (A), (B), (C), or (D) of this paragraph or otherwise) to concentrate (consistent with such criteria as the Assistant Secretary may prescribe) funds available to it under this title on the provision of basic instructional services and basic supportive services for educationally deprived students enrolled in schools of such agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families and on the provision of such services for educationally deprived students who, pursuant to such plan, transfer from such schools to other schools in which a lower proportion of the students enrolled are from low-income families."

(c) Section 706(c) of such Act is amended by—

(1) inserting "(or, in the case of a local educational agency described by clause (E) of subsection (a), the appropriate State educational agency)" after "Assistant Secretary"; and

(2) inserting "prescribed by the Assistant Secretary" after "regulations".

(d) Section 710(a) of such Act is amended by inserting "(or, in the case of a local educational agency described by section 706(a)(1)(E), the appropriate State educational agency)" after "Assistant Secretary" each time it occurs in so much of such section as precedes clause (1).

(e) Section 710(b) of such Act is amended by inserting "(or, in the case of a local educational agency described by section 706(a)(1)(E), the appropriate State educational agency)" after "Assistant Secretary".

(f)(1) Section 710(c) of such Act is amended by—

(A) inserting "(or, in the case of a local educational agency described by section 706(a)(1)(E), the appropriate State educational agency)" after "Assistant Secretary",

(B) striking out "and" at the end of clause (1)(C),

(C) striking out the semicolon at the end of clause (1)(D) and inserting in lieu thereof ", and", and

(D) adding at the end of clause (1) of such section the following:

"(E) the extent to which educationally deprived students are enrolled in schools of a local educational agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families;"

(2) Such section 710(c) is further amended by inserting before the semicolon at the end of clause (2) the following: ", or in the case of applications by local educational agencies implementing plans described in section 706(a)(1)(E), the degree to which the plan and the program or project are likely to meet the special educational needs of educationally deprived students enrolled in schools enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families and of educationally deprived students who, pursuant to such plan, transfer to schools in which a lower proportion of the students enrolled are from low-income families".

(3) Such section is further amended by inserting before the semicolon at the end of clause (3) the following: ", or in the case of a plan described by section 706(a)(1)(E), constitutes a comprehensive approach to meeting the special educational needs of educationally deprived students enrolled in schools of a local educational agency enrolling a higher proportion (as determined by the Assistant Secretary) of their students from low-income families and of educationally deprived students who, pursuant to such plan, transfer to schools in which a lower proportion of the students enrolled are from low-income families".

(4) Such section is further amended by striking out "and" at the end of clause (5), striking out the period at the end of clause (6) and inserting "; and" in lieu thereof and adding at the end thereof the following:

"(7) such criteria as the Assistant Secretary may prescribe for the purpose of assuring that funds made available under this title to a local educational agency implementing a plan described by section 706(a)(1)(E) will, to the extent determined by the Assistant Secretary after consultation with the appropriate State educational agency, be used by such local educational agency for carrying out programs or projects for the provision of basic instructional services and basic supportive services for educationally deprived students enrolled in the schools of such agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families and for educationally deprived students who, pursuant to such plan, transfer to schools in which a lower proportion of the students enrolled are from low-income families.

Criteria prescribed by the Assistant Secretary pursuant to clause (7) of the preceding sentence shall be designed to insure that—

"(1) in the approval by State educational agencies of applications for funds under this title from local educational agencies to assist them in implementing plans described in section 706(a)(1), priority will be given to those local educational agencies which are implementing, or will implement, if assistance is made available to them under this title, a plan described in clause (A), (B), (C), or (D) of such section and a plan described in clause (E) of such section,

"(2) the amount of funds available under this title to a local educational agency implementing a plan described by section 706(a)(1)(E) for the provision of basic instructional services and basic supportive services for educationally deprived students enrolled in the schools of such agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families will be adequate to meet the needs of such students for such services, and

"(3) there will be adequate provision for meeting the needs of such students who transfer from schools in which a high proportion (as determined by the Assistant Secretary) of the number of students enrolled are from low-income families to schools in which a lower proportion of the number of students enrolled are from such families.

except that nothing in this title shall be construed to authorize the provision of assistance under this title in such a manner as to encourage or reward the transfer of a student from a school in which students of his race are in a minority to a school in which students of his race are in the majority or the transfer of a student which would increase the degree of racial or economic isolation in the schools of any local educational agency."

(g) Section 710(d)(2) of such Act is amended by inserting "(or, in the case of an application by a local educational agency described by section 706(a)(1)(E), the appropriate State educational agency)" after "Assistant Secretary".

(h) Section 710(e) of such Act is amended by inserting "(or, in the case of applications by local educational agencies described by section 706(a)(1)(E), the appropriate State educational agency)" after "Assistant Secretary".

(i) Section 720 of such Act is amended by inserting at the end thereof the following:

"(16) The term 'basic instructional services' means instructional services in the field of mathematics or language skills which meet such standards as the Assistant Secretary may prescribe.

"(17) The term 'basic supportive services' means noninstructional services, including health or nutritional services, as prescribed by the Assistant Secretary.

"(18) The term 'low-income families' means families having an annual income of less than the low-income factor.

"(19) The term 'long-income factor' means the low-income factor as defined by section 103(c) of the Elementary and Secondary Education Act of 1965."

(j) Such Act is further amended by inserting at the ending thereof the following new sections:

"TITLE I OF THE ELEMENTARY AND SECONDARY EDUCATION ACT OF 1965 NOT AFFECTED

"Sec. 721. Nothing in this title shall be construed to alter the amount of a grant which any local educational agency is eligible to receive for a fiscal year under title I of the Elementary and Secondary Education Act of 1965 or otherwise modify any provision of such title.

"STATE PLANS

"Sec. 722. (a) Application by local educational agencies for assistance in carrying out plans described by section 706(a)(1)(E) shall be submitted to the appropriate State educational agency for approval by such agency.

"(b)(1) A State may receive payments for any fiscal year for the purpose of assisting local educational agencies to carry out plans described by section 706(a)(1)(E) if it submits to the Assistant Secretary, through its State educational agency, a State plan which—

"(A) recommends to the Assistant Secretary the amount of funds apportioned to such State under section 705 which shall be reserved within such State for applications under subsection (a);

"(B) sets forth criteria for establishing an order of priorities for the approval of applications of local educational agencies submitted under subsection (a) which such State educational agency determines will most effectively carry out the purposes of this title;

"(C) provides that such fiscal control and fund accounting procedures will be adopted as may be necessary, in the judgment of the Assistant Secretary, to assure proper disbursement of and accounting for Federal funds paid to the State (including such funds paid by the State to local educational agencies) under this section;

"(D) provides assurances satisfactory to the Assistant Secretary that such State educational agency will evaluate the effectiveness of assistance made available under this title for carrying out plans described by section 706(a)(1)(E) and make such periodic reports to the Assistant Secretary as he may determine to be reasonably necessary for him to perform his duties under this title.

"(2) The Assistant Secretary shall—

"(A) determine the amount of the funds apportioned to each State under section 705 which shall be reserved for applications under subsection (a),

"(B) approve a State plan which meets the requirements of this section, and

"(C) not determine the amount of such funds which are to be reserved for applications under subsection (a) or finally disapprove a State plan without first giving reasonable notice and opportunity for a hearing to the State educational agency.

"(3) The aggregate amount of funds reserved, from funds apportioned to States under section 705, by the Assistant Secretary for making payments to States under subsection (d) shall be $500,000,000 for each fiscal year.

"(c)(1) If any State is dissatisfied with the Assistant Secretary's final action with respect to the approval of its plan submitted under this section, such State may, within sixty days after notice of such action, file with the United States court of appeals for the circuit in which such State is located a petition for review of that action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Assistant Secretary. The Assistant Secretary thereupon shall file in the court the record of the proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

"(2) The findings of fact by the Assistant Secretary, if supported by substantial evidence, shall be conclusive; but the court, for good cause shown, may remand the case to the Assistant Secretary to take further evidence, and the Assistant Secretary may thereupon make new or modified findings of fact and may modify his previous action, and shall file in the court the record of the further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

"(3) Upon the filing of such petition, the court shall have jurisdiction to affirm the action of the Assistant Secretary or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

"(d)(1) The Assistant Secretary shall make payments to any State educational agency which has a State plan approved under this section for carrying out its State plan (including the cost of administration of such plan, but not to exceed 5 per centum of the amount reserved for such State for any fiscal year pursuant to subsection (b)(2)(A)) and for making payments to local educational agencies.

"(2) For the purposes of this subsection and section 712, a State educational agency shall be deemed an applicant for assistance."

Mr. PUCINSKI (during the reading). Mr. Chairman, I ask unanimous consent that this title be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

AMENDMENT OFFERED BY MR. HAWKINS

Mr. HAWKINS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Hawkins: On Page 31, after line 19, add the following:

"Sec. 102. Section 704 of the Emergency School Assistance Act is amended by inserting at the end of Section 704 the following:

"'(c) For the purposes of making grants under this title to carry out the plan described in 706(a)(1)(E) and Sec. 402(f) of the Equal Educational Opportunities Act, there is authorized to be appropriated for the fiscal year 1973 and for each fiscal year thereafter the sum of $1,500,000,000 and no funds appropriated under subsection (a) shall be used for such purposes.

"'(d) No funds are authorized to be appropriated under subsection (c) for any fiscal year until funds appropriated for title I of the Elementary and Secondary Education Act of 1965 are at least equal to the funds appropriated for such title for the fiscal year immediately preceding, and subsection (a) of this section is fully funded.'"

Mr. HAWKINS. Mr. Chairman, this bill is labeled the Equal Educational Opportunity Act. It seems to me if this is the intent of the authors of this act this amendment is absolutely necessary to implement that title and the policy as stated.

This amendment would provide $1.5 billion each year for the implementation of this act.

Various remedies have been proposed in this bill, including the construction of magnet schools and other construction items, as well as the closing of inferior schools. If this is to be implemented, obviously some money is going to be required.

Also, the bill provides for the concentration of title I funds. If this amendment is not adopted, it simply means that perhaps as many as another million disadvantaged children will be deprived of the services of title I, due to the concentration of the money.

I do not object to the concentration. I believe the idea is good; it is desirable. At the same time, I believe we should not deprive children who are already receiving title I services, by the concentration of that money, by taking the money away from some children to provide for the concentration of services among other children.

Actually, since 1966 the amount of money available under title I has decreased due both to inflation and to the concentration of the money. So if we do not adopt this amendment it simply will mean that in addition to the 1.5 million children who have already been deprived by a concentration of services of title I, an additional number will be deprived of those services.

This amendment protects both the elementary and secondary education funds, as well as the emergency school assistance funds which we approved just 2 months ago. Unless this amendment is adopted, it means, therefore, that the so-called remedies provided or suggested under this bill will be meaningless and mere rhetoric, because we are saying that you should do certain things, but we are not providing the money with which to do them. It means also some of the children who are presently enjoying the services of title I will lose the services.

On page 33 of the report, if you turn to the report, you will see set out on the page an enumeration of the amounts of money your State will receive at the present time under the Emergency School Aid Act.

Under the proposal as it is now drafted, that money will be taken away from your State. Under the Emergency School Act, $500 million will be taken away to provide services under this present proposal. I think that is unnecessary; I think it is certainly a juggling of the funds, statements emanating from the White House that pretend to say to the children of this country that they are going to be provided with some services. In this bill, however, we are going to take those services away from. This is an irresponsible way to proceed. If this bill is to have any validity at all, I think this is certainly an amendment which will provide a means of making the bill operate for the benefit of at least some children in this country.

Mrs. GREEN of Oregon. Mr. Chairman, I rise in support of the amendment offered by the gentleman from California. As the Members of this House know, I have said repeatedly I do not consider busing as a cure-all for the problems that confront our schools across the country. I think that is a very superficial answer. I think it leads to polarization. I think it has increased racial tension. But we cannot talk about just being against busing. If we are not going to look at the other side of the coin and do something in a positive and constructive way to improve the quality of education, then we are not doing anything. Certainly if the Members of this House do not have the opportunity to visit the schools in Detroit, Chicago, Philadelphia, New York City, Portland, Oreg., Los Angeles, and other places, we do have the opportunity to visit the schools in the District of Columbia. In my judgment, the schools in the District of Columbia are typical of schools across the country. They are deteriorating. Unless we face up to the responsibility of doing something about it, we are going to have a lost generation.

Mr. Chairman, I voted to sustain the President's veto yesterday on the Labor-HEW bill. You may say that is inconsistent that you would vote to sustain that and then support the amendment offered by the gentleman from California. I voted to sustain the veto, because I thought the increase of $2 billion to the House-passed bill which was carefully considered, I felt those $2 billion were not carefully considered. I said yesterday on the floor we not only have to think about tax reform, but we have to think about spending reform.

In HEW there are lots of places where millions and millions of dollars are being wasted. Many millions of tax dollars are going down the drain. The benefits from those dollars are not reaching the people for whom they were intended. We could eliminate that waste if we would be more selective in the programs that we fund instead of just adding $2 billion to be scattered among many programs in HEW. As some of you know, I have been doing, for 2 years, a study of contracts and grants. I am appalled by what I see in the Office of Education. It is just as bad as many of those things happening in the Department of Defense, but the difference is many dislike the Department of Defense supposedly, and, therefore, if they waste money, it is somehow sinful, but if HEW and the Office of Education waste money, then we rationalize and we say well, we meant to do good. We meant those funds for good purpose. If they were wasted, and if there was conflict of interest, if deals were made, we gloss it over and say that is too bad.

Until we get to the place where we are selective about the programs we fund and insist that the dollars go to the beneficiaries for whom they were intended, we are never going to improve the quality of education.

The amendment offered by the gentleman from California, as I understand it, is to say that we will have a billion and a half dollars for compensatory education that is to go into the classrooms. You can spend $500 million more in all the think tanks and research but the schools are closing early, they are deteriorating because they do not even have the money to buy essentials. Certainly they do not have the money to implement the results of the research programs that are funded. So let us save the money there and let us really provide the money for compensatory education, as the gentleman from California has suggested, and take the positive attitude that while we are opposed to busing because it is a superficial answer, and it increases polarization, that we will not settle for the deterioration of the schools of this country, and that we are going to try to do something about it and provide quality education, and equal educational opportunities for every child whether he is black, white, brown, red, or yellow.

Mr. QUIE. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, if you adopt this amendment you might be able to go home and tell your people that you added another billion and a half dollars a year for education, but you know good and well there is not going to be any billion and a half dollars of additional appropriation.

The committee used wise judgment, I think, because it took $500 million from the emergency school aid authorization and put it in this compensatory education title, which is title I of H.R. 13915.

That money is already budgeted. It has not been appropriated. All of the $1 billion of the Emergency School Aid Act which has been budgeted, has not been appropriated. I am confident that we should be able to convince the Committee on Appropriations to bring out this $1 billion with $500 million for emergency school aid and $500 million for compensatory education. The President asked for the emergency school aid more than two years ago, and that was to help the schools pay for the added cost of desegregation. They have had to pay for that themselves. Emergency school aid has been one-shot money. We should not be paying for that very far in the future. Since there is as much emergency school aid money needed at the present time, we ought to use $500 million for compensatory education.

But let us not hand out false hope like we handed out for years, authorizing money that we know good and well would not be appropriated. Why, you might as well make this a trillion dollars, and really feel like a hero, because there is not going to be any of that appropriated.

I think we have a realistic bill here. We ought to stay with the figure that is in it, and then after in this fiscal year we can look at the program and maybe we should increase the appropriation later on.

Mr. LONG of Maryland. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Maryland.

Mr. LONG of Maryland. Mr. Chairman, let me say first that I intend to vote for this bill. I am against busing, but I am also for equal educational opportunity if we can possibly achieve it. I wonder if the gentleman from Minnesota really believes that we can achieve equal educational opportunities for $500 million, or anything like that?

Mr. QUIE. No, we cannot, we will not get equal educational opportunities by just authorizing an additional billion and a half, making it $2 billion. I think we have to look at what this Congress can appropriate, and how we can distribute it.

You have to remember that this money is to be allocated to the States on the basis of the number of minority children there. But the compensatory education money is going to be divided according to the number of poor kids. That means all the States that have disadvantaged kids are not going to get much money unless they have a large number of minority children.

I think that is another failure of the amendment. If we are going to pay an additional $1,500,000 in compensatory education, let us go at that through separate legislation.

Title I of the Elementary and Secondary Education Act also is faulty. New legislation should be drafted so compensatory education money is distributed on the basis that we get at children in need, wherever they are and whatever their race is.

This is not the vehicle to use to add another $1,500,000,000 under a formula that we do not want to appropriate any more money through, anyway.

Mr. LONG of Maryland. I am on the Appropriations Committee and I happened to vote to sustain the President's veto the other day on the floor.

Lamentably, we are far from the last word on appropriations. If we are really sincere about carrying through the title of this bill to achieve equal educational opportunity and I am not sure that this title is not an exercise in hypocracy—if we are really sincere in this—then I think we have to vote some meaningful sums of money. This $500 million is a joke and I think the gentleman from Minnesota is intelligent enough to recognize that.

Mr. QUIE. But I also recognize that this Congress is not going to appropriate an additional $1½ billion when you allocate the money the way this allocation will be. That I recognize full well and I do not see any sense in handing out false hope.

Mr. PEPPER. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Florida.

Mr. PEPPER. Mr. Chairman, if I recall correctly, the able gentleman stated before the Committee on Rules the other day that none of the money now in this bill could be used or is designed to be used for the construction of additional schools; is that correct?

Mr. QUIE. That is correct—and there will not be if this amendment is adopted either.

Mr. WILLIAM D. FORD. Mr. Chairman, I do not think anybody has taken this floor more often than I have to fight for more money for elementary and secondary education.

But I also took this well twice when the President's so-called emergency school assistance act or desegregation bill was before the House to ask the House not to approve $1½ billion because of the way in which it was to be divided and spent.

Unfortunately, that legislation was attached to the Higher Education Act when it passed the House last fall and did provide for an authorization of $1½ billion for education funds to be distributed at the discretion of the Secretary of HEW.

Why would people, like me, who have made a career in this Congress out of fighting for more money for education and improvement in the quality of education be opposed to that?

I called that bill, at the time it went through here, a back door busing bill and I have been criticized very severely for that opinion by some of my friends in the civil rights movement who now disagree with me on this bill.

That bill was wrong and the method of distributing the money was wrong. Instead of addressing itself to distributing money on the basis of need of children for education, it distributes money merely on the basis of the numerical count of people according to their race, and if you please—their national origins in the case of Spanish-speaking people. That, I think, is wrong.

It was a departure from everything constructive that has been attempted for education in this House, but it did pass.

One of the things that we did achieve in the bill now before you was taking $500 million of that money and reallocating it to be used, not on a distribution to school kids according to the number of kids who have black skins or brown skins or a Spanish-sounding name, but on the basis of the number of children they have who come from backgrounds and surroundings which indicate they need a special educational effort to help them to get an equal education in this country.

What we are doing here is giving you an opportunity to correct that previous action. I feel today, as we talk about reordering priorities, that there is a higher priority for giving money to children on the basis of an identifiable need for additional education help than there is for giving it on the basis of the color of their skin.

We cannot stand here and talk, all of us, on both sides of the question of whether this bill should be adopted, about supporting a colorblind society, and then turn around and at the same time talk about looking at the color of people's skins when you start passing out education dollars.

It is wrong to pass out education dollars to people whose skin is white or to people whose skin is black by taking that skin color into account. What we have to be considering here today is the educational needs of children and forget about what color they are. If we start talking about a billion and a half dollars for providing quality education, Mr. Quie and I will both tell you that we really ought to be talking about $12 billion because that is where he and I agree that we should be moving in the next year in the way of Federal aid to elementary and secondary education.

I think before the end of the Congress you are going to see the two of us working together for that kind of legislation.

Mr. Hawkins offered this amendment in committee, and I know he is sincere, but understand one thing, it will wipe out what we have done in reallocating priorities for the $500 million and it will not provide the billion and a half in additional funds for kids. It would say to the Secretary of Health, Education and Welfare, "If we appropriate pursuant to this legislation any amount of money, you can take any or all of it and use it on a distribution according to race instead of a distribution on the basis of educational need."

I would say now to those people who feel exercised, as they have indicated here today one person called this legislation, a bill that is hypocritical because it talks about equal educational opportunity—put your money where your mouth is. If you want equal educational opportunity, talk about educational opportunity in terms of identifying the kids who need it and giving it to them, not identifying the school districts by counting children on the basis of what color their skin is or how they spell their last name——

Mr. HAWKINS. Mr. Chairman, will the gentleman yield?

Mr. WILLIAM D. FORD. I yield to the gentleman from California.

Mr. HAWKINS. Mr. Chairman, the gentleman from Michigan made a statement that this amount would wipe out in some way the formula under which the Emergency School Aid money is now being allocated.

Mr. WILLIAM D. FORD. No; I would like to correct the gentleman; he misunderstood me. I said that it would wipe out the progress which I think the legislation before us today makes in changing the formula by which the emergency school assistance funds will be distributed. That is, by educational need rather than by race.

Mr. HAWKINS. I have no intention of changing the formula.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

For what purpose does the gentleman from Florida (Mr. Bennett) rise?

Mr. BENNETT. Mr. Chairman, I move to strike the requisite number of words and I rise in support of the amendment.

Mr. Chairman, when I first came to Congress, I believe the first bill which I introduced and the first speech while I made on the floor of the House were within relation to improving the education of people who were underprivileged because of racial connection. My bill and that speech did refer to the black race and to the red race. Much of that legislation has now been enacted as far as the red race is concerned in impact-type legislation.

I think this amendment which has been offered here is in content similar to the type of legislation which I have reintroduced in every session of Congress since I have been here during the last 24 years. I very much think that it is needed and that it will do nothing but good.

In the State of Florida this year we had an overwhelming straw vote. In the population of Florida, a million and more votes were cast. The overwhelming percentage of these votes were cast in favor of the neighborhood school concept. In another thing in that straw ballot, another vote was on the question of having equal school opportunities for all people in this country. By almost the same percentage this idea was also approved. So I think that I am being consistent with my constituents and being consistent with what I have had in my heart ever since I have been here in Congress, and I am grateful to the gentleman from California for introducing this amendment.

Atlhough I am a fiscal conservative I think not just the amount of money he urges but more money than this is in fact needed.

I wish also to speak in strong support of an amendment which will be submitted by the gentlewoman from Oregon to allow the reopening of previous "court orders" or "desegration plans." I particularly want to thank her for putting a comma after the word "orders" to assure that the words found after the words "desegregation plans," as found in the original bill, will in no way be a limiting factor on the types of "court orders" involved in her amendment.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, if I could make a couple of quick comments, it has been inferred we are dreaming and we might as well ask for a trillion dollars. Yet a request for a billion and a half is a reasonable request. It has been suggested the Appropriations Committee would not give it. Let me suggest there are two areas where if we were selective we could save a billion and a half. In the higher education bill there is a provision for a National Institute of Education. Ninety percent of it is to go to more contracts and grants; there is absolute chaos already down there in their research department.

To spend funds on compensatory education instead of NIE and the Foundation on Higher Education would provide $635 million in authorization.

Also in the higher education bill, which the gentleman from Minnesota supported, there is a provision that every student attending college, postsecondary education, in this country is entitled, the words in the bill are that each is entitled; every student is postsecondary education is "entitled" as a matter of right to $1,400 minus the family contribution, and inevitably ahead of us in all States are going to concur big arguments about the nationally imposed standard on family contributions. Let me suggest education in this country requires far more attention at the elementary and secondary levels; if a student in postsecondary education is entitled as a matter of right to have $1,400 for personal expenses beyond the institutional cost of providing the education, then I say to the Members that a youngster in the elementary schools ought to be entitled in this country to the educational opportunities which might be provided by that $1,400.

We would have more than a billion and a half if these priorities were established in the Appropriations Committee. These funds would then go to that part of the educational program where there is the greatest need.

Mr. Chairman, I thank the gentleman from Florida.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I yield to the gentleman from Minnesota.

Mr. QUIE. Mr. Chairman, the gentlewoman from Oregon says we should reduce authorizations to find money for appropriation. It just will not work. We cannot talk about saving money in authorizations. Look at the budget request for the items the gentlewoman mentions in the higher education amendments. That will not even fund one-half billion dollars. You would have to find new money outside the budget to fund this proposed new authorization. This the Congress will not do.

Mr. BENNETT. Mr. Chairman, I would like to say a few words in conclusion. If we really want to do this, we will find the money to do this. I think it is something that needs to be done. No legislation is perfect when it comes from one of our two legislative bodies. It will go from here to the Senate and will be worked over there. Then a conference committee can perfect it further.

We owe a debt to all these Americans. I would like to see that debt paid as much as we can and as soon as we can. Let us get on with it.

Mr. MEEDS. Mr. Chairman, I rise in support of the legislation and move to strike the necessary number of words.

Mr. Chairman, the amendment offered by the gentleman from California really does two things. First of all it puts a billion and a half in this bill where our mouth is. We are saying we want to apply equality of educational opportunity and we are in fact robbing another program to provide the funds for doing it. So first the amendment puts a billion and a half dollars in the program we are talking about today.

Second, and I think very importantly, it protects the Emergency School Act from that $500 million robbery. It is $500 million which can be used and should be used to comply with the kind of educational opportunity we are talking about and which we were talking about when the House Members cast these votes the very kinds of things we are talking about as eliminating segregation.

I submit to this House that if we are really serious when we talk about educational opportunity, we are not going to take $500 million from one act which was dedicated to doing that and put it in another act which says it is going to do the same thing. It is a sleight-of-hand trick that this Congress really ought to be above. If we are going to do as the gentlewoman from Oregon so correctly says, if we are going to put the money in where it will do the most good, we will have it in those lower grades. We are going to be providing compensatory education for these young people, and this billion and a half dollars some people said this afternoon is going to be going right into the areas where compensatory education is needed most. This billion and a half dollars is going to go into those areas of 30 percent educationally deprived children, or higher, combined with the efforts under the Emergency School Act, and the $500 million should be spent under that act as well as this, and we should be getting the kind of concentration of funds the President was talking about but which he did not provide funds for, and which the educators are talking about, getting to the critical mass we hear so much about today, to bring about real educational opportunity.

I submit to this House, if we are not going to provide the funds really required to do that, if we are not going to provide ample funds to get to these educational problems, then we really do not mean what we are saying when we talk about equal educational opportunities.

Mr. CORMAN. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from California.

Mr. CORMAN. I just want to call the attention of Members to the fact that the President is presently trying to get the Ways and Means Committee to spend $980 million for private education, and I believe that $980 million would be better spent under this amendment.

Mr. RUTH. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I sincerely feel that we have a great many Members here who exercise fiscal responsibility. To add $1.5 billion to this bill would eliminate the vote of those Members who are responsible.

I should like to point out that in the Emergency School Act we put $1.5 billion, and by the time it came back from conference it had $2 billion in it. When the administration proposed this bill, they proposed that we take $500 million out of that bill which the President did not want to start with, so therefore we could sweeten this with the half billion dollars we already have and do not need in another program.

I should also like to remind the Members that in the committee it was proposed we add a billion dollars, a half billion dollars less than this proposal, and that was defeated in the committee. So it is almost absurd to come up with a proposal here that we add $1.5 billion.

I urge the defeat of the amendment.

Mr. HAWKINS. Mr. Chairman, will the gentleman yield?

Mr. RUTH. I am happy to yield to the gentleman from California.

Mr. HAWKINS. Does the gentleman care to give the specific vote whereby this amendment was defeated in the committee?

Mr. RUTH. No, sir. I remember there was a specific vote.

Mr. HAWKINS. Would it be correct to say it was defeated by a vote of 18 to 19?

Mr. RUTH. That could possibly be.

Mr. HAWKINS. That is a narrow defeat.

Mr. RUTH. I do remember specifically that the reopening clause was defeated by two votes. I can remember that very clearly.

Mr. PUCINSKI. Mr. Chairman, I move to strike the last word.

I believe we are about ready to vote on this amendment. We have made no attempt to curtail this discussion.

The Members ought to know that this amendment was offered in the committee. It was rejected by a vote of 18 to 19.

Members also ought to know that we now have $1.8 billion in title I. We have $6 billion authorized. If the Appropriations Committee wants to increase the appropriation for title I, they now have the authorization. There are $6 billion authorized, of which only $1.8 billion has been appropriated.

There was an additional $300 million in the bill vetoed by the President yesterday, the appropriation bill. I presume that since the objections of the President to the bill were not so much in the area of education it is reasonable to assume, or at least to hope, that the $300 million under the veto message will be reinstated by the Appropriations Committee.

Secretary Richardson testifying on this matter before the committee said that this $500 million that the administration proposes to transfer from the Emergency School Act that was approved a few weeks ago here would provide $300 per child of compensatory services in the target areas. In other words, taking the $500 million incorporated in the bill before us—each child in the target area, that is, the area of the highest concentration of poverty, would get $300 additional money for compensatory education. I might say under this bill if a child subsequently moves to another school, the $300 will follow that child to that school.

The Secretary, as Mr. MEEDS mentioned, talked about the critical mass. The testimony before our committee indicated children in the highest concentration areas of need require a minimum of $300 additional money to give them a compensatory program of education which will meet their needs. The Secretary said $500 million in the bill would provide that $300. He said, and I quote from the testimony, "Compensatory supplementary aid provided over and above the base level after a district complied with existing title I comparability provisions. These private schools must receive at least equal resources for a pupil for instructional purposes as provided in nontarget schools."

Therefore, I believe it is important for the Committee. I know this is a tough decision, and each member of the Committee of the Whole will have to make that decision.

It seems to me when you have $6 billion already authorized in title I——

Mr. WAGGONER. Will the gentleman yield to me at that point?

Mr. PUCINSKI. Yes; I yield.

Mr. WAGGONER. Is the $6 billion to which you keep referring which is presently authorized for title I an annual authorization of $6 billion?

Mr. PUCINSKI. That is correct.

Mr. WAGGONER. And what did the gentleman say the Committee on Appropriations had appropriated this year for title I?

Mr. PUCINSKI. Well, the Congress appropriated $1.8 billion.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. PUCINSKI was allowed to proceed for 1 additional minute.)

Mr. PUCINSKI. Therefore, the decision that the Members have to make here is difficult. I appreciate the sincerity of the amendment offered by the gentleman from California. I may say that I voted for it in the committee.

I hope you use your judgment wisely on this.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent (at the request of Mr. GERALD R. FORD) Mr. PUCINSKI was allowed to proceed for 3 additional minutes.)

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield to me?

Mr. PUCINSKI. I yield to the gentleman.

Mr. GERALD R. FORD. Mr. Chairman, I was intrigued as the gentleman from Louisiana was a few moments ago, when the gentleman from Illinois mentioned a $6 billion annual authorization in title I and the annual appropriation reflected in the last appropriation bill against that authorization of $1.8 billion.

If my mathematics are correct, that means that $4.2 billion of unused authorization exists certainly in this current fiscal year or the next fiscal year. Is that correct?

Mr. PUCINSKI. That is correct.

Mr. GERALD R. FORD. I also understand that this amendment would add another $1.5 billion to that $6 billion authorization?

Mr. PUCINSKI. That is correct.

Mr. GERALD R. FORD. On an annual basis?

Mr. PUCINSKI. There is one difference in that the $1.5 billion being offered by the gentleman from California to title I would not go through the normal census basis formula. This money that the gentleman from California is proposing here, the $1.5 billion, would go right into the target areas. It would substantially increase the $300 that Secretary Richardson says is the minimum to be added in the target areas, but it would all be title I type money.

I would ask the gentleman from California (Mr. HAWKINS), if that is correct?

Mr. HAWKINS. I think that is correct, but is it not correct that we who sponsor this amendment are not the ones who provide for the concentration of the funds. The sponsors of this legislation are changing the rules of the game by providing for the concentration of the funds and they are the ones who should provide for the means.

Now, you either will concentrate that money on fewer children, or else you will deprive some children of these services. And if you do not adopt this amendment it simply means that you will be taking it from another agency in order to get the money provided. If you want to juggle the money and take it away from one program that has already been signed by the President, and sponsored by the President, you will take the money away from that program before the money is even appropriated.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

(By unanimous consent, Mr. PUCINSKI was allowed to proceed for 1 additional minute.)

Mr. PUCINSKI. That statement is not quite consistent with the facts. The gentleman from Michigan asked a good question. This $1.5 billion is an addition to title I—in other words, we would have $7.5 billion authorized, but if I understand the language offered by the gentleman from California, that portion of the title I type money that he is now proposing as a new additional authorization would be allocated to the target areas, and that is the difference. But the fact remains, and you will recall that a member of the Committee on Appropriations made a very eloquent speech here on this subject, and I would hope that that Member and the other members of the Committee on Appropriations would recognize that they have, as the gentleman from Michigan has pointed out, there is $4.5 billion of unexpended authorizations for title I, and when they are ready to appropriate that money then I would be happy to support that move.

Mr. GERALD R. FORD. If the gentleman will yield, the gentleman from California referred to the possibility that there would be a reduction to the number of children in title I. As I understand the legislation, there would be no reduction in title I money in any way.

Mr. HAWKINS. Since 1966 the number of children receiving title I services has decreased from $9 million to $7.5 million. That is a tremendous loss. If you continue that concentration obviously there will be fewer children. This is merely to offset that decrease.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. HAWKINS).

TELLER VOTE WITH CLERKS

Mr. HAWKINS. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. HAWKINS. Mr. Chairman, I demand tellers with clerks.

Tellers with clerks were ordered; and the Chairman appointed as tellers Messrs. HAWKINS, ASHBROOK, QUIE, and MEEDS.

The Committee divided, and the tellers reported that there were—ayes 129, noes 252, not voting 51, as follows:

So the amendment was rejected.

The CHAIRMAN. If there be no further amendments to be proposd to title I, the Clerk will read.

The Clerk read as follows:

TITLE II—UNLAWFUL PRACTICES

DENIAL OF EQUAL EDUCATIONAL OPPORTUNITY PROHIBITED

SEC. 201. No State shall deny equal educational opportunity to an individual on account of his or her race, color, sex, or national origin, by—

(a) the deliberate segregation by an educational agency of students on the basis of race, color, or national origin among or within schools;

(b) the failure of an educational agency which has formerly practiced such deliberate segregation to take affirmative steps, consistent with title IV of this Act, to remove the vestiges of a dual school system;

(c) the assignment by an educational agency of a student to a school, other than the one closest to his or her place of residence within the school district in which he or she resides, if the assignment results in a greater degree of segregation of students on the basis of race, color, sex, or national origin among the schools of such agency than would result if such student were assigned to the school closest to his or her place of residence within the school district of such agency providing the appropriate grade level and type of education for such student;

(d) discrimination by an educational agency on the basis of race, color, or national origin in the employment, employment conditions, or assignment to schools of its faculty or staff;

(e) the transfer by an educational agency, whether voluntary or otherwise, of a student from one school to another if the purpose and effect of such transfer is to increase segregation of students on the basis of race, color, or national origin among the schools of such agency; or

(f) the failure by an educational agency to take appropriate action to overcome language barriers that impede equal participation by its students in its instructional programs.

BALANCE NOT REQUIRED

SEC. 202. The failure of an educational agency to attain a balance, on the basis of race, color, sex, or national origin, of students among its schools shall not constitute a denial of equal educational opportunity, or equal protection of the laws.

ASSIGNMENT ON NEIGHBORHOOD BASIS NOT A DENIAL OF EQUAL EDUCATIONAL OPPORTUNITY

SEC. 203. Subject to the other provisions of this title, the assignment by an educational agency of a student to the school nearest his place of residence which provides the appropriate grade level and type of education for such student is not a denial of equal educational opportunity or of equal protection of the laws unless such assignment is for the purpose of segregating students on the basis of race, color, sex, or national origin, or the school to which such student is assigned was located on its site for the purpose of segregating students on such basis.

Mr. PUCINSKI (during the reading). Mr. Chairman, I ask unanimous consent that this title be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

AMENDMENT OFFERED BY MR. BADILLO

Mr. BADILLO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BADILLO: At page 33, after line 6, add the following new subsection:

"(g) permitting any general or special purpose unit of local government to exercise powers with respect to planning, zoning, subdivision controls, building codes or permits, or other matters affecting land use in such a manner as to prevent the reasonable provision of low and moderate income housing in undeveloped or predominantly undeveloped parts of any community within a Standard Metropolitan Statistical Area, or to discriminate in any other way (on the basis of amount, type, location, or otherwise) against low or moderate income housing in any such community."

POINT OF ORDER

Mr. PUINSKI. Mr. Chairman, I make a point of order against the amendment that it is not germane to the bill before us. The bill before us is an education bill.

The CHAIRMAN. The gentleman from Illinois (Mr. PUCINSKI) will state his point of order.

Mr. PUCINSKI. Mr. Chairman, I love the applause for the recognition that this is an education bill, and I am also pleased to see the distinguished former Speaker of the House, Mr. McCormack, join us on the floor.

Mr. Chairman, I make a point of order against the amendment on the grounds that this bill deals primarily with educational matters. It imposes certain duties on educational agencies and the courts. The amendment permits any general or special purpose unit of local government to exercise powers with respect to planning, zoning, subdivision control, building codes or other matters affecting land use in such a manner as to prevent the reasonable provision of low- and moderate-income housing in underdeveloped areas and parts of any community.

The amendment goes way beyond the scope of the legislation before us and brings in extraneous matter not germane to the basic matter before the committee. Therefore, I make the point of order that the amendment is not in order under the rule of germaneness.

The CHAIRMAN. Does the gentleman from New York desire to be heard on the point of order?

Mr. BADILLO. I do, Mr. Chairman.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. BADILLO. Mr. Chairman, this specific bill has to do with unlawful practices, and does not limit the unlawful practices to those unlawful practices which may be carried out by an educational agency. The section begins by saying that "no State shall deny equal educational opportunity" by doing the following things. That means not just the educational agencies of the State but all the agencies of the State as well.

The specific provision has to do with States and municipalities and what they might do in order to deny equal educational opportunity by making it impossible to have that kind of housing pattern that would bring about the neighborhood school that would not require any kind of busing.

Since we are talking about what the States may do, I submit that the point of order does not lie.

The CHAIRMAN. Does the gentleman from Illinois desire to be heard further on the point of order?

Mr. PUCINSKI. I reiterate what I said, Mr. Chairman. On pages 31 and 32 are all the remedies on the denial of equal educational opportunities, and the entire program is directed through State educational agencies. This deals only with educational agencies.

The amendment offered by the gentleman from New York goes way beyond that and brings into this act special purpose or general units of local government to exercise powers with respect to planning, zoning, subdivisions and a myriad of other functions that are not functions of State educational agencies.

The CHAIRMAN (Mr. UDALL). The Chair is prepared to rule.

The gentleman from Illinois makes the point of order that the amendment offered by the gentleman from New York (Mr. BADILLO) is not germane to section 201 of the committee amendment in the nature of a substitute.

The Chair notes that section 201 contains prohibitions against six types of activities by State educational agencies which deny equal educational opportunity to an individual on account of race, color, sex, or national origin. Each of those prohibited activities relates to policies adopted by school systems with respect to pupils, teachers, and policies of educational agencies.

On the other hand, the amendment offered by the gentleman from New (Mr. BADILLO) would prohibit actions by "any general or special purpose unit of local government" with respect to land use or building policies which discriminate against low or moderate income housing in a community.

It is the feeling of the Chair that the class of activities in section 201 of the committee substitute is confined to actions and policies of educational agencies. The amendment, on the other hand, relates to another class of prohibited activities, namely certain discriminatory housing policies of local government.

It is, therefore, in the opinion of the Chair, not germane to section 201 of the committee substitute. The Chair, therefore, sustains the point of order.

Are there any further amendments to title II?

AMENDMENT OFFERED BY MR. WHITE

Mr. WHITE. Mr. Chairman I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WHITE: Amend H.R. 13915, Title II, Section 201, subsection (d) on page 32, line 21, by striking the semicolon and by inserting the following: ", except to fulfill the purposes of subsection (f) below."

Mr. WHITE. Mr. Chairman, an inconsistency exists which this amendment seeks to correct.

On a number of occasions this House has passed and funded bilingual education programs.

In fact, this bill, on pages 31 and 33, section 201, provides:

No state shall deny equal educational opportunity to an individual on account of his or her race, color, sex, or national origin, by . . .

(F) the failure by an educational agency to take appropriate action to overcome language barriers that impede participation by its students in its instructional programs.

This means, in Spanish-speaking areas such as along the Mexican border—where there are language barriers and need bilingual education to phase students into comprehending English and their courses, there must be Spanish-speaking teachers to apply the bilingual program.

This usually means persons of Mexican-American descent.

Yet, in this same section 201, subsection (d) the bill specifically prohibits "discrimination" on the basis of national origin in the employment or assignment to schools of its faculty or staff.

This would, in effect, defeat the bilingual education program because in its administration Spanish-speaking and Mexican-American teachers are preferred and assigned.

My amendment merely qualifies subsection (d) by simply adding the words "except to fulfill the purposes of subsection (f) below."

Mr. PUCINSKI. Will the gentleman yield?

Mr. WHITE. I am glad to yield to the gentleman.

Mr. PUCINSKI. Mr. Chairman, we have examined the amendment offered by the gentleman from Texas, and we find it a constructive amendment. It improves the bill, and we are prepared to accept it.

Mr. WHITE. I am happy to hear that.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I am glad to yield.

Mr. QUIE. Mr. Chairman, I think the amendment does what the bill probably would have done anyway, and therefore clarifies it.

We are prepared to accept it.

Mr. WHITE. I thank the gentleman.

Mr. MEEDS. Will the gentleman yield?

Mr. WHITE. I yield to the gentleman.

Mr. MEEDS. Mr. Chairman, I believe this is a constructive amendment, and I hope it is adopted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. WHITE).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. SCHMITZ

Mr. SCHMITZ. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SCHMITZ: In section 201, add "creed" after "color" whenever the word appears (line 25, page 31; line 2, page 32; line 19, page 32; line 1, page 33).

Add the following paragraph at the end of section 201, describing another situation in which denial of equal educational opportunity is prohibited:

"(g) The failure by an educational agency to take appropriate action to require that no teacher shall give instruction, nor any textbook or other instructional materials be used in the classroom, which reflects adversely upon any person because of his race, color, creed or national origin, and the failure by an educational agency to take appropriate action to terminate discrimination on the basis of religion which results from the teaching of unproven theories based on atheism, agnosticism and secular humanism as fact in the classroom, while ignoring, deprecating or ridiculing in the classroom religious beliefs which pertain to the same area of knowledge as the unproven theories."

Mr. SCHMITZ. Mr. Chairman, this amendment which I am offering relates to another situation in which denial of equal educational opportunity is found. It is the forgotten discrimination against Christians who are strong in their faith, especially fundamentalist Protestants and traditional Catholics. I speak at this time as a former instructor in philosophy, history, and political science, since the problem to which this amendment is directed pertain primarily to those fields. You could add others such as the field of anthropology. College students, high school students, and even grade school students are subjected to unproven theories, taught as fact, in all these fields, while simultaneously their own religious faith is ridiculed. There are any number of examples, whether in history—presenting the teachings of Toynbee or Marxism as opposed to Christian history—or in philosophy, anthropology, and presenting the theory of evolution as opposed to the doctrine of creation. I for one am not against teaching these things as theory, and I have taught these things as theory in my own college teaching career, but this amendment gets to the central problem which is the teaching of these things as fact. And in some schools they are discriminatory toward those religious people whose beliefs are different, and as the amendment points out, they are ignored, deprecated, and ridiculed.

Mr. PUCINSKI. Mr. Chairman, I believe that this is a very complicated amendment, and one which we have not had any opportunity to examine at any length. The gentleman from California has not presented it to the subcommittee or to the full committee at any point in time. There have been no hearings held on it at all. We have not the slightest idea how this amendment would affect the educational institutions of this country, and what are some of the views, for or against the amendment, by religious leaders.

My concern, is just a quick reading of this amendment, is that it would indicate to me that it would put a lot of authority into the Government over the classrooms in our schools. It would impose severe requirements on school administrators. It would put the Federal Government into the business of examining textbooks and other instructional materials used in the classrooms, as to whether or not they have some religious bias or not religious content to them.

It just seems to me that in addressing ourselves to the curriculum matter of the schools we open up a Pandora's box.

The bill before us today generally deals with students attending schools; it does not make any effort to go into the curriculum in a school, the educational standards or practices.

So it seems to me that a hurried examination of this amendment, well-meaning as it may be—and I am sure the gentleman is offering it with the best of intentions—that it would open up, as I say, a whole Pandora's box of new problems that I do not think the Congress wants to become involved in. This may very well be an excellent amendment and had the gentleman submitted it to our committee for study we might have been able to work something out.

Mr. SCHMITZ. Mr. Chairman, if the gentleman will yield, would not the gentleman tend to agree that this whole bill opens up a Pandora's box, and most specifically line 3, which is subsection (f) of the bill, which says:

> (f) the failure by an educational agency to take appropriate action to overcome language barriers that impede equal participation by its students in its instructional programs.

Requires a heavy burden on the administrations in this connection also?

Mr. PUCINSKI. No, because under all of our civil rights legislation, existing legislation, which is a part of our law, discrimination because of racial origin is now an established matter of law.

But I suggest that what the gentleman is proposing here is the heavy hand of the Federal Government going into these classrooms and examining the books for religious content, and to establish whether the religious content is discriminatory and whether it is fair.

I wish that the committee had had some opportunity to examine this amendment and to get some professional judgment and some professional advice as to just exactly what would be the full impact of this language. I do not at all question the gentleman's sincerity. I am sure he is trying to do a constructive thing here. By my judgment is that you are going to open up a whole mess of problems that I do not think anyone is prepared to deal with.

Mr. SCHMITZ. Mr. Chairman, will the gentleman yield for a response?

Mr. PUCINSKI. I yield to the gentleman.

Mr. SCHMITZ. If I may just give a very brief response, I might point out this very policy, as put forth in this amendment, is basically the policy adopted and successfully implemented within the last few years, by the State Board of Education in the State of California, the largest State in the Union.

This would seem to be adequate indication as to the feasibility of such a policy.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. SCHMITZ).

The amendment was rejected.

AMENDMENT OFFERED BY MR. SEIBERLING

Mr. SEIBERLING. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. SEIBERLING: On page 33, line 23, substitute a comma for the period at the end of the line and add the following words: "or such school assignment would otherwise result in a denial of equal educational opportunity in violation of Amendment XIV to the Constitution of the United States."

Mr. SEIBERLING. Mr. Chairman, this amendment is an effort to try to cure some of the obviously very serious constitutional defects in this bill.

Section 203 says:

> SEC. 203. Subject to the other provisions of this title, the assignment by an educational agency of a student to the school nearest his place of residence which provides the appropriate grade level and type of education for such student is not a denial of equal educational opportunity or of equal protection of the laws unless such assignment is for the purpose of segregating students on the basis of race, color, sex, or national origin, or the school to which such student is assigned was located on its site for the purpose of segregating students on such basis.

I submit to you that the "unless" clause does not cover all the possible situations that might involve violations of the 14th amendment of the Constitution.

Now all my proposal does is simply add another qualifying clause, which says that it is not a denial of equal opportunity unless one of those purposes that are cited in the bill, as presently drawn, exist, or unless such a school assignment would otherwise result in a denial of equal educational opportunity in violation of the 14th amendment.

I do not think that is an unreasonable addition—if the proponents of this bill really mean this to be a constitutional bill.

I would just like to dilate for a minute on this subject. I think it is a very tragic turn of events that the latter day leadership of the party of Abraham Lincoln is now, on the very eve of their national convention, sponsoring a step backward, away from the principles for which the founder of their party lived and died.

I think it is a very sad turn of events that the national head of the party that wrote the 14th amendment to the Constitution is now asking the Congress to weaken that great charter of liberty.

But I am not going to address myself to that party. I think the dean of the Ohio delegation, the gentleman from Ohio (Mr. McCULLOCH) dealt very effectively with that subject. I urge the Members of his party in this House to heed his advice.

I would like to address myself to those in this House who are members of the Democratic Party. The founder of our party wrote the immortal words, "All men are created equal," that the 14th amendment tried to translate into constitutional doctrine.

Last month we held our party's national convention. My memory goes back to a presidential year, 24 years ago, when the late, beloved Alben Barkley of Kentucky, who was one of the great pillars of the Democratic Party, made the keynote speech in Philadelphia at the party's national convention. In his speech he recalled what our party's founder said in the Declaration of Independence.

Alben Barkley pointed out that Jefferson did not say that all rich men or poor men are created equal, but all men are created equal; not black men or yellow men or white men, but all men. I ask the members of this party—at a time when it is asking the people of the whole country once more to support its principles and its candidates—whether the members of this party are going to go before the country with a clear conscience and with their heads held high, be able to say that they have acted in the great traditions of our country and our party, and, I might add, within the language and the spirit of our party platform that was adopted only a few short weeks ago. That is what is at stake here.

We all know that the talk about busing is a smokescreen for something much deeper. Do we really mean it when we say that all Americans are created equal? Is the 14th amendment to stand as a pillar and as a beacon for future progress, or are we going to turn our backs on it? That is really what it is all about.

It is incumbent on us to make this bill conform with the Constitution as it was conceived by the great authors of the 14th amendment. That is what I am trying to do.

Mr. PUCINSKI. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, the language being offered by the gentleman from Ohio as an addition to section 203 would, in effect, negate all of section 203. The Supreme Court under the bill as it stands now would have ample opportunity to review section 203 as a judicial body.

We are proceeding in this legislation to write some legislative guidelines in this whole field of educating children, and we are spelling out these guidelines in this bill. Now, to do what the gentleman from Ohio suggests in the language which he has proposed here would for all practical purposes wipe out the legislative intent and substitute for the legislative intent whatever subsequent judges or prior judges of the Supreme Court have said.

We have argued all afternoon about section 5 of the 14th amendment of the Constitution. It does give the legislative branch of the Government the right to set up certain guidelines for principles guaranteed under the 14th amendment. If we are wrong in any of these provisions in this bill, we will learn soon enough in judicial review. I do not believe we should be adding to this bill the particular language offered by the gentleman from Ohio.

Therefore, I would hope that the amendment be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. SEIBERLING).

The question was taken; and on a division (demanded by Mr. SEIBERLING) there were—ayes 17, noes 58.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TITLE III—ENFORCEMENT

CIVIL ACTIONS

> SEC. 301. An individual denied an equal educational opportunity, as defined by this Act, may institute a civil action in an appropriate district court of the United States against such parties, and for such relief, as may be appropriate. The Attorney General of the United States (hereinafter in this Act referred to as the "Attorney General"), for or in the name of the United States, may also institute such a civil action on behalf of such an individual.

JURISDICTION OF DISTRICT COURTS

SEC. 302. The appropriate district court of the United States shall have and exercise jurisdiction of proceedings instituted under section 301.

INTERVENTION BY ATTORNEY GENERAL

SEC. 303. Whenever a civil action is instituted under section 301 by an individual, the Attorney General may intervene in such action upon timely application.

SUITS BY THE ATTORNEY GENERAL

SEC. 304. The Attorney General shall not institute a civil action under section 301 before he—

(a) gives to the appropriate educational agency notice of the condition or conditions which, in his judgment, constitute a violation of title II of this Act; and

(b) certifies to the appropriate district court of the United States that he is satisfied that such educational agency has not, within a reasonable time after such notice, undertaken appropriate remedial action.

ATTORNEYS' FEES

SEC. 305. In any civil action instituted under this Act, the court, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorneys' fee as part of the costs, and the United States shall be liable for costs to the same extent as a private person.

Mr. PUCINSKI (during the reading). Mr. Chairman, I ask unanimous consent that the title be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

AMENDMENT OFFERED BY MR. FASCELL

Mr. FASCELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. FASCELL: Page 34, after line 10, insert the following:
>
> "SEC. 302. When a court of competent jurisdiction determines that a school system is desegregated, or that it meets the constitutional requirements, or that it is a unitary system, or that it has no vestiges of a dual system, and thereafter residential shifts in population occur which result in school population changes in any school within such a desegregated school system, such school population changes so occurring shall not, per se, constitute a cause for civil action for a new plan of desegregation or for modification of the court approved plan."
>
> And redesignate the sections which follow accordingly.

Mr. FASCELL. Mr. Chairman, I have another amendment on the same subject. It is on page 38 and it deals with exactly the same subject matter. I ask unanimous consent that the amendments be considered en bloc.

PARLIAMENTARY INQUIRY

Mr. WAGGONNER. Mr. Chairman, a parliamentary inquiry.

Does not the rule require that the bill be read for amendment by title?

The CHAIRMAN. The Chair would advise the gentleman that he is correct. However, a unanimous-consent request to consider en bloc at this time an amendment in this title and an amendment in a subsequent title is appropriate if there is no objection.

Mr. WAGGONNER. Mr. Chairman, I object.

Mr. FASCELL. Mr. Chairman, I withdraw my unanimous-consent request.

The CHAIRMAN. Objection is heard to considering the amendments en bloc and the gentleman from Florida is recognized on his amendment to title III.

Mr. FASCELL. Mr. Chairman, if the Members would turn to page 34, line 10, with respect to court action, I would like to refresh the Members with the language of the amendment which says:

> When a court of competent jurisdiction determines that a school system is desegregated, or that it meets the constitutional requirements, or that it is a unitary system, or that it has no vestiges of a dual system, and thereafter residential shifts in population occur which result in school population changes in any school within such a desegregated school system, such school population changes so occurring shall not, per se, constitute a cause for civil action for a new plan for desegregation or for modification of the court approved plan.

There are a lot of frustrations in this busing issue. One of them, and I am sure we are all familiar with it, is that people are never sure exactly when they have met the desegregation test; when they have met the constitutional requirements. There should be no requirement that year after year because of demographic changes which occur naturally we have to rescramble the entire school system to take care of those changes.

The Court has stated that proposition very carefully in the case of Swann against Board of Education—Charlotte-Mecklenburg—and to be positive of it let me read from the Court language. I am quoting from the decision:

> At some point, these school authorities and others like them should have achieved full compliance with this court's decision in *Brown I*. The systems will then be "unitary" in the sense required by our decisions in *Green* and *Alexander*.
>
> It does not follow that the communities served by such systems will remain demographically stable, for in a growing, mobile society, few will do. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composition of student bodies once the affirmative duty to desegregate has been accomplished and racial discrimination through official action is eliminated from the system. This does not mean that federal courts are without power to deal with future problems; but in the absence of a showing that either the school authorities or some other agency of the State has deliberately attempted to fix or alter demographic patterns to affect the racial composition of the schools, further intervention by a district court should not be necessary.

The amendment I have offered tracks that language.

I believe the Court has time after time laid down guidelines we ought to follow where we can properly legislate. I submit this is one of those areas which ought to be written into statute.

The people in my district have in good faith complied with Court-ordered desegregation and the Court has so held. But the school system has been concerned with changes in population which have taken place and which have resulted in school population changes. And even though our system has been declared a unitary system further school and student changes have been contemplated in order to anticipate the possibility of further court action. My amendment says that now that the Court has said we are desegregated no further court action is required.

Mr. PUCINSKI. Mr. Chairman, will the gentlman yield?

Mr. FASCELL. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Is it the gentleman's opinion and intention in offering this amendment that while the community in a state of change shall not be subject to constant legal action and legal attacks, the Court, having issued the original order, always has jurisdiction over that matter? The gentleman is not changing that at all, is he?

Mr. FASCELL. I am not changing that at all, Mr. Chairman. I simply said that demographic changes in populations occurring after the stamp of approval has been made, after the Court has said, "You have met the constitutional test and you are a unitary system," at that point, under this amendment, changes in population, per se, shall not be considered as the basis for court action.

Mr. QUIE. Mr. Chairman, I move to strike the last word.

I should like to ask the gentleman from Florida a question or two.

The gentleman read from the Swann decision the language which says that "this does not mean that Federal courts are without power to deal with future problems; but in the absence of a showing that either the school authorities or some other agency of the State has deliberately attempted to fix of alter demographic patterns to affect the racial composition of the schools, further intervention by the district court should not be necessary."

My question to the gentleman is: Why does the gentleman leave out of his amendment the exact wording which brings into the jurisdiction of the court the right to determine whether the State or other agency deliberately attempted to fix or alter demographic patterns?

Mr. FASCELL. Because that issue is quite clear under all of the interpretations by the Court in defining constitutional rights under the 14th amendment. That is a constitutional interpretation. In other words, it is their definition of de jure segregation.

Mr. QUIE. Is it the gentleman's interpretation that if this amendment is adopted at any time the State or any agency of the State should deliberately try to fix or alter demographic patterns to affect the racial composition of the schools the amendment would not apply?

Mr. FASCELL. Absolutely, positively, without any question.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Illinois.

Mr. PUCINSKI. In other words, the controlling factor in the amendment is that if the shift in population occurs the original court order would prevail. As the gentleman from Minnesota said, if some other overt act were done by some agency in some effort to create artificial segregation, the court would not lose jurisdiction over the subject matter.

Mr. FASCELL. There is no question about that in my mind. The amendment does not change that and could not change the constitutional interpretation laid down by the court in any event.

It seems to me we ought to write this amendment into the statute. We are making it clear that once a school system has desegregated and removed the vestiges of a dual school system, the mere shift in population that normally takes place is not, per se, to be considered a cause of action.

Mr. MEEDS. Mr. Chairman, I rise in reluctant opposition to the amendment offered by the gentleman from Florida.

I think I am sympathetic with what the gentleman is trying to do, but unfortunately I think it goes beyond what the Swann-Mecklenburg ruling said, and in fact, imposes by statute an obligation or guideline on the court which is changes in population. In other words, the Court in Swann said that—

> This does not mean the Federal court is without power to deal with future problems, but in the absence of a showing that they deliberately acted to fix or alter the demographic patterns—further intervention by the District Court should not be necessary.

Indeed it should not be necessary, but the fact is that we are, by statute, making that determination and taking away the continuing equity power of the court what I object to as I understand the amendment.

Mr. FASCELL. Will the gentleman yield?

Mr. MEEDS. I am happy to yield. Perhaps the gentleman can straighten me out if I am incorrect.

Mr. FASCELL. With all due deference, it does not remove any power of equity from the court. That is impossible.

Mr. MEEDS. That is precisely why I am concerned it does.

Mr. FASCELL. We cannot do it by statute and this amendment does not seek to do that. It simply says the demographic changes shall not per se constitute a cause of action after the court already ruled a school system is desegregated, and it is a unitary system. It simply follows the thrust of the language by the court. When people in good faith have desegregated their school system and the court has sustained such action by its determination that such a system is a unitary one, there is no need to scramble the school system year after year because of population changes which have taken place through normal actions of people.

Mr. MEEDS The gentleman is making an effort to accomplish that, and perhaps with some colloquy we could do so on the record. It is not in any way the intent of the gentleman's amendment to impose by statute a determination of what is occurring, and in that manner to take away the equity and continuing power of the court to make the determination?

Mr. FASCELL. No. As a matter of fact, if the gentleman will read the amendment very carefully. It simply says it shall not be per se a cause of action.

Mr. PEPPER. Mr. Chairman, will the gentleman yield?

Mr. MEEDS I yield to the gentleman.

Mr. PEPPER. The purpose of this bill is to lay down guidelines for the governance of the courts in these matters. This amendment merely lays down certain guidelines, and it should be adopted. I associate myself with my distinguished colleague and hope his amendment will be adopted.

Mr. MEEDS. Mr. Chairman, with that explanation I withdraw my objection.

Mr. PUCINSKI. Mr. Chairman, I rise in support of the amendment. I believe it does clarify the bill, and I hope it is adopted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. FASCELL).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. HALL

Mr. HALL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. HALL: On page 35, lines 4 through 9, strike out "attorneys' fees" in section 305.

Mr. HALL. Mr. Chairman, this is a very simple amendment. I would remind you that section 305 says in a very unusual manner that—

> In any civil action instituted under this Act, the court in its discretion may allow the prevailing party other than the United States a reasonable attorneys' fee as a part of the costs, and the United States shall be liable for the costs to the same extent as a private person.

To be the very kindest about the committee included language herein, and with all my respect for my legally trained brethren who make up the bulk of this body, this would certainly encourage litigation predicated on this act. It is certainly a departure from the old system of jurisprudence wherein courts assigned the necessary attorneys in pursuit of equality and justice.

Further, it is an unfair opening of the Treasury's door. I refuse to believe that the courts in their wisdom cannot and will not arrange with qualified lawyers or attorneys to see that they are adequately recompensed in the due course of events. I strongly recommend the deletion of this section in order to eliminate another objection from this bill in the form of another lawyer's bonanza.

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to the amendment.

I am sure that this is a well-meaning amendment, and I have deep respect for the gentleman who is offering this amendment, but we had this same provision in the emergency school bill, we wrote it into this bill and the other bill, and for a very good reason, and that is that a lot of the small school districts sometimes find themselves with greater legal bills than their payroll for their teachers. A school district is brought into court and is put through all of the legal proceedings at tremendous expense, and all that this section says is that if the school district wins the case, if the Federal Government is bringing the action against the school district, then the Government pays for it; if somebody else is bringing the action, then that somebody pays for it. All it is designed to do is to give the small school districts some sort of backing on the enormous amount of money that they have to expend in defending themselves in these lawsuits.

I would hope that the amendment, well-meaning as it may be, will be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri (Mr. HALL).

The question was taken; and on a division—demanded by Mr. HALL—there were—ayes 24, noes 43.

Mr. HALL. Mr. Chairman, I demand tellers.

Tellers were refused.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TITLE IV—REMEDIES

FORMULATING REMEDIES; APPLICABILITY

SEC. 401. In formulating a remedy for a denial of equal educational opportunity or a denial of the equal protection of the laws, a court, department, or agency of the United States shall seek or impose only such remedies as are essential to correct particular denials of equal educational opportunity or equal protection of the laws.

SEC. 402. In formulating a remedy for a denial of equal educational opportunity or a denial of the equal protection of the laws, which may involve directly or indirectly the transportation of students, a court, department, or agency of the United States shall consider and make specific findings on the efficacy in correcting such denial of the following remedies and shall require implementation of the first of the remedies set out below, or on the first combination thereof which would remedy such denial:

(a) assigning students to the schools closest to their places of residence which provide the appropriate grade level and type of education for such students, taking into account school capacities and natural physical barriers;

(b) assigning students to the schools closest to their places of residence which provide the appropriate grade level and type of education for such students, taking into account only school capacities;

(c) permitting students to transfer from a school in which a majority of the students are of their race, color, or national origin to a school in which a minority of the students are of their race, color, or national origin;

(d) the creation or revision of attendance zones or grade structures without requiring transportation beyond that described in section 403;

(e) the construction of new schools or the closing of inferior schools;

(f) the construction or establishment of magnet schools; or

(g) the development and implementation of any other plan which is educationally sound and administratively feasible, subject to the provisions of sections 403 and 404 of this Act.

TRANSPORTATION OF STUDENTS

SEC. 403. (a) No court, department, or agency of the United States shall, pursuant to section 402, order the implementation of a plan that would require the transportation of any student in the sixth grade or below to a school other than the school closest or next closest to his place of residence which provides the appropriate grade level and type of education for such student.

(b) No court, department, or agency of the United States shall, pursuant to section 402, order the implementation of a plan which would require the transportation of any student in the seventh grade or above to a school other than the school closest or next closest to his place of residence which provides the appropriate grade level and type of education for such student, unless it is demonstrated by clear and convincing evidence that no other method set out in section 402 will provide an adequate remedy for the denial of equal educational opportunity or equal protection of the laws that has been found by such court, department, or agency. Such plan shall only be ordered in conjunction with the development of a long-term plan involving one or more of the remedies set out in clauses (a) through (g) of section 402. If a United States district court orders implementation of a plan requiring transportation beyond that described in this subsection, the appropriate court of appeals shall, upon timely application by a defendant educational agency, grant a stay of such order until it has reviewed such order.

(c) No court, department or agency of the United States shall require directly or indirectly the transportation of any student if such transportation poses a risk to the health of such student or constitutes a significant impingement on the educational process with respect to such student.

DISTRICT LINES

SEC. 404. In the formulation of remedies under section 401 or 402 of this Act, the lines drawn by a State, subdividing its territory into separate school districts, shall not be ignored or altered except where it is established that the lines were drawn for the purpose, and had the effect, of segregating children among public schools on the basis of race, color, sex, or national origin.

VOLUNTARY ADOPTION OF REMEDIES

SEC. 405. Nothing in this Act prohibits an educational agency from proposing, adopting requiring, or implementing any plan of desegregation, otherwise lawful, that is at variance with the standards set out in this title, nor shall any court, department, or agency of the United States be prohibited from approving implementation of a plan which goes beyond what can be required under this title, if such plan is voluntarily proposed by the appropriate educational agency.

AMENDMENT OFFERED BY MRS. GREEN OF OREGON

Mrs. GREEN of Oregon. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mrs. GREEN of Oregon: Title IV is amended as follows: (a) Section 403, page 37, line 5 is amended by striking out "in the sixth grade or below";

(b) Section 403., beginning on page 37, line 9 and continuing on page 38 through line 3 is amended by striking all of paragraph (b);

(c) Section 403., page 38, line 4 is amended by striking out the letter "c" and inserting in lieu thereof the letter "b";

(d) Adding at the end thereof the following new sections:

"REOPENING PROCEEDINGS

"SEC. 406. On the application of an educational agency, court orders, or desegregation plans under title VI of the Civil Rights Act of 1964 in effect on the date of enactment of this Act and intended to end segregation of students on the basis of race, color, or national origin, shall be reopened and modified to comply with the provisions of this Act. The Attorney General shall assist such educational agency in such reopening proceedings and modification.

"LIMITATION ON ORDERS

"SEC. 407. Any court order requiring, directly or indirectly, the transportation of students for the purpose of remedying a denial of the equal protection of the laws shall, to the extent of such transportation, be terminated if the court finds the defendant educational agency is not effectively excluding any person from any school because of race, color, or national origin, and this shall be so, whether or not the schools of such agency were in the past segregated de jure or de facto. No additional order requiring such educational agency to transport students for such purpose shall be entered unless such agency is found to be effectively excluding any person from any school because of race, color, or national origin, and this shall be so, whether or not the schools of such agency were in the past segregated de jure or de facto.

"SEC. 408. Any court order requiring the desegregation of a school system shall be terminated, if the court finds the schools of the defendant educational agency are a unitary school system, one within which no person is to be effectively excluded from any school because of race, color, or national origin, and this shall be so, whether or not such school system was in the past segregated de jure or de facto. No additional order shall be entered against such agency for such purpose unless the schools of such agency are no longer a unitary school system.".

(Mrs. GREEN of Oregon asked and was given permission to proceed for 5 additional minutes.)

PARLIAMENTARY INQUIRY

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentlewoman yield for a parliamentary inquiry?

Mrs. GREEN of Oregon. I yield to the gentleman.

The CHAIRMAN. The gentleman will state the parliamentary inquiry.

Mr. STEIGER of Wisconsin. Mr. Chairman, the amendment offered by the gentlewoman from Oregon amends several sections in title IV.

My parliamentary inquiry is whether or not it is possible to have a separate vote on each of the substantive sections included in the gentlewoman's en bloc amendment?

The CHAIRMAN. In response to the parliamentary inquiry, the Chair will state at this point it would be appropriate and proper to ask for separate votes on amendments to the different sections.

However, in the event a substitute is offered and agreed to, that procedure cannot be followed.

Mr. STEIGER of Wisconsin. But there could be separate votes?

The CHAIRMAN. The gentleman can demand a separate vote and the Chair will preserve his right to do so, subject to the condition that a substitute, if offered, is not agreed to.

The gentlewoman from Oregon is recognized for 10 minutes.

Mrs. GREEN of Oregon. Mr. Chairman, I know that the hour is growing late and I am sure that all of us, regardless of which side of the issue on which we stand, are a bit weary of the total busing controversy.

But I do suggest that parents—millions of parents in the United States are even more weary of having their schools thrown into chaos and the constitutional rights of their children being ignored.

Now the amendment, which is a single amendment, although it does affect various sections, is the amendment to which I referred earlier this afternoon. Earlier, I said that I could not vote for this bill unless there are some amendments approved that, in my judgment, would strengthen it.

Without these amendments, it seems to me, we give congressional approval to busing and specifically authorize busing for youngsters from the seventh grade up.

This amendment was worked on by a group of people, and I pay my respects to the gentleman from North Carolina (Mr. RUTH) who did the major amount of work on this.

Earlier in the day, as I mentioned, it was he who was going to offer this amendment, but for some reasons that I will not take the time to go into, I find myself offering the amendment and I hope that you will support it. I support EARL RUTH's views and believe we are not in any disagreement on these four parts of this amendment. He is a great legislator; his delightful sense of human so often serves the legislative process very well. When tensions are high, he has that knack of saying just the right thing to get us all back on the track.

In the discussion today, at least as I see it, we are not talking about busing out of choice to achieve an educational purpose. We are not talking about a family with children who buy a farm and know when they purchase the farm that there is no school nearby and that they will bus their children 9 miles or 15 miles or 30 miles; this was their decision, not a Government decision. It was a decision based entirely on their choice.

We are talking about a family who establish residence in a particular area and where a major factor that entered into buying their home or establishing their residence there was the school in that area which they had every right to expect their children to attend.

What we are really talking about in this whole debate today is not voluntary busing but forced busing: the force of the Government versus the freewill choice of a family.

The amendment which I offer to the House this afternoon first of all goes to section 403. It strikes out the lines, "in the sixth grade or below" and then strikes out all of subparagraph (b) which in effect says that it is all right to bus children in the seventh grade and above. I concede that I am not a lawyer, and there may well be technical points of the law which I do not understand. But I must say to you I do not understand the logic nor the constitutional justification in this House saying that it is all right to bus children from the seventh grade up but you cannot bus youngsters from the sixth, and fifth and on down to the first grades. I cannot accept the logic.

I never knew that constitutional rights were in one case available for seventh-graders if they were 13 years of age, and were not available to sixth-graders if they were 12 years of age. This seems to me a glaring inconsistency in the bill, so I propose to strike that.

The second part of the amendment, Mr. Chairman, goes to reopening proceedings. This is section 406. It enables schools that are under court orders to reopen proceedings. This makes for justice and fairness, and in my judgment it would be a very hollow victory if the bill did not contain this provision.

We have debated on the floor of this House many times the uniform administration of guidelines and rules and regulations, but I suggest—and it is not out of bitterness or anything else—but I suggest that the full impact of the court orders on busing were not really brought to the membership of this House until there were certain court decisions in Detroit and other northern cities.

By this particular part of the amendment, it simply seeks to correct what I think has been a terrible injustice by treating one section of the country differently from others. So we say they could reopen the cases.

The next part of the amendment, Mr. Chairman, restores, with amendments, sections 407 and 408, the limitation of orders. This refers to court orders and the thrust is that any court order requiring transportation of students shall terminate if the educational agency is found not to have effectively excluded any person from any school because of race, color, or national origin. It defines a unitary school as one that has not denied any students attendance because of race, color, or national origin. So, it restores section 407 and 408 with amendments.

The Attorney General shall enter into the case if the educational agency asks for the court order to be reopened.

That, Mr. Chairman, is the summary of the amendment that I have offered. I have offered it as a single amendment. It would be my hope that it would be considered and voted upon as a single amendment because together the four parts make a package that seems to me will go to the heart of what we are talking about today.

Mr. BROOMFIELD. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Michigan.

Mr. BROOMFIELD. Mr. Chairman, I rise in support of the amendment offered by my distinguished colleague, Mrs. EDITH GREEN.

It is no secret that I have long been opposed to forced busing. I have found that too often court-ordered busing is as impractical as a tool of desegregation as it is cruel in its application. In recent months the entire Detroit metropolitan area comprising 53 independent school districts has been faced with the threat of consolidation and the prospect of extensive cross district busing.

Fortunately, that order has been stayed pending a hearing of appeal, and thanks to the congressional moratorium on busing orders pending the outcome of appeals which I was pleased to sponsor, the people of Detroit will be spared busing while Congress gets to the task of legislating an end to this problem once and for all.

The President's Equal Educational Opportunities Act is a substantial and important new step in the direction of providing a quality education to all of our children without more busing. This measure may not be the final answer but it is a substantial beginning.

The Green amendment, the so-called reopener clause, is a logical and I think a necessary extension of the President's proposal. This measure seeks to prescribe an orderly and uniform system of priorities and procedures which must be met before more busing is ordered. I think that is a good idea, especially if you consider the confusing and conflicting busing decisions that have been handed down throughout this country in the past few years.

The Green amendment seeks merely to extend the same restrictions which this bill will place on future busing cases to those cases which have been decided in the past.

Mr. Chairman, it is a fundamental proposition that our laws must be equally applied across the board for everyone if they are to be really fair. Without this amendment we will be using one yardstick to measure the requirements of those school districts which have had to bus in the past and another for those who may have to bus in the future.

That makes very little sense. In my own congressional district the city of Pontiac has complied with court ordered busing since last year. Without this amendment, that busing will continue next year with no hope of relief from this bill.

Yet, in a different city, at some future time after the passage of this bill much of that some sort of busing would be illegal.

Mr. Chairman, the people of Pontiac, Mich., along with Americans all over this country are curious to know why they must continue to bus under orders which, if issued today, would be invalid.

Why should they be forced to conform to one strict standard while the rest of the Nation finds relief from this measure.

Mr. Chairman, I know from my own experience that in many instances forced busing is as ill advised educationally as it is disruptive socially. Busing rather than uniting Americans has been an irritating and disruptive mistake. I feel certain that many of my colleagues here today have shared similar experiences and hold similar opinions.

If forced busing is a mistake, and I feel it is, then why do not we freely admit it. Instead of merely changing the law to prevent additional school districts from suffering, we should open the doors of the courthouse for those schools which have unjustly suffered from the mistakes of busing in the past.

They should be allowed to return to court to have a reexamination of their cases conducted under the light of these new busing limitations.

In conclusion, Mr. Chairman, I feel that the Green amendment is fair in theory and further I am confident that it will prove fair and reasonable in effect. I therefore recommend its passage.

Mr. THOMPSON of Georgia. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Georgia.

Mr. THOMPSON of Georgia. Mr. Chairman, I thank the gentlewoman for yielding.

I would like to try to write a little legislative history here because I think it is very important. Earlier in the day we had a discussion about Katzenbach against Morgan and the fact that in that decision it was specifically provided or stated this Congress under section 5 of the 14th amendment does have the power to implement the provisions of the 14th amendment and through legislative action.

Is this amendment being offered specifically through the power of Congress to implement equal protection of the laws for all, sixth grade or fifth grade or 10th grade or whatever it may be, for all students? Is this where the gentlewoman is basing this decision, the power of the Congress to legislate the implementation of equal protection of law?

Mrs. GREEN of Oregon. The amendment limits the extent of the busing that may be ordered.

Mr. THOMPSON of Georgia. Mr. Chairman, if the gentlewoman will yield further, in doing this as a basis of authority for this, is the gentlewoman basing this upon the authority of the Congress as contained in the Constitution, the 14th amendment, fifth section?

Mrs. GREEN of Oregon. That is right.

Mr. THOMPSON of Georgia. I thank the gentlewoman.

AMENDMENT OFFERED BY MR. O'HARA TO THE AMENDMENT OFFERED BY MRS. GREEN OF OREGON

Mr. O'HARA. Mr. Chairman, I offer an amendment to the amendment offered by the gentlewoman from Oregon (Mrs. GREEN).

The Clerk read as follows:

> Amendment offered by Mr. O'HARA to the amendment offered by Mrs. GREEN of Oregon: Strike out paragraphs (a), (b) and (c) on page 1 of the amendment and insert "Beginning on Page 37, line 1, strike everything through Page 38, line 8, and insert in lieu thereof the following new section:
>
> "TRANSPORTATION OF STUDENTS"
>
> "SEC. 403. No court, department or agency of the United States shall, pursuant to section 402, order the implementation of a plan that would require the transportation of any student to a school other than the school closest to his place of residence which provides the appropriate grade level and type of education for such student."
>
> And redesignate succeeding paragraphs accordingly.

Mr. O'HARA. Mr. Chairman, the purpose of the amendment is to completely prohibit busing of students as a remedy in a desegregation case. The amendment offered by the gentlewoman from Oregon goes part way in that direction but does not go the rest of the way. The language of the section of the bill which is found at the top of page 37 says:

> No court, department, or agency of the United States shall, pursuant to section 402, order the implementation of a plan that would require the transportation of any student in the sixth grade or below to a school other than the school closest or next closest to his place of residence which provides the appropriate grade level and type of education for such student.

The gentlewoman from Oregon proposes to strike the words "in the sixth grade or below" and I am completely in accord with that. I would propose also to strike the words "or next closest" which the gentlewoman's amendment does not do.

The reason for this, Mr. Chairman, is that busing is either correct or it is incorrect. I do not know what is better about the next closest as compared to the second next closest, or the third next closest, or the 10th next closest.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Just a point of information. As I understand the amendment the gentleman has offered, he also would strike subsection (c) on page 38.

Mr. O'HARA. Yes, because if we have gotten rid of orders that require transportation completely then we do not need (c). We need (c) only if we keep in the words "or next closest." We do not need (c) if we take out the words "or next closest."

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from Ohio.

Mr. ASHBROOK. I believe the gentleman may have answered a question I was going to raise. One of the concerns I have about the amendment offered by our colleague from Oregon, consistent with what she said earlier this afternoon about this legislation encouraging rather than discouraging forced busing is this: By leaving (c) in, to my way of thinking, would not we encourage busing? Do I understand the gentleman to say his amendment would have the effect of knocking out paragraph (c)?

Mr. O'HARA. Yes. My amendment knocks out both (b) and (c). The gentlewoman's amendment would knock out just (b). But we do not need (c) if we get rid of that "next closest" in my amendment.

Mr. ASHBROOK. I agree with the gentleman, and I give him my wholehearted support.

Mr. O'HARA. I thank the gentleman from Ohio.

Mr. THOMPSON of Georgia. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from Georgia.

Mr. THOMPSON of Georgia. Is the gentleman's amendment an amendment to the amendment or a substitute?

Mr. O'HARA. It is an amendment to the amendment offered by the gentlewoman from Oregon.

Mr. THOMPSON of Georgia. It does not delete that portion of the amendment of the gentlewoman from Oregon providing for the reopening of cases?

Mr. O'HARA. No. It does not affect that in any way.

Mr. CLAY. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from Missouri.

Mr. CLAY. Will the gentleman explain to this body what he means when he makes the statement that busing is either correct or it is not correct?

Mr. O'HARA. Yes. It is my thesis and the thesis, apparently, of a number of Members of the Congress, that assignment of students on the basis of their color and transporting them to schools on the basis of their color is an inappropriate remedy for a 14th amendment violation. I would hold that it is inappropriate whether it is the second closest school or the 25th closest school.

Mr. CLAY. Pardon me. Whether the busing is inappropriate, or the busing of black children into white schools or vice versa is inappropriate is the question. Let us get down to the point.

Mr. O'HARA. Busing, when used to carryout a system of racial assignments, I believe to be wrong under the equal protection clause.

Mr. CLAY. I believe honestly would dictate if the gentleman believes busing is incorrect the amendment should be to outlaw busing, period, to any school.

Mr. O'HARA. No. I do not agree that there is no difference between busing for the purpose of carrying out racial assignments and busing to provide a child with transportaiton to the nearest school, if that school is somewhat distant. I think there is a great deal of difference.

SUBSTITUTE AMENDMENT OFFERED BY MR. QUIE FOR THE AMENDMENT OFFERED BY MRS. GREEN OF OREGON

Mr. QUIE. Mr. Chairman, I offer a substitute for the amendment offered by the gentlewoman from Oregon (Mrs. GREEN).

The Clerk read as follows:

Amendment offered by Mr. QUIE as a substitute for amendment offered by Mrs. GREEN of Oregon: Title IV is amended by adding the following new sections:

"REOPENING PROCEEDINGS

"SEC. 406. On the application of an educational agency, court orders, or desegregation plans under title VI of the Civil Rights Act of 1964 in effect on the date of enactment of this Act and intended to end segregation of students on the basis of race, color, or national origin, shall be reopened and modified to comply with the provisions of this Act. The Attorney General shall assist such educational agency in such reopening proceedings and modifications.

"LIMITATION ON ORDERS

"SEC. 407. Any court order requiring, directly or indirectly, the transportation of students for the purpose of remedying a denial of the equal protection of the laws shall, to the extent of such transportation, be terminated if the court finds the defendant educational agency is not effectively excluding any person from any school because of race, color, or national origin, and this shall be so, whether or not the schools of such agency were in the past segregated de jure or de facto. No additional order requiring such educational agency to transport students for such purpose shall be entered unless such agency is found to be effectively excluding any person from any school because of race, color, or national origin, and this shall be so, whether or not the schools of such agency were in the past segregated de jure or de facto.

"SEC. 408. Any court order requiring the desegregation of a school system shall be terminated, if the court finds the schools of the defendant educational agency are a unitary school system, one within which no person is to be effectively excluded from any school because of race, color, or national origin, and this shall be so, whether or not such school system was in the past segregated de jure or de facto. No additional order shall be entered against such agency for such purpose unless the schools of such agency are no longer a unitary school system.".

Mr. QUIE (during the reading). Mr. Chairman, I ask unanimous consent that the substitute amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

Mrs. ABZUG. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk concluded the reading of the substitute amendment.

The CHAIRMAN. The gentleman from Minnesota is recognized for 5 minutes in support of his amendment.

PARLIAMENTARY INQUIRY

Mr. ECKHARDT. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. Does the gentleman from Minnesota yield to the gentleman from Texas for a parliamentary inquiry?

Mr. QUIE. I will yield to the gentleman.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. ECKHARDT. The parliamentary inquiry is whether or not the first portion of the amendment was separated from the latter portion as was urged at an earlier time and I think at a proper time. This, it seems to me, is an amendment to the second portion and as I understood it, the Chair recognized the right of the gentleman to insist on a separation between the two amendments.

The CHAIRMAN. The gentleman's inquiry goes to the substitute offered by the gentleman from Minnesota with regard to separating?

Mr. ECKHARDT. That is right. As I understand the amendment before us now, it is to the first amendment which, as I understood it, was separated from the second.

The CHAIRMAN. The Chair is not entirely sure the Chair understands the gentleman's inquiry. Let the Chair state that the original amendment offered by the gentlewoman from Oregon (Mrs. GREEN) contains four separate elements. Inquiry was made by the gentleman from Wisconsin (Mr. STEIGER) as to whether it would be proper to divide those questions and ask for a separate vote. The Chair advised that in the event the substitute is not agreed to, the gentleman's rights would be protected, and he could ask for a separate vote on each of the four propositions in the amendment offered by the gentlewoman from Oregon (Mrs. GREEN).

Is the gentleman asking the same inquiry or asking about a division of the substitute offered by the gentleman from Minnesota?

Mr. ECKHARDT. What is the parliamentary situation with respect to the matter we are working on now?

The CHAIRMAN. The Chair will state to the gentleman from Texas that the substitute offered by the gentleman from Minnesota (Mr. QUIE) cannot be divided for a separate vote, whereas the original proposition by the gentlewoman from Oregon can be divided in the event that a substitute is not agreed to.

Mr. ECKHARDT. Thank you.

Mr. QUIE. Mr. Chairman, first I want you to know I am completely opposed to the O'Hara amendment which would prohibit any busing at all any place, which would be completely unconstitutional. I do not see how it could be anything else from the recent decisions of even the Supreme Court, and the Swann decision. However, my big concern in this legislation is that the House will go too far and remove provisions which draw a rational and, I believe, constitutionally required distinction, between the extent of busing of pupils in the sixth grade and below and those in the seventh grade and above. The Supreme Court itself has recognized that the age of the students bused is a critical factor in these cases.

Chief Justice Burger, in the opinion in Swann against Board of Education, in discussing limitations on busing which district courts should consider stated:

> It hardly needs stating that the limits on time of travel will vary with many factors, but probably with none more than the age of the students.

This certainly is a major consideration in limiting elementary school transportation which can be ordered to the nearest or next nearest school which provides the appropriate grade level and type of education for the student.

At the seventh grade and above, the bill applies the same formula of "nearest or next nearest school" but it permits these limitations to be exceeded if a list of other remedies is examined and found not to be effective. It is not absolute at the seventh grade and above. From the cases I have reviewed, and from the testimony of distinguished constitutional lawyers who favor this bill—such as Prof. Robert Bork of Yale Law School—I am convinced that if we remove the distinction, that if we legislate an absolute bar to busing beyond the nearest or next nearest school at the seventh grade and above, we shall have rendered the legislation unconstitutional.

And so I urge my colleagues to reject that course of action and to stay with that committee bill. Our purpose here is to give guidance to the courts and to place effective, workable limits upon busing as a remedy. That purpose would be destroyed if the courts are forced to strike down the act as unconstitutional.

There are other rational and sound reasons for making the distinction and for placing an absolute limitation on busing at the sixth grade and below which may not be exceeded. The age of the student was mentioned by the Chief Justice. This bears upon the educational process as well. Traditionally, our elementary schools are our neighborhood schools, and we are increasingly finding that school programs for younger children are more effective when the parents and the community are closely involved in these programs. This is particularly true of programs to help disadvantaged students. When these children are bused out of their neighborhoods, and particularly to schools so distant that their parents feel no identification with them, then we have lost the proven educational value of parental involvement. So there is a very sound educational reason why we make this distinction.

I am told by my colleagues who are lawyers that the fact that the legislature has made a rational and, in its judgment, valid distinction in matters of this kind bears heavily upon the constitutionality of their action, when that is at issue. There is always the presumption that a legislative act is constitutional, but that presumption is overcome when it appears to be an arbitrary or capricious action. There is nothing arbitrary or capricious about the distinction made by this bill—it is based upon a large and growing body of evidence that parental and community involvement in school programs at the elementary level is an essential ingredient if they are to serve their purpose.

My substitute drops the changes of the Green amendment to section 403, the remedies section, but leaves in the new section 406, which is the reopener and leaves in the limitations on orders, which says as soon as the school district becomes a unitary system, that the court then can remove the order and they could be on their own. The question comes before us as to whether under the Green amendment, we should prohibit, absolutely prohibit, the courts from ruling or providing an order that grades seven and above cannot be bused any further than the second closest school.

Now, we provide in the legislation that before there can be any busing, all the other remedies have to be attempted, including closing schools, building new schools, putting in magnetic schools, and all the other remedies before ordering busing. If this does not bring about elimination of de jure segregation, or provide for the equal protection of the law, and busing them to the closest or the second closest school does not either, busing further may be ordered for those in seventh grade and above if the need is demonstrated by clear and convincing evidence that none of the methods in section 402 provide an adequate remedy.

However, we do put a limitation, that you cannot go any further than the second-closest school for the sixth grade and below. And that is the only place in the legislation, without amendment, that some seem to have a question on its constitutionality. But here the court itself has looked at the lower grades as being different than the higher grades because there is more likelihood, as they have said, that transportation could be harmful to their health or impinging on the educational process, and that is why the administration reached this decision in the legislation.

Most of the objection to busing is against busing elementary children out of their community. But I do not know how we can here say that the court should be denied the use of that remedy in the high schools, because I doubt that by being isolated from the community is necessarily going to be harmful to education in the high schools. The question here is constitutional rather than preference. I would prefer all children got to their neighborhood school.

As I said earlier this afternoon, there is no problem with young people going all over the country to college, and so if the year before they should travel to the third closest school I doubt that that is going to hurt them in what we look for here as the procurement of equal educational opportunity and equal protection of the law.

I believe the courts have been in danger of really preventing equal educational opportunity when they bus small children too far. I cannot imagine in the city of Detroit that it will do anything different than that, if they bus small children from 50 or more different districts. I think that is unreasonable.

I believe from everything I have learned that the Congress can set standards, but we had better stay close to the administration bill.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. QUIE. Mr. Chairman, I ask unanimous consent that I may be permitted to proceed for 3 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

Mr. CELLER. Mr. Chairman, reserving the right to object, will the gentleman yield to me and respond to a question that I will propound to him?

Mr. QUIE. Yes, I will yield to the gentleman from New York.

Mr. CELLER. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. QUIE. I yield to the gentleman from New York.

Mr. CELLER. Mr. Chairman, I would ask the gentleman from Minnesota what cases under his proposal this would reopen, and what cases could be modified, how many, and to what date could this go?

Mr. QUIE. The gentleman from New York has asked me how many cases this would affect. Do you ask which cases could be reopened by this reopener?

Mr. CELLER. How far back would you go?

Mr. QUIE. How far back could we go?

Mr. CELLER. Yes.

Mr. QUIE. You can go to any case.

Mr. CELLER. Can you go back to the 1954 Brown decision?

Mr. QUIE. You can go all the way.

Mr. CELLER. There is no limitation?

Mr. QUIE. No.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. Mr. Chairman, I think it should be made clear that the reopener which is in the Quie substitute is identical with the reopener in the GREEN amendment.

Also I believe that the reopener in either case would go back at least to any case where there is continued court jurisdiction. That is my judgment; it might be broader.

Now, as to what precise cases this would cover in each instances, I cannot cite the cases. However, I think that wherever there is a continued court jurisdiction they are covered and possibly to a broader extent.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman.

Mr. WAGGONNER. Mr. Chairman, I have asked the gentleman to yield for the purpose of pursuing for a moment the statement made by the gentleman from Michigan (Mr. GERALD R. FORD).

It makes no difference how far it goes back, because the only relief to be granted wherein cases are reopened, if this becomes law, is that same relief which is provided for those who have not yet been subjected to court orders. They would only be modified to the extent that those which have not yet had court orders finalized would gain relief. It is simply a matter of equity.

Mr. CELLER. Would that pertain to cases that were reopened and would have been decided by the U.S. District Court, the U.S. Court of Appeals and by the Supreme Court; is that correct?

Mr. QUIE. That is correct.

Mr. CELLER. About how many cases would that involve?

Mr. QUIE. Well, we do not know how many cases would be involved because I do not have the number of cases that have transportation involved.

As I recall, many of the earlier court orders did not involve transportation and, naturally, that would be a different situation.

Now in late years, practically all of the cases have involved transportation and, therefore, if they are under court order at the present time—they could if they don't comply with the transportation limits of this act.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman.

Mr. PUCINSKI. I think it is important to point out here, when we are talking about the reopener, the only ground for reopening is to comply with the provisions of this act.

So those who tell you that there is going to be a wholesale reopening all over the country have completely ignored the fact that the limitation is to comply with the provisions of this act. That is why I think the reopener makes a lot of sense. If you are going to treat northern schools one way, certainly you ought to have the same standard for the whole country.

Mr. QUIE. Mr. Chairman, I just want to make this statement.

This issue before us now on my substitute, is not the reopener or limitation on orders since Mrs. GREEN's amendment and mine are the same in this regard.

The issue is section 403 (a) and (b) and also the change in the entire section 403, as proposed by the gentleman from Michigan (Mr. O'HARA). Here is where I believe we have to make certain that we do not make this legislation unconstitutional or else it is just as impossible to make any changes in the problems that face us now with people being so emotionally upset by crosstown busing of elementary school children

Now on the reopener part of it, which I support—I think it is just fair. I do not think we should penalize the people of the South just because they are southerners and then let everybody else under new court orders operate under this bill. Let us treat everybody alike across the country. The only way to do that is if you permit the reopener.

(Mr. DERWINSKI asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. DERWINSKI. Mr. Chairman, I rise in support of this amendment and feel it is absolutely essential if in this bill Congress will truly solve all the problems caused by arbitrary court-ordered busing plans.

School District 151, Cook County, Ill., in my district, has been subjected to a very strict court-ordered busing program since 1968. The district has had nothing but growing problems traced primarily to the adverse effects of the arbitrary court order, which was concerned only with busing for racial quota purposes and not at all concerned with improving educational facilities or standards.

I believe some statistics on the adverse effect of court-ordered busing on this one school district are in order, and I am sure these statistics can be substantiated by other Members who are aware of similar problems in their own school districts.

The district's racial composition has changed from 30 percent black to 45 percent black with an adverse change in enrollment from an anticipated enrollment of 2,800 to only 1,760 in September 1972. For every five homes constructed in the area since the court order, the district receives only one student, clearly indicating that parents are enrolling their children in private schools.

The reduction of staff, the closing of buildings and the possibility of reducing school programs has negated the positive aspects of a quality school program, which the Board had hoped to implement.

Mr. Chairman, time does not permit me to go into much more detail except to reemphasize that unless this amendment is accepted there will be no relief under this bill for school districts, such as the one I refer to, which have already been feeling the adverse effects of court-ordered busing. Therefore, I support the amendment as logical addition to the bill.

Mr. BELL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise to strike section 406 of the substitute.

This provision would require the reopening of old and settled desegregation cases which many of us have been arguing about for years.

It strikes at the heart of our total civil rights progress from 1954 to the mid-1960's.

If you think that by supporting this provision you are merely further getting on record against busing, you are wrong.

You are in the process of turning the clock back on the whole civil rights progress that has been made in this Nation.

The same committee that reported out this antibusing bill voted down the reopening proceedings section—and it did so after extensive hearings and discussion.

It did so because of the realization that of all the provisions contained in the original bill, this one is the most insidious in its anti-civil-rights purpose and ramifications.

It encourages injustice and guarantees chaos in the Federal courts.

Some have argued that this section is needed to assure equal treatment of North and South.

Those who make this argument overlook the fact that the courts do not need a law to tell them when they can modify their own decrees.

In Brown two, the Supreme Court set out the manner in which the rights guaranteed by Brown one were to be implemented.

While placing the primary burden on the local school systems, the Court made clear that this burden would be subject to the continuing jurisdiction of the lower Federal courts exercising their equity jurisdiction.

And as every lawyer Member of this body knows, once equity takes jurisdiction, it retains it for all purposes.

It should be clear, then, that this provision is not intended to permit the courts to modify their decrees—they can already do that.

It is intended to require that old cases, with voluminous and often obsolete evidence, be reopened, relitigated, rehashed.

Rehearing these cases would impose a financial burden of unprecedented magnitude on civil rights groups who would be forced to fight again battles they won years ago.

And there would be neither money, lawyers, nor court time left over to secure rights not yet vindicated.

Another argument we have heard is that this provision applies only to a few cases involving excessive busing orders.

But the language is so broad that it can apply to virtually every one of the several hundred orders still in effect—whether or not they involve transportation.

This is not an antibusing provision.

It is an anti-civil-rights provision.

Our Nation and its people suffered enough from troops in the schools, fire bombs, police dogs, and beatings.

Is that an era we really want to return to?

If you want to start another rhubarb in this country, then just vote for this provision, vote for a return to the era of fire bombs, vote for chaos in the Federal court system, vote for reopening old wounds, vote for injustice.

Mr. Chairman, this is the real purpose of this provision.

I urge that it be defeated.

Mr. CORMAN. Mr. Chairman, will the gentleman yield?

Mr. BELL. I yield to the gentleman from California.

Mr. CORMAN. Mr. Chairman, I ask to be associated with the remarks of the gentleman from California (Mr. BELL).

Mr. MEEDS. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the Quie substitute.

Mr. HOGAN. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Maryland.

Mr. HOGAN. Mr. Chairman, I rise in support of the Green amendment as I have supported and will support all amendments to strengthen the bill before us today, the Equal Educational Opportunities Act of 1972.

I oppose the assignment of children to a particular school because of the color of their skin. It was wrong when it was done to maintain segregated schools and it is wrong when it is done to maintain artificial racial balance in the schools.

If we are ever going to solve the racial strife in this country, we must reach a point where the color of a person's skin makes no difference in where he goes to school, where he lives or what kind of job he gets. We must eliminate all remnants of discrimination in education, housing, and employment. Busing for racial balance is not the answer. It solves no problems and is disruptive of the education of our children.

The Green amendment would prohibit courts from ordering the implementation of any plan that would require busing a child past the nearest or next nearest school to his home, not only in the sixth grade and below, as in the committee bill, but of any student of any grade of direct interest to me.

Mr. Chairman, the Green amendment would also keep Prince Georges County in its dispute with the Department of Health, Education, and Welfare. It would allow the school board to have reopened and modified any court order or HEW citation for noncompliance with the Civil Rights Act. The Attorney General of the United States would assist in the legal proceedings to reopen and modify these orders.

In my opinion this amendment would completely terminate any order which the U.S. District Court at Baltimore might hand down to the Prince Georges County School Board.

I urge my colleagues to support the Green amendment to demonstrate effectively to the courts and HEW that this body—the House of Representative, the people's House—believes that the purpose of schools is to educate children, not to engage in a disruptive scheme of social manipulation.

Mr. Chairman, I would like to relate one of the experiences of the Prince Georges County School System regarding busing, because it relates to the bill before us.

In addition to a citation which HEW leveled against it, the Board of Education of Prince Georges County is involved in a suit in the U.S. District Court for Maryland. The plaintiffs are represented by attorneys of the American Civil Liberties Union and the National Association for the Advancement of Colored People. The court has ordered a plan to bring the school system into "total compliance with the Brown-Swan standards" by 10 a.m. August 22, 1972.

It is impossible to design a plan to satisfy the court without destroying the concept of neighborhood schools.

Prince Georges County School System is greater in size than Washington, Baltimore and all the area in between. One could take the map, cut out Prince Georges County and superimpose it over Baltimore, Washington, and the area in between and it would cover it completely. The system covers an area eight times as large as the District of Columbia. It has more pupils than the District of Columbia and is the 10th largest system in the Nation. At the present time, the budget for busing in Prince Georges County is approximately $6 million a year. The Prince Georges County school system has more than 700 buses, about the same as the combined fleets of the public bus companies: A. B. & W., Virginia; WBM, Virginia; and WMA, Maryland. The Prince Georges County school bus fleet is five times larger than WMA which handles public transportation for Prince Georges County. It is three times larger than A. B. & W. which not only handles public transportation, but also school transportation for the Alexandria, Virginia schools.

There are 230 schools in the Prince Georges County school system. Of these, 18 are senior high and 43 junior high schools. The school system has 160,000 students.

In short, busing of Prince Georges County school students is already big business.

Some county schools are racially unbalanced because the neighborhoods they serve are racially unbalanced.

Prince Georges County is the one area where blacks have been able to find housing with relative ease. There are more black-owned homes in Prince Georges County than all the rest of the Washington suburban areas combined. The percentage of Negroes in Prince Georges County is increasing at a far greater rate than in the rest of the Washington metropolitan area.

In the 1971–72 school year the number of black students for Prince Georges County increased by 4,500. The number of whites decreased by 2,500 leaving a net increase for black and white of 2,000. Although Prince Georges County, with an 80 percent growth, was among the Nation's fastest growing counties in the past decade, it can be seen that the racial balance is changing far greater than the total growth as these figures indicate. Many parents will not allow their children to be bused past their neighborhood school. Many are putting their children in private schools and many others are moving from the county.

One can picture an imaginary black-white demarcation line bulging out into Prince Georges County. An example is Dodge Park elementary school some 6 miles from the District of Columbia line. In 1968, black students constituted one-quarter of 1 percent of the student body. In 1971 blacks were 25 percent. In 1972, they will exceed 30 percent. You have the "domino" effect when you bus for racial equalization. One school after another becomes black and requires more busing.

In summary, the growth rate of blacks and the way it comes about makes mockery of any attempt to "comply with the Brown-Swain standards to the fullest extent." The neighborhood school concept is abandoned and new busing plans must constantly be revised to maintain an artificial racial balance as the racial balance in the neighborhoods is constantly changing The net result is a changing racial standard which has no static meaning. The standard was 12 percent 5 years ago, 22 percent today, and will be 33 percent 5 years hence. And the Brown decision was handed down over 15 years ago.

Transportation is not the only element in busing for racial balance. Prince Georges County schools now begin as early as 7:30 a.m. and end as late as 4 p.m. I am told that no other system in Maryland has these extremes. Busing times should not be considered in terms of averages, but in terms of maximums. Prince Georges County, in extreme cases, has a 90-minute schedule. Educators tell us that it is undesirable for schools to have more than one starting time but some have three. When there is more than a single starting time, it is impossible to tell whether a student on school property is in class or not.

Many people have related individual busing problems to me. The Committee for the Advancement of Red America—Indians—points out the Court order relates to blacks whereas it should relate to other minorities as well. The question raised is whether Indians in the county are to be racially balanced. The Indian mother of four called and asked what happens to her offspring, are they counted as white or black? There are also 14,586 Spanish-speaking residents of the county many of whom have a language problem. Are these students also to be "balanced"? I have previously related the story of the black mother of seven who already sends her children to five different schools at four different times. And who has three junior high school students attending three different schools.

Under the Board's staff plan for the full 1972 session the seniors of senior high schools could be at one school, the juniors and sophomores at another, the junior high students at still another and the elementary at again another. Thus a family with several children is faced with children attending many schools and living by many bus schedules.

Perhaps, if schools open early enough, close late enough, bus long enough, stagger hours and ignore individual considerations that racial balance can be achieved with a "minimum" of busing. In effect, the students ride segregated buses to desegregated schools at the expense of the education of both bused and non-bused students.

The Prince Georges County board in an effort to comply with the order of the district court has directed its staff to proceed immediately to develop plans for desegregation of the county's secondary schools, under the following guidelines and constraints:

Each school shall reasonably reflect the overall racial composition of the county school system, and in no circumstance shall any school have a majority of a minority race. Specifically, the attainment of a standard of not more 35 percent black student body is deemed to be the optimum practical means of achieving such results. Mr. Speaker, it strikes me as being a racist concept to say that the only way that black children can get an adequate education is if they have the great honor and privilege of going to a school that has a majority of whites in it.

That to the extent possible, such a plan require the least amount of additional pupil transportation consonant with achieving the degree of racial balance stipulated in above.

That no schools, as a result of implementation of such plan, operate at more than 2 percent over its seating capacity.

That, in adjusting senior high attendance areas, the existing senior class may complete its attendance at its current school; accordingly that in computing the racial balance of a senior high, consideration be directed solely to grades below the 12th.

That plans for the desegregation of existing senior high schools be developed so that, if reasonable, they could be implemented by September 1972, and that plans for desegregation of existing junior high schools be developed so as to enable them to be implemented as soon thereafter as is feasibly possible, but in no case later than the opening of the second semester in February of 1973.

The board further instructed that the staff be directed to continue to develop plans for desegregation of the county's elementary school system, such plans to become effective with the opening of school in September 1973 and that the staff be directed to continue to achieve faculty and administrative staff desegregation in accordance with past board policies and directives.

Mr. Chairman, the Prince Georges County School Board is an appointed board, not an elected body. It reflects essentially the will of the Governor of our State. It may not necessarily be responsive to the will of the public. The present school board is almost equally divided on busing matters. Yet my questionnaire, which was answered by over 32,000 respondents, indicates that 88 percent of my constituents are opposed to busing for racial balance.

It is difficult to predict what will happen on Monday, August 22, 1972. The board will not have the results of the staff study until that morning, so obviously, there will not be adequate time for review of what could be the most important decision the board will ever make.

Mr. Chairman, I have urged the school board members to delay their action until Congress acts on this important legislation.

The Green amendment is needed to delay enforcement of any court which would require busing until Congress finally acts on this complex matter. As a member of the Committee on the Judiciary, I deplore the failure of the committee to act on moratorium legislation and the constitutional amendment to prohibit racial busing. One can look over the Nation and see widely varied court interpretations of racial busing. I strongly support the passage of H.R. 13915 but for it to respond to the real problems of busing the Ruth amendment is necessary.

Mr. MEEDS. Mr. Chairman, Members of the House, as the gentleman from California correctly pointed out, the Court has always had the power to reopen these cases, and by putting it in the statute we give them not one whit more power to reorder and reexamine the fact situation as it existed at the time of the entry of the order and the fact situation as it may be now. Indeed, in the Swann case the Court indicated that this should be done.

So, Mr. Chairman, the mischief in the reopener clause does not come from the reopening, but it comes from the combination of the reopening and the application of the guidelines as set forth in the bill before us.

Now, here is what will happen. Assuming the reopener passed, the cases in which there was absolute de jure segregation, segregated schools, dual school systems, can be reopened and the children—as the bill now stands—in the sixth grade and below even in those schools could be absolutely segregated. They could be in dual school systems, and there is nothing that could be done about it.

If this reopener carried, and if this bill passes with section 403 intact, obviously that is unconstitutional, as I think I have tried to point out before.

But the fact is that we ought to know precisely what we are doing when we do it here. I suggest that is patently unconstitutional.

We are told day after day here on the floor of the House that we just want to make the same law apply all over the Nation. I am really getting a little irritated about that because the same law does apply all over this Nation. De jure segregation is just as wrong in California as it is in Alabama or Mississippi, and it has been rooted out in some places better, in California or other places, than it has in Alabama or Mississippi. The same law with regard to dual systems exists all over this land, and if there is a school system in the State of California that is dual it will be rooted out as it would in any other place. So the same law does now apply.

Further, section 407, which they attempt to put in in the substitute is supposedly a limitation of orders, but it does not require, as the Supreme Court has required in every instance since the decision in the Green against County Board case, an affirmative duty on the part of the courts to reach out and to root out the dual school system. Under the proposal of the gentleman from Minnesota we could achieve dual school system or we could go back to a dual school system and never have an obligation on the school board to take the affirmative action of attempting to root it out.

The same problem exists with his proposed section 408. Again, there is absolutely no affirmative duty on the school board or on the courts in these instances, as has so often been enunciated by the court, to take affirmative action to root out the unconstitutional or dual school systems which exist.

For all of these reasons, Mr. Chairman, and many others the substitute should be defeated.

Mrs. CHISHOLM. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, it is not difficult to assess the impact of the amendment before us: it would simply make a bad bill even worse. The amendment offered by the gentleman from Minnesota (Mr. QUIE) represents an open invitation to school boards throughout our Nation to discard effective court orders and title VI desegregation plans already implemented and to reopen proceedings to bring their plans into line with the ineffective guidelines spelled out in H.R. 13915.

Imagine the turmoil such a provision would create in school districts which have met their constitutional responsibility to desegregate by reassigning students in such a way as to eliminate illegal segregation. Needless to say, in many communities those assignments have required transportation beyond the next closest school.

Now, along comes the Congress—after the fact—telling those districts that what they did was more than necessary and that they can now backslide because what the courts and Federal agencies said was required by the Constitution no longer goes. Congress will set a new standard for compliance with the Constitution.

The end of illegal segregation in many school systems has not just happened; it has resulted from hard work, sweat, and even the blood of many thousands of Americans—black and white—working in their communities for what they knew was right. A provision such as that proposed by the gentleman from Minnesota (Mr. QUIE) would effectively cut the ground—indeed the credibility—from under this local leadership, which we should be supporting, by saying in effect, "You have taken your community too far. Children do not need to be bused beyond the next closest school; the neighborhood is the appropriate basis for assigning children; school district lines should not be tampered with."

This bill, even without the so-called reopener provision is unconstitutional and a slur on our Nation's commitment to equal opportunity. With the reopener, it is even worse. The amendment deserves to be defeated as a similar provision was in the Committee on Education and Labor.

Mr. Chairman, I cannot see how a reopener provision is in the interests of any of us. Those who support it are voting against the enlightened leadership which has emerged in their congressional districts to deal with the issue of school desegregation. I cannot vote with those who have tried to resist the requirements of the law the longest; I shall vote with the enlightened educational and political leaders in communities across this land who are meeting their constitutional obligation to end segregation. A vote for the amendment is a vote for retrogression, a vote against it is a vote of confidence in those leaders and parents in communities who have met this challenge and have prevailed by desegregating their schools effectively.

Mr. Chairman, I urge defeat of the amendment.

Mr. ERLENBORN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, there are those who would tell us that in an area where rights are guaranteed by the Constitution the Congress ought to leave the enforcement of those rights to the courts, that we should not legislate in that area.

I reject that argument. I believe we have not only the right but also the duty to legislate to establish the means to enforce constitutional rights. I believe that the attempt to legislate in this bill in the area of the rights to be protected relevant to nonsegregated education is a proper exercise of the authority of the Congress.

There are those who tell us that this is strictly an antibusing bill, that calling it a quality education bill is mere subterfuge.

Mr. Chairman, I believe that if the amendment offered by the gentlewoman from Oregon is adopted there may be some reason to say that, because if we are going to limit the remedies to merely allowing the child to go to the nearest school or the next nearest school to his residence regardless of the age or the ability of that child it may be that charge would have some substance.

So I rise in opposition to the amendment offered by the gentlewoman from Oregon.

In the bill I believe there is a logical differentiation made between the lower grades and the upper grades. There is a difference between the remedies that are available. For the upper grades a list of remedies are available. Busing is one of those remedies, but as a last resort after other remedies have been attempted by the courts.

The fact that there is a differentiation between the upper and lower grades I believe is a reasonable exercise of the judgment of the Congress. Those who are entering school, leaving their home environment for the first time, to spend a part of the day in a school environment, are the least able to take the long distance busing. The most important thing for them is to stay in the neighborhood, with chillren that they know, in an area that would be more familar to them.

As the child gets older, it is less important that the child be educated in his neighborhood. We all know by the time our children graduate from high school they travel long distances, perhaps across the country or perhaps to other parts of the world, to get their educational experience.

So applying different standards to grades one through six and the grades seven and above I believe is a legitimate exercise of the discretion that this Congress can utilize in this area of establishing the remedies for the enforcement of the constitutional rights that we are trying to enforce and in giving equal educational opportunity.

I would fear that if the Green of Oregon amendment were adopted the bill would be subject to attack as being unconstitutional. I believe if the Quie substitute is adopted we will be on more solid constitutional ground. Of course the court, as has been pointed out, will have the last word in any event, but we should do the best job we can in seeing that this bill is on solid constitutional ground.

I will be happy to yield to my colleague from Illinois.

Mr. MIKVA. I will agree with the gentleman that Congress also has the responsibility for enforcing constitutional rights. I do not know anybody who says to the contrary; but I ask the gentleman what do we say in response to a court that says a fifth grader is being denied equal protection of the laws and protection can only be afforded him by transportation? How does that square with the Constitution of the United States?

Mr. ERLENBORN. The gentleman is presuming the court will say the only way to protect the constitutional rights of a fifth grader is by busing. In other words, the gentleman might say that we made some arbitrary choice that was not based on the facts. I submit we make arbitrary choices all the time.

Mr. MIKVA. In the Constitution?

Mr. ERLENBORN. By denying the right of an 18- or 19-year-old to vote in an election, it is unconstitutional, because it is arbitrary. However, if you set the age at 18, then the 17-year-olds will argue they are being deprived of their constitutional rights. So it might appear arbitrary to set a specific age limit.

I do not believe it is arbitrary, however, to recognize that certain remedies might be proper for older children but not for the younger.

Mr. CELLER. Mr. Chairman, I move to strike the last word. I rise in opposition to the so-called reopening amendments. Not only cases involving pupil busing would be involved, but all manner and kinds of school desegregation cases, in fact a myriad of cases would be involved. Courts are mandated to modify any previous court order where the court complained of did not follow the shopping list of remedies, and the specific order of that shopping list outlined in section 402 of the bill. If you will examine section 402, you will see the different types of remedies involved and the specific order of priority set forth. Reopening and modification of prior orders depends on whether prior decisions complied with this bill. Otherwise the case "shall" be reopened and the decree shall be "modified." That is a very far-reaching provision. How many existing court orders will be jeopardized; how many are vulnerable to modification?

Mr. Chairman, during hearings before a Judiciary subcommittee then Acting Attorney General Richard Kleindienst testified concerning the so-called reopening provision of H.R. 13915.

The Attorney General asserted that all desegregation cases, even where busing was not an issue and though completely litigated and a final decree issued, could be reopened. Under the reopening provision, the Attorney General further stated that the courts could order busing where none had been ordered earlier. Indeed, HEW has advised the committee that 154 school districts' assignment plans in 19 States would be vulnerable to reopening under the provisions of this proposed amendment. What a waste.

I would like to quote briefly from Mr. Kleindienst's testimony, Mr. McClory of our committee asked the following questions:

Mr. McClory. Is it your opinion that the enactment of H.R. 13915 would provide a right then to reopen all of the desegregation cases that have already been litigated, even those that have been decided by the Supreme Court?

Mr. Kleindienst. And if reopened, with respect to many (cases) where there is no busing, under this law there could be some busing.

Mr. McClory. Would the right to reopen apply only to cases which involve busing?

Mr. Kleindienst. No, sir.

Mr. McClory. Are we talking about only busing cases or all desegregation cases?

Mr. Kleindienst. All desegregation cases, even where busing might not even be an issue involved in it. You are going to have an opportunity for a school agency to come into a Federal district judge and say, this order was entered into 12 years ago. Congress has laid down a national standard and we want to reexamine this and apply the remedies and priorities set forth in the national standards, and obtain a new order in this particular case.

Mr. McClory. So all desegregation cases that have been litigated and in which there have been final decisions can be reopened?

Mr. Kleindienst. Yes, sir; and if they reopen them, the Court could order as a remedy, busing, where they had none before.

So, that clearly indicates that busing alone is not involved in the situation.

If the reopening provision becomes law, it is painfully obvious from the Attorney General's own interpretation that no school administrator will know what the law is or what is required of him. Confusion and litigation surely will ensue.

Imagine the pressures upon a school authority that does not wish to reopen a case or modify a case. Think what kind of pressure would be brought to bear upon that school board to bring a motion to reopen a previous case? We would have confusion thrice confounded. It is the best situation I know to encourage all manner and kinds of litigation.

If the reopening provision becames law, it is painfully obvious from the Attorney General's own interpretation that no school administrator will know what the law is or what is required of him. Confusion and litigation surely will ensue.

I urge that the reopening provisions be defeated.

The text of the Attorney General's testimony on this provision before Subcommittee No. 5 of the Committee on the Judiciary on April 12, 1972 follows:

Mr. McClory. In reviewing H.R. 13915 in your statement, you mention that the Congress is considering a permanent solution to the busing problem—"one that permits reopening of existing busing orders."

Mr. Kleindienst. Right. Section 406 of the substantive legislation says that upon the application of any school agency, every desegregation order that exists in this country may be reopened to see to it that it meets the standards set forth in this legislation. And that, it seems to me, is the great remedying feature of this legislation. I do not think that there is anybody in the country that can speak with more convincing clarity and persuasion than the Congress of the United States, as it has done so many times in the past, and say that we have a national problem here, that there is a national standard that is going to be met by everyone. If you are going to say that, then it seems to me that you have got to permit the reopening of cases to come within that standard. Some will require more and some will require less busing.

Mr. McClory. Is it your opinion that the enactment of H.R. 13915 would provide a right then to reopen all of the desegregation cases that have already been litigated, even those that have been decided by the Supreme Court?

Mr. Kleindienst. And if reopened, with respect to many where there is no busing, under this law there could be some busing.

Chairman Celler. Will the gentleman yield?

Mr. McClory. Would the right to reopen apply only to cases which involve busing?

Mr. Kleindienst. No, sir.

Mr. McClory. Are we talking about only busing cases or all desegregation cases?

Mr. Kleindienst. All desegregation cases, even where busing might not even be an issue involved in it. You are going to have an opportunity for a school agency to come into a Federal district judge and say, this order was entered into 12 years ago, Congress has laid down a national standard and we want to reexamine this and apply the remedies and priorities set forth in the national standards, and obtain a new order in this particular case.

Mr. McClory. So all desegregation cases that have been litigated and in which there have been final decisions can be reopened?

Mr. Kleindienst. Yes, sir; and if they reopen them, the Court could order, as a remedy, busing, where they had none before.

Mr. RUTH. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I think we need to get our feet back on the floor, and find out what we are talking about. We started out with the Green amendment, and then we had the O'Hara amendment to the Green amendment, and the Quie substitute. All the O'Hara substitute does is to change the wording, take out that phrase which said "or the next nearest school," and then the Quie substitute, where the point was to have a different ruling for the first through the sixth grades, and the seventh through the 12th grades. None of these have opposed the reopening clause. I repeat, none of them have opposed the reopening clause.

Mr. Chairman, I would like to take this time to thank the gentlewoman from Oregon (Mrs. Green) for her kind remarks, and to assure her that it was a pleasure for me to have the gentlewoman offer the amendment.

Most of the Members received a "Dear Colleague" letter from me with regard to the reopening clause, and, therefore, I would like to talk about the reopening section at this time.

I would first like to go to the bill, and I take this from the bill—

> shall be reopened and modified to comply with the provisions of this act

That is the whole story—shall be reopened to comply with the provisions of this act.

I say to the Members that if we had not had certain court decisions that we would not have this bill before us today. I also say are we so unfair in this bill that we would consider passing legislation to help with the busing problem and say to the school boards that have already had a decision, "You are stuck with it, we do not give you any relief." If we do, we destroy the bill. This would be no bill if we did not give those schools who already have been ruled against an opportunity to reopen them where compliance comes within the provisions of this bill.

So I beseech you in the spirit of fairness: Do not say to those who have already been discriminated against, "We closed the door on you, but we promise not to let it happen in the other areas of the United States."

Mr. YOUNG of Florida. Mr. Chairman, will the gentleman yield?

Mr. RUTH. I will be happy to yield to the gentleman from Florida.

Mr. YOUNG of Florida. Mr. Chairman, I thank the gentleman for yielding, and I would ask this question of the gentleman:

Beginning in section 401, the Green amendment says, "On the application of an educational agency." I wonder if the gentleman would comment on his feelings as to what would qualify as an educational agency?

Mr. RUTH. This is a problem that you people seem to have in Florida, and we have discussed that, and to me an educational agency is the school board, and those people who operate the schools.

If you will look in title V, under "Definitions," and I have just had some help here by the gentleman from Louisiana (Mr. Waggonner), it says:

> The term "educational agency" means a local educational agency or a "State educational agency" as defined by section 801(k) of the Elementary and Secondary Education Act of 1965.

I thank the gentleman from Louisiana for his assistance and I point out that that appears on page 39 of the bill.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. RUTH. I yield to the gentleman.

Mr. JONAS. Mr. Chairman, I would like to associate myself with the remarks of my colleague, the gentleman from North Carolina.

The major school system in my district is one of those which is operating now under a court order. It involves the famous Swann case to which I have already referred in earlier colloquy this evening.

I concur in the view of the gentleman in the well that it would be unthinkable for this Congress to pass legislation without giving the school system the right to have cases that have already been disposed of before this act becomes law an opportunity to have those cases reopened and reconsidered under the terms and conditions outlined in this bill.

Mr. RUTH. Mr. Chairman, I thank the gentleman.

Mr. MIZELL. Mr. Chairman, I rise to express my opposition to the Quie amendment and support the amendment offered by the gentlewoman, Mrs. Green, and Mr. O'Hara to the Equal Educational Opportunities Act, which would permit the reopening of existing desegregation cases to bring the school districts involved in those cases in line with the new desegregation guidelines set forth in this legislation.

I announced last week, immediately after this legislation was reported by the Education and Labor Committee, that I was prepared to offer this same amendment in the event that no member of the committee did so. I am happy to see that the amendment has already been offered.

The need for this amendment is obvious, Mr. Chairman. There is absolutely no reason why the Winston-Salem/Forsyth County school system, for instance, should have to continue to bear the heavy financial and social burden of massive forced busing when this legislation prescribes much less drastic conditions for providing quality education to children in some other area of the country.

In Winston-Salem, 32,220 of the school system's 44,000 students rode buses to school this past school year. About two-thirds of them were bused because they lived beyond walking distance of a school, but more than one-third—more than 11,000 children—were bused solely to achieve court-required racial balances in the elementary and secondary schools.

One hundred fifty-seven new buses were required to implement that order. Each of those buses cost $6,300 to buy, and it costs $1,600 a year to maintain them, without mentioning the additional costs in bus drivers' salaries. The superintendent of schools in Winston-Salem has told me that this massive busing program requires an operating budget of $1.4 million. That figure represents almost exactly a 100-percent increase in transportation costs over the previous year.

I have said on many occasions that, when funds for higher teachers' salaries, school building improvements, and other basic educational needs cannot be sufficiently met with existing revenues, it makes no sense to impose overwhelming additional costs for buying new fleets of buses to conduct an artificial and arbitrary social experiment in the name of quality education.

Now it seems that some of my colleagues have agreed that this holds true for the school systems in their districts, but that the financial and human expense of massive forced busing is entirely justified and proper for the Winston-Salem school system and for other systems currently under court order to bus students for racial balance.

This kind of hypocrisy and duplicity makes a farce out of the express purpose of this legislation—to provide equal educational opportunities to all our children.

What is equal about requiring one school system to spend more than a million dollars to buy school buses to send children to schools they should not have to attend in the first place, while another school system can spend that some million dollars for upgrading its faculty, or for building new facilities, or for the other basic needs essential to a good education?

What is equal about making a child in Winston-Salem travel 20 miles to school every day on a bus, while a child in Hartford, Conn., is free to walk to the school in his neighborhood?

What is equal about these conditions? Nothing. Yet this is what the Equal Educational Opportunities Act in its present form calls for.

Obviously, the reopening clause is warranted, it is needed, and I also believe it is imperative for all grades from the first grade through the 12th. We must provide protection for all our children. I strongly urge my colleagues to join me in seeing its enactment.

Mr. DICKINSON. Mr. Chairman, I rise in support of the gentleman's amendment to restore a provision to H.R. 13915 to allow school districts under busing orders to reopen their proceedings in the Court.

Two years ago, I wrote in a weekly news column that we in the South are not asking for special handling and special treatment with regard to desegregation of our school system. Now, as then, we are merely asking that laws which we deem unworkable, especially concerning busing, be applied equally throughout the United States. We are sick and tired of being the scapegoat. If the laws being applied in the South are just and equal, we demand that they also be applied justly and equally to all sections of the country.

I had hoped that the Education and Labor Committee would report a bill to the House of Representatives which would finally give the South equal treatment in the busing controversy, but once again we are being asked to vote for a bill which grants relief to the North while the South continues to suffer. This bill will allow a moratorium on busing for northern States like Michigan but will continue busing in the South. I know the people of my home State of Alabama are not willing to give this type of help to our northern neighbors who were all too eager to refuse us such help a few years ago. Certainly, if legislation is not passed now to remedy this situation in the South, we will never be rid of the menace of busing.

If busing is the least desirable remedy for alleged denial of equal educational opportunity or of equal protection of the laws, as the committee bill states, then why is it allowed to continue in the South? In the interest of justice, I ask the Members of this body to vote in favor of the amendment to allow school districts under busing orders to reopen their proceedings in the Court in order to let the Southern States have an equal opportunity to find better remedies for the dual school system.

Mr. PUCINSKI. Mr. Chairman, I rise in support of the Quie substitute.

Mr. Chairman, if I may have the committee's attention. We have worked very hard on this bill. The Quie substitute includes all of the President's language recommended by the administration and carefully worked out by the Office of the Attorney General to maintain that very careful and narrow balance between the right of the Congress to establish certain limitations and a long line of Supreme Court decisions on busing itself.

Now I know that there are a lot of temptations around here and I know that there are great pressures. The fact of the matter is—if you want a bill, an honest to goodness bill, that will stand up and will do all the things that you want it to do—then I say to stay with the experts.

You are not going to be writing legislation on the floor here on something as important as this issue. So I am standing with the administration bill because it was carefully thought out and there has been testimony on it. Now what the gentleman from Minnesota (Mr. QUIE) has done, in addition to taking all of the language carefully worked out so that we are not struck down in the Supreme Court as so many have predicted all day here—the gentleman has taken the language that we have brought before this Committee of the Whole and he has added to it the reopening clause.

I have said that we ought to treat every school the same—North or South or East or West.

The author has taken the other proposals incorporated in the Green amendment. I know there is temptation over here to tilt this thing too far. If you vote down the Quie substitute amendment, you are tempted to go ahead with the Green amendment—the package, and you may find yourself going too far on this whole subject and, indeed, make the dire predictions of those who have said that this bill is going to be struck down as unconstitutional come true.

I say that you ought to stay with this committee. This committee held extensive hearings. We did not bring a frivolous bill here. We recognized what the problems were. They said that we would never get this bill to the floor of the House and we did get it to the floor of the House.

So I say to you—stay with the ranking minority member on the committee. This substitute will give you the leeway that you need to take care of the reopener.

As to the other problems that you have brought up, which should have been brought up in our committee, and voted on in our committee—if they should be restored here on the floor—I tell you this, you are running the risk of tightening this so tight that it is going to be held unconstitutional.

I am relying on the fifth section of the 14th amendment which says that Congress may place limitations on the guarantees and the rights incorporated in the 14th amendment.

In our best judgment—in the best judgment of the administration—in the best judgment of the President of this country—and in the best judgment of those in the Department of Justice—by saying that we can bus to the next closest school, the O'Hara amendment would be a certain road to having the courts hold this whole bill unconstitutional because the courts have already said that busing is legal in Swann. You are not going to turn that around. Just the other day in the Fifth Circuit Court of Appeals in New Orleans, the court remanded two cases to the lower courts in Corpus Christi and in Austin and the court said—"Examine all the other alternatives—but you cannot deny busing if there are any other alternatives."

So what we are doing here as legislators is putting in what we believe are reasonable limitations so that we do not have a repetition of children being bused 20 and 30 and 40 miles, 2 hours a day. What we are doing here is placing a reasonable limitation in which we believe, and the Justice Department——

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent Mr. PUCINSKI was allowed to proceed for 2 additional minutes.)

Mr. PUCINSKI. What we are asking this House to do is to go along with those people who have carefully worked this out and brought to you a bill that I believe will stand up and will bring the people of this country the relief they are seeking from all the turmoil and chaos.

Mr. DENNIS. Mr. Chairman, I agree with the gentleman from Illinois on a great deal of what he says, and I am very anxious to pass a constitutional bill. I do not think we should have to amend the Constitution on this question, and I personally would be very much afraid of the O'Hara amendment. I would not go along with it because under the second Swann case, the Court struck down down a very similar statute. In that case it was a State statute, but I am afraid of it.

Mr. PUCINSKI. Mr. Chairman, if my colleague will yield me time, I will make one further observation. I should like the House to carefully consider the Quie substitute. If you vote up the Quie substitute, you will have everything that the administration has recommended, plus the reopener, plus the other things that certainly concern some of those who said that we ought to treat every school district equally in this country. If you start fooling around at this late hour with other bills, you are going to find that you have spent a whole day legislating a bill that may very well be shot down by the Supreme Court.

For that reason I urge you to stay with the substitute offered by the gentleman from Minnesota (Mr. QUIE).

Mr. Chairman, if I have time remaining, I will lield to the gentleman from Indiana (Mr. DENNIS).

Mr. DENNIS. Mr. Chairman, if I might ask the gentleman from Illinois, I am not so sure that the Green amendment has anything wrong with it. What is the constitutional basis for the different treatement in respect to the sixth grade and under? The only thing I know of is that an offhand remark made by Justice Burger as to what was reasonable——

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent Mr. DENNIS was allowed to proceed for 1 additional minute.)

Mr. DENNIS. The only basis for that that I know of in case law is Justice Burger's offhand remark that what busing will be reasonable will depend on the circumstances, and perhaps mostly on the age of the children. It was just an aside; it was not a holding. I am not so sure as the gentleman seems to be that Mrs. Green's amendment has any constitutional infirmity.

Mr. PUCINSKI. I think the gentleman misses the point, though. The Justice Department well recognizes the fact that the courts have now established busing as a legitimate alternative in desegregated schools. What we are trying to do here is put in reasonable limitations. In our judgment, the best judgment that we can offer, we are saying that children of tender age, the first through the sixth-grade children of tender age, cannot be bused beyond the second closest school to their home. That is a reasonable limitation which we think the Court will sustain.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PUCINSKI. Mr. Chairman, I ask unanimous consent that I be allowed to proceed for 1 additional minute.

Mr. SCHERLE. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. STEIGER of Wisconsin. Mr. Chairman, I move to strike the requisite number of words.

Mr. STEIGER of Wisconsin. Mr. Chairman, we are faced here with a confused parliamentary situation and a series of bad choices. As I understand, we will vote first on the O'Hara amendment to the Green amendment in order to perfect that amendment. Then we will vote on the Quie substitute to the Green amendment. And then on the Green amendment. I must say in all honesty that I do not like either the Quie substitute or the Green amendment, and, I find myself in the difficult position, even though it is tempting to vote for the Quie substitute, of voting against it. I say that because the Quie substitute continues to have within it section 406, the reopening procedure.

I think there is mischief in that section. I think it creates serious problems. I cannot support section 406, whether it be in the Quie substitute or in the Green amendment. Thus, I would hope that the committee would vote down the Quie substitute and vote down the O'Hara amendment to the Green amendment. Then let us bite the bullet, and let us have the vote that I have asked for, and the Chair has indicated has been protected, which is a separate vote on the provisions of the Green amendment. Those separate provisions are substantively important.

One of them has to do with amendments to 403, and I think the House ought to have the right and opportunity to have a separate vote on eliminating the distinction between the sixth grade and below, and I would hope that the particular provision in section 403 and that amendment that relates to 403 could be considered separately, so that each of us might have the opportunity to determine whether or not we want to maintain the distinction as the gentleman from Minnesota would like to do; or not to, as the gentlewoman from Oregon would like to do. I personally think it is important to maintain the distinction.

I think the gentleman from Minnesota, with the original administration bill that contained that provision, was correct in saying that there is a difference between the first to the sixth and then above the sixth insofar as the question of how far one transports children.

Then we could have a separate vote on section 406, the reopening procedures, and I recognize many Members of the House feel very strongly on what they conceive to be the equity question, and that there ought to be a separate vote on that. Many will vote for it. I personally will vote against it.

Thus I would say, Mr. Chairman, at least insofar as I am concerned, the only way in my judgment that we can get what I think is most important, which is the opportunity for the Members of this House to vote separately on section 403 and the amendments thereto, is to vote down the Quie substitute, to vote down the O'Hara amendment, and then have a clear-cut decision about whether or not we want to amend section 403.

I think that is by and large what is substantively most important in this debate.

Mr. PUCINSKI. Mr. Chairman, I wonder if we can have some idea of how many Members intend to discuss this substitute and all amendments thereto.

Mr. Chairman, I ask unanimous consent that all debate on this Quie substitute—not on the Green of Oregon amendment and not on the O'Hara amendment, but on the Quie substitute—end at 9:30.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

Mr. GERALD R. FORD. Mr. Chairman, reserving the right to object, I wonder if the gentleman from Illinois will withhold that request for a speech or two.

Mr. PUCINSKI. Mr. Chairman, I was trying to ascertain if there was a basis for some limitation of time, but if the gentleman has some objection I will withdraw my request.

Mr. ECKHARDT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I oppose both the O'Hara amendment and the Green amendment as well as the Quie amendment. But let me point out I oppose the first two primarily on questions of constitutionality, but let me point out one other infirmity. In addition to its constitutional infirmity, the amendment offered by the gentleman from Michigan (Mr. O'HARA) also has a geometric infirmity which makes it practically impossible to implement.

If it is said that one must attend the school closest to his residence, this means that all schools in the United States must, in order to be subject to jusdicial implementation, be in districts shaped in a hexagon with the school exactly in the middle of the hexagon. Everyone in the United States has to be in a sort of beehive. Presently, with irregularly shaped districts, many people do not live in the area closest to their neighborhood schools. If we vary from a hexagon and if we live close to the edge of the district or if the neighboring school district has a school closer to our borderline, we are not as close to the school in our attendance district as to the school in the adjoining area.

This illustrates how bad it is to try to draw legislation on the floor.

The O'Hara amendment, in striking the next closest to his place of residence, makes the amendment utterly impossible. I know that the gentlewoman from Oregon, with whom I disagree on many matters of principle in regard to this legislation is nevertheless extremely well learned on the question of the location of school districts and where people live in them, and I should like her to comment on whether or not in the United States there are not presently literally thousands of children in every school attendance district who live closer to a school in another school attendance district.

Mrs. GREEN of Oregon. If the gentleman will yield, I would not argue about the description he has made of the hexagon; it may well be accurate. Certainly there are families who live in school districts in which another school might be closer even though it's outside of their own district.

It seems to me the important point to remember on the O'Hara amendment is that the courts indeed have said that one can bus. By the action we take today we do not defy the courts and say, "You cannot bus," but we limit the distance, we limit the area of busing.

I believe that if the O'Hara amendment is adopted we will weaken the final result of the bill. I would hope that this House would not support the O'Hara amendment for the reasons the gentleman from Texas has stated as well as the constitutional points.

Mr. ECKHARDT. Let me point out in conclusion that certainly we cannot establish the exact bounds of these districts in such a way as to require every district to be uniformly shaped. The necessity of a little flexibility of the school closest to one's place of residence or next closest is absolutely necessary to protect the integrity of the division between two districts as they exist in many cases throughout the country. I believe the committee was wise in putting that language in. I am sure the language was put in for that purpose.

Mr. O'HARA. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Michigan.

Mr. O'HARA. I am afraid the gentleman has misconstrued by amendment. My amendment goes to orders pursuant to section 402; in other words, busing plans for the purpose of carrying out racial assignments, not busing plans for the purpose of getting kids to distant schools. They can carry them all the way across the county, unless that is the purpose of the order.

Mr. ECKHARDT. That is right, but if an order were issued to presently put into effect present school assignments it would be illegal under the O'Hara provision. That is the point I am making. I do not believe that can be refuted.

Of course it is true there are not orders with respect to every district, but certainly an order ought to have sufficient flexibility to perpetuate the existing districts, and the O'Hara amendment would prevent it. That is the point I am making.

Mr. GERALD R. FORD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, a very few moments ago my very good friend and outstanding colleague the gentleman from Wisconsin (Mr. STEIGER) made a statement that went more or less like this: He said that the committee at this point was faced with a series of bad choices.

I will say to the gentleman, if I have misquoted him I will be glad to correct the record. At least that was the impression I received of his remarks.

Let me say, Mr. Chairman, I believe the committee at this point is faced with a series or the potential of a number of good choices, with one exception. I happen to believe that the Quie amendment and the Green of Oregon amendment are both good legislative proposals.

I intend to support the Quie amendment, but I would certainly support the Green amendment if the Quie substitute does not prevail. The difference between the Green and Quie amendments is a simple one. I think conscientious people can intelligently differ. The Quie amendment seeks to retain in the bill that was submitted by the administration the differentiation between the sixth grade and below with certain rules and regulations or prescriptions from those students in the sixth grade or above. Now honest differences can exist in each one of us as to whether there should be this different treatment. As I understand the Green amendment, that differentiation is eliminated. The Quie amendment keeps it in as the administration recommended. I intend to support the Quie substitute first, but I have no hesitancy whatsoever in supporting the Green proposal if the Quie substitute does not prevail.

What does concern me, however, and this is the bad choice, is the potential problems of the amendment offered by the gentleman from Michigan, my friend (Mr. O'HARA). This legislation as it came from the administration and as it is before us today is delicately put together in order to give some guidance to the courts so that the courts will understand that busing is the last resort, but anything that makes that prescription too tough or too tight could upset the applecart. I am just apprehensive and I am concerned that the elimination of the next nearest school could make all the efforts that we are seeking to achieve tonight in vain.

For that reason when we come to that choice, I intend to vote against the O'Hara amendment.

Mr. COLMER. Will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Mississippi.

Mr. COLMER. Let me say first to my distinguished friend, the minority leader, that I think we both seek the same objective. However, I am wondering how one can read into the 14th amendment of the Constitution a differentiation based upon the sixth grade or the eighth grade and how, as a political proposition, one is going to explain, aside from the politics of this thing, how he will explain to his constituents back home that he was in favor of limiting it to the sixth, but not to the eighth.

Mr. GERALD R. FORD. Let me respond to the gentleman's inquiry. It is a very legitimate inquiry. The Supreme Court, or the Chief Justice, did himself differentiate in the Swann case, so we have the precedent based on his words in one of the Supreme Court's recent cases. So it seems to me that if we follow his guidelines, it makes more certain, it makes more certain although not positive, that what we are doing tonight here will be accepted by the Supreme Court.

Mr. CLAY. Mr. Chairman, I move to strike the last word. Mr. Chairman, I came in here today very concerned about the inferior education that millions of black and Spanish-speaking children in this country have been receiving and what I thought they would be receiving if this bill became law. However, after sitting here for some 9 hours and 15 minutes, it has become apparent to me I ought not to be quite as concerned about the kind of education blacks are receiving, and Mexican Americans as I ought to be concerned about the kinds of education that whites, particularly some Members of this body, have received.

Mr. Chairman, I think that there are Members in this body, and apparently a majority of this body, who do not have the courage or the integrity to stand up and say specifically and honestly what this particular bill is all about.

As I analyze the situation, I think it boils down to one primary argument, and that argument is whether or not blacks are entitled to equal protection and due process as guaranteed under the 14th amendment of the Constitution. I think with the mood and the sentiment that exists here in this House today that if that question is posed the answer will be that blacks are not so entitled, and I would like to advance the solution for those of you who feel that black people in this country are not entitled to equal protection of the law, and due process.

I would like to advance the solution for you, and that solution is simply that this body instruct the Supreme Court to stop enforcing the provisions of the 13th amendment to the Constitution, return us to our previous status of involuntary servitude, and I am sure that no constitutional authority in the country will rule that slaves are entitled to equal protection or due process of law.

Mr. PUCINSKI. Mr. Chairman, I wonder if we can have some idea on how many Members intend to speak either on the O'Hara amendment, the Green substitute, or the Quie substitute, because, as I understand, Mr. Chairman, we are going to vote first on the O'Hara amendment.

Therefore, Mr. Chairman, I ask unanimous consent that all debate on all three amendments and all amendments thereto close at 9:45.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

Mr. DELLUMS. Mr. Chairman, reserving the right to object, I would like to ask the gentleman from Illinois a question. I believe the gentleman mentioned earlier in the debate that he would not make such a move under any circumstance, and that he would give ample opportunity for every single Member to express their will.

Mr. PUCINSKI. Mr. Chairman, if the gentleman will yield, my colleague will notice that I asked unanimous consent, and I did not move the question.

If it is agreeable to all, if everyone agrees—and as I mentioned, we have a number of other amendments—so I merely ask unanimous consent, and the gentleman has the right to object.

Mr. DELLUMS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. SCHERLE. Mr. Chairman, I move that all debate on the pending amendments and all amendments thereto close at 10 o'clock.

The motion was agreed to.

PARLIAMENTARY INQUIRY

Mr. SEIBERLING. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. SEIBERLING. The motion that was just agreed to, does that just relate to the amendments that were offered by the gentlewoman from Oregon (Mrs. GREEN) and all amendments and substitutes thereto, or does it cover all amendments to this bill?

The CHAIRMAN. The gentleman is correct in his first statement; the motion was that all debate on the Green amendment, the Quie substitute, the O'Hara amendment and all amendments thereto close at 10 o'clock.

Mr. SEIBERLING. I thank the Chairman.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. ASHBROOK).

(By unanimous consent, Messrs. ROUSSELOT, SCHMITZ, and O'HARA yielded their time to Mr. ASHBROOK.)

Mr. SCHMITZ. Mr. Chairman, I welcome the amendment offered by the gentleman from Michigan (Mr. O'HARA) because it will afford this House the first opportunity it has had in many years for all Members to go on record for or against the removal of busing cases from the jurisdiction of the Federal courts, which is the real effect of the gentleman's amendment. I have long advocated that Congress use the power granted by article III, section 2 of the Constitution to take away the jurisdiction of the Federal courts in the areas where they have most consistently abused it. The forcible transportation of public school students to achieve racial balance is clearly the most spectacular example of this kind of abuse.

The effect of the gentleman's amendment would be to deprive the Federal courts of all authority to order busing—except to the nearest school—rather than recognizing that authority in some cases as the administration's bill would do. The amendment previously offered by the gentlewoman from Oregon (Mrs. GREEN) would extend this elimination of Federal court authority to busing orders already issued, thereby undoing the great injustices to parents already committed in places such as Richmond, Va.; Jacksonville, Fla.; and, of course, in the Detroit area. It would in fact render these court orders null and void.

Nearly a year ago I introduced a bill, H.R. 10614, which would have essentially the same effect as the amendment now introduced by the gentleman from Michigan. I had a similar amendment ready to offer on the floor tonight. In February of this year the Senate approved such a measure, only to reverse itself soon afterward. In March I testified for my bill before the Judiciary Committee, but still it was not possible to bring it to the floor. Now a measure of this kind is on the floor and I am happy to support the gentleman from Michigan, a senior member of the committee which handled the bill we are debating, in putting it before you. May I say that I am certain he is speaking for the great majority of his hard-working, taxpaying constituents, workingmen of his district, good solid Americans who are tired of having their children pushed around like pawns on some sociological chessboard. These are the type of Americans I am also proud to speak out for on this and similar issues.

Let us get the Federal courts out of busing cases once and for all. They never had any business, any legal or constitutional right, to be making such rulings.

This is a situation above all others that calls for our use of the power the Constitution gives us to put a check on the judiciary when they go too far, arrogantly ignoring the most fervent desires of the people, who are and should remain the final authority in this land of ours.

The amendment offered by the gentleman from Michigan deserves to be adopted overwhelmingly.

Mr. ASHBROOK. Mr. Chairman, it seems to me there is a very interesting constitutional doctrine that is evolving on the floor of the House tonight.

The chairman of our subcommittee, the gentleman from Illinois (Mr. PUCINSKI) and our esteemed minority leader, the gentleman from Michigan (Mr. GERALD R. FORD) in addressing the House both said the Quie substitute has endeavored to walk a very fine constitutional line.

But let us think about that line. The opponents of the O'Hara amendment would have us believe that simply by this Congress stating that busing shall only be allowed as a last resort—that is a restraint—as a last resort—that would probably be constitutional. But for the Congress to say that busing shall not be allowed would be unconstitutional, according to their logic.

Now I ask you to consider very carefully those two different ideas. Does it make sense to say that busing as a last resort is proper, but to prohibit busing is improper?

I happen to think if it is wrong, it is wrong and if it is right, it is right. I think the gentleman from Michigan (Mr. O'HARA) is absolutely right when he said that busing is either right or wrong. Let us find out whether it is right or wrong.

No. 2, we keep hearing references to Supreme Court cases. It is very axiomatic and it is very simple to reflect on those cases to recall there was no statement on the part of the Congress—there was no indication by this body of what we thought national policy should be when they rendered their busing decisions.

I think all of the constitutional lawyers in this House—I think the chairman of the Committee on the Judiciary and I think the gentleman from Ohio (Mr. MCCULLOCH), for example, will all admit there is a difference when there is no statement on the part of the Congress of what a national policy shall be as against what they would say when there is a strong statement.

Agreed that even with a strong statement the court might say that this action is unconstitutional—but there is a great chance, and I think the Congress should take that chance—I think there is a great chance that if the Congress passes a law that indicates that busing is against public policy—that the Supreme Court would not strike it down.

But whether they do this or not, reflects on what the detractors of the O'Hara amendment have said—that somehow or other by saying that busing is all right—but only as a last resort, that that is constitutional.

I happen to think that is a distinction without a difference. I happen to think the gentleman from Michigan was absolutely correct when he said—

> Constitutionally speaking, busing is either constitutional or it is unconstitutional.

Let us go on record against busing. Let us defeat the Quie substitute. Let us pass the O'Hara amendment. Let us pass the Green substitute. Let us state national policy in clear terms.

I happen to believe that this Congress, as a coequal branch of the Government has a right to set national policy. This we should do.

Let us not forget that the Swann decision and other busing decisions were rendered when there was no statement of congressional policy. Let us make a strong congressional policy here and now. If that should happen to be found unconstitutional, then as the President has indicated, possibly the constitutional amendment route would be in order, but let us find out.

The CHAIRMAN. The Chair recognizes the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I rise in support of the amendment offered by the gentlewoman from Oregon (Mrs. GREEN), who as a thoughtful and consistent member of the Education and Labor Committee, has grappled with this whole issue of Federal mandatory and compulsory busing for some time. She is thoroughly familiar with what needs to be done legislatively by this Congress and I support her amendment. In addition, I support the gentleman from Michigan, Mr. O'HARA's amendment to Mrs. GREEN's amendment because, in my opinion, he further clarifies that the Federal Government should not intervene and mandate in any way compulsory busing.

More important than this, and an issue that I do not believe has been as thoroughly discussed as it should be here in our debate tonight, is what seems to me to be very clear; that is, that Federal financing and intervention in the field of compulsory busing is a violation of the 10th amendment of the U.S. Constitution which states:

> The Powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Mr. Chairman, both the Green and O'Hara amendments address themselves very thoroughly to this issue and put Congress on the record, where we should have been many months ago, that it is the sense of Congress that the Federal Government has never been delegated the authority to impose itself over a school district, or any area, to mandate compulsory busing. It runs counter to commonsense and it does not allow to parents, the important civil right of free choice to send their children to the local neighborhood school—which system has been the backbone of our public education system.

Further, as stated in both sections 407 and 408 in the amendment offered by Mrs. GREEN, it is only fair that we allow all school districts that have been mandated in the past by Federal courts into a compulsory busing system, that they have a clear opportunity to retry these decisions, or properly appeal such cases as all other school districts will be able to do currently, or in the future, under this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. Mr. Chairman, I would remind the Members that what they are seeing here this evening is a throwback to a few years ago in the House of Representatives in dealing with bills from the Committee on Education and Labor. In those days when the committee rewrote its bills on the House floor, and that was quite frequently, there was always a "Quiedell" amendment; always a "Quiedell" substitute. We rued those days.

The House is right back to a few years ago, for there is a "Quiedell" substitute here tonight. Now, I say to you who are opposed to forced busing: Vote for the O'Hara amendment, adopt the O'Hara amendment; defeat the "Quiedell" substitute, and pass the Green amendment as amended and get on with the business.

The CHAIRMAN. The Chair recognizes the gentleman from Kentucky (Mr. MAZZOLI).

Mr. MAZZOLI. Mr. Chairman, as the Members know, I very seldom take the well. I do so only when I am sufficiently moved, and I believe that I am sufficiently moved tonight.

I am a member of the committee, and I was one who voted originally to retain the reopener provision in this bill. Then, I had an opportunity to attend the hearings, and I had the opportunity to sit there with Mr. Henry of Mississippi when he testified, and others testified on his panel.

I was at that point sufficiently moved to vote later to strike the reopener because it is the most pernicious, the most mischievous possible addition to this bill.

I believe that the House is called upon tonight to show true leadership. I think the House can do so by not adopting the reopener, whatever else we do tonight in this bill.

I understand the feelings of my own colleagues from the border and Southern States. They have had it very tough; there is no question about that. At the same time, we must be realistic and understand that it was in those States where there were the clearest-cut cases of de jure and legally sanctioned segregation of schools.

I urge the defeat of the reopener.

The CHAIRMAN. The Chair recognizes the gentleman from Georgia (Mr. THOMPSON).

Mr. THOMPSON of Georgia. Mr. Chairman, it troubles me to hear people take the well of this Congress and advocate that there be a different policy for those States in the North than those States in the South. We have seen a differentiation made based upon de jure and de facto. We have seen the courts go to absurd lengths in order to call something de jure just in order to reach a de facto situation.

The truth of the matter is simply this: That we should have reopening. The entire Nation should be treated the same, and not one section treated differently from another section. A reopening does not mean that the Court is going to close their eyes to any discrimination that is taking place. The Court simply is not going to allow discrimination, but if there is an inequity that exists in the South, and believe me, there are many inequities that exist in the South, then at least it allows a method by which we can reach that inequity and correct that inequity.

The CHAIRMAN. The Chair recognizes the gentlewoman from New York (Mrs. Abzug).

Mrs. ABZUG. Mr. Chairman, I have observed with great sorrow that the Congress has failed to exercise the power it does have under the Constitution to end the war, and now seeks to exercise power which it does not have under the Constitution to impose segregation. The Green, the O'Hara, and the Quie amendments reflect the clear intention of Members of this body to usurp the power of the courts, to attack the courts which have sustained the democratic rights to equal education that this country and this very body has in the past fought for.

What is involved in each of these amendments has thoroughly unmasked the busing facade. Underneath is cold racism and a concerted effort to repeal hard fought for civil rights won for youngsters through Brown against U.S. Board of Education. If we unlawfully act to take away the human rights of young black people to go to school so that they can have an equal opportunity to become useful, important members of society, whose human rights will we take away next?

Mr. Chairman, I urge the defeat of every one of these amendments and their substitutes. I should really urge their support because their passage would crystallize the true purposes of this legislation, which is foul and wholly unconstitutional.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. Corman).

Mr. CORMAN. Mr. Chairman, I am very much opposed to the O'Hara amendment, to the Green amendment, the Quie substitute to the Green amendment, and to section 403A of the bill. I hope we may have an opportunity to strike that section.

It seems the height of absurdity to me to say that the constitutional rights for the youngest of our children penetrate only the periphery of the ghetto.

Further, I would like to point out that the courts have never validated de facto racial segregation. And I have never been able to distinguish de facto and de jure segregation. The court in the Brown case was not looking at the intent of the school board or the State legislature. The court was looking at the effect on young Americans of racial segregation. The small child is segregated by color. Degraded, demeaned and often destroyed, that child really does not know, nor are the end results altered by some nebulous definition of de facto or de jure.

The greatest blot on this free Nation from its inception has been the treatment of the blacks by the nonblacks. A substantial portion of all our social and economic problems are rooted in the mire of racism which has imposed upon us all racial segregation. How can we possibly look at the effect such a system has on our Nation and its people and insist on preserving it?

If we somehow frustrate the efforts of the courts and people of good will across the land to desegregate our schools, then we will preserve for our children and grandchildren this degrading and immoral practice. The victims in the first instance are the little children whom we by this action condemn to a life outside the America which we so highly prize and selfishly guard for ourselves. But certainly we who are on the comfortable side of the segregation wall do not escape its evil. First, we suffer the social and economic results. Second, we deny ourselves the fellowship of some of the finest among us. And most costly of all, we tolerate a cruelty which must trouble our own conscience.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana (Mr. Waggonner).

(By unanimous consent, Mr. Ruth, Mrs. Green of Oregon, and Mr. Edwards of Alabama yielded their time to Mr. Waggonner.)

Mr. WAGGONNER. Mr. Chairman, I thank the gentlemen for yielding their time.

There are a number of things in this bill that are important. The O'Hara amendment is important. It is controversial. Section 403 of the Green amendment is, as well, controversial and important.

But listen to me now, you people who have not had the experience we have had in the South. You have not been listening in the years gone by, but you had better listen now. The Michigan people have finally awakened to what is going on. They are converts. They are believers now. Some of the rest of you had better listen to me tonight because you are going to be believers at a later point in time.

The most important thing in this bill is not the reopening clause. That is important. It is a matter of equity. Surely you would not deny us that. But the most important thing in this bill to those people who do not know what is going on has to do with the Green amendment and sections 407 and 408, because sections 407 and 408 provide a limitation on orders.

It is not a limitation having to do with a time, with a period of time, but a limitation on a court order which simply says, as the U.S. Supreme Court has said, and I have got two decisions here where they use this language, describing a unitary system as one within which no person is to be effectively excluded from any school because of race, color, or national origin. The amendment adds that this shall be so whether or not such school system was in the past segregated de jure or de facto.

We are trying to get rid of court orders when we operate schools in conformity with the law. A court order will no longer be in effect against those school people if they do not discriminate. And this shall be so according to sections 407 and 408, whether or not the situation which brought it about because of segregation was de jure or de facto. Why should not a court order be terminated if there is no discrimination when you operate a unitary system.

The South has already been judged to be de jure and we are still on probation.

The people in the North who do not know, who were living so smugly and so far away from it, have, so some say, a de facto situation, but they are the people who are in for it in the time to come. We have had it in the South, but the de facto situation is under attack now in Michigan and it is going to be so in other cases, and they are the people who had better put a limitation on these orders by adopting sections 407 and 408 as contained in the Green amendment.

If you people do not think I am telling the truth, come back a few years from now and tell me as so many have, "I wish I had listened to you a few years ago."

The only thing in the world you have to do is put a limitation on these orders and operate your school systems as unitary systems without discrimination, and the court orders will be terminated.

Believe me. Provide a reopening procedure but put a limitation on the orders you have already gotten, and the orders you are going to get. If you do not put some limitation on such orders you will live to regret it.

You do not believe me. Vote against it, and then go back and tell your people, when the situation hits, "I was too blind to see."

The CHAIRMAN. The gentleman from Washington (Mr. Meeds) is recognized.

Mr. MEEDS. Mr. Chairman and Members of the House, the unconstitutionality of all three of these proposals is just a matter of degree. I therefore urge my colleagues to vote against all of them.

The CHAIRMAN. The Chair recognizes the gentleman from Maryland (Mr. Mitchell).

(By unanimous consent, Mrs. Chisholm and Messrs. Badillo, Rangel, and Stokes yielded their time to Mr. Mitchell.)

Mr. MITCHELL. Mr. Chairman, I would ask that the Chair bear with me and that my colleagues bear with me. I am suffering from a heavy cold, as Members possibly can hear, and therefore I have been reluctant to participate in this debate up to this point. Now I find myself forced to participate.

I ask the very simple question: Is it possible to love one's country very deeply? The answer is "Yes." I believe I have loved my country very deeply.

Then I ask another question: Is it possible to have that love turn to hate, if indeed every vestige of racism and dishonesty and hypocrisy is revealed nakedly before a nation? I ask the question: Is it possible for the love of one's country to turn to hate?

Earlier today a Member took offense because I quoted the remarks made by a young man who lives in my district who wrote the following words. That young man said, in his little poem, "My country 'tis of thee, sweet land of bigotry?"

I am suggesting that every one of you, you who use all of the euphemistic terms and all of the constitutional terms to cover over racism, every one of you, has forced that young black man into the position where he had to write the words, "My country 'tis of thee, sweet land of bigotry?"

There are blacks in this country who are now asking and who have been asking for a separate black State in this country. Years ago they asked for five separate States to be turned over to black people. The reason they did that was they had been once too often exposed to the deceit and the hypocrisy and the lying and the duplicity and the double-dealing that is clearly an integral in all of the debate tonight.

There are blacks in this Nation that you have forced to say, "We want no more of America, because America has lied to us once too often."

You are guilty. You are guilty. All of the words you have used about polarization, this amendment and that amendment helping to end the polarization are really expressions of your guilt. The only way you will end it is by being decent and honest and just on this occasion.

Maybe I am asking too much. Maybe I am asking too much that this body be decent and honest and just. Maybe I am asking too much that the Representatives who serve this country should reach back into the past of this Nation and find that which is decent, and just, and honest, and compassionate. Maybe I am asking too much of you to do that.

However, if I am asking too much of you to do that, then you are asking too much of black Americans to take the kind of insults you are heaping on us tonight.

There are other black Americans who are now saying "No white man, no white man can ever be my friend." They are saying that because they are exposed to the hypocrisy of the liberals; they are exposed to the reactionary people in this Congress; they are exposed to the racism that we cover over by using polysyllabic words and alliterative phrases. But when you reduce the polysyllabic words, and the phrases, they come out as one simple little word: r-a-c-i-s-m. You talk about polarization. Well, who has caused it? May I have order, Mr. Chairman? I am sorry, but my voice is not strong enough tonight.

You talk about polarization in this Nation and ask who caused it. Oh, you love to attempt to place the blame on black militants and radicals and all of the groups who disturb the status quo. That is your way of getting off the hook. But you caused it by holding out the dream of a perfect nation to people and then snatching the dream back. You caused it by lying once too often and expecting the black people to be so naive and so stupid that they cannot see the lie. What you are doing tonight—and you will do it, there is no doubt in my mind but that you will do it—is setting the stage for the second post-Reconstruction era in this Nation. You talk about black Congressmen being here. Yes, 13 of us are here, but we were here a hundred years ago. We were here until this Nation reneged on a commitment. What you are doing tonight is setting the stage for the second post-Reconstruction era. Mark my words and mark them well.

Also mark the words of the young black man: "My country 'tis of thee, Sweet land of bigotry?"

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. BENNETT).

Mr. BENNETT. Well, it is very difficult to follow a very impassioned and very intellectual speech that we have heard, and I am a rather simple man myself. My own feelings about these matters is that, if we use words like bigotry and hate and hypocrisy, we may, in fact, engender them. If we think of love and justice and honesty, we may achieve them.

I believe I represent about as many black people as most people here do, at least. I do not believe there is a one of them that I hate, and I do not think there is a one of them that hates me. I just recently had a youth forum, or it was several months ago, and, in that youth forum, most of the young people who spoke against busing were black youngsters. I think sometimes you do not realize the tremendous impact this has had upon people, not just because they are black or white, but because they are people. There are people in my district who are being bused in excess of 80 miles a day.

The CHAIRMAN. The time of the gentleman from Florida has expired.

(By unanimous consent, Mr. STEIGER of Wisconsin was allowed to yield his time to Mr. BENNETT.)

Mr. BENNETT. I thank the gentleman. There are 65,000 youngsters in my hometown who are being bused for racial reasons. Sixty percent of the youngsters in my hometown are bused for racial reasons. My hometown is not a wealthy one; it has a very low average income, both black and white. The youngsters, both black and white, who speak to me about busing, say it has not added very much to their education; it has decreased their opportunities for extracurricular activity; it has decreased their chances for working in after-school hours. I just want to say that I am not here in a spirit of bigotry. I would much rather be a person who loved my fellow man than to be a Congressman. I am deeply grateful for the black people who elect me to office, as they do, by tremendous numbers in my district.

I do not think any one of them has ever hated me, and I have certainly never hated them. So I think we ought to think about this legislation with the idea of what is best for our country, or can help the country and make a better country for us, and think less about these inflammatory words.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. CHAPPELL).

Mr. CHAPPELL. Mr. Chairman, the Federal District Court in Jacksonville entered a school desegregation order on June 23, 1971, setting forth a comprehensive countywide plan which necessitates the massive cross-busing of its students. All appeals from the order have been exhausted. Thus section 803 of the recently enacted Education Amendments Act of 1972 does not afford Jacksonville any relief. The order was partially implemented during the 1971–72 school year with the major provisions of the order scheduled to be implemented this fall under the so-called phase II. Recently, the court denied a motion to stay the further implementation of the order.

Jacksonville is a prime example of the devastation which can be caused by massive court ordered forced busing in school desegregation cases.

Jacksonville, ranked 13th as of last year, is one of the largest school systems in the country. Prior to the first order requiring busing, which was entered in August 1970, the student enrollment was almost 122,000 of which 33,500 were riding 200 buses to their neighborhood schools.

Since then two orders have been entered. Their requirements and results are as follows:

The August 1970 order: Additional students bused, 5,250; additional buses, 49.

The June 23, 1971, order:

Phase I, school year 1971–72: Additional students bused, 6,250; additional buses, 112.

Phase II, school year 1972–73: Additional students bused 21,000; additional buses, 62.

Totals, 32,500 additional students bused; 223 additional buses.

The public school enrollment has steadily decreased during this period of time to an anticipated enrollment this year of 110,667 students.

The costs of implementing the Federal court orders have been devastating. The cost alone of operating buses for the 1972–73 school year—not counting costs of school personnel time in attempting to make changes in the school system and programs necessary to comply with the near impossible requirements to implement the court orders—will be approximately $3 million. Of that amount, almost half is necessary to implement the busing necessary under Federal court order.

This fall, with the full implementation of Federal court orders, Jacksonville will be busing approximately 65,000 students or about 60 percent of the total student enrollment.

Many of these students are elementary school children who will be transported up to 2½ hours per day, many of whom will be traveling distances from 50 to 74 miles daily. This fall alone, 21,000 students who have not previously ridden a bus to school are scheduled to be bused to implement the Federal order. Of course, that number will probably be reduced somewhat since those who can afford private school will probably not be in the public school system come September 5.

The Jacksonville experience is a living, real example which should rebut the ridiculous assertion by some of the opponents of this bill that school desegregation orders do not require many, if any, additional students to be bused.

The Jacksonville public school system is literally being turned into a mass transit system.

It would indeed be unconscionable for communities such as Jacksonville to be deprived of the relief which other cities would obtain under the Educational Opportunities Act simply because of the unfortuitous happenstance of the court order having been entered before the passage of this bill.

Even opponents of this bill—in the spirit of fairness—should advocate passage of this amendment to permit the reopening of proceedings. Commonsense and justice require no less. In considering the applicability of this bill, how can we possibly, in good conscience, draw a distinction between a court order which is entered after the bill's passage and an order, such as the one in Jacksonville, which, although entered a year ago, is currently being implemented with a major part of it not being implemented until this fall.

If this bill is passed without this amendment, the American people will never understand, as indeed they should not, why the Congress of the United States chose to accord substantial rights to one section of the country while denying them to another.

Mr. Chairman, I urge the adoption of the Green amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. Mr. Chairman, as a black Member of this body who represents a district that is 70 percent white, who opposes not only all of the amendments before us, but the entire bill, I would ask in the remaining seconds I have, how far are many of my colleagues in this body willing to go in defense of their personal and political ambitions? Are they willing to sell out the Constitution of the United States, the democratic process that we talk about in this country, or even their very souls?

Perhaps the answer to those questions will be learned in the CONGRESSIONAL RECORD tomorrow, as it reflects the votes for the remainder of the time this evening. I find it all very tragic, Mr. Chairman, and yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. ERLENBORN).

(Mr. ERLENBORN asked and was given permission to revise and extend his remarks.)

Mr. ERLENBORN. Mr. Chairman, I listened a moment ago to the gentleman from Maryland (Mr. MITCHELL), who gave a very impassioned and obviously a very sincere and deeply felt speech to this House. The gentleman asked that we be decent and fair and just. The gentleman of course has the right to ask that, and we must all be decent and fair and just. But I would ask the gentleman is it decent and fair for him to say we must follow his lead, we must follow his conscience; that if we disagree with the gentleman we are no longer decent, honest, and just people? If so, I say that is the way of a dictatorship.

The gentleman probably did not mean it that way, and maybe when the gentleman thinks a little deeper on it he may realize that in a country as large and diverse as ours that there can be honest differences of opinion. If we deny a person the right to have an honest and different opinion we then set ourselves up as dictators.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I have never heard such an eloquent plea to subordinate principle to expediency as I have just heard enunciated by my colleague and fellow southerner, the gentleman from Louisiana, who is a very affable and very honest and candid Member of this House.

The first action I took in this House was to take an oath to uphold the Constitution of the United States, and I believe that pledge was to be taken literally. I think it must be so taken because we are as much under a duty as Members of the Congress to uphold the Constitution of the United States as the Court is.

It is wrong to call upon us to make experiments in constitutionality, to pass laws that we think may be unconstitutional with the expectation that they will be so held—just as an experiment, and then to come back to amend the Constitution when we find we are wrong.

I would suggest to you that we are wrong—we are wrong in both substitutes and in the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. SCHEUER).

Mr. SCHEUER. Mr. Chairman, what these amendments and the substitute do and, indeed, what the bill does is to attempt to, by statute, require the courts to refrain from taking actions that they feel are obligated to take under the Constitution to protect individual constitutional rights.

I think most of you here tonight know that we cannot by action here set new and narrow parameters over the remedies that the Supreme Court can apply to assure constitutional rights. Perhaps we can limit them to what remedies they can apply for rights that we create by statute, by our legislation here. But we cannot tamper with their right to grant remedies to preserve constitutional rights. I think we all know that.

So we will not be accomplishing anything tonight by trying to do that because they will strike us down. But we will be sending out the kind of signal that you have heard other Members of the Congress deplore—the kind of signal that is going to exacerbate tensions, and deepen the mistrust, frustration, and alienation that plagues our society.

Mr. Chairman, in the Swann cases, decided only 1 year ago, the Supreme Court reaffirmed the 14th amendment's prohibition on State-imposed segregation by race in the public schools and upheld the broad and flexible equitable powers of the Federal courts to fashion remedies, including busing, designed to remedy the effects of violations of that constitutional prohibition.

Clearly, the Congress cannot permit by legislation what the Supreme Court has declared to be constitutionally prohibited. Thus, the Congress cannot, by statute, specifically permit State-imposed segregation in our public schools.

H.R. 13915 does not purport to do this. Rather, the bill is aimed at the second part of the Court's Swann decisions and attempts to limit the remedies which the Federal courts may fashion. Thus, the bill specifically provides, in section 403 (a) that a court cannot order the transportation of a student in the sixth grade or below to a school other than the school closest or next closest to his place of residence which provides the appropriate grade level and type of education for such student.

The Congress cannot constitutionally enact a complete prohibition of this nature. If it could do so, it would be, in effect, rendering State-imposed racial segregation constitutional in those cases: First, which involved children in the sixth grade or below; and second, which could be remedied only by transporting the students beyond the appropriate school next-closest to their homes. That is, Congress, would be changing, by statute, a right guaranteed by the Constitution—something which, under our theory of the supremacy of the Constitution, the Congress cannot do.

Thus, in my opinion, section 403(a) as contained in the committee bill is clearly unconstitutional. Congress cannot by statute prevent the courts from taking an action which the Constitution requires them to take.

The amendment I will introduce in a few moments to section 403(a) would remedy this defect in the committee bill by adding the words "unless the implementation of such a plan is required by the Constitution of the United States." It would thus permit the courts to order the implementation of a plan requiring the transportation of students in the sixth grade or below beyond the school next-closest to their homes, if the implementation of such a plan is required by the Constitution. Thus, the amendment makes it clear that the Congress is not attempting, by statute, to require the courts to refrain from taking an action they are required to take by the Constitution.

Mr. Chairman, if my amendment is not adopted, the passage of H.R. 13915 will do great harm.

Its passage will raise the hopes of the opponents of busing to cure dejure segregation. They will be encouraged by the passage of this bill to believe that busing, under specified circumstances, cannot and will not be ordered by the courts. As I have attempted to make clear, this will not bet the case. Section 403(a) is bound to be struck down as unconstitutional. The unfulfilled hopes of the opponents will only serve to increase their frustration and militancy.

The passage of the bill without my amendment will also demoralize those who have asserted and continue to assert their constitutional rights under the 14th amendment. They will view the willingness of the House to pass such a clearly unconstitutional bill as a great retreat from the sometimes slow, but steady, progress we have made in the nearly 20 years since Brown against Board of Education was decided. They will also be put to great inconvenience and expense in instituting a lawsuit attacking the bill—a lawsuit which would not be necessary if the Congress would recognize its responsibilities.

Mr. Chairman, there are those who will say that my amendment is not necessary—that every bill passed by the House is implicitly subject to the Constitution.

My answer to this argument is that if this is so, Members should not object to making explicit that which everyone knows is implied. The amendment can do no harm.

However, an explicit recognition in this bill of the supremacy of the Constitution, can be of great benefit. It would clearly indicate to the opponents of busing that Congress cannot satisfy their demands by statutorily permitting that which is constitutionally prohibited, and it would clearly indicate to those who seek to assert their rights under the 14th amendment that this body was not abandoning its responsibilities under the Constitution no matter what pressure is exerted upon it.

The CHAIRMAN. The Chair recognizes the gentleman from Mississippi (Mr. WHITTEN).

Mr. WHITTEN. Mr. Chairman, I am glad to see the House finally come to this day though I must say I do not have the greatest confidence that the bill we pass will stop forced busing or restore the quality of our schools—but I do have hopes.

I am the author of the so-called Whitten amendments which have brought us to the point where again we have the opportunity to show the Federal courts, all of them that the people's branch, the Congress overwhelmingly opposes forced busing against the wishes of parents which has done so much to lower the quality, and in some cases to actually destroy public schools.

These amendments which I wrote and which the House and the Congress adopted repeatedly as a part of the appropriation bill for the Department of Health, Education, and Welfare, read as follows, I quote:

> SEC. 309. No part of the funds contained in this Act may be used to force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88–352, to take any action to force busing of students; to force on account of race, creed or color the abolishment of any school so desegregated; or to force the transfer or assignment of any student any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.
>
> SEC. 310. Provides that funds shall not be withheld until any school or school district shall on its own action do any of these things.

Mr. Chairman, these sections offered by me have not been enforced though adopted repeatedly. I do think that in their passage we have crystallized the feelings of the Members here and have changed or influenced public opinion. I see many of my colleagues supporting my views here.

Congressional Quarterly in its December 11, 1971, issue, page 2559, refers to the history of my provisions under the title "The Building of a Majority." It lists the history of the Whitten amendments as follows:

LIST OF WHITTEN AMENDMENTS

1968. Whitten amendments to education appropriations bill, 1968. Almanac, page 603, 600, 598, vote 214, p. 92H, 93H.

1969. Whitten amendment to education apropriations bill, 1968 Almanac, page 603, 549, 548 vote 167, 78H, 79H.

1970. Whitten amendments to education appropriations bills, 1970 Almanac, p. 266, 264, 262, 260, 144, 143, 142, 141, 133, vote 106, p. 40H, 41H, vote 2. page 8H, 9H. C.Q. Book Civil Rights Progress Report, 1970, p. 49–50.

1971. Anti-busing amendments, to higher education-desegregation aid bill. Weekly Report p. 2386–2310, 2276. President Nixon busing, p. 1820, 1829; Whitten amendments to Education Appropriations bill, p. 1468, 1304, 843, 842; Supreme Court decision on busing, p. 928. Desegregation statistics, p. 199, vote 236(T), 239(T), p. 2332–2333, vote, 31(T), p. 875, 874.

Mr. Chairman, it has been a long road. Perhaps this bill which is supported by many who opposed my amendments for years, whose names I shall not repeat here, may break the ice, influence the President to enforce my provisions; change the attitude of the Supreme Court and other Federal courts so to put education first and foremost, and to stop this course which has lowered the quality of public education, and actually destroyed schools in some sections.

Mr. Chairman, I am proud to see us get this far. Let us hope once again that we keep on the road to victory for the education, for the well-being of all schoolchildren.

Mr. WILLIAM D. FORD. Mr. Chairman, I rise in support of H.R. 13915 as the most comprehensive and reasonable legislative proposal to reach the floor of Congress since the Federal courts first began to invade the jurisdiction of the legislative branch by "legislating" social policy rather than interpreting and enforcing the legitimate constitutional rights of all Americans regardless of race, creed, color, or national origin.

My entire public career and record as an attorney, local judge, constitutional convention delegate, State senator, and Member of Congress reflects my unswerving dedication to the building of an open American society.

No child should be deprived of or interfered with in his pursuit of education. However, I find myself in complete disagreement with those who speak in this House and elsewhere of equal rights while they argue for a double standard. I agreed with the U.S. Supreme Court when it said in 1954 that it was wrong to bus little children past the school nearest their home to an inferior school, because the color of their skin happened to be black. I still think the Court was correct in that decision and believe that it would be equally wrong to bus little children away from their neighborhood schools to an inferior school just because their skin is white.

As a lawyer, I have believed that the Constitution of the United States prohibits the establishment of racial quotas. Racial quotas are wrong. The assignment of children to schools to establish racial balance or achieve racial quotas is wrong when applied against anyone of any color or creed and whether it is done by the courts, the legislative or the executive branch of Federal, State, or local government.

The Congress has never before confronted this whole question in the way in which we present it to you here today. Although the legislation is basically that asked for by President Nixon last March, the bill before you today represents a bipartisan effort by those of us on the Education and Labor Committee who have worked for months to secure passage of a Federal law to bring order out of the social chaos created by Federal judges who attempt to engage in social engineering by ordering mass transfers and busing of children with little or no regard for sound educational policy or the real intent and purpose of constitutional guarantees of equal educational opportunity.

One need only consider the current case involving Detroit and the suburbs to recognize the need for immediate adoption of this bill. While Judge Roth has been stopped from putting any busing into effect this fall and I am sure that the Supreme Court would never approve cross-district busing or merger of suburban school districts, the fact that he has long since gone beyond the precedent of any higher court has led to unnecessary damage to public confidence in our democratic system and the Congress, as well as the courts.

The Constitution clearly insulates the courts from interference from the Congress in their jurisdiction, but the people have a right to expect the Congress to address itself to the serious problems they face and stand up to them. I believe we have a duty to legislate legitimate guidelines for courts to follow in dealing with the education of children.

Mr. Chairman, at this point, I would like to discuss the various provisions of this legislation.

First of all, an amendment which we added to the committee bill repeals the authorization in the Emergency School Aid Act for the construction and maintenance of education parks, the committee wants to make clear that this repeal means that no such parks may be constructed or maintained with any funds provided under the act, including the discretionary funds reserved to the Assistant Secretary.

This bill prescribes remedies which Federal courts and agencies may use in correcting denials of equal educational opportunity and equal protection of the laws as regards education.

These remedies are listed in a specific order of priority which courts and agencies must abide by in formulating remedies. No transportation, however, can be prescribed by any such court or agency, pursuant to this listing, for a student in sixth grade or below, other than to the school closest or next closest to his or her place of residence. Nor can transportation be prescribed for a student in seventh grade and above beyond the closest or next closest school unless it is demonstrated by clear and convincing evidence that no other method will provide an adequate remedy.

In no case, however, can school district lines be ignored or altered unless they were established for the purpose, and had the effect, of segregating students.

The Equal Education Opportunities Act of 1972 was proposed to Congress by President Nixon on March 17, 1972. Subsequently, the Committee on Education and Labor conducted 16 days of extensive hearings on H.R. 13915 and related bills. The General Subcommittee on Education reported an amended version of that bill on August 8 by a record vote of 21 yeas and 16 nays. As a member of both these committees, I have supported its basic principles and now ask you to vote for it.

The committee bill sets out specifically the remedies which Federal courts and agencies may use in correcting denials of equal educational opportunity and equal protection of the laws as pertaining to education. This sequential listing of remedies and the provisions limiting the use of massive busing are meant to systematize the manner in which Federal judges and officials formulate their remedies. Far too often it seems that different officials order widely different remedies when they are faced with similar fact situations. It is the purpose of this section of the committee bill title IV, to require an orderly and nationally uniform procedure for the formulation of remedies. Again the idea is to make clear the ground rules so that everyone involved will know where they stand.

Title I of the Equal Educational Opportunities Act, as reported by the committee, is designed to change the persistent patterns of discouragement and failure experienced by poor children.

The title reserves up to $500 million of funds authorized to be appropriated annually pursuant to the Emergency School Aid Act—which I voted against when it was attached to the Higher Education Act earlier this year—for special compensatory programs in those schools having the heaviest concentrations of poor children.

By limiting the compensatory education supportable under title I of the committee bill to "basic instructional services," defined as mathematics and language skills, and to "basic supportive services," such as counseling, nutrition, and health, the legislation attempts to avoid dissipation of the aid in nonessential areas. No funds can be used for overhead, major capital investments, or general salary increases. The title does not in any way authorize general aid.

The committee made several major changes in the administration's propsal. First, it eliminated any reference to title I of the Elementary and Secondary Education Act of 1965. As proposed by the President, the title would have combined the resources of the Emergency School Aid Act with those of title I ESEA, and would have authorized a redirection of title I ESEA funds into the limited uses eligible for support under EEOA. The committee strongly opposes any change in the existing title I ESEA program. To reinforce this feeling, it added a new section 721 to the Emergency School Aid Act which makes it clear that nothing in the new leigslation should be construed to alter the amount of a grant a local educational agency is eligible to receive under title I ESEA or otherwise modify in any way the current operation of title I ESEA.

Second, the bill reported by the committee makes the compensatory education portion of the Emergency School Aid Act a State plan program. The administration had proposed that it be a project-grant program, administered by the Assistant Secretary for Education. We felt that this vested too much discretion at the Federal level. We felt, rather, that State educational agencies are closer to the needs of their individual school districts and better able to make decisions concerning relative needs for compensatory education funds.

The committee bill states explicitly that the failure of an educational agency to attain a balance, on the basis of race, color, sex, or national origin, of students among its schools will not constitute a denial of equal educational opportunity or a denial of equal protection of the laws. This provision reaffirms the holding in Swann against Mecklenburg that the Constitution does not require a racial balance in each school.

This title of the committee bill also makes clear that, subject to the other provisions of this title, the assignment of a student to his neighborhood school—if that school has the appropriate grade level and type of education for such student—is not a denial of equal educational opportunity or of equal protection of the laws unless such assignment is for the purpose of segregation.

Title IV of the committee bill prescribes specifically the remedies which Federal courts may use in correcting a denial of equal educational opportunity or a denial of equal protection of the laws. This title also restricts in the same manner all Federal agencies and departments which are engaged in correcting such denials.

The title, first of all, requires that these Federal courts, departments and agencies may only impose such remedies as are essential to correct particular denials of equal educational opportunity and equal protection as regards education. This provision means that courts are not to use lawsuits against school districts as occasions for imposing free-wheeling requirements on these school districts. Rather, they must restrict themselves to the particular facts and circumstances of the cases. But this provision does not mean that courts are restricted to imposing remedies only when the particular plaintiffs are still in attendance at the schools in question if the particular lawsuit has taken several years to reach its conclusion.

This title also requires that in formulating a remedy for a denial of equal educational opportunity or of equal protection, which involves directly or indirectly the transportation of students, the Federal courts, departments, and agencies must follow the specified order of remedies set out in section 402. The courts or agencies must attempt to correct the denial by applying the first remedy or the first combination of remedies on the specified list before it can move on to the other remedies on the list.

This list includes such remedies as the creation and revision of attendance zones and grade structures and the construction of new schools. A plan heavily dependent on the transportation of substantial numbers of schoolchildren is only permited as the last possible remedy and even then such transportation is subject to the grade requirements in section 403 and the provision in section 404 regarding school district lines.

They cannot order the transportation of a student in sixth grade and below to a school other than to the school closest or next closest to his place of residence which provides the appropriate grade level and type of education for such student. Nor can any student in the seventh grade or above be transported beyond the school closest or next closest to his place of residence providing the appropriate grade level and type of education for such student unless clear and convincing evidence demonstrates that no other method of providing an adequate remedy is possible. If any Federal district court orders the implementation of a plan requiring such transportation, the appropriate court of appeals shall grant a stay of such order until it has reviewed the order.

This title, moreover, bars any transportation of students if such transportation poses a risk to the health of such students or constitutes a significant impingement on the educational process. Furthermore, in formulating the remedies under this title, school district lines shall not be ignored or altered except where they were drawn for the purpose, and had the effect, of segregation.

(By unanimous consent, Mr. PATTEN yielded his time to Mr. PUCINSKI.)

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Chairman, as I heard the comments of the gentleman from Maryland, they can only make one sad. I do not know how I would feel if I happened to be a black. I hope that I would not call everybody that I disagreed with a racist.

But the other comment that gave me a different reaction was by Mr. GROSS—when he was so devoid of logic—that he condemns the amendment because he likens it to old Quiedell amendments, telling you that one person who fell from favor in our party some years ago should now cause you to vote against the amendment.

Let us get to the issue before us—the substitutes I have offered here.

I would like to quote to you from a professor of the Yale Law School, Robert H. Bork, a conservative professor who supports this legislation.

He says, and these are his very words:

> The constitutionality of this provision depends essentially upon the reasonableness of the judgments that busing is less appropriate for children in the elementary grades than it is for older students.

Then he goes on and says:

> Section 403(a) gains support from the fact that the Supreme Court has recognized as proper the type of distinction the law draws. In discussing the factors to be weighed in framing busing orders, Chief Justice Burger stated in Swann I: It hardly needs stating that limits on time of travel will vary with

many factors, but probably with none more than the age of the students.

This distinction, drawn by Chief Justice Burger in the Swann case was quoted by the gentleman from Michigan (Mr. Gerald R. Ford).

Continuing: Professor Bork says:

> On balance, therefore, it appears that a good case can be made for the constitutionality of the President's proposal to limit busing of elementary school children.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. Pucinski) to close debate.

Mr. PUCINSKI. Mr. Chairman, we have heard a great deal of oratory here today. No one has told the House that 48 percent of black people in this country are opposed to busing.

I have heard all of the gentlemen over here telling us the things that they think they know. But we had studies made and 78 percent of the American people said that they opposed busing and 48 percent of the black people who were asked told us and indicated that they also opposed busing—because busing has been most cruel to the black people of this country and for a longer time.

If the courts of this land faithfully carry out the remedies spelled out in title IV of this bill, we probably will not need very much busing in this country. So you can vote for this bill on final passage regardless of what happens in the amendment stage as long as we provide the remedies here which the courts should apply first before they can apply any busing to the solution of these problems.

Therefore, I would hope on final passage of this legislation that we stand together.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. O'Hara) to the amendment offered by the gentlewoman from Oregon (Mrs. Green).

TELLER VOTE WITH CLERKS

Mr. O'HARA. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. O'HARA. Mr. Chairman, I demand tellers with clerks.

Tellers with clerks were ordered; and the Chairman appointed as tellers Mr. O'Hara, Mrs. Green of Oregon, Mr. Quie, and Mrs. Chisholm.

The Committee divided, and the tellers reported that there were—ayes 174, noes 211, not voting 47, as follows:

So the amendment to the amendment was rejected.

The CHAIRMAN. The question now occurs on the substitute amendment offered by the gentleman from Minnesota (Mr. Quie) for the amendment offered by the gentlewoman from Oregon (Mrs. Green).

The question was taken; and on a division (demanded by Mr. Quie) there were—ayes 20, noes 208.

So the substitute amendment was rejected.

Mr. STEIGER of Wisconsin. Mr. Chairman, I am correct, am I not, that the question now occurs on the Green of Oregon amendment.

The CHAIRMAN. The gentleman is correct.

Mr. STEIGER of Wisconsin. On that I demand a separate vote on those amendments relating to section 403 and 406.

The CHAIRMAN. The gentleman from Wisconsin demands a division and a separate vote on those portions of the pending amendment of the gentlewoman from Oregon (Mrs. Green) to section 403 and section 406. The gentleman is entitled to make that request.

The question now occurs on that portion of the Green of Oregon amendment relating to section 403.

Without objection, the Clerk will reread that portion of the amendment.

There was no objection.

The Clerk read as follows:

> Title IV is amended as follows:
>
> (a) Section 403, page 37, line 5 is amended by striking out "in the sixth grade or below";
>
> "(b) Section 403, beginning on page 37, line 9 and continuing on page 38 through line 3 is amended by striking all of paragraph (b);
>
> (c) Section 403, page 38, line 4 is amended by striking out the letter "c" and inserting in lieu thereof the letter "b";

PARLIAMENTARY INQUIRY

Mr. GERALD R. FORD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. GERALD R. FORD. Mr. Chairman, my parliamentary inquiry is this: Does section 403 in effect only change the differentiation of the treatment between sixth grade and below and sixth grade and above?

The CHAIRMAN. The Chair will state

that the interpretation of the language in this portion of the amendment is for the individual Members.

The question is on that portion of the amendment relating to section 403 of the amendment offered by the gentlewoman from Oregon (Mrs. GREEN).

Mr. QUIE. Mr. Chairman, on that I demand tellers.

Tellers were refused.

The question was taken; and on a division (demanded by Mr. STEIGER of Wisconsin) there were—ayes 178, noes 88.

So that portion of the amendment relating to section 403 of the amendment offered by the gentlewoman from Oregon (Mrs. GREEN) was agreed to.

The CHAIRMAN. The question now occurs on that portion of the Green of Oregon amendment relating to section 406.

Without objection, the Clerk will reread that portion of the amendment.

There was no objection.

The Clerk read as follows:

(d) Adding at the end thereof the following new sections:

"REOPENING PROCEEDINGS

"SEC. 406. On the application of an educational agency, court orders, or desegregation plans under title VI of the Civil Rights Act of 1964 in effect on the date of enactment of this Act and intended to end segregation of students on the basis of race, color, or national origin, shall be reopened and modified to comply with the provisions of this Act. The Attorney General shall assist such educational agency in such reopening proceedings and modifications.

The CHAIRMAN. The question is on that portion of the amendment relating to section 406 of the amendment offered by the gentlewoman from Oregon (Mrs. GREEN).

TELLER VOTE WITH CLERKS

Mr. STEIGER of Wisconsin. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. STEIGER of Wisconsin. Mr. Chairman, I demand tellers with clerks.

Tellers with clerks were ordered; and the Chair appointed as tellers Mrs. GREEN of Oregon and Messrs. STEIGER of Wisconsin, ASHBROOK and MEEDS.

The Committee divided, and the tellers reported that there were—ayes 245, noes 141, not voting 46, as follows:

So that portion of the amendment relating to section 406 of the amendment offered by the gentlewoman from Oregon (Mrs. GREEN) was agreed to.

The CHAIRMAN. The question is on the remainder of the amendment offered by the gentlewoman from Oregon (Mrs. GREEN).

The remainder of the amendment offered by the gentlewoman from Oregon (Mrs. GREEN) was agreed to.

AMENDMENT OFFERED BY MR. MIKVA

Mr. MIKVA. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MIKVA: On page 38, after line 8, insert a new subsection (d) to read as follows:

"(d) The limitations on student transportation contained in this section shall not preclude any court, department, or agency of the United States from ordering an adequate remedy for denial of equal protection of the laws."

Mr. MIKVA. Mr. Chairman, I realize that the hour of reason has probably passed on this bill. It may have passed in the Michigan primary, or in the Maryland primary, or in one of the earlier primaries this year.

But I must confess I am still troubled by some of the orators who talk about shooting craps with the Constitution, who urge that "we ought to take chances on the Constitution" or who justify our actions tonight on the notion that section 5 of the 14th amendment to the Constitution somehow gives us the power to interpret the Constitution or to limit it in some way or to limit the remedies for its violations.

Section 5 is very simple. It says "enforce the rights"—not to limit, not to dilute, not to derogate the rights, but to enforce the rights under the 14th amendment. One of those rights is the equal protection of the laws.

I call attention of the Members to page 33 of the bill, where it states that an assignment which is for the purpose of segregating students on the basis of race, color, sex, or national origin is outlawed, but an assignment that does not have that purpose is all right, even though it could have that effect.

And that is what we have said in the bill.

As recently as June 22, 1972, the Supreme Court of the United States, interpreting the 14th amendment, said, and

I quote from Mr. Justice Stewart's opinion, the majority opinion:

> The existence of a permissible purpose cannot sustain an action that has an impermissible effect.

Yet we are going ahead and legislating exactly that result, even though the Supreme Court of the United States has said we cannot do it.

What my amendment does—in a very imperfect way, because this bill took too long to write for me to try to pull it out of imperfection with one amendment—is to suggest that at least we are cognizant of the fact that the 14th amendment and its equal protection clause cannot be repealed, modified, or limited by this Congress; that we might not like the court decisions but if they are interpreting or enforcing that clause there is nothing we can do about them.

Mr. Chairman, I realize it is politically popular to derogate the courts even when they are interpreting the Constitution of the United States, but it is constitutionally contemptible.

If that oath we took means anything, I would urge support of this amendment.

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to the amendment.

I shall not take 5 minutes.

This amendment totally negates everything we have been doing here all evening. It negates completely the provisions of the act and the limitations we have carefully written into the act. It seems to me that if we adopt this amendment we will just undo everything that has been done here so far, so I urge the rejection of this amendment.

Mr. QUIE. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Illinois. Very briefly, with what we have done now, I believe that is the only way we can save this bill, to make it constitutional. Therefore, I shall support the amendment offered by the gentleman from Illinois.

Mr. SEIBERLING. Mr. Chairman, I move to strike the last word.

I will not take 5 minutes. I just want to say I find that the arguments we have heard, in opposition to those amendments which would require that the act be administered in such a way that it complies with the 14th amendment, are fantastic, because they are saying, in effect, that the purpose of these particular provisions is to permit the courts to violate the 14th amendment. That is a patently absurd position. It is incredible to me that it would be advanced in this House.

Mr. FRASER. Mr. Chairman, I did not hear the amendment read when first read. I would ask unanimous consent that before the vote is taken the amendment be read once more.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota that the amendment be reread?

There was no objection.

The Clerk reread the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. Mikva).

The question was taken, and on a division (demanded by Mr. Fraser) there were—ayes 76, nays 109.

TELLER VOTE WITH CLERKS

Mr. MIKVA. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. MIKVA. Mr. Chairman, I demand tellers with clerks.

Tellers with clerks were ordered; and the chairman appointed as tellers Messrs. Mikva, Pucinski, Quie, and Meeds.

The Committee divided, and the tellers reported that there were—ayes 154, noes 223, not voting 55, as follows:

So the amendment was rejected.

AMENDMENT OFFERED BY MR. FASCELL

Mr. FASCELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. Fascell: Page 38, after line 8, insert the following:
>
> "(d) When a court of competent jurisdiction determines that a school system is desegregated, or that it meets the constitutional requirements, or that it is a unitary system, or that it has no vestiges as a dual system, and thereafter residential shifts in population occur which result in school population changes in any school within such desegregated school system, no educational agency because of such shifts shall be required by any court, department, or agency of the United States to formulate, or implement any new segregation plan, or modify or implement any modification of the court approved desegregation plan, which would require transportation of students to compensate wholly or in part for such shifts in school population so occurring."

Mr. FASCELL. Mr. Chairman, I will only take a moment. This amendment simply conforms this section in the same manner which the previous amendment which was adopted by this committee on page 34 does. This makes the language of the Mecklenburg case apply to an act of a department or agency as well as that of a court.

I hope there is no objection since the other similar amendment has already been agreed to by this committee.

Mr. PUCINSKI. Mr. Chairman, we have no objection to accepting this amendment. In the committee it was not accepted at that time because it was under a different title.

We accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. FASCELL).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. THOMPSON OF GEORGIA

Mr. THOMPSON of Georgia. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. THOMPSON of Georgia: On page 39, after line 2, insert:

"CONGRESSIONAL IMPLEMENTATION OF EQUAL PROTECTION OF THE LAWS

"SEC. 409. Pursuant to authority contained in Section 5, of the 14th Amendment and in order to implement, for public school students, "equal protection of the laws" as set forth in Section 1 of the 14th Amendment the Congress does declare that no student shall because of his race, creed or color be assigned to or forced to attend a particular school."

Mr. THOMPSON of Georgia. Mr. Chairman, this amendment is a very broad amendment. I want to be certain that everyone in the Chamber knows what it does. I will not attempt to mislead you, but I do state that I think it is perhaps one of the broadest amendments that has been presented before this body because it reaches not just to busing; it reaches gerrymandering districts; it reaches pairing of schools; it reaches changing of grade structures or whatever it may be which has a racial motive, be that to segregate or to provide for a racial balance.

I would like to reread the amendment so that you can hear it. I base its authority on section 5. The title is—

"CONGRESSIONAL IMPLEMENTATION OF EQUAL PROTECTION OF THE LAWS

"Pursuant to authority contained in Section 5, of the 14th Amendment and in order to implement, for public school students, 'equal protection of the laws' as set forth in Section 1 of the 14th Amendment the Congress does declare that no student shall because of his race, creed or color be assigned to or forced to attend a particular school."

As I said, this is not just a busing amendment. It goes beyond that. It would prevent the drawing of district lines, the closing of schools, the pairing of schools, the changing of grade structures, or what ever it may be that is done for a racial motive. The reason, I think, that this amendment should be adopted is because we in this country have reached a time when we should stop considering students by race, with race to determine, by whatever means is used, where they will go to school, either to achieve a balance or to segregate.

Now this wording is practically identical with the constitutional amendment that many Members have seen and coauthored and signed a discharge petition for. I personally think it will withstand the challenge of the courts. However, the Members as well as I know that the courts are going to declare constitutional those bills and measures which they deem are constitutional and as unconstitutional those they deem are not constitutional. I cannot speak for the court in this particular instance, but I do know that we do have the power to implement—and I stress "implement"—equal protection. It is not equal protection to take a child out of a school which we say has a high standard and force it into a school which we say has a low standard in order to balance them, because we are taking from the child in the so-called good school the right to a good education. What we should do is to insist that we build up the low school and not seek a common level of two schools. That is in effect the amendment.

Mr. WOLFF. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman from New York.

Mr. WOLFF. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I wonder if the gentleman would accept, for the purpose of clarification, an addition to his amendment which reads:

Nor shall any school be established to evade "equal protection of the laws" which require equal education for all regardless of race, creed or color.

Mr. THOMPSON of Georgia. Mr. Chairman, I will be willing to accept that, because I think it does further clarify the purpose and intent. The gentleman discussed it with me prior to this time and the purpose is simply this: to provide that a school board, a school district, or a State, or whatever it may be, would not establish a school for the purpose of trying to have a segregated district or whatever it may be. In other words, it provides that the quality of education is the primary factor and that we would not establish schools for the purpose of trying to deny equal protection of the laws, and equal protection of the laws is equality of educational opportunity.

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to the amendment. This is language that is very close to what is in the constitutional amendment which may, or it may not, I do not know, come before this House. It is a very complicated subject. It creates a whole series of legal questions. This language undoes or would attempt to undo at least a whole series of Supreme Court decisions and other decisions.

The committee had not had an opportunity to hold hearings on this amendment. I think the House would be wise to reject this amendment at this time. We have placed limitations on busing, which has been a deep concern to Members of this House. We have done that in this bill.

Now to accept this amendment being offered at this late hour would be unwise. This is normally an amendment of a nature that if it were offered as a constitutional measure would require a two-thirds vote. In my judgment it is bad legislation. I would welcome opinions from some other constitutional experts on this matter, but it seems to me we will be going into a field that needs a great deal more debate and study. I am afraid we are going to be adopting an amendment in haste that can do more harm than good in the final analysis.

I appreciate the gentleman offering this but I think this amendment could seriously impair the bill that we are now carefully working through this House, which I presume is going to be adopted by this House.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. Let me say that although I personally favor the constitutional amendment, I think it would be folly to include this amendment on this legislation at this time. Therefore, I urge opposition to the amendment, because I want good legislation passed and I will take my chances on the constitutional amendment on a separate basis.

Mr. THOMPSON of Georgia. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Georgia.

Mr. THOMPSON of Georgia. Mr. Chairman, the gentleman said it was not considered by the committee. I did bring this to the attention of the Committee on Education and Labor when they were considering this particular matter. So it did come before them.

It is broad legislation; there is no question about that. But we do have the power to implement the equal protection clause.

In effect it says a student shall be a student, not a black student or a white student.

While I grant there is a split of opinion as to whether or not it is constitutional or not constitutional, it will establish a principle in this country that we are not going to consider race as the criterion by which we are going to assign students, by busing or other means.

Mr. PUCINSKI. The other side of the coin is that the language is so unclear that I believe it would cause more problems than it would solve.

Mr. Chairman, I ask that the amendment be voted down.

Mr. QUIE. Mr. Chairman, I rise in opposition to the amendment.

Even though I do not favor the constitutional amendment, I believe language of this nature can only be offered as a constitutional amendment.

On April 20, 1971, Chief Justice Burger in his opinion in the North Carolina State Board of Education against Swann struck down a North Carolina State statute, being virtually identical language to that contained in this amendment, so the Supreme Court has already decided on this. We should not offer something which has already been decided as unconstitutional.

Also I would say that the House has made its decision not to accept the amendment offered by the gentleman from Michigan (Mr. O'HARA). Therefore, if this were adopted it would cancel out what we have already agreed, to permit the assignment of students to the next nearest appropriate school to their place of residence. Therefore, it would be contrary to what we have already accepted.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, I ask unanimous consent that all debate on this amendment conclude at 11:15 p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The CHAIRMAN. The Chair will recognize Members for approximately 1¼ minutes each.

The gentleman from Washington (Mr. Meeds) is recognized.

Mr. MEEDS. Mr. Chairman, I take this time to address a question to the gentleman from Georgia (Mr. Thompson).

In the event that there is a dual school system, what remedy could be used to desegregate that system in the event the gentleman's amendment is adopted?

Mr. THOMPSON of Georgia. They may use any remedy that is based upon factors other than race, creed, or color. In other words, the criterion would be no discrimination. Those who say racial balance is the answer——

Mr. MEEDS. I am not asking about racial balance. I am asking, how would that school system be desegregated?

Mr. THOMPSON of Georgia. If a school system is considered a dual system, the children are being assigned based upon race, creed, or color. When they are no longer assigned based on race, creed, or color it would not be a dual school system.

The CHAIRMAN. The gentleman from Georgia (Mr. Thompson) is recognized.

Mr. PUCINSKI. Mr. Chairman, I am opposed to the amendment, but I ask unanimous consent that my time be yielded to the gentleman from Georgia (Mr. Thompson).

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. THOMPSON of Georgia. Mr. Chairman, I thank the gentleman for yielding me his time.

Let me again make one point very clear. This, of course, is the language of the proposed constitutional amendment many Members have signed. The minority leader has signed a discharge petition, I know, in this particular area.

It is broad legislation, but, at the same time, the time has come when we should stop the classification based upon race, color or creed.

In my opinion there is a very good chance that this is constitutional. In fact, I sincerely believe, as an attorney, this is constitutional. I cannot stand here and tell the Members that the court is going to uphold it. I do not believe any Member can state what the court will hold.

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. As I understand the gentleman's amendment, he does not have the word "solely" in it, but it is my understanding he really means that race, creed, color, et cetera, may not be the sole basis for assignment of a child to any school.

Mr. THOMPSON of Georgia. I certainly agree.

Mr. Chairman, I would like to ask unanimous consent that immediately following the word "student," the word "shall" be stricken, and "solely" substituted, so that he would not be solely assigned based on race, creed or color.

The CHAIRMAN. Is there objection?

Mr. GREEN of Pennsylvania. I object to it.

Mr. BROWN of Michigan. Will the gentleman state that that is the intent of the amendment.

Mr. THOMPSON of Georgia. Yes, that is the intent.

Mr. BROWN of Michigan. That the assignment should not be solely on the basis of race, creed or color.

Mr. THOMPSON of Georgia. That is correct. I thank the gentleman.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. Wolff).

AMENDMENT OFFERED BY MR. WOLFF TO THE AMENDMENT OFFERED BY MR. THOMPSON OF GEORGIA

Mr. WOLFF. Mr. Chairman, I take this time to offer an amendment which has been accepted by the author of this amendment as a clarifying amendment to his amendment.

The Clerk read as follows:

Amendment offered by Mr. Wolff to the amendment offered by Mr. Thompson of Georgia: At the end of the amendment, strike the period and insert the following: "Nor shall any school be established to evade 'equal protection of the laws' which require equal education for all regardless of race, creed, or color".

The CHAIRMAN. The gentleman from New York is recognized.

Mr. WOLFF. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. Wolff) to the amendment offered by the gentleman from Georgia (Mr. Thompson).

The amendment to the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia (Mr. Thompson), as amended.

The question was taken; and on a division (demanded by Mr. Thompson of Georgia) there were—ayes 30, nays 126.

So the amendment, as amended, was rejected.

AMENDMENT OFFERED BY MR. MIZELL

Mr. MIZELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Mizell: Page 36, strike out lines 11 through 14, and insert in lieu thereof the following: "(c) granting students the right to transfer to the school of their choice which provides the appropriate grade level and type of education (taking into account only school capacities) without regard to their race, color, or national origin;".

Mr. MIZELL. Mr. Chairman, section 402 of this legislation prescribes seven possible remedies which Federal courts and Government agencies may use in guaranteeing equal protection of the laws and equal educational opportunities for all of our children.

These remedies are supposedly designed to end discrimination. But I would like to direct my colleagues' attention in particular to one of these remedies, proposed in subsection (c) of section 402—

Permitting students to transfer from a school in which a majority of the students are of their race, color or national origin to a school in which a minority of the students are of their race, color or national origin.

This language seems innocent enough until you begin to examine it more closely. Then, gentlemen, I would have to liken it to the old hidden ball trick—no one seems to know where it is. But when it works, it is great. In this case few Members evidently know what it really says.

I am surprised that this language has remained in the bill this long, for if it is not removed it will be the most discriminating legislation that has ever passed the House of Representatives since I have been a Member of the House. That discriminates against our school children.

You might ask the question.

Why or how did I come to this conclusion? I would like to share my reasons with you, and I believe the majority of this body will agree with my conclusion.

First. It provides for freedom of transfer for one race within a school while denying the same right to another race within the same school.

Second. It establishes or tends to write into law for the first time, that a child's race is the only criterion to be considered in granting a transfer.

Third. Under the language of this bill, a student who requests a transfer could be provided space within the school of his choice even if some student would have to be denied the right to attend his school in order to provide space for the one who wants to transfer. In fact, the courts could require this.

Well, you might say that would be ridiculous, and I agree, but I would point out to you that the reason we have this legislation before us today is because the courts today are denying children the right to attend the school of their choice.

Let me give you an illustration of what could occur under the language contained in this bill. Which I hope to correct.

Let us say we have a school with 175 students, 100 black and 75 white. Twenty-five of the black children would have the right to transfer to the school of their choice. The remaining 150 black and white children would be denied that right.

What could be more discriminatory than a situation like that?

If my amendment is not adopted, based on the past track record of the Federal courts, I see this section C. placed in every school plan implemented in this country.

My amendment would correct these inequities. It would eliminate granting a preference to one race over another. Therefore it would strengthen the legislation by providing truly equal treatment for children of every race.

I don't believe the House wants to be on record as passing legislation that would grant right of transfer to children of one race while denying it to children of another race.

My amendment assures that this will not be the case, and I strongly urge the adoption of this amendment.

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this freedom of choice amendment has been held unconstitutional by the U.S. Supreme Court in the Green decision.

We have already dealt with this subject in this bill establishing all kinds of neighborhood schools. I would urge rejection of this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Carolina (Mr. Mizell).

TELLER VOTE WITH CLERKS

Mr. MIZELL. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. MIZELL. Mr. Chairman, I demand tellers with clerks.

Tellers with clerks were ordered; and the Chairman appointed as tellers Messrs. Mizell, Meeds, Schmitz, and Mrs. Green of Oregon.

The Committee divided, and the tellers reported that there were—ayes 123, noes 255, not voting 54, as follows:

[Roll No. 343]

[Recorded Teller Vote]

So the amendment was rejected.

Mr. PUCINSKI. Mr. Chairman, it is my understanding that there are eight amendments still pending to title IV but some of those may not be offered.

I ask unanimous consent that all debate on title IV and all amendments thereto end at 11:50.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that all debate on title IV and all amendments thereto close at 11:50. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The CHAIRMAN. Members will be recognized for approximately 1¼ minutes each.

The gentleman from Washington (Mr. Meeds) is recognized.

Mr. MEEDS. Mr. Chairman, I yield back my time.

The CHAIRMAN. The gentleman from Florida (Mr. Pepper) is recognized.

Mr. PEPPER. Mr. Chairman, in section 402 there is a provision to permit the courts to order the construction of new schools as a way of desegregating school systems which have been segregated by State order, yet there is no authority in any legislation for the provision of any Federal money.

My amendment would simply authorize the Commissioner of Education to make grants to local educational agencies to assist them to construct school facilities where such construction is required by section 402 of this act. In other words, if we are going to permit the courts to order construction we ought to provide some money to help the local school authorities pay the cost of the building of such schools.

I hope the amendment will be adopted.

The CHAIRMAN. The Chair will state to the gentleman from Florida that he did not offer his amendment.

AMENDMENT OFFERED BY MR. PEPPER

Mr. PEPPER. I am sorry, Mr. Chairman. I offer the amendment.

The Clerk read as follows:

Amendment offered by Mr. Pepper: Page 39, after line 2, insert:

"FINANCIAL ASSISTANCE WHERE SCHOOL CONSTRUCTION REQUIRED

"Sec. 406. The Commissioner of Education is authorized to make grants to local educational agencies to assist them to construct school facilities where such construction is required by section 402(e) of this Act. A grant under this section may be in any amount not exceeding the cost of the construction. For purposes of the General Education Provisions Act the program provided for in this section is an applicable program. For purposes of this section the terms 'construction' and 'school facilities' have the meaning given them by section 15 of the Act of September 23, 1950 (Public Law 815, Eighty-first Congress). There is authorized to be appropriated the sum of $500,000,000 for the fiscal year 1973, and $1,000,000,000 for the fiscal year 1974, for making grants under this section."

The CHAIRMAN. Do any of the Members on the list desire to be heard on the Pepper amendment?

Mr. PUCINSKI. Mr. Chairman, the gentleman makes a valid point in his amendment. This bill gives courts the right to order construction of new schools but there is no money in any bill to help local communities in that process. I would hope the amendment would be adopted to provide such funds.

Mr. Chairman, I reserve the remainder of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. Pepper).

The question was taken; and on a division (demanded by Mr. Pepper) there were—ayes 29, noes 79.

So the amendment was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. Eckhardt).

Mr. ECKHARDT. Mr. Chairman, this is a very noteworthy night and a very historic occasion. It is most unusual that we could make Mr. Hamilton and Mr. Jefferson turn over in their separate graves at the same time by action taken in a single session.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. Quie).

Mr. QUIE. Mr. Chairman, as I have talked to various groups, especially in schools, one of the things I said is there are times when a Member finds that his own bill is amended so that he cannot even support it. I thought I would want to take the floor and tell you so that you would not be surprised when we vote. Rather than wait until the very end when you will be anxious to vote quickly, I tell you now. I want you to know that from the information given to me from the administration about this legislation, it is constitutional to limit busing for the grades 6 and below. Extending the full limit to 7th grade and above. I feel makes this bill unconstitutional. Therefore, I will not vote for it. I do not say that with any rancor, because you voted for the Green amendment, I know you have the right to do that, and I am not holding that against any of you, but I just do not want anyone surprised when we vote here, on how I vote. I want you to know beforehand, and that is why I am telling you now.

The CHAIRMAN. All time has expired on title IV. Are there any further amendments to be proposed to title IV? If not, the Clerk will read.

The Clerk read as follows:

TITLE V—DEFINITIONS

Sec. 501. For the purposes of this Act—

(a) The term "educational agency" means a local educational agency or a "State educational agency" as defined by section 801(k) of the Elementary and Secondary Education Act of 1965.

(b) The term "local educational agency" means a local educational agency as defined by section 801(f) of the Elementary and Secondary Education Act of 1965.

(c) The term "segregation" means the operation of a school system in which students are wholly or substantially separated among the schools of an educational agency on the basis of race, color, sex, or national origin or within a school on the basis of race, color, or national origin.

(d) The term "desegregation" means desegregation as defined by section 401(b) of the Civil Rights Act of 1964.

(e) An educational agency shall be deemed to transport a student if any part of the cost of such student's transportation is paid by such agency.

The CHAIRMAN. Are there any amendments to be proposed to title V? If not, the Clerk will read.

The Clerk read as follows:

TITLE VI—MISCELLANEOUS PROVISIONS

Sec. 601. Section 709(a)(3) of the Emergency School Aid Act is hereby repealed.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Dingell: Page 39, after line 25, add the following:

"SEPARABILITY OF PROVISIONS

"Sec. 602. If any provision of this Act or of any amendment made by this Act, or the application of any such provision to any person or circumstance, is held invalid, the remainder of the provisions of this Act and of the amendments made by this Act and the application of such provision to other persons or circumstances shall not be affected thereby."

Mr. DINGELL. Mr. Chairman, this is a very simple amendment. It is taken almost verbatim from the statute which has been in effect since 1938. It is known as the separability clause. Its purpose is to see to it if any portion of the statute now before us is later held unconstitutional that the balance of it shall remain intact, and that the whole of the statute shall not fall by reason of a finding of unconstitutionality of any part of the statute.

It is a very simple thing. I hope that my friends and colleagues in this body will support it.

The function of it, I repeat to my colleagues, is simply to insure that in the event that any portion of the statute is held unconstitutional that the balance of the statute shall continue to have force and effect, and shall not fall by reason of any finding of lack of constitutionality.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to my good friend, the gentleman from Minnesota (Mr. Quie).

Mr. QUIE. Mr. Chairman, I want to say to the gentleman that his amendment is acceptable to me.

Mr. DINGELL. I thank my good friend.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to my good friend, the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, this is boilerplate language, it is used in other bills. Much has been said here today about the constitutionality of certain sections; it seems to me that this is a very timely and constructive amendment, and I would have no objection to it, and I would urge its adoption.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. Dingell).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. SEIBERLING

Mr. SEIBERLING. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Seiberling: Page 39 following line 25 add a new section, as follows:

"Sec. 602. Notwithstanding any other provision of this Act, nothing contained herein shall authorize or require any educational agency or court to avoid any action necessary to prevent a denial of equal educational opportunity within the meaning of Amendment XIV of the Constitution of the United States."

Mr. SEIBERLING. Mr. Chairman, we have taken care of some of the defects in this bill by the separability clause that this House has just approved. Nevertheless, I submit that it is poor legislative practice to incorporate provisions which are of very dubious constitutionality. We have one more opportunity to clean up the unconstitutional character of this act. That is the purpose of this amendment, to bring the whole act into conformity with the 14th amendment to the extent that that is necessary.

I hope very much that the same kind of arguments we had on some of the similar amendments, to the effect that "this frustrates the whole purpose of the bill," will not be used again, because such arguments amount to an admission that the purpose of this bill is to violate the 14th amendment.

Mr. PUCINSKI. Mr. Chairman, we have already disposed of a similar amendment earlier in the evening, and I would hope that this amendment would be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. Seiberling).

The question was taken; and on a division (demanded by Mr. Seiberling), there were—ayes 48, noes 104.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. ASHBROOK

Mr. ASHBROOK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Ashbrook: Page 39, after line 25, insert a new section:

"Sec. 603. The implementation of any order of a court of the United States shall be stayed to the extent it requires, directly or indirectly, a local educational agency—

"(1) to transport a student who was not being transported by such educational agency immediately prior to the entry of such order; or

"(2) to transport a student to or from a school to which such student was not being transported by such local educational agency immediately prior to the entry of such order."

Mr. STEIGER of Wisconsin. Mr. Chairman, I will make a point of order against the amendment, and I reserve the point of order.

The CHAIRMAN. The gentleman from Wisconsin (Mr. Steiger) reserves a point of order on the amendment.

The Chair recognizes the gentleman from Ohio (Mr. Ashbrook).

Mr. ASHBROOK. Mr. Chairman, I certainly do not need to take 5 minutes this late at night on this amendment.

Last March 20, two bills were introduced, H.R. 13915 and H.R. 13916. The bill, H.R. 13916, was offered by that eminent constitutional lawyer in this body, the gentleman from Ohio (Mr. McCulloch).

The minority leader, the gentleman from Michigan (Mr. Gerald R. Ford) joined him in the introduction of this bill which was known at that time as the moratorium.

I am very candid to say that there is a very basic difference. The moratorium they introduced, and this is the language of the bill, H.R. 13916, was to be for 1 year, to expire on July 1, 1973.

This amendment you would strike that date. It would make a permanent stay. Therefore, their moratorium would be in the form of a stay and I think it is proper and I would in advance answer the point of order which has been raised—unless I misunderstand the debate this afternoon—virtually everything we have talked about has been busing guidelines for busing, prohibitions on busing when busing can be used, and whether it is a last resort or a first resort or whether it is to be prohibited. This is what we are talking about in this amendment. I think it is in order and with that explanation, I yield back the balance of my time.

The CHAIRMAN. Does the gentleman from Wisconsin (Mr. Steiger) desire to be heard on the point of order?

Mr. STEIGER of Wisconsin. I do, Mr. Chairman.

The CHAIRMAN. The Chair recognizes the gentleman.

Mr. STEIGER of Wisconsin. The language contained in the amendment offered by the gentleman from Ohio is, of course, not identical to that introduced as to the moratorium legislation. But I would think a prima facie case could be made that the moratorium legislation has as its root the Judiciary Committee's jurisdiction. This legislation comes out of the Committee on Education and Labor.

An attempt to invade the jurisdiction of the Committee on the Judiciary by introducing the moratorium legislation would, I think, be out of order and not germane to the bill from this committee.

Thus, I would say to the chairman that any effort to bring in this bill not referred to the Committee on Education and Labor is not germane to the work of this committee and is not germane to the bill under consideration this afternoon.

The CHAIRMAN. Does the gentleman from Michigan (Mr. Gerald R. Ford) desire to be heard?

Mr. GERALD R. FORD. Yes, Mr. Chairman.

Let me supplement what has been said by the gentleman from Wisconsin.

If my recollection is accurate. At the time the bills were introduced, the Parliamentarian recommended to the Speaker of the House that the moratorium legislation—and this amendment is reasonably comparable to it—had to be referred to the Committee on the Judiciary. He precluded its reference to the Committee on Education and Labor.

Now with that decision as to the reference of the legislation was good then, it seems to me the point of order is good tonight.

The CHAIRMAN. Does the gentleman from Ohio (Mr. Ashbrook) desire to be heard on the point of order?

Mr. ASHBROOK. Yes, Mr. Chairman.

Mr. Chairman, I would say, if we would reexamine the bill we have before us tonight—the policy and purpose—time and time again we refer to the courts of the land. We refer to guidelines of the Supreme Court. We refer to limitations.

The gentleman from Michigan himself in discussing previous amendments has referred to the constitutionality of these amendments. I could cite section after section that refers to limitations which apply to courts and to local educational agencies. I would say that this amendment is strictly in keeping with the previous amendments, all of the sections of the bill, and I hope that the point of order will be overruled.

The CHAIRMAN. The Chair is prepared to rule.

The Chair has read the amendment offered by the gentleman from Ohio and notes that it would stay the implementation of orders of courts of the United States under certain circumstances. The Chair notes that in section 403 of the committee amendment there are provisions relating to the power of courts and agencies and departments of the United States to order the implementation of plans requiring the transportation of students.

The Chair also notes that we already have approved in the bill sections 406, 407, and 408 which deal with the reopening or termination of court orders relating to transportation and place certain limits and conditions on the power of the courts in those cases, so the Chair would be constrained to rule that the amendment offered by the gentleman from Ohio is germane, based upon the well-established principle that the germaneness of an amendment is based upon its relation to the bill in its amended form.

Therefore, the Chair overrules the point of order.

Mr. PUCINSKI. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

At the time the administration introduced this legislation setting some guidelines of limitations on busing, the administration at the same time introduced a moratorium bill. One went to the Judiciary Committee; one went to our committee. It was clearly the intention of the administration that until Congress worked its will on this legislation, the moratorium legislation would be hopefully approved as a stopgap measure. But there is no need for this legislation since we are now passing the Equal Educational Opportunities Act. Therefore, I would hope that the membership would reject the moratorium as unnecessary so long as we are moving the bill.

I would hope this bill will be approved. If the bill is not approved, obviously this amendment would not be approved with the bill.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, I would say to the gentleman respectfully that he is incorrectly referring to this amendment as a moratorium. This amendment is not a moratorium. It is a stay. As was originally drafted, it was a stay on court orders in the form of a moratorium as of a fixed date.

As I have introduced it, it is a stay, purely and simply, and could not be called a moratorium.

Mr. PUCINSKI. Mr. Chairman, I say to the gentleman this amendment is not necessary.

Mr. Chairman, we are coming to the end of debate on this long and weary bill. The fact is we have covered a lot of ground today. I want to thank the membership for the courtesy with which we have dispensed with the amendments. We have had a lot of action.

I regretfully disagree with my colleague from Minnesota, Mr. Quie, on his assessment of the bill. This is a good bill. I believe one thing that many of us overlooked in the heat of debate on the busing amendment. Many have failed to see the forest for the trees.

If you will look at title IV and the remedies provided in this bill, if the courts will apply these remedies in the order in which we have recommended them, I doubt very much if there is going to be any need for any extensive busing in this country. Therefore, I highly recommend the bill for final passage to my colleagues. I hope the motion to recommit will be rejected and the bill will be approved.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. Mr. Chairman, I yield to the distinguished minority leader.

Mr. GERALD R. FORD. Mr. Chairman, I join the gentleman from Illinois in urging approval of this legislation. I think it is good legislation. The House has worked its will. I believe it is reasonably close to the proposals initiated by the President, and I think for the benefit of the country we come closer and closer and closer to the opening of schools this fall. It is important that the House—and I hope the other body—make a conscientious effort to pass legislation of this kind, and by affirmative action in this body tonight we have at least assumed our responsibility to prevent the chaos and the complications, and perhaps far more unfortunate circumstances, in September when literally millions of children go back to school.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. GERALD R. FORD. Mr. Chairman, I shall be glad to yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Mr. Chairman, I cannot refrain from making one final comment. This House went through a similar exercise last November when various amendments on busing were passed, and we instructed conferees, and we saw everything that was done in the House go down the drain.

I would hope that the leadership on

both sides of the aisle would take all the steps that they possibly could to see that we do not have a repeat performance and that we do not have to come back here a month from now to again go through this exercise.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Minnesota.

Mr. QUIE. Mr. Chairman, I thank the gentleman for yielding.

Since I will be voting against the bill, I will not be a conferee. I do want to make the point here that I feel that both sides of the question should be represented in the conference, that 100 percent of the conferees need not hold the view of the House, but I also feel that a majority of the conferees should be selected who carry the view of the House and to represent the view of the House. That is my point of view on any legislation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. ASHBROOK).

The amendment was rejected.

AMENDMENT OFFERED BY MR. STOKES

Mr. STOKES. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STOKES: The bill is amended by adding thereto the following:

"Title VII—Conformity to the Constitution

"SEC. 701. Nothing in this Act is intended to be inconsistent with or violative of any provision of the Constitution."

Mr. STOKES. Mr. Chairman, the hour is late and I shall not belabor the point. It would seem to me that the amendment which I offer to this body is in conformity to everything that has been said here for the past 12 hours. The only exception is that of the gentleman from Minnesota (Mr. QUIE) who has announced that in his opinion, just a few minutes ago, this legislation may be unconstitutional. Everyone else whom I have heard in this Chamber over the past 12 hours has told us what fine and good legislation it is and how it does conform to the Constitution in all respects.

For instance, I could quote our distinguished chairman of the subcommittee, the gentleman from Illinois (Mr. PUCINSKI), who in opening up the bill this afternoon told us of the many eminent and distinguished constitutional scholars who said that this is a bill that conforms in all respects to the Constitution. Additionally we have heard comments similarly all afternoon, particularly with reference to the distinguished minority leader, Mr. GERALD R. FORD, who said that this bill has been delicately put together in order to give the Supreme Court some guidance.

It seems to me then that we ought at this time to express the fact that it is the intention of the Congress that this bill conform in all respects and not in any manner be violative of the Constitution of the United States. I would urge adoption of this amendment.

Mr. PUCINSKI. Mr. Chairman, I presume the Members of this House, all of whom have taken the oath of office and have sworn to uphold the Constitution, deliberated all day here today on amendments and a bill that the majority believe to be constitutional. I am not aware of any Member of this House who intentionally or willfully or willingly wants to pass legislation that is unconstitutional.

If there is anything unconstitutional in this bill, there will be ample opportunity for the U.S. Supreme Court to so declare.

I submit that as far as I know, to the best of my knowledge, in my honest judgment, this bill is constitutional.

This legislation was put together very carefully with the help of the best constitutional experts we know and we could get in the Justice Department. The administration had tried to put together language that we believe is constitutional.

So I say, Mr. Chairman, I have no objection as to whether this language is here or not, but I do not believe it is needed. I believe it is superfluous. If there is anything unconstitutional in this bill, the U.S. Supreme Court will make that very clear very quickly.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. STOKES).

The question was taken; and on a division (demanded by Mr. STOKES) there were—ayes 72, noes 121.

TELLER VOTE WITH CLERKS

Mr. STOKES. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. STOKES. Mr. Chairman, I demand tellers with clerks.

Tellers with clerks were ordered; and the Chairman appointed as tellers Mrs. GREEN of Oregon and Messrs. STOKES, MEEDS, and SCHMITZ.

The Committee divided, and the tellers reported that there were—ayes 178, noes 197, answered "present" 4, not voting, 54, as follows:

[Roll No. 344]

[Recorded Teller Vote]

So the amendment was rejected.

Mrs. GREEN of Oregon. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do not mean these words to be critical of anyone as to the manner in which they voted on the last vote. But I have listened to several people who have, in effect, said that those of us who support amendments tonight are in favor of destroying the Constitution.

That seems to me to be a rather unfair allegation—and absolutely without foundation. I have noticed constitutional lawyers for whom I have the greatest respect who have voted on both sides of the issue. So it does not seem to me fair nor intellectually honest to make such accusations.

Someone once said that waving the flag, and an extraordinary display of patriotism is the last refuge of the scoundrel. I suggest tonight, that waiving the Constitution, and this extraordinary display of waiving the Constitution, is the last refuge of those who have lost their case.

Mr. MEEDS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, fortunately we have not been able to destroy the Constitution and I think it is a fitting tribute to our day of noble work to paraphrase that famous English statesman, Winston Churchill, and to say that never has the Constitution of the United States been assailed by so many so often with so little effect.

The CHAIRMAN. The question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. Udall, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 13915) to further the achievement of equal educational opportunities, pursuant to House Resolution 1090, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. QUIE

Mr. QUIE. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. QUIE. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. Quie moves to recommit the bill H.R. 13915 to the Committee on Education and Labor.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. PUCINSKI. Mr. Speaker, I demand tellers.

The SPEAKER. All those in favor of taking a vote by tellers will rise.

Mr. QUIE. Mr. Speaker, on that I demand the yeas and nays.

Mr. PUCINSKI. Mr. Speaker, I have demanded that the vote be taken by tellers and I will ask that it be taken by tellers with clerks.

The SPEAKER. The gentleman from Illinois has demanded a vote by tellers and a request has been made that the Members rise. The Chair is counting.

PARLIAMENTARY INQUIRY

Mr. GERALD R. FORD. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. GERALD R. FORD. Mr. Speaker, if we have a vote by tellers with clerks, is it possible to have a record vote subsequently?

The SPEAKER. A record vote is a constitutional prerogative of the Members of the House.

Mr. PUCINSKI. Mr. Speaker, I withdraw my demand for tellers.

Mr. QUIE. Mr. Speaker, I demand that the vote be taken by the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 283, nays 102, not voting 47, as follows:

[Roll No. 345]

So the bill was passed.

The Clerk announced the following pairs: On this vote:

Mr. Hébert for, with Mr. Rooney of New York against.

Mr. Abernethy for, with Mr. Ryan against.

Mr. Kluczynski for, with Mr. Leggett against.

Mr. Passman for, with Mr. Waldie against.

Mr. Caffery for, with Mr. Reid against.

Mr. Anderson of California for, with Mr. Metcalfe against.

Mrs. Hansen of Washington for, with Mr. Gallagher against.

Mr. Carney for, with Mr. Blatnik against.

Mr. Rhodes for, with Mr. Conte against.

Mr. Gude for, with Mrs. Dwyer against.

Mr. Lennon for, with Mr. Roncalio against.

Until further notice:

Mr. Boggs with Mr. Keith.

Mr. Hull with Mr. Lujan.

Mr. Bob Wilson with Mr. Carter.

Mr. Melcher with Mr. Davis of Wisconsin.

Mr. Edmondson with Mrs. Heckler of Massachusetts.

Mrs. Abourezk with Mr. Michel.

Mr. Betts with Mr. Pelly.

Mr. Ullman with Mr. Railsback.

Mr. Long of Louisiana with Mr. Springer.

Mr. McMillan with Mr. Talcott.

Mr. Dorn with Mr. Terry.

Mr. Miller of California with Mr. Frelinghuysen.

Messrs. GARMATZ, TEAGUE of Texas, and DUNCAN changed their votes from "nay" to "yea."

Mr. RUPPE changed his vote from "yea" to "nay."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to revise and extend their remarks and include extraneous matter on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

AUTHORIZING CLERK TO MAKE CERTAIN CHANGES IN ENGROSSMENT OF H.R. 13915

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that in the engrossment of the bill H.R. 13915, the clerk be authorized and directed to make such changes in section numbers, cross references, and other technical and conforming corrections as may be required to reflect the actions of the House.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

GUARANTEED STUDENT LOAN PROGRAM

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 260) to delay the effectiveness of certain amendments to the interest subsidy provisions of the guaranteed student loan program in the case of certain students.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

The Clerk read the Senate joint resolution as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) until April 1, 1973, in the case of students whose adjusted family income is less than $15,000, the provisions of section 428(a)(1) of the Higher Education Act of 1965, as amended by the Education Amendments of 1972, shall not apply, and in lieu thereof, the provisions of section 428(a)(1) of such Act in effect on June 30, 1972, shall be applicable and shall be retroactively effective to July 1, 1972.

(b) Section 431(b) of the General Education Provisions Act shall not be applicable to any regulations promulgated with respect to such section 428(a)(1) prior to April 1, 1973.

AMENDMENT OFFERED BY MRS. GREEN OF OREGON

Mrs. GREEN of Oregon. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mrs. GREEN of Oregon: Strike all after the resolving clause and insert the following:

"That the effectiveness of the amendments made by sections 132A, 132B, 132C, 132D, 132E, and 132F of the Education Amendments of 1972 is hereby suspended for the period beginning with the date of enactment of this joint resolution and ending March 1, 1973, and the provisions of part B of title IV of the Higher Education Act of 1965, as in effect immediately prior to the enactment of such amendments, shall be effective during such period, except that (1) nothing in this joint resolution shall be deemed to affect the validity of any action taken or obligation undertaken under such part prior to the enactment of this joint resolution, and (2) section 438(b) of the Higher Education Act of 1965 shall continue to be in effect during such period. Section 431(b) of the General Education Provisions Act and section 495 of the Higher Education Act of 1965 shall not be applicable in the case of administrative action taken to effectuate this joint resolution."

Mrs. GREEN of Oregon. Mr. Speaker, believe me, and I suppose it is superfluous to say it, that I could not be persuaded at 1 a.m. this morning to ask unanimous consent to take up anything in this House if I were not persuaded it was a real emergency and crisis facing us.

The President sent up a special message yesterday to the Congress asking that action be taken on this before we go home. If the House is willing at this hour to take favorable action, then we have some reason to believe that the Senate will take action tomorrow and this can be on the President's desk.

Let me describe the situation briefly. The guaranteed student loan program over the years has worked amazingly well. In my judgment, the lending institutions, primarily the banks, have done a superb job of making loans to students in our colleges and universities. Last year alone, over $1 billion was loaned to students; money that does not come out of Federal funds or the Federal Treasury. Over 1 million loans were made.

A year ago in July, $71 million in loans was made to students. This July, of this year, $4½ million only was made to students. The situation is such that many of the lending institutions have withdrawn from the program entirely because there is so much confusion and there are difficulties in carrying on this program. In the last 2 weeks the Health, Education, and Welfare Department has put out interim regulations, and it has resulted in nationwide opposition and consternation among colleges and universities. I am sure that many of you have received telegrams and letters urging you to take some action on this so that the students in the colleges and universities in your districts will be able to borrow the money which will enable them to be able to pursue their college education this year.

Now, in the unanimous request and the amendment which was read, we do not touch EOG or the college work study or NDSL or the so-called grants. The only thing we do is to repeal the guaranteed student loan program as it was amended in the Higher Education Act of 1972, the conference report which was voted upon in this House about 2 months ago.

We repealed the guaranteed student loan program with the exception of secondary loans and the warehousing provisions. Many of you supported very actively the secondary loan and warehousing provisions which would make it possible for a larger sum of money to be obtained from this source.

This obviously was cleared before I would suggest that it be brought up tonight. It was cleared by the Speaker of the House, by the minority leader, by the distinguished chairman of the committee, by the ranking Republican member on the committee, the gentleman from Minnesota (Mr. QUIE), and the gentleman who is approaching the mike now, the gentleman from Illinois (Mr. ERLENBORN), by the gentleman from Wisconsin (Mr. STEIGER), by the gentleman from Pennsylvania (Mr. DENT), and by the gentleman from New Jersey (Mr. DANIELS), and other members of the Committee on Education and Labor.

Mr. ERLENBORN. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Illinois.

Mr. ERLENBORN. Mr. Speaker, the gentlewoman from Oregon has just a moment ago stated that the resolution under consideration would repeal the guaranteed student loan program as enacted in the Higher Education Act. Just for clarity, is it not correct that the effective date would be extended and the legislation for the student loan program would be in effect as it was prior to passage of the higher education program?

Mrs. GREEN of Oregon. The gentleman is correct. We do not repeal the Act. We repeal the changes made a couple of months ago, and the effect is to go back to the provisions of the guaranteed student loan program as they were in operation this past year. I think the effect will be to relieve the uneasiness and anxiety of the student foreign aid officers and the presidents of colleges and universities.

If the House approves this resolution this morning and the Senate later this morning, then the student financial aid officers will be able to work under the rules and the guidelines and the regulations under which they worked last year so they will not be having the ground rules changed and will not be having to train people for a new procedure. Also the lending institutions will be working under the ground rules under which they have worked for a couple of years.

This also, may I say to my colleagues, has met with the approval of Senator DOMINICK and Senator WILLIAMS on the Senate side, so we do have a hope that the action that is taken tonight is not an exercise in futility and that it will get down to the President's desk and will make it possible for students to borrow the money and go to college.

I urge that this be adopted.

Mr. BRADEMAS. Mr. Speaker, I rise in opposition to the amendment.

When the House approved and sent to the President the Education Amendments of 1972 2 months ago, it was our intent to broaden rather than constrict the scope of the student aid programs.

Specifically, Mr. Speaker, it was our intention that the subsidized loan program, under which millions of students each year obtain low-interest loans from private lenders, be opened up to all students who need help, and not be restricted only to those whose adjusted family income is less than $15,000 per year, as had previously been the case.

Unfortunately, Mr. Speaker, our intent was not immediately clear to the Department of Health, Education, and Welfare, which has the responsibility for implementing the program, and interim regulations were promulgated by the Department which threatened substantially to reduce the number of students who would be eligible to participate in the program.

This was emphatically not the intent of the conferees. As I have indicated, it was our intent to expand rather than restrict the eligibility of students to receive Federal interest benefits, for it was quite clear to us that the $15,000 adjusted family income limitation in existing law was, if anything, unrealistically low.

But as I have indicated, Mr. Speaker, the guideline drafters at the Department of Health, Education, and Welfare had quite a bit of difficulty in understanding this.

And in the meantime a crisis has erupted that affects millions of college students and their parents in every congressional district in this country.

The subsidized loan program is in complete disarray, with colleges and universities, their students—and most important, the banks that actually make these loans—bewildered by conflicting signals from Washington as to who is eligible, who is not eligible, and who is eligible for how much.

The situation has hit hardest those families whose sons and daughters are already in school, and who in past years have received these loans.

To such families the availability of subsidized loans is a promise on which they have put their faith, and on which they made decisions—some of them as long ago as 3 years ago—as to which college or university their sons or daughters would attend.

But now these expectations have been drawn up short of events in Washington.

According to the U.S. Office of Education, only 4,500 applications for Federal loan subsidies were processed during the last 2 weeks of July this year, while the figure for the comparable period last year was 30,000 applications processed.

And, Mr. Speaker, with the passage of time the situation is getting even worse. During the first week of August only 606 applications were processed, while last year the comparable figure was 21,184.

Mr. Speaker, from this evidence we are surely confronted with a crisis of national proportions; one which demands a response on an emergency basis.

The Senate has already taken remedial action, and the President of the United States has sent us a message urging action.

The Senate bill suspends until April 1 of next year the applicability of the new law to students whose adjusted family income is less than $15,000.

Thus families who have in the past been able to count on these loans being available, will be able to do so now, without further delay.

They will also be able to take advantage of the liberalized maximum loan ceiling, which the law increased from $1,500 in any one year to $2,500.

Finally, Mr. Speaker, families with adjusted gross incomes in excess of $15,000, who in the past have not been eligible to participate, will also be eligible as soon as HEW manages to promulgate regulations appropriate to their situation.

But to reiterate, Mr. Speaker, the main thrust of this legislation will be to reestablish—at this critical time of the year—the rules with which bankers and other lenders have long been familiar in responding to the needs of families who have come to depend on this program.

If we act now the bill will go to the White House tonight for signature.

But if we adopt this amendment—if we yield now to the desire of some to reopen the decision Congress made earlier this year to try and bring more families into this program, and to liberalize the maximum loan limit—the bill will have to go back to the Senate for reconsideration by that body.

Mr. Speaker, I am aware that suggestions have been made in this Chamber to the effect that the Senate will readily accept this amendment, that it will "sail through" the other body tomorrow morning.

But I must suggest, Mr. Speaker, that we should not forget that, in order for a measure different from the one passed by the Senate to gain quick acceptance in that body, unanimous consent to its immediate consideration would have to be obtained.

If only one Senator, therefore, were to object to the immediate consideration by the Senate of the bill containing the amendment that has been offered, we could be in a situation where, Congress having adjourned, we would not be able to do anything to clear up the chaos that has resulted from the confusion over loan regulations until next month, after the academic year has started.

Mr. Speaker, we cannot afford to take chances such as are posed by this amendment.

If we defeat the amendment and approve the bill as passed by the Senate, millions of students and their families will thank us.

If, on the other hand, we attempt to engage in substantive lawmaking here at this late hour, we run the risk of a reenactment of a conference between the two Houses, and all of the rest of the normal legislative process being dragged out into the fall.

Mr. Speaker, we deal here with an emergency.

I urge the House to act accordingly, to reject the amendment, to approve the bill passed in the Senate and to forward this measure to the President for his signature.

Mr. QUIE. Mr. Speaker, I should like to speak in favor of the amendment.

Mr. Speaker, I support the amendment that is offered by the gentlewoman from Oregon (Mrs. GREEN) to the Senate language. This is the reason why: If we adopt the Senate language, that means the needs test is removed for this school year. We put in a needs test. Everybody who has a $15,000 income and below is presumed to be in need, and those above $15,000 of income have to prove whether they are needy or not.

But all of that is under the law we passed into effect on July 1, with respect to the amount the educational institutions determined needed.

The Senate removed that needs test entirely.

Also, what the new language did was to increase the maximum a person could borrow each year from $1,500 to $2,500. This is what has happened in some lending institutions. A banker came before our committee and said that he lends everybody $1,500, that the law provides for it, they come in and ask for the money, and he gives it to them. I have talked with any number of students who say that they do not only receive the money in the loan for their needs at college, but they get more. We know there are purchases of cars and boats and what not. Everybody knows that.

On August 1 of this year the GAO came in with a report which said that loans are going to students who do not need them. Now, with the Senate language, we will be opening the door for another $1,000 for students who do not need it.

The only way that I can see we can get rid of the confusion, so that the students today can get some money, is to adopt the amendment of the gentlewoman from Oregon.

Those of us who got together this afternoon agreed to it, as she listed the names. A member of the other body may object, but I would say that he will then have on his shoulders the denial of guaranteed student loans to all the students of the country, not only of Rhode Island. I believe the gentleman has a little problem of his own and I doubt that he is going to make that objection.

Mr. PUCINSKI. Mr. Speaker, I move to strike the last word.

Mr. Speaker, I hope that the statement made by our colleagues from Indiana, Mr. BRADEMAS, has not escaped the careful attention of this House. It is 1:15 a.m.

We stayed here until about 2 o'clock or 2:30 a few weeks ago hammering out the higher education bill. This amendment before us today was worked out all day long in discussions and makes some very substantive changes to what you did here after careful deliberation. Now whether we believe him or not, a Member of the other body said he is going to object, and he has a right to object, and if he does object, then most of you are going to be stranded. We will be leaving here tomorrow and will not come back until the 5th of September. You are going to find tens of thousands of young people stranded in this country without loans. We have already enacted a resolution by the other body. Here it is in the RECORD.

All you have to do is look at page 28578 of the RECORD of August 16. The suggestion being made today is that instead of taking a chance on a new approach and taking a chance that somehow it will work in the Senate, that we do this. I know several others have said that they will get it through, but all it takes is one Member, and that Member has already said he is going to object, so you will be stranded until after Labor Day. If you do that, I strongly recommend we take the Senate language already approved and run with the law. Otherwise we will get in trouble.

Mr. STEIGER of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman.

Mr. STEIGER of Wisconsin. Let me say I hope the gentleman from Illinois is not suggesting that the House play patsy to the other body or any Member of the other body?

Mr. PUCINSKI. I am not suggesting it, but he has the votes and the objection, and if he exercises that objection, you can stand on your head for the rest of tomorrow and you will not get this bill through, and he has said he will object.

Mr. STEIGER of Wisconsin. If the gentlemen will yield further, what the gentlewoman from Oregon has proposed in the way of the action of the House is substantively the correct course to take, and it allows the House to work its will.

Mr. PUCINSKI. I do not quarrel with that.

Mr. SISK. Mr. Speaker, a point of order.

Mr. PUCINSKI. I have the floor. I do not hold with the theory——

Mr. SISK. Mr. Speaker, I hesitate to make a point of order against my friend here, but there have been a number of violations of the rules of the House in the past few moments, and reference to a Member of the other body was made.

The SPEAKER. The Chair would like to state there has been a number of violations of the rule of comity recently. The rules of the House forbid any reference to debates or votes in the other House or to the probable action of the other House. If any Member wants the citation in the manual read, he can have it read, but it forbids any reference to any Member of the other body or any action of the other body. The gentleman may proceed in order.

Mr. PERKINS. Mr. Speaker, I move to strike the requisite number of words.

This situation comes about because unnecessarily restrictive regulations have been prescribed to implement new provisions for the guaranteed student loan program.

It was clear to me at the time the Office of Education promulgated temporary regulations for the insured student loan program in July that the Office had badly misinterpreted congressional intent and that unless corrected there would be a crisis.

Within days after the release of those guidelines, on July 28, I along with other members of the conference committee from both bodies, protested the new regulations in a letter to the Commissioner of Education. In that letter, it was made clear that the interim regulations failed to carry out congressional intent.

In the face of continuing delays, on August 10, I telegramed both Secretary of the Treasury Shultz and Secretary of Health, Education, and Welfare Richardson restating my concerns, pointing out the crisis, and asking for their personal intervention. At this point in the RECORD I should like to insert a copy of our letter to Commissioner Marland dated July 28, and a copy of my telegram to Secretary Richardson and Secretary Shultz dated August 10. I should also like to insert a letter I received from the executive secretary of the National Association of Student Financial Aid Administrators, as it is illustrative of many of the letters the committee has received regarding this crisis situation:

CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES, COMMITTEE ON EDUCATION AND LABOR

Washington, D.C., July 28, 1972.

Hon. SIDNEY P. MARLAND, JR.,
Commissioner of Education, Office of Education, Washington, D.C.

DEAR COMMISSIONER MARLAND: We are writing to you with respect to an interim regulation affecting the interest subsidy provisions of the Guaranteed Student Loan Program, which was filed last week and published in the Federal Register of July 18, 1972.

Having compared the regulation to the relevant provisions of the statute, we must tell you that in our view the regulation seriously misconstrues the law, and, if left unchanged, will effect a substantial change in Federal student aid policy that we as Members of the Committee of Conference on the Education Amendments of 1972 did not intend.

The regulation in question purports to give effect to Section 132C(a) of the recently approved Education Amendments of 1972, and states in part:

"(b) In connection with a loan issued after June 30, 1972, in order for a student to be eligible for payment on his behalf by the Commissioner of a portion of the interest on such loan . . . the eligible institution at which the student has been accepted for enrollment or which he is attending . . . must, prior to the making of such loan, (1) determine, pursuant to paragraph (c) of this section, the loan amount needed by the student, if any, and (2) recommend that the lender make a loan in the amount so determined.

In our view this regulation would not be objectionable if it governed only the eligibility to receive interest benefits of students whose adjusted family incomes exceed $15,000, since in essence it merely restates the three elements of subparagraph II of Section 428(a)(1)(C) of the statute, as amended. These elements are: (1) that the institution has determined the student is in need of a loan; (2) that the institution has determined the amount of the loan of which the student is in need; and (3) that the institution has recommended to the lender that it make a loan in the amount of such need.

The comparable statutory provision running to students whose adjusted family incomes does not exceed $15,000, however, contains only two of these three elements, omitting the requirement that the institution has determined the student is in need of a loan.

This omission was intended by the Conferees to have meaning. Our intent was to create *a presumption* of need in favor of students whose adjusted family incomes does not exceed $15,000, and not to change existing law in this respect.

The statement of the managers that accompanied the legislative provisions of the Conference Report supports this conclusion:

"The conference substitute contains features drawn from both the Senate and House amendments. Under it a student would be eligible for an interest subsidy if his adjusted family income is less than $15,000. The student's school will furnish the leader with a statement concerning its determination of the amount of the student's need for the loan and a recommendation as to amount of the subsidized loan. In the case of students whose adjusted family income is over $15,000, the school may determine that he is in need of a loan to attend the institution. If it so determines, it shall provide the lender with a statement evidencing the school's determination of the amount of his need and a recommendation as to the amount of the subsidized loan.

You will note that the statement of managers describes in absolute terms the eligibility to receive interest benefits of students with adjusted family incomes of less than $15,000. Further, the statement of managers clearly indicates that the only issue to be addressed by the educational institution under such circumstances is the *amount* of the student's need, and the amount of the loan it will recommend.

Thus, on the strength of the language of the statute, as well as the statement of managers that accompanied it, we feel that the only reasonable construction of the recently enacted amendments is one which recognizes a clear distinction between the eligibility requirements applicable to a student with an adjusted family income of less than $15,000, and those applicable to a student with an adjusted family income in excess of $15,000. Indeed, unless Section 132C when read in its entirety is construed as having this meaning, our action in writing two separate eligibility provisions could at best be regarded as a frivolous exercise. It was not.

You will appreciate that the above analysis has more than academic interest, since it bears directly on a question to be addressed in subsequent regulations, i.e. the basis on which the payment of interest benefits may be made on loans in excess of the recommendation of the educational institution.

The regulation here addressed implies—and the form (OE 1260) intended to implement it flatly states—that "if the educational institution makes no recommendation for a loan . . . the loan is not eligible for the Federal interest benefits."

Again in our view such a result would not be objectionable if it applied only to the eligibility to receive interest benefits of students whose adjusted family income exceeds $15,000, for there an institutional determination of need is a prerequisite to any further consideration of a student's application.

When applied to students whose adjusted family income is less than $15,000, however, such a rule would have the effect of allowing the educational institution to overcome the statutory presumption of need on the part of such students, thus exercising a power Congress did not grant, and working a substantial change in previously existing law.

This result was not our intent. We intended to leave existing law substantially unchanged with respect to students with adjusted family incomes of less than $15,000, adding only the requirement that the educational institution have some input into the judgment reached by the lender before the loan is made. This input was not intended to be conclusive, and students with adjusted family incomes of above and below $15,000, respectively, were not intended to have to proceed on the same footing.

It follows from this conclusion that if the Office of Education is to administer the loan subsidy program in the manner intended by Congress, substantial changes must be made in the regulation promulgated last week. Such changes should reflect the intent of Congress that students with adjusted family incomes of less than $15,000, and students with adjusted family incomes in excess of $15,000, not be treated the same, and that the former be accorded a presumption of need, as was the case under previous law.

It is our understanding that, pursuant to Section 189 of the recently enacted Education Amendments, the Office of Education will submit proposed permanent regulations, guidelines, and application forms issued in connection with the subsidized loan program to the Committee on Labor and Public Welfare of the Senate, and to the Committee on Education and Labor of the House of Representatives, at least thirty days prior to such regulations, guidelines, and application forms taking effect. We trust that copies of the relevant documents will be transmitted as soon as possible since the immediate plans of millions of college students, and thousands of colleges, universities and lending institutions, are dependent upon the matter being resolved without delay.

In the meantime we hope the information contained in this letter will be useful to you in revising the regulation issued last week. We appreciate that the Office of Education has had to move with considerable speed in implementing the changes made by Congress in the subsidized loan program but know you will agree that this and all programs created by statute must be administered in accordance with the intent of Congress, without exception.

Best wishes,

Sincerely,

Carl D. Perkins,
Chairman, House Committee on Education and Labor.
John Brademas,
Member, House Committee on Education and Labor.
Harrison A. Williams, Jr.,
Chairman, Senate Committee on Labor and Public Welfare.
Claiborne Pell,
Chairman, Senate Subcommittee on Education.
Jennings Randolph,
Ranking Majority Member, Senate Committee on Labor and Public Welfare.

August 10, 1972.

Hon. Elliot Richardson,
Secretary, Department of Health, Education, and Welfare, Washington, D.C.
Hon. George P. Shultz,
Secretary of the Treasury,
Washington, D.C.:

The increasing volume of protests to the interim regulations for the Federally insured student loan program compels me to contact you and ask for your personal intervention in this matter. Based on the reports I have, we are already in a crisis situation. Unless immediate action is taken and rules and regulations promulgated which are consistent with the position stated in our letter to Commissioner Marland dated July 28 and which protect the statutory rights of students with adjusted family incomes of $15,000 or less, thousands and thousands of students will be denied benefits clearly intended for them by the Congress.

Carl D. Perkins,
Chairman, House Education and Labor Committee.

National Association of Student
Financial Aid Administrators,
Washington, D.C., August 9, 1972.

Hon. Carl D. Perkins,
Committee on Education and Labor, Rayburn House Office Building, Washington, D.C.

Dear Chairman Perkins: I thought you would be interested in the following telegram sent to Secretary Richardson, today.

"Denver, Colo.

"Dear Mr. Secretary: Want to share with you the deep concern of the student financial aid community represented by leaders of over 40 States assembled in Denver, Colorado, over the interim regulations for the federally insured student loan program.

"Aid officers from every corner of the country are reporting the effect of these regulations to:

"1. Deny eligibility for Federal interest subsidy to many deserving students for whom the program was intended;

"2. Choke up processing in colleges lending institutions and endorsement centers because of burdensome new administrative requirements;

"3. Discourage lender participation due to increased red tape and additional processing costs of billing interest to individual students. If these hurdles are not cleared up soon thousands of students will lack the needed resources for fall enrollment only a few weeks away.

"We realize that there are a number of technical problems with this legislation but we are confident that the Office of Education can develop realistic regulations that meet the intent of Congress yet stay within the law. However, direction is needed from your office to bring this about. Our association stands ready to help with this effort in any way possible.

"Sincerely yours,

"Grant R. Curtis, *President.*"

We support your position in this matter completely.

Sincerely,

Richard L. Tombaugh,
Executive Secretary.

During this period I instructed the staff of the committee to cooperate in every way possible with the Office of Education in order to arrive at an acceptable solution at the earliest possible date.

On August 14, Monday of this week, I called Commissioner Marland to my office in a further attempt to expedite matters. At that time, I was advised that within 24 hours agreement would be reached within the Administration and that we would be provided with new regulations. On Monday also we began to plan the action which the Committee on Education and Labor might have to take. On Tuesday, I was hopeful that satisfactory rules, regulations and guidelines which would properly carry out the intent of the Congress would be agreed to within the Administration.

In order to expedite matters in the event that such was the case, I introduced House Resolution 1286 to exempt any new regulations from the provisions of law which requires their publication for thirty days prior to their effective date. It was with great disappointment yesterday that I learned that there was still division within the Administration and that it would not be possible to meet the crisis as we had hoped to do, and as we should have done. We are thus in a position today where we must resort to the legislation which is before us.

Yesterday the Senate passed the resolution now under consideration, postponing the effectiveness of certain new provisions of the interest subsidy portion of the guaranteed student loan program until April 1, 1973. Shortly after that, the President's message was received requesting such legislation. Hearings on this matter had already been scheduled this morning by our Special Subcommittee on Education.

Based on all the information that I have, including the hearing transcript of this morning, it is clear to me that we are indeed in a crisis situation. I believe the Senate resolution meets the problem fairly.

However, the amendment under consideration should be supported since it is the only way we have been able to obtain an agreement on the House side.

Time is working against us. Students are in the process of seeking aid for this coming semester. About 200,000 to 300,000 applications are presently pending. Approval of the amendment and enactment of the resolution will allow for the continuation of the program as it has been operated in the past, with the result that students will be able to get the needed financial aid during the next few weeks, the peak borrowing period.

Mr. PEYSER. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from New York.

Mr. PEYSER. I thank the gentleman for yielding for just one moment, because I feel very strongly on this particular issue. I have supported the higher education bill that we originally passed. I agree with the terms of it. However, there are students in my State, in the State of New York, and all over the country, who will not be able to get loans today. If we accept and support the amendment of the gentlewoman from Oregon tonight then we have a good chance and the students, starting in the middle of next week, will be able to get loans. This is August, and school starts in September.

So I hope you will support this amendment.

Mr. DELLENBACK. Mr. Speaker, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Speaker, I think it is important that the House understand exactly what it is we are facing. The point that is made by my colleage, the gentlewoman from Oregon, is sound. We have a provision which wraps up together, not to repeal, but merely to suspend the operation for a period of time for the series of sections of this higher education law which make an homogenous unit. The proposal of the Senate is deficient in at least two respects. First it is deficient in that it does not present the series of items which should be in it if we are going to suspend them all together, but it suspends only one process.

Second, if you will read the last sentence, there is one provision which deals with the effectiveness of the regulations, and time delays which should be utilized before those regulations can become effective; the proposal which passed the Senate did not waive one of those two provisions which apparently must be waived, if in these next several weeks we can be operating under a program to get loans that the institutions can live with, and the students can get loans, and the lending institutions can operate under it. We have operated under this section, as my colleagues pointed out, and they know what it is.

If we can pass this amendment tonight and get the approval of the Senate, and it is almost inevitable it will be coming, then we will have an operating unit which will get loans to our students. Without such action, we will be seriously deficient.

Mr. BRADEMAS. Mr. Speaker, will the gentleman yield?

Mr. DELLENBACK. I yield to the gentleman.

Mr. BRADEMAS. Mr. Speaker, I appreciate the observations of the gentleman.

One thing, I think, has not been made totally clear and apparently I failed to do so in my own remarks.

We are not talking, when we analyze the amendment offered by the gentlewoman from Oregon, about a simple extension of time. We are talking of repealing substantive portions of the higher education law that was enacted. I cited one example of the dropping of the maximum limit of the amount of money that can be borrowed, from $2,500 to $1,500. That may be a good idea or it may not be a good idea. But that is part of the amendment and we should not beguile ourselves into thinking that we are talking about a simple extension of time here.

I hope my colleagues will appreciate, therefore, that this is the safest way to be sure that we make possible loans for students.

Mr. DELLENBACK. I appreciate the remarks of my colleague.

Mr. BRADEMAS. I am sure my colleague will not disagree with what I have said.

Mr. DELLENBACK. I will merely read the first lines of the amendment offered by our colleague from Oregon:

> That the effectiveness of the amendments made by sections 132A, 132B, 132C, 132D, 132E, and 132F of the Education Amendments of 1972 is hereby suspended for the period beginning with the date of enactment of this joint resolution and ending March 1, 1973.

This is not a repeal. This is a suspension for a given period of time.

Mr. THOMPSON of New Jersey. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, the gentleman from Indiana uses words of art when he warns that this is more than a suspension in time, that this is indeed and in fact an effort substantively to change the action taken overwhelmingly by this body.

What the other body will or will not do, I suppose, is not particularly relevant, except that I might warn that in the unhappy event the other body does not agree with the action taken in this body, if this amendment is passed, then each and every one of you can look for all sorts of grief from students who are expecting and have a right to be expecting stipends and loans and who are not going to get them if it happens that there is not a concurrence on tomorrow.

Now, if you want to run this risk, I invite you to do so. But you are running a great risk. You have not had a chance to study these amendments any more than a lot of us have had. I will admit I had an opportunity, which I was unable to avail myself of this morning. But had I availed myself of that opportunity this morning to go to the subcommittee, I would have objected strictly and violently to this.

I doubt that the chairman of the full committee would have been a participant in it. I simply caution you that the safest route is to defeat this amendment and to concur in what the other body has done and guarantee to the students the availability of these loans.

Mr. ESCH. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, speaking as a member of the committee and having suffered with the House during the past hours of this day, I would suggest to the Members of the House that it is indeed a rare occasion when our committee recognizes that it needs to correct an error that it made.

I would strongly urge that all of you support the amendment and pass the bill and recognize that we take this responsibility and that you would support the action of the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Will the gentleman yield?

Mr. ESCH. I would be happy to yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. I thank the gentleman for yielding. I appreciate the comments of my colleagues on the committee, and especially my colleague from Oregon.

It seems to me that he made it abundantly clear that all that is being asked is that we postpone the effective date of the amendments which were made to the guaranteed student loan program this year through the conference report. It is not to repeal; it is to postpone the act, and there is a terminal date of March 1. There was an agreement today that in the subcommitee which I have the privilege of chairing that we would immediately start hearings on the guaranteed student loans and work out several provisions that are causing trouble.

We would start those hearings immediately after we come back on September 5. I am planning to schedule hearings on September 6 and 7, and at that time the several bugs that have been identified can be discussed and the committee and the House can work their will at that time.

So we are not asking for any repeal; we are asking for the postponement so that we can get on with the business that is so urgent for the colleges and universities.

The SPEAKER. The question is on the amendment offered by the gentlewoman from Oregon (Mrs. GREEN).

The question was taken; and on a division (demanded by Mr. BRADEMAS) there were—ayes 198, noes 64.

So the amendment was agreed to.

The SPEAKER. The question is on the Senate joint resolution.

The Senate joint resolution, as amended, was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: To suspend until March 1, 1973, the effectiveness of certain amendments made by the Education Amendments of 1972 to the Guaranteed Student Loan Program.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the Senate joint resolution just passed.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

PERSONAL EXPLANATION

Mr. RONCALIO. Mr. Speaker, I was unavoidably detained during final passage of the bill H.R. 13915, Equal Education Opportunities. If I had been present I would have voted against the legislation.

MOST FAVORED NATION FOR RUMANIA

(Mr. FINDLEY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FINDLEY. Mr. Speaker, today a bipartisan group of 10 of my colleagues who are members of the Ways and Means Committee are introducing a bill to provide the President the authority to negotiate most-favored-nation tariff treatment with Rumania. The language of the bill is identical to one I first introduced in the House in August 1969 and reintroduced in July 1971.

For the last decade, the Rumanians have made a significant effort to formulate and practice their own independent policies, both at home and especially in their international relations. Among the significant signs of Rumanian independence in recent years are the following:

1964—Rumania blocked a Soviet attempt to integrate the economies of the Warsaw Pact countries on Soviet terms.

1966—Rumania was the first Warsaw Pact nation, other than the U.S.S.R., to recognize West Germany, and establish diplomatic relations despite objections from Moscow and the East Germans.

1967—Rumania refused to break diplomatic relations with Israel or brand Israel an aggressor after the 6-day war.

1968—Rumania refused to participate in the invasion of Czechoslovakia and warned Moscow that a similar move against Rumania would be met by force.

1969—Rumania was the first Communist nation to invite and host President Nixon on its soil.

1971—Rumania's President Ceausescu paid a state visit to the People's Republic of China, despite Soviet reaction.

1972—No Rumanian ships were in North Vietnamese ports when they were mined, nor have any called there in recent memory. Rumanian trade with the North Vietnamese has declined steadily for years, consisting only of a minimal amount of non-military goods.

This independence makes it desirable, indeed very essential that the United States be able to negotiate for most-favored-nation tariff treatment with this Eastern European country as far in advance of a similar negotiation with the Soviet Union as possible.

To fail to do so will serve to aid the Soviets in consolidating their hold on their Eastern European neighbors, who will conclude that their own independence from the Moscow line will yield them little recognition from the United States, and that the United States prefers "big power" diplomacy with the Soviets to the exclusion of Eastern Europe's sometimes differing interests.

President Nixon upon several occasions—including his most recent State of the World Message—has publicly endorsed most favored nation for Rumania and, through Secretary of State Rogers, asked Congress to give him the authority to negotiate with Rumania on most-favored-nation trade status. Congress' failure to do all possible to fulfill this most important commitment to the Rumanians might be misunderstood in all Communist capitals as well as elsewhere.

The introduction of this bill today by so many prominent members of the Ways and Means Committee is a signal that Congress has not forgotten one of the most independent Communist countries in the Soviet bloc. Hopefully, the committee will now set a date for hearings on this bill.

Such a move at this time would certainly be a political and economic plus for the United States.

Politically, as stated above, it would recognize the independent policies pursued by the Rumanians and give meaning to our declared intention to deal with Eastern European countries directly and not through Moscow. At the same time, it would give the Soviets no valid cause for offense if negotiations on most favored nation were initiated first with Rumania. The Soviets realize the significance for themselves of an Eastern bloc country being accorded favorable trade status. It is well known that they hope to receive similar trade status early in 1973. In fact, granting most favored nation to Rumania would clearly strengthen the United States negotiating position vis-a-vis the Soviet Union.

Most favored nation for Rumania should not be compromised because of the continuing war in Vietnam. Rumania's trade with Hanoi has steadily dwindled since 1967 to the point where last year it sold only $10 million worth of products to the North Vietnamese. Even that trade is restricted to foodstuffs, medical supplies, and other nonmilitary goods.

Economically, it would represent a positive trade initiative by President Nixon. A bill restricted to most favored nation for Rumania would not, in my judgment, encounter the fire of protectionists in either the House of Representatives or the Senate this year. What may occur next year is unknown. Certainly a major effort will be made then to amend general grade legislation to include protectionist measures.

Moreover, it can be expected that granting most favored nation to Rumania will increase its trade with us, which is already heavily in our favor. Rumania purchases more than four times as much from the United States as it sells to us. At the same time, it has limited its trade with the Soviets to only 28 percent of its total trade, far less than other Warsaw Pact countries.

In addition, U.S. investors in Rumania may obtain equity of 49 percent of their investments in a joint venture.

All of this indicates the strong reasons for acting on most-favored-nation tariff treatment for Rumania. The members of the Ways and Means Committee are to be commended for their foresight and judgment in introducing this measure which can have a substantial impact upon our political and economic relations in Europe.

DR. CALVIN M. THOMPSON

(Mr. HANLEY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HANLEY. Mr. Speaker, a dear friend and noble man passed from this life yesterday, Dr. Calvin M. Thompson. Dr. Thompson held many titles in his life, but first and foremost, he was a man of God, and a man who served his God by serving his fellow man.

Dr. Thompson was more than a cornerstone of the Syracuse community. He was an embodiment of its moral force, and for 37 inspiring years he influenced generation after generation as pastor of the Delaware Street Baptist Church. But Dr. Thompson did not confine his message to his own church only, it was far too important, and he knew of its power. So for as many years, he preached the Gospel for all Syracusans over WSYR radio. I remember as a young man listening to his words come over the radio; words of conviction and courage; words that were to influence my life and many others.

Dr. Thompson's influence hardly stopped there, however. Over the years of our long and close association, I leaned on him heavily for counsel. His wisdom and strength buoyed me through many a trial.

In 1970, I had the honor of speaking on the occasion of his retirement, when his congregation and community feted him for his years of loving service, and his personal warmth and sincerity never shined as brightly. We came to praise him and did, but when he rose to speak, he did not talk much about his past, but rather he spoke of the future, and once again inspired us. That was the kind of man he was.

Dr. Thompson was a native of Newark, Ohio, and was educated at Georgetown College, Ky., and the Andover-Newton Theological School in Newton Center, Mass. His career was a brilliant one, and I would like to touch on a few of its many highlights.

At age 22, Dr. Thompson served as the post chaplain at the American Hospital Center, Beaune Cote D'Or. After returning to America after the war, young Dr. Thompson finished his seminary work and took his first pastorate in the wild and untamed oil town of Casper, Wyo. In 3 short years, Dr. Thompson's efforts were so successful he had to build two new missions to accommodate his flock.

It was in Casper he met his bride, Miss Helen Crissman, who was working with the Young Women's Work of the Baptist Denomination. After his work in Wyoming was done, the people of Kentucky were next to have the privilege of his services. As in his later years in Syracuse, Dr. Thompson contributed much to the community of Barbourville, writing a newspaper column as well as administering to the religious needs of his people.

Then he came to my home, Syracuse, N.Y. I have mentioned some of his work there, but there is more. For more than 10 years, Dr. Thompson was member, vice chairman and chairman of the Syracuse Housing Authority, forcefully molding the first postwar program of low rental housing. His contributions in this area cannot be measured. He also was a figure in community organizations, including the Masons, the Kiwanis Club and the American Legion, and he often wrote for the city paper.

But, Mr. Speaker, you know as well as I that a man's accomplishments, although they be great, do not give us the true feeling of the man. Dr. Thompson was a great human being. A man of spirit and humor, a man who was deeply concerned about his fellows. He was a deep and reflective man, a man with an abiding faith in God and the life hereafter.

It is for that reason that my sadness at his passing is tempered. I know he died at peace, for he lived in peace with God. I am reminded of the immortal words of John Donne:

> "Death, be not proud, though some have called thee
> Mighty and dreadful, for, thou art not so,
> For those, whom thou think'st, thou dost overthrow,
> Die not, poor death
> One short sleep past, we wake eternally,
> And death shall be no more; death, thou shalt die."

Mr. Speaker, I trust my good friend Dr. Thompson shall wake, for he trusted his life to his Creator.

THE CROPLAND AND WATER RESTORATION ACT

The SPEAKER. Under a previous order of the House, the gentleman from Missouri (Mr. HALL) is recognized for 1 hour.

(Mr. HALL asked and was given permission to revise and extend his remarks and include extraneous matter.)

GENERAL LEAVE

Mr. HALL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to comment on the subject of the Cropland and Water Restoration Act of 1972.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. HALL. Mr. Speaker, as I prepare to introduce the Cropland and Water Restoration Act, today, I would like to first point out that it is applicable to agriculture legislation as a whole concept, or can be incorporated as a part, or special feature of another agriculture bill.

It is divided into two parts, the first of which eliminates the Federal Government, that is the U.S. Department of Agriculture, from any management of food and fiber grown by the farmer to be sold in the free marketplace; the second part, which I refer to as the "second market," puts the Federal Government, through its Department of Agriculture, in the position of acting as a regulatory agency only to the extent that the farmer himself is willing to participate in, after consultation and agreement with his local representative of the ASCS committee, on an economically feasible basis.

In short, this bill is voluntary, and funding by the Federal Government is elected only as an incentive to encourage the farmer to make better use of his land, instead of merely "idling" acres.

Mr. Speaker, early in my service as a Member of the Congress, I felt the need for a new approach to the way our Federal Government participates in this Nation's vast system of agriculture.

We have for years, attempted to solve our farm problems on a "piecemeal" basis, patching here, shoring up there, deleting programs, adding others, always reacting instead of attacking the problems with an across-the-board, "grand design." It is increasingly apparent to all that we now need a plan that will not only give the American farmers a strong and voluntary voice in the management of their own affairs, but will assure this Republic of—

First, an abundance of food and fiber for the consumer;

Second, a fair profit for the farmer; and

Third, a conservation program that will provide for the future demands on soil and water—that will surely be made by our growing population—here and around the world.

Fortunately, we are blessed with abundant resources and I believe that we are smart enough to plan and prosecute the utilization thereof. Also, it is basic that our farmers have sought out and used the best environmental control practices for generations.

Mr. Speaker, today attention is focused on agriculture as never before. The farmers' story, for the first time in years, has become page 1 news, and the message is finally coming clear to the American people that farm income is only 75 percent, of nonfarm income. The story is being told, that the people who produce our food and fiber now number less than 5 percent of our population; and the resources we are dependent on are slowly being depleted, yet no thought of depletion allowances has ever occurred. How much better to restore, than to deplete.

The Fact Book of U.S. Agriculture tells us that by the year 2000, farmers will withdraw about one-third more water than they did in 1965. We must have a sound program to prepare for that eventuality. It is, No. 1 for the farmer, consumer, scientist, technician, manufacturer, dreamer, and ecologist.

The same publication tells us that in January of 1971, the farm debt amounted to more than $61 billion, and production expenses have increased by $14 billion in the last 10 years. We must have a plan to help alleviate this problem, including "start-ups" of young farm couples fresh from agriculture schools. Close to a national disaster is the decreasing numbers of farm-born children who elect to stay, produce, and follow in the tradition of their parents. Indeed, we are all too rapidly becoming a nation of buyers, not producers. It cannot go on to the endpoint, in this manner.

Mr. Speaker, while I do nót pretend to have all the answers, I do feel that after some 10 years of intense staff and library research, plus field experimentation and observation, I have, with the assistance of many knowledgeable men of the soil, put together a plan that when given the added expertise of our House Committee on Agriculture and the U.S. Department of Agriculture; can offer this Nation a strong, workable, and fair agricultural program. At least it could well be the first that all farm organizations can study and agree upon. This alone is a big plus, as well as almost essential.

The bill I suggest is entitled the Cropland and Water Restoration Act of 1972, and it seeks to create a "second market" for restoring the national cropland in direct proportion—or better than—to the rate it is being used and depleted; and to bring the supplies of farm products into line with current demands, in order to encourage the farmer to return to the soil that potential to produce which has been taken from it in the production of crops, to hold it in place, to provide irrigation through the building of flood controlling farm ponds, to increase farm income toward minimal parity while the family is growing, to decrease the public cost of agriculture, and to preserve the high quality of food and fiber at a reasonable price to the consumer. In this sense it could just as fairly be "dubbed," "The consumer protective bill." It truely entwines proper management practices, conservation, amplitude and environment.

The really essential ingredient of this legislation is what I have termed the "second market." This feature provides the farmer with the option of selling to the Federal Government improved practices on depleted acres, or disposing of his crop in the usual manner, in the marketplace, and foregoing any Federal payment.

Under the bill, the Secretary of Agriculture will be authorized to enter into contracts covering periods of 1 or more years with producers, determined by him to have control for the contract period of the farms, if such producers agree to retire and devote to soil-rebuilding uses any or all farm cropland.

The Secretary will be further empowered to place a maximum limitation on the percentage of total cropland which may be so dedicated, if he finds that such action is necessary to prevent the program from having an unduly disruptive effect on the economics of counties and local communities. Widespread and voluntary polls prior to explaining the intent of this bill, indicate oversubscription of the requisite number of acres.

The Secretary will also be empowered to make annual restoration payments to participants based on the following:

The incentive necessary to achieve voluntary participation;

The loss of crop production, on the rededicated acres;

Any savings in cost which result from not planting crops;

The estimated profit margin of crop production on the designated acres;

Continuing farm overhead expenses;

The cost of establishing conservation, and good land and water management practices on the rebuilding acres; and

The cost of planting, fertilizing, and plowing under a suitable restorative or cover—nurse—crop, capable of returning the lost fertility to the soil.

For example, the "second market" idea would permit the local ASCS agent to figure on the spot, the weight and rent per acre the farmer would receive for growing a restorative crop, such as sweet clover or lespedeza to be plowed under, after 1 year. The farmer would receive additional bonus money if he had an SCS approved farm pond for irrigation and flood control, or other bonuses for approved and enhancing practices.

The Secretary of Agriculture would in effect, buy tons of a suitable crop, which would be used to restore the land instead of just idling acres, such as provided by the soil bank.

The farmer will be permitted to determine by a competitive bid procedure the percentage of the rental rate applicable to his farm, that he is willing to accept.

The Secretary will then compensate the producers for participating in the program through cash payments. These payments can be made in advance, as long as they do not exceed 50 percent of the determined amount.

Other uses for the restored land credits could include: Environment controls, restoration of wildlife habitat, ponds for farm and community water supplies where nitrate poisoning in wells becomes a health hazard and/or row crop irrigation, the preservation of virgin stands of grasses and timber, and beautification in general.

One final advantage to the "second market" concept is that the cost to administer the program will be less. There is only one crop in any given acre to measure. Participation can be easily checked. There will be no surplus to measure, sell, or give away. There will be no "cost sharing" for fertilizer, lime, ponds, terraces, and many other activities now requiring more and more people, wherein the executive branch plays budget games with the legislative branch. These are all good, tested and approved practices and would be rated and considered for payments in the "second market" formula.

Mr. Speaker, what I am offering today, is an attempt to give the farmers of this Nation, an opportunity to farm and produce, utilizing their God-given talent and our God-given resources, both of which are so vital to the survival of this Nation; to say nothing of the rest of the Nations of the world who are dependent on our food exports. It is an attempt to release them from dependency on the whim of the Federal Government, and yet permit them to exercise their own judgment, judgment that has always proved to be far and away better than those bureaucrats who for years have determined what will be grown and where it will be grown, with little or no thought to the future. Let us put the biblical ever-normal granary concept to work in our own soil, and its products.

I do not advertise the Cropland and Water Restoration Act as a "cure-all" or final solution. I repeat, I have no pride of authorship. I do offer it as evidence that a successful solution to the problems of agriculture can be found, and this proposal can serve as a "framework" or vehicle for that solution. I hope those concerned will take up the baton and race for a record of accomplishments.

Mr. Speaker, for a number of years now, I have been speaking to my colleagues about the need for a totally new concept in agriculture legislation. To that end, I have spent many years in research and consultation with men whom I think hold credentials in the field of agriculture that are superior to most. They make up the 11-year-old Seventh Missouri District Farm Advisory Council. Through their input and advice, a bill has been developed and introduced to the House of Representatives today. The main source of counsel for the legislation has been a man by the name of E. M. "Gene" Poirot, a man of the soil, author, conservationist, and philosopher. His book, "Our Margin of Life," was the source of much of the legislative concept.

Recently, the mail brought further thoughts and suggestions from Gene Poirot, and his simple but eloquent words, reach out and grasp the problem and offer a sensible solution at the same time. It proves that the end product of farm produce, is human bodies.

For the enlightenment of my colleagues, and all interested parties, I offer Mr. Poirot's letter at this time.

The letter follows:

POIROT FARMS, INC.,
Golden City, Mo., August 14, 1972.

Congressman DURWARD G. HALL,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN HALL: You amaze me. Even though retired you fight as hard for what you know is right as you did when first elected. I am proud to be on your side and you may be sure I will come to Washington any time you may call me.

Your letter is good news. Perhaps some people are beginning to understand the farm problem is more than economics; and economics as taught by the professors and put into laws will not solve it.

The best proof is that 1. farm income has not reached parity of income for farmers. When beef prices got near that level the economists got scared and opened the gate for more imports made by Natures laws not not by economic laws.

2. USDA Figures say we have lost more than we have restored in crop land by some over 25 million acres in the past 25 years. That is a NET loss.

3. The farmers our programs were supposed to help, have left the farms by the millions because they went broke.

4. Streams are still muddy. Cropland goes to the sea. Streams and lakes are polluted. Floods are still with us. Wildlife is becoming less. Insect sprays have become a "Must" on most farms. Why?

Because the economists who put together past laws were guided only by man's economic law of supply and demand which gives its reward for a limited supply and measures its reward in dollars. The other law ignored by economists is nature's law, the law that creates life from air, water, sunshine and soil plantfood minerals. Her reward for obedience is abundance, her punishment is death, first economic death for the farmers who had to leave the land. For those in other nations who could not find food elsewhere it is death.

Where in reality is the farm problem? It is one farmer and his farm any place from here to there. He can not grow net income in dollars when his yield is multiplied by the market price offered him. If Nature's law declares his corn yield to be zero, and offer of $1,000.00 per bushel could not correct his problem. The science of agriculture can correct it. It deals with obedience to the law of Nature and it is taught by every college of agriculture down to include 4 H clubs and grade school kids in rural communities.

Now try to find any program we have ever had that reaches the people who went broke farming. The payments are always less for retiring poor land and more for retiring richer land. Programs were directed to all farmers not just to those having a problem as they knew it to be on their farms down even to the acres that were not net profit producers because of yields, weather; or local market prices.

The excuse was (and still is), "These farms are not efficient units of production and should be absorbed by larger farms". Many farmers did not sell out. They followed the law of Nature which says "return to the soil the plant foods that have been taken. Hold those additions in place where new life begins and provide water if and when it is needed". These are the people we brag about. They got the money to buy lime and fertilizer by putting their wives and kids to work when they should have been at play. Go up and down any country road and you can find them.

The real, long time solution to the farm problem then, is to provide a program to give all farmers a chance to solve their problems as they find it on one or many acres, where yields are poor and/or prices are low, by applying the science of agriculture.

The program will use supply and demand to control every commodity but in this market is another commodity the government buys called soil and water restoration. It is to be bought at a fair parity of income price to the farmer below which he need never produce food and fiber for the consumer. Supply and demand is now in the hands of the farmer and consumer. The government responsibility is only that of holding the food and fiber producing resources of soil and water at a high level of potential production for generations to come.

In order to prevent private investments from plowing out new lands for the production of products, a tax on all food and fiber can be collected to pay for soil and water restoration. It is a cost item that should be paid by all those who expect to eat. It would not be passed on to the farmer as long as the government provided a market for soil and water restoration at a parity of income price to the farmer.

This is your bill, for buying the science of agriculture put to work on every farm. Soil and water are the resources in limited supply. Their conservation and restoration gives the SCIENCE OF AGRICULTURE in any of its details a chance to reach farmers, and his farm, in the shortest possible time.

Thanks again for the many things you have done and are doing for we who farm the lands, so many more human bodies and well nourished minds can be grown from our farm land soils.

Sincerely yours

GENE POIROT.

Mr. HALL. Finally, Mr. Speaker, I include a cropland and water restoration bibliography.

CROPLAND AND WATER RESTORATION BIBLIOGRAPHY

1967, June 12. CONGRESSIONAL RECORD, volume 113, part 12, page 15497, Introduced Cropland and Water Restoration Act, plus discussed visit to Poirot Farm.

1968, May 1. Testified before the House Committee on Agriculture, accompanied by Gene Poirot. Page 324 of Committee hearings for that year.

1968, May 1. CONGRESSIONAL RECORD, volume 114, part 9, page 11295, Statement re H.R. 10742, Cropland and Water Restoration Act.

1969, August 9. Visit to Poirot Farm accompanied by Representative Odin Langen and Dr. Don Paarlburg, U. S. Department of Agriculture.

1969, September 10. Introduced new bill, H.R. 13717. CONGRESSIONAL RECORD, volume 115, part 18, pages 24983–24986.

1969, October 10. Testified in behalf of H.R.

13717 before House Committee on Agriculture.

1970, July 28. Testified before Committee on Rules to offer H.R. 13717 as a substitute for H.R. 18546—The Agriculture Act of 1970.

1970, August 4. Offered H.R. 13717 as a substitute for H.R. 18546, CONGRESSIONAL RECORD, volume 116, part 20, pages 27191–27193.

CONGRESSIONAL REORGANIZATION

The **SPEAKER**. Under a previous order of the House, the gentleman from Iowa (Mr. SCHWENGEL) is recognized for 30 minutes.

Mr. **SCHWENGEL**. Mr. Speaker, congressional reform is a series of continuing changes that serve to keep the legislative branch both strong and responsible to the American people. The Legislative Reorganization Act of 1970 was the first step towards modernization since 1946. In this period of accelerating change, we must continue the process of reform in order to keep Congress a viable, respected institution.

This bill would not, by any means, do all that is needed. A bill that includes all the changes I believe necessary would not have a chance of being enacted into law. We are trying only to correct a few of the most needed changes in the rules of this body. Many of them have been debated before, and some have even been passed by this body, only to be eliminated in a conference committee. Many were recommended in the final report of the Joint Committee on the Organization of the Congress in 1966, but still have not been acted upon.

In this country, we are dedicated to the ideals of democracy and the rights of the individual. Yet Congress, which is supposed to be the fortress of representative government, still clings to the antiquated seniority system. It does not guarantee the rights of the minority for committee staff or for the filing of minority reports. It does not guarantee individual Members of Congress the right to request budgetary and fiscal investigations and information. It does not encourage the opening of committee hearings to the public. Is it any wonder that many people are losing faith in our Government?

In recent years, the power of the executive branch has increased, while Congress has been relegated to a watchdog status, making minor adjustments in the executive program. Now we are finding ourselves unable even to do that satisfactorily. This bill would serve to provide more effective legislative review, especially in regard to appropriations.

A major reason for the declining influence of Congress is that we are being pressed more and more for our time. We must reduce some of the demands on our time. We must become more efficient in our committee procedures. This bill would serve to provide digests and summaries of testimony in committees, and to revise the House Employees Position Classification Act.

The first provision of this bill requires the public announcement of any rollcall vote in any committee meeting at the conclusion of the meeting. Immediate access of committee votes will encourage the media to publicize committee votes, resulting in a more informed public. The people have a right to know how their Representative voted in committee, since that is where virtually all of our legislation is created.

Greater freedom of information is provided by section 106. This provides that each committee hearing "shall be open to the public except when the committee, by majority vote, determines that the testimony to be taken at that hearing may relate to a matter of national security, may tend to reflect adversely on the character or reputation of the witness or any other individual, or may divulge matters deemed confidential under other provisions of law or Government regulation." This language is exactly that which the Joint Committee on the Organization of the Congress recommended in 1966, after much study and many hearings. A committee is still allowed to close more than one hearing at a time, but it does place limits on the reasons by which a hearing can be closed. Thus, this is a very mild change, insuring the access of the public to more hearings, especially investigatory hearings.

A major part of this bill is the total elimination of voting by proxy. As we all know, most of the work accomplished by the House is done in the committee. Ninety percent of the legislation voted out of a committee is passed in that form.

We do not allow proxy voting on the House floor. Why should we allow it in committees where each vote carries much more weight? Elimination of proxy voting would mean that Members would be more likely to make a wise decision. They would, hopefully, be present to listen, debate, discuss, and question proposed legislation before exercising their right to vote. A proxy cannot consider amendments, it cannot compromise. Through the increased participation and attendance, the committees would become more responsible, more likely to produce better legislation.

Section 105 requires that a majority of the committee be present when a vote on any measure or amendment is taken, not just to report a bill. This will guarantee proper consideration of all bills and amendments. Section 104 will be changed to conform with the elimination of proxy voting so that a "concurrence of a majority of the members actually present," is needed to report a measure or matter.

These changes in committee procedure will lead Members to spend more time in committees. Several provisions to compensate for this lost time are made in the bill. Each day of committee hearings, the staff will prepare a digest of the statements filed by the witnesses for that day. Not only will this serve as a timesaver, but it will also enable the Members to prepare intelligent, constructive questions for the witnesses. The staff is also required to prepare a summary at the conclusion of each day of hearings, for the use of the Members and the public, if the hearing was not closed. These provisions might necessitate a staff increase, but the savings in time and the long-range effects on legislation would certainly justify the cost.

In order to cope with the increasingly heavy workload, section 112 would tend to encourage more committee meetings, Monday through Friday. Clause 26(b) of Rule XI already gives the chairman the power to call and convene additional meeting as necessary. This section would just further define and elaborate on that power, and limit the extra meetings to the normal weekdays.

The Joint Committee on the Organization of Congress recommended each standing committee have at least one review specialist assigned exclusively to that function. Each committee would determine how the review specialist could best perform his function. Section 111 of the bill would carry out this reform recommended 6 years ago by the bipartisan committee. My bill would also broaden the areas of review by requiring the committee to "analyze, appraise, and evaluate reports and other data of the Comptroller General," to review and study departmental and agency reports, as well as to "carry out the general review and study policies of the committee." It also specifies that the reports must be distributed to all other concerned branches of government.

Section 109 of my bill will require distribution of committee reports to all members before filing. It allows at least 2 days, excluding Saturdays, Sundays, and holidays, for members to check the committee report and correct it before it is published. This inspection period immediately follows the minimum 3-day period to submit minority reports.

In our two-party system, the majority rules. The chairman of all the committees is a member of the majority party and all the committees are carefully controlled so that the proper ratio of majority to minority exists. These two factors give potentially great power to a united majority party. Yet, we all realize that the rights of the minority must be protected in order to provide a constructive opposition or to provide the people with a choice.

Sections 113 and 114 will help support this constructive opposition. The minority must have the same facilities and the same access to experts' information in order to prevent domination of one party. I hope we all realize how basic two strong parties are to our system of government. Therefore, this bill insures the right of the minority to two of the six professional and clerical staff members on all committees, and control of one-third of all the additional funds allotted beyond the basic staff.

I sincerely hope this does not become a partisan issue for I do not offer it because I am a Republican. In many cases, there will be no need to invoke this rule. But if some committee is sharply divided along party lines, this insures the minority will be able to adequately fulfill their function. How can they be expected to offer alternative programs or evaluate the existing ones if they do not have adequate staff to do the research and background study that is necessary? These sections are not intended to, and will not, encourage partisanship in the committees. Ideally, the staff should be chosen by consensus of the majority and minority leaders and they would serve both parties equally well. But this House does not function ideally. Thus, we must put the rights of the minority into the rules.

The other side of the aisle might find itself in the minority and will then welcome this protection in the rules. I ask a spirit of fairness in passing this reform, again recommended by a bipartisan committee over 6 years ago.

The most controversial proposal in this bill concerns the selection of committee chairmen. My bill provides for election of the chairmen and ranking minority members of all the standing committees. The three most senior members of the committee who are of the majority party are automatically nominated. Voting shall be by secret ballot and only members of the majority party may vote. The minority ranking member shall be elected in the same manner except only those who are not members of the majority party may vote.

This is a much needed reform. The seniority system began when the House took away Speaker Cannon's power to appoint chairmen. Since then, the sole criterion for chairmen has been to get reelected many times from a safe district where one does not have to be nearly as responsive to the mood of the country. Certainly experience and broad knowledge is necessary, but sheer longevity should not be the sole qualification.

One of the most common criticisms of people in regard to Congress is the seniority system. We claim to be a representative government, an open democracy, yet how many times do we cast a meaningful vote for chairman of our committees? This is not an issue of the party or the House, but of the people. The committee members, working in close contact with each other, are best able to judge knowledge, leadership, and competence.

As far as I know, there is no similar method of selection in the free world. Yet we retain this system for fear of the alternatives. We elect all our other officers—the Speaker, our respective party leaders, and our whips. Why can we not elect chairmen and minority leaders of our own committees? I do not believe we are so spineless that we would sell our votes in return for favors. If my colleagues voice these deep fears, is it any wonder why the American people doubt our integrity?

How can we expect to be effective when we choose our committee chairmen by age? When Members first arrive, they soon realize that all Congressmen are not equal. They are, in effect, second-class Congressmen making time until they slowly move into a position of power.

In all likelihood, very few chairmen will be displaced by this procedure. Nevertheless, the chairmen will necessarily be more responsive to the committee as a whole, knowing that his actions would determine his tenure.

It is said the longer a Member is here, the more he likes the seniority system. I have been here almost 16 years and I still do not like it. It is time we responded to the people and admit that seniority is not the best system. The principle of voting by secret ballot should be made universal. Members of the committee are not only the best qualified to cast an intelligent vote, but they are also the ones who are most affected by their vote. I hope the Members will realize that this is not a party problem but a problem of the House of Representatives.

In the Legislative Reorganization Act of 1970, all committees and joint committees were given the power to request fiscal information from the various Federal agencies. My bill would expand this power to include individual Members of Congress as well as the committees. Again, this serves to protect the minority by giving them access to the information necessary to develop their own evaluations and proposals. Without this provision, each individual has to obtain the permission of the committee to request this data. Under normal circumstances, I am sure there would be no difficulty. But putting this provision into the rules would guarantee equal access to all under all conditions.

Section 202 of my bill requires the Committee on Appropriations to "state the consideration" given by them to any cost effectiveness analysis or study. They are also required to include an "analysis of the major factors taken into consideration by the committee in reporting the measure and recommending the appropriations contained therein." The report also must inform the Members where they may obtain copies of such cost effectiveness analysis or study. These requirements will apply both to the Senate and the House. With more complete committee reports and increased availability of cost effectiveness studies, the average Member can be much better informed in regard to the crucial appropriations bills.

Section 203 puts requirements on any report of the Committee on Appropriations which makes supplemental or deficiency appropriations for any fiscal year. The report accompanying such measure shall include a complete explanation of the nature of the request for such appropriation, and the reason such request was not made or could not have been made for inclusion in the regular appropriation measure for the following fiscal year.

These stipulations will eventually lead to greater fiscal responsibility. Whenever additional money is needed, it will have to be explained and justified by the respective committees. This in itself is sound budgetary policy. The necessary correction of inadequacies will point out errors in the process of estimating appropriations. Hopefully, through time the cause of these errors will be corrected so that there will be less need for supplemental or additional appropriations.

With the deficit increasing at a rate of $20 billion a year, it is time we began to establish some mechanism to show why we keep running out of funds. It will help make clear the cost overruns, especially those that appear to be standard procedure in military programs.

Under my bill, the Congressional Research Service is put under the jurisdiction of the Joint Committee on the Library. The Joint Committee is allowed up to one professional and two clerical staff to help them with this added responsibility.

The Congressional Research Service has done an excellent job of providing information to both bodies and both parties impartially. In order to maintain this high-quality service, we need to be more responsive to their needs and they to ours. By being under the jurisdiction of a joint committee, both Houses would have an equal input, and the Service could better respond to the needs of both bodies. As it now stands, the Congressional Research Service is not closely tied to any committee.

The last provision of this bill seeks to change the system under which many of the House employees operate. Presently, there is a strong system of patronage supervised by the Committee on House Administration.

Under my bill, the elected officers of the House would be given the power to regulate their employees without the Committee on House Administration having to approve their every move. It provides that the Clerk, the Sergeant at Arms, the Doorkeeper, and the Postmaster of the House of Representatives shall establish classes of positions, position standards, and compensation under their respective jurisdictions. They would have the power to adjust various positions to different compensation levels. They will also be able to hire new personnel and create new positions as necessary and appropriate "for the orderly and efficient operation of the House of Representatives."

The net effect of these provisions will be to free the Committee on House Administration from many of the minor decisions and give it more of a supervisory responsibility. The officers of the House will have much more responsibility, including that of promotion. This will help base the system more on merit than patronage, as employees advance to positions of responsibility through ability, rather than political connections. Of course, this will be beneficial to all, since the employees will realize that quality will result in advancement, thus resulting in better service to the House. The Committee on House Administration will now be able to devote their time to other, more important matters.

I offer these reforms in the sincere belief that they are needed. They are needed to help us use and distribute our time more wisely. They will let us take another small step towards making this Congress more open and more representative. We are writing into the rules provisions to protect the minority, to guarantee their rights, and help them provide a constructive alterntive. The cumulative effect of all these reforms will be to increase the trust of the American people in our ability to respond to changing needs and conditions.

RECOMPUTATION OF MILITARY RETIRED PAY

The SPEAKER. Under a previous order of the House, the gentleman from Alabama (Mr. DICKINSON) is recognized for 15 minutes.

Mr. DICKINSON. Mr. Speaker, the House of Representatives conferees on the Military Procurement Act have a unique opportunity to eliminate an injustice endured by our retired military for nearly 15 years. They have the opportunity to agree with the Senate amendment to this bill to provide that any member or former member of the uniformed services who is age 60 or older and is entitled to retired pay in effect prior to January 1, 1972, would be allowed to recompute this pay based on the rates in effect January 1, 1972. The amendment also allows recomputation for some retirees with disabilities of 30 percent and more and permits both groups to benefit from the consumer price index formula.

As a long-time supporter of military recomputation and, at the same time, as an advocate of fiscal responsibility, I feel this amendment is reasonable. First, it is a step toward mending a break in faith with the men and women of our uniformed services and, second, it authorizes expenditures which have already been accounted for in the President's budget.

I realize that some will argue that we should have hearings on an issue of such magnitude as recomputation, and I agree that we should. However, we should have dealt with recomputation long before now, and since we have not, I feel that we can do no less than to give prompt attention to the plight of those who laid their lives on the line to preserve our heritage, not just because the law demanded it but because they were committed and served voluntarily until they had, by virtue of their sacrifices, attained retirement.

Of all the recomputation proposals, and there have been many, this amendment is the most conservative. It is not a runaway bill and requires less money than any of the others that have been offered. As you know, the President has recommended that recomputation take place and his plan will cost $4 billion more than the amendment. Furthermore, full recomputation, which I have supported in the past, would cost approximately $134 billion between now and the year 2000.

We are currently giving the lowest rate to the oldest group of retirees, because salaries in the service have been raised year after year since 1958 when the recomputation principle was set aside. The raises are just, but the man who served his country just as long before 1958, and for less money, now gets 50 percent less, in many cases, than the man who retired last year or the year before in the same grade.

It has been suggested that the whole military retirement system is becoming unreasonable in cost and unmanageable and we should put a new system in motion which includes the idea of contributing amounts to be paid in by the military personnel in question. By all means, let us make a study and come up with a more sound, reasonable, workable, fair system; but, in the meantime, we have an obligation to our retired military personnel now, and I believe we must not lose this opportunity to fulfill that obligation.

BENEFITS FOR VIETNAM VETERANS

The SPEAKER. Under a previous order of the House, the gentleman from Kansas (Mr. WINN) is recognized for 5 minutes.

Mr. WINN. Mr. Speaker, much has been said about the plight of the Vietnam veteran. There appears to be a continuing controversy over the adequacy of benefits extended to this most deserving group of our Nation's defenders.

As a member of the Committee on Veterans' Affairs, I am aware of the deep interest of our committee in fulfilling this Nation's obligation to its Vietnam era veterans. I, of course, intensely share that interest. Fulfilling this obligation is, to me, a matter of justice and national honor.

I am somewhat surprised and dismayed, therefore, to read such statements as, "They are the most shabbily treated veterans in our history." I cannot accept the premise, Mr. Speaker, that veterans of any war are shabbily treated.

It is generally recognized that the United States has the most generous and comprehensive program of veterans' benefits of any nation in the world. Vietnam veterans participate in these benefits to the same degree as veterans of previous conflicts. In the current fiscal year, this Government will spend almost $12 billion on veterans' programs. These funds help to provide education and job training benefits for Vietnam era veterans. Monthly compensation payments for the service connected disabled of all wars and the survivors of our war dead are provided on a continuing basis. Pensions are authorized for those war veterans who are in financial need. Home loan guarantees by the Government have enabled thousands of veterans to purchase the home of their choice. Additionally, we are providing hospitalization for sick and needy veterans of all wars.

Now, this is not to say that we should rest on our laurels, or that there is no room for improvement in the benefits offered to Vietnam veterans. There are three areas in particular that concern me, and require our positive action if the benefits are to be meaningful.

First, we must recognize the fact that spiraling costs of education have far exceeded the increased cost of living. Now, I have heard it said that today's veteran wants the same G.I. bill education program that was available to the World War II veteran. The Veterans' Administration, on the other hand, has informed me that a large percentage of current veteran-students would receive less monetary benefits if they were paid on the same basis as their World War II predecessors. Comparing the World War II G.I. bill with today's bill is like comparing apples with oranges. The cost of living has increased, but the cost of education has increased even more.

World War II veterans had a ceiling on their combined income from wages and educational allowances. There is no ceiling on today's G.I. bill. The World War II veteran had 48 months of entitlement but the Vietnam veteran has a predischarge educational program, and high school remedial and refresher education program with no charge against his entitlement. So, Mr. Speaker, it is extremely difficult to make comparisons. The important point, however, is that the Vietnam veteran desperately needs an increase in his monthly benefits that is commensurate with today's educational costs. I am hopeful that the House and Senate can soon reach agreement on a substantial increase in payments.

An equally important topic that is deserving of congressional attention is employment opportunity. This administration is already focusing the spotlight of public attention upon the need for job opportunity for the returning veteran. President Nixon's Jobs for Veterans Committee, with the cooperation of Federal agencies, State and local governments, veteran's organizations, industry and labor, waged an intensive campaign that resulted in the employment or placement in job training of at least 1.3 million veterans during the 12 months ending June 30.

Despite this Herculean effort, much remains to be accomplished. I am hopeful that we will be able to enact legislation that will improve even more the Government's splendid effort in this area.

Finally, Mr. Speaker, the high-cost of housing has made it virtually impossible for the young veteran to take advantage of the home loan guaranty provisions of the G.I. bill. It is essential that we develop a program that will make it possible for today's veteran to be able to buy a home in the current market.

Mr. Speaker, the approval of measures to accomplish these purposes will accent our continuing resolution, "to care for him who shall have borne the battle."

NEEDED LEGISLATION

The SPEAKER. Under a previous order of the House, the gentleman from Michigan (Mr. HARVEY), is recognized for 15 minutes.

Mr. HARVEY. Mr. Speaker, I was pleased to note that the House Committee on Ways and Means just last week acted favorably on H.R. 15624, a bill that is designed to eliminate some of the inequities in the Federal-State extended unemployment compensation program. The committee has reported this bill to the full House, and I would like to bring it to the attention of my colleagues at this time because it will provide some additional unemployment compensation to those States which have previously lost, or are about to lose, their Federal-State extended benefits.

In a period of unacceptable unemployment, it seems ridiculous to me that States should be losing benefits because their unemployment does not equal 120 percent of a given base period. Such a formula makes it extremely difficult, in periods of prolonged unemployment, for a State to qualify for these Federal-State extended benefits. My home State of Michigan, for example, has an unemployment rate of 9.8 percent, and an insured unemployment rate of 4.28 percent. Yet it does not qualify for Federal-State extended benefits because this rate is not 20 percent greater than the average rate for 1970 and 1971.

H.R. 15624 corrects this anomaly by deleting the 120-percent requirement from the "off" trigger of the Federal-

State Extended Unemployment Compensation Act of 1970. If this bill is enacted, as I sincerely hope it will, States will qualify for extended benefits so long as their insured unemployment rate is 4 percent or greater, and provided they have passed enabling legislation that will bring their state laws into compliance with the amended Federal statute. Thus, unemployed individuals in States with an insured unemployment rate of 4 percent or more will be able to qualify for an additional 13 weeks of compensation, provided H.R. 15624 is passed.

There are several other shortcomings in the Federal-State Extended Unemployment Compensation Act of 1970. Unfortunately, H.R. 15624 does not address itself to these additional problem areas, and for that reason, I introduced H.R. 16243 on August 8. The most serious problem with the existing law is its failure to deal with pockets of persistent unemployment. In my Eighth Congressional District, for example, certain counties have an unemployment rate approaching 20 percent. Bay County, a new addition to the Eighth District, has an unemployment rate of 14.4 percent, and Huron County's rate is 21.3 percent. Yet, even if H.R. 15624 passes, the State will lose the extended benefits if its insured unemployment drops by only slightly more than one-fourth of 1 percent. If that happens, none of my constituents will be eligible for these extended benefits.

H.R. 16243 is designed to correct this flaw. Under my bill, States would continue to receive both extended and emergency unemployment compensation so long as any county in the State had unemployment rates exceeding the minimum accepted levels for each program. Thus, H.R.16243 would provide Michigan with continued unemployment benefits for as long as any county in the State remained above the acceptable levels.

A second aspect of H.R. 15624 that might cause unnecessary delays before States can receive these additional extended benefits, should the bill pass, is the requirement for enabling legislation on the State level. No Federal money will be available to States until they bring their own laws into compliance with the Federal statute, and if the Congress acts on H.R. 15624 before adjournment, it might be difficult for some States to recall their legislatures and pass the proper amendments. I have written to Gov. William Milliken of Michigan and to the appropriate leaders of the Michigan Legislature to inform them that H.R. 15624 is pending in the House and that the State government should prepare itself, when the legislature returns in September, to amend State law should the Congress act. It would be unfortunate if Michigan, or any State, lost unemployment benefits for which it was entitled because of the inability of the local legislatures to pass the necessary enabling legislation.

Having reported out H.R. 15624, I would hope that the Ways and Means Committee will not consider this subject closed. Many States are experiencing the problem of pockets of high unemployment, and until the Congress acts to correct this situation, many of our citizens will be left without compensation, even though they are unemployed. I would also hope that the Ways and Means Committee would attack this problem with the same vigor and with the same ingenuity that it has shown on all subjects in the past. With their cooperation, the Congress can end, forever, the burden of prolonged unemployment without adequate compensation.

At the same time, I would hope that the House Committee on Education and Labor will continue its consideration of my Comprehensive Manpower Act, H.R. 15829. While unemployment compensation is necessary, it never will solve the root of the unemployment problem, inadequate training and the lack of job opportunities. My Comprehensive Manpower Act is designed to provide such an approach and to reduce unemployment by stimulating job opportunities. Only when this type of legislation is passed, Mr. Speaker, can this Congress consider its work on the problems of unemployment finished.

COMMUNITY SCHOOL CENTER DEVELOPMENT ACT

The SPEAKER. Under a previous order of the House, the gentleman from Michigan (Mr. BROWN), is recognized for 5 minutes.

Mr. BROWN of Michigan. Mr. Speaker, today, I have introduced a modified version of the Community School Center Development Act. While I am in wholehearted agreement with the spirit of other similar bills introduced this session, and recognize the great need for and value of the community school center concept, I believe certain changes in the provisions of the proposed act will materially advance the development of community school centers.

I would like to gratefully acknowledge the guidance I have received in this important matter from Dr. John Sandberg, dean of the College of Education at Western Michigan University and his staff. After a careful study of the earlier proposed legislation, Dr. Sandberg suggested certain changes and additions. The bill that I have introduced today embodies most of those suggestions.

My version of the Community School Center Development Act would establish a national research and development center for the purpose of promoting the adoption of community school programs throughout the country. This center would perform the necessary and basic function of storing, retrieving, and disseminating relevant information for the various agencies participating in the program.

In addition, every State community school coordinator would be required to attend training seminars prescribed by the Commissioner of Education before the implementation of that State's program. I would like to quote Dean Sandberg on the need for such a requirement:

> Many programs of this magnitude have been started assuming than an operating network will automatically appear. We believe that this is a false assumption. We also believe that meaningful working relationships will not be established in a one or two day "get together." Therefore, we suggest that state community education coordinators be required to attend an extended seminar prior to the implementation of their programs. Through such a training experience, coordinators should get to know their contemporaries and the program will probably gain identity as a national thrust in education.

There are, in addition, some changes in language and terminology which I believe are necessary, but which I will not detail here.

In conclusion, let me just say that the recognition and cultivation of an identity with one's community brought into focus through the medium of a community school is, in my opinion, an important goal and must be given the highest priority. I think that the Community School Center Development Act will be an important step in bringing that goal to fruition and will, at the very least, provide the structure for encouraging communities to adopt such programs. I sincerely hope that this legislation will receive the enthusiastic support of Congress.

REMARKS BY JANE FONDA AND RAMSEY CLARK

The SPEAKER. Under a previous order of the House, the gentleman from Alabama (Mr. NICHOLS) is recognized for 5 minutes.

Mr. NICHOLS. Mr. Speaker, I rise today to endorse the actions of my distinguished colleague from Missouri—the chairman of the House Internal Security Committee—and members of the committee for their actions in the Jane Fonda case. I too have written the Attorney General of the United States, asking that Miss Fonda's remarks made during her recent visit to North Vietnam be investigated. While there may be a question of whether or not Miss Fonda did commit treason, I hope the Justice Department will investigate her activities for a possible violation of title 18, section 2387 of the U.S. Code which deals with activities affecting Armed Forces generally.

Right after Miss Fonda's visit, former U.S. Attorney General Ramsey Clark visited North Vietnam and soundly criticized our involvement in Southeast Asia. Mr. Clark has branded the United States as criminal and inhumane. Perhaps this explains his sometimes questionable actions as Attorney General—he could not decide who the good guys were. On Monday, the distinguished gentleman from Mississippi (Mr. MONTGOMERY) said on the House floor:

> I do not want to question the patriotism of Ramsey Clark but I do question his judgment, motives and the ability to know the truth.

Mr. Speaker, I cannot help but question the patriotism of an American who brands his country as a criminal for their actions against a Communist Nation that has been carrying on a war of aggression for over 10 years, a Communist Nation that has contributed to the deaths of approximately 55,000 fine Americans.

In the past, hundreds of thousands of Americans have given their lives so individuals such as Jane Fonda and Ramsey Clark have the right to speak freely. I cherish the first amendment to the Constitution as much as any American but I believe this safeguard has been badly abused by the statements of Miss Fonda and Mr. Clark.

The 55,000 Americans who have died in Vietnam and the hundreds of thousands who died in earlier conflicts did not give their lives so Miss Fonda could urge American troops in South Vietnam to stop fighting or so Mr. Clark could brand us as criminals.

The morality of the war in Vietnam is not the question. Individuals and groups in the United States have the right to peacefully protest our involvement there and this right I do not question. What I do question is the right of Miss Fonda to urge our servicemen to quit fighting and the right of Mr. Clark to brand our actions in Vietnam as criminal.

I do not view the U.S. action in Vietnam as being criminal or inhumane. If Miss Fonda and Mr. Clark do, I am sure Alabamians could be counted on to provide the necessary money to purchase one-way tickets for these characters back to Hanoi.

CARE FOR THE MENTALLY ILL

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, the whole spectrum of medical care and health facilities in our country has, as most of us realize, not kept pace with the needs of the people.

Further, the greatly abused stepchild of medical care—care for the mentally ill—is further behind than all other aspects of health care.

Because of this lag there continues to be great misunderstanding, even among those who should know better, as to what mental illness is all about. There are times when it seems that the general populous is more acutely aware of what the needs are in this respect and what the variables are in terms of types of mental illness, than those in the mass media whose interests are not frequently directed toward health problems, particularly mental health problems.

Such words as "schizophrenia" or "schizophrenic" are overused in news stories to connote various forms of mental maladies, and invariably it is never explained to the reading public that there are at least seven different categories of schizophrenia with greatly varying characteristics. For example, if a killer is described as schizophrenic, it is easy to see how those who might not know about the various categories of schizophrenia might believe that all schizophrenics are potential killers, or the likelihood of their killing someone is much greater than that of the average person. However, the truth is that many, whose illnesses have been described as schizophrenia, would not even hurt a fly. Many in this classification, doctors of psychiatry will tell you, might hurt themselves, but they would not inflict harm on others.

To further illustrate how the word has increasingly become overused one has only to read a number of articles on the subject by doctors of psychiatry to learn that if everyone who is called schizophrenic in our country really has schizophrenia then there are more schizophrenics in the United States than anywhere else in the world.

Also, those doctors of psychiatry who are considered "radical" rather than traditionalistic write articles to the effect that schizophrenia does not exist—that it is just a myth.

By making this point I do not want it to be interpreted that I am making a strong criticism of mass communications in terms of its usage of such words as schizophrenia. The main problem lies in the necessity of the writer of the news story getting as succinct a description of the reasons for a person's actions as possible. In any given situation, a psychiatrist or more than one psychiatrist attempts to describe the situation simply to the reporter, knowing full well that the case is not one which can be described simply.

However, what I have just discussed is among the more complex of our Nation's mental health problems.

What we have to face, first of all, is that we are not meeting the needs of the more ordinary, day-to-day, occasional type of mental health problem of which almost everyone knows.

These are the momentary "breakdowns" which occur in persons who are facing extreme personal crises, or cases of completely debilitating exhaustion and nervous fatigue which result from overwork and lack of sleep.

We have facilitated several programs for drug addiction and alcoholism, still other mental health problems, but we still do not have adequate facilities for all those who need and seek help with these problems.

Primarily, we have to face realistically the fact that every human being has his or her breaking point; however, the fact that someone has broken at some point or the other does not make him or her any less worthy to have responsibility and to hold a position of importance. People who are wise about life, even though they may not have a great deal of formal education, are sensitive to the fact that the intelligent, intense and highly capable people are often prone to drive themselves beyond human mental and physical endurance.

The nature of today's society is such that such instances are more common than is generally known. And, as these cases go untreated, Americans generally become less and less healthy.

Those who realize they must seek help often times do not find it in our country, especially in the smaller townships and even the smaller metropolitan regions.

Many who seek appointments with psychiatrists who have good reputations are told frankly that unless they have the funds to pay the $35 to $60 an hour fees, they should seek help elsewhere.

At least some of these eventually wind up in a hospital. If it is in a private hospital, it is at an exorbitant rate, and oftentimes they do not get appreciably better by the hospitalization because of the little time their therapist has to spend with them.

Paradoxically, despite the terrible reputation that various State hospitals have as far as conditions are concerned, many persons actually get more help through the low-rate hospital care because of the dedication and sincerity of purpose of the therapists in many of these institutions. However, the overwhelming majority of our State hospitals are overcrowded and understaffed, and despite the dedication of some of the personnel, not nearly enough can be accomplished.

The main thing that we need is preventative mental health care, because the consensus of opinion in mental health groups today is to keep the patient functioning at some level and out of the hospital, if at all possible.

It is for these reasons as well as countless others that I wish to join as a cosponsor of the bill introduced by my ditinguished colleague, the Honorable MICHAEL J. HARRINGTON, Democrat of Massachusetts, which will provide comprehensive mental health coverage to all Americans through a program of national health insurance. A major thrust of the bill is that of preventing mental illness, and this is, of course, as I said above, essential for the well-being of our society.

Although the bill is comprehensive in scope, I know that it is not a panacea to our national mental health problems, even if it is enacted and fully implemented.

There is no way to guard against the human failings that make what appears to be on paper an ideal program less than effective; nevertheless, we must try and get this legislation enacted as quickly as possible if we are even to come close to meeting the mental health crisis in our country.

NASA REFUSES TO SUPPLY DETAILED INFORMATION ABOUT SPECIAL ENVELOPES ON APOLLO 15

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. ASPIN), is recognized for 5 minutes.

Mr. ASPIN. Mr. Speaker, on July 18 I called on NASA to dismiss the three Apollo 15 astronauts from the space program for trying to smuggle 400 specially stamped and canceled envelopes aboard Apollo 15, with the intention of later selling them for their personal profit. At that time, I also asked the GAO to determine whether the astronauts had violated any Federal laws.

In response to my request, GAO wrote to NASA asking the space agency to detail more thoroughly than it had in public the facts surrounding the three astronauts' scheme. However, NASA has written the GAO, which forwarded a copy of the letter to me, that because the Justice Department and the Senate Aeronautical and Space Sciences Committee are both currently looking into the case for possible violations of Federal law by the astronauts, "it would be inappropriate at this time to respond to your request."

I can understand why NASA would be hesitant to give a definitive opinion as to whether the astronauts broke any Federal laws, but its refusal to even fully detail the facts surrounding the controversy is inexcusable and totally unjustifiable. It strongly suggests that NASA still has something to hide and has not been completely open about the astronauts' scheme.

There are extremely important questions of facts surrounding this controversy which have not yet been made public. For example, who in NASA besides the astronauts knew of their scheme? How did the envelopes get stamped, both before the astronauts left for the moon and after they returned? Since their movements were monitored extremely closely the day they left and after they returned, is not it likely that high NASA officials would have been aware that the astronauts took 400 special envelopes with them?

On July 18 I put some questions directly to NASA. One of the questions I asked then was whether NASA was aware of any other astronauts on previous missions who had concocted similar plans. I am still waiting for an answer almost 1 month later.

Mr. Speaker, NASA's ostrich-like action of trying to bury its head in the sand and not even answer factual questions will not work. I hope the space agency will realize this and begin to respond openly and publicly to all requests for objective information concerning the three astronauts' envelope scheme.

REINTRODUCTION OF PRISON REFORM ACT OF 1972, H.R. 15765

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. EILBERG), is recognized for 5 minutes.

Mr. EILBERG. Mr. Speaker, the riots at Attica, Holmesburg in my own northeast Philadelphia district, and in prisons near Washington, are irrefutable evidence of the failure of America's correctional institutions.

Not only are prison conditions causing disruption and dissatisfaction behind prison walls, but they are also contributing to this country's ever-growing crime problem.

Today we have over 400,000 persons locked up in our prisons and jails. Nineteen out of 20 prisoners eventually will be released. It is estimated that two-thirds of these will then go on to commit additional and often more serious crimes.

In fact, it is said that four out of five felonies are committed by "graduates" of our "correctional" institutions. Instead of preparing prisoners for a resumption of normal life in the community upon release, our correctional institutions are—rather—finishing schools for the lessions in crime and violence learned on the streets.

The majority of today's prisons are hopelessly overcrowded, outmoded and isolated. They house thousands of offenders in an impersonal atmosphere, far from the family, friends, and the community to which they will someday return.

First offenders are thrown in with hardened repeaters. Homosexuality is rampant. Relevant job training or academic programs are few and far between and recreational and medical facilities on any significant scale are almost nonexistent.

In short, as pointed out by the President's Commission on Crime and the Administration of Justice, the conditions in which most offenders live "are the poorest possible preparation for their successful re-entry into society, and often merely reinforce in them a pattern of manipulation or destructiveness."

If we seriously want to reduce the number of repeaters and cut crime, we must reform our prison system without further delay.

In order to meet this pressing need I have introduced the "Prison Reform Act of 1972"—H.R. 15765—which was prepared with the help and advice of the staff of the Governor of Pennsylvania, Milton J. Shapp. The proposal amends the Omnibus Crime Control and Safe Streets Act of 1968. It provides increased assistance to the States to develop effective correctional programs by placing greater emphasis on programs and action and by streamlining administrative procedures.

The 1970 amendments to the Omnibus Crime Control and Safe Streets Act of 1968 made available to the States and localities a special program of grants specifically for the improvement of correctional facilities, programs, and practices. The law provided that not less than 20 percent of the funds available for general law enforcement purposes should be allocated to correctional activities.

The Prison Reform Act of 1972, however, increases the percentage to 40 percent, thereby doubling the amount available for correctional purposes. Under current law, States wishing to receive assistance must submit a State plan for corrections which meets certain requirements. My bill, however, spells out more specifically the guidelines for the receipt of such assistance.

In order to receive aid, State plans must emphasize the phasing-out of massive and outmoded prisoner facilities, and stress instead the development and operation of community-based correctional facilities and programs, such as halfway houses, probation, parole, and other supervisory release programs.

We cannot successfully rehabilitate the offender by "warehousing" him in fortresses located substantial distances from the urban areas to which he is most likely to return. An offender's problems begin in the community and it is in the context of this community that he must learn to cope with them. Moreover, studies have indicated that alternatives to incarceration such as probation and parole are not only less expensive but are also more effective in rehabilitating offenders and reducing recidivism.

One of the most damaging features of prison life is its mass treatment procedures resulting in the offenders' loss of individuality and self-respect. In an interview conducted shortly after his release from Lewisburg Federal Penitentiary, James Hoffa declared:

> If you want to know what's wrong with prisons, you can start with this. Everybody is dumped together. The kid who stole or a kid who wrote a $40 bad check, dumped right with a psychotic . . ., or the homo, or the rapist.
>
> Everything that happens to the inmate in prison reduces the chances of his making it on the outside. He's stripped of his personality and his individuality. He is treated as if he is nothing. He is put in cells that are too small with people he shouldn't be with.

According to Hoffa, the single most important action which would relieve pressure and tension in the prisons would be to classify prisoners, by age and by offense:

> Get the young ones together. Keep the homosexuals together, and away from the others. Keep the violent ones apart.

Under this proposal a State plan must emphasize privacy and adequate living space for prisoners, and most particularly, separate housing for known or declared homosexuals, hardened recidivists, and youthful first offenders.

The Prison Reform Act also stresses and provides funds for modern vocational training methods and facilities. In order to prepare men and women for reentry into society, they must be able to obtain and keep meaningful jobs.

Studies have shown that unemployment is a major factor in release violations, and that steady employment is directly related to lower recidivism rates. Yet, it is estimated that 85 percent of the inmates leaving our Federal prisons alone lack marketable job skills. Our Nation's prisons are faltering in the one area where they could have the most impact. They are failing to provide the offender with meaningful job training, relevant to outside employment needs. In Jimmy Hoffa's words:

> Many ex-convicts revert to a life of crime because they have not received job training that would assist them in obtaining employment in the outside world.
>
> License plate and mop bucket manufacturing are two examples of prison vocations that bear little resemblance to potential jobs in private industry.

It is no wonder that the unemployment rate for ex-offenders is three times the national average. It is no surprise that recidivism rates are a whopping 63 percent.

H.R. 15765 would provide funds to assist States in developing modern vocational training methods and facilities, including work-release and other useable on-the-job training experience, as well as opportunities for occupational counseling and testing.

In order to prepare offenders for the job market of today and the chance for a meaningful and fulfilling life upon release, we must equip them not only with adequate vocational training, but with the necessary academic tools as well.

Fewer than 5 percent of the inmates in our Federal institutions function at the 12th grade level; many can neither read nor write. At a national conference on corrections held in Williamsburg last December, Chief Justice Warren E. Burger said:

> The figures on literacy (of prisoners) alone are enough to make one wish that every sentence imposed could include a provision that would grant release when the prisoner has learned to read and write, to do simple arithmetic, and then to develop some basic skill that is saleable in the marketplace . . . to which he must someday return.

The Prison Reform Act would provide assistance for the conducting of basic education courses within our correctional institutions, including high school graduation equivalency programs and study release opportunities at the college level. Funds are also available for the development of correspondence and independent study programs.

Chief Justice Burger also stressed the need for recreational facilities sufficient to end the "terrible effect of boredom, frustration of empty hours and pointless existence of prison life." I am pleased to note that such programs are also eligible for assistance under the provisions of H.R. 15765.

Perhaps one of the worst fears the average offender has behind bars is that of illness. According to the recent national jail census, one-half of our jails alone have no medical treatment facilities whatsoever and the treatment programs that do exist are critically undermanned. Moreover, despite the large number of drug addicted or drug dependent offenders who comprise our prison population—approximately 30 percent of our Federal inmates, for example—prison drug abuse treatment programs are extremely limited in both scope and supply.

In order to remedy these shortcomings, my bill provides assistance to States for establishing inmate mental and physical health programs, including preventive and corrective medical, psychological and psychiatric care as well as drug treatment facilities.

Financial assistance is also available for the creation of area parole boards; inmate grievance procedures and experimental programs, such as conjugal living projects—all of which are designed to reduce the tensions inherent in prison life and to better prepare the offender for a law-abiding life in the community upon release.

In order to carry out these programs, my proposal would increase significantly the amount of assistance available to the States. The proposed legislation would amend the Omnibus Crime Control and Safe Streets Act of 1968 by authorizing $2.75 billion for fiscal year 1973 for all programs to be funded under title I of this act. Forty percent of this amount, or $1.1 billion would be allocated for corrections programs under H.R. 15765. Under present law, however, only $1.75 billion is authorized for general law enforcement purposes; and only 20 percent of this amount, or $350 million, is available for corrections activities.

Mr. Speaker, when we put a person behind bars we are punishing him by depriving him of liberty, the freedom we all cherish so much. Further punishing him—by subjecting him to degrading and dehumanizing conditions and by denying him the opportunity to participate in useful job-training and academic programs—is only self-defeating.

TAX CREDIT FOR HIGH SCHOOL AND GRADE SCHOOL TUITION

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. DULSKI), is recognized for 10 minutes.

Mr. DULSKI. Mr. Speaker, the Committee on Ways and Means is holding hearings this week on a subject of vital importance, public and private education assistance.

This morning I had the opportunity to present my views to the committee. Last May I introduced H.R. 15065, to permit a credit against the individual Federal income tax for tuition paid for the elementary or secondary education of dependents.

A somewhat similar tax credit proposal is an integral part of a more comprehensive education assistance bill, H.R. 16141, introduced by our colleague from New York (Mr. CAREY), a member of the committee, and the gentleman from Arkansas (Mr. MILLS), committee chairman. I am today introducing an identical bill so that I may be identified as a cosponsor of the broad measure.

With private and parochial school tuition rates rising fast, it is only reasonable that these families receive some tax relief since they are assuming a burden that otherwise would fall on the entire community.

Mr. Speaker, as part of my remarks, I include the full text of my statement to the committee today on this pressing matter:

STATEMENT BY HON. THADDEUS J. DULSKI

Mr. Chairman, I appreciate your giving me this opportunity to express my views on tax help for families facing the skyrocketing costs of elementary and secondary education.

For the record, Mr. Chairman, I am Thaddeus J. Dulski, Representative for the 41st Congressional District of New York.

On last May 18, I introduced H.R. 15065, now pending before your Committee. This bill would amend the Internal Revenue Code of 1954 to allow a credit against the individual income tax for tuition paid for the elementary or secondary education of dependents.

A somewhat similar tax credit proposal is included in H.R. 16141 which our colleague from New York, Mr. Carey, has introduced with co-sponsorship by the Chairman and other members of the Committee.

The bill by Mr. Carey and his co-sponsors goes beyond a tax credit and, while your Committee is considering this subject, I believe the expanded approach is in order.

Indeed, I am today joining you gentlemen as a co-sponsor of the concept of H.R. 16141. I will drop the bill in the hopper this afternoon.

INCREASES IN EDUCATION COSTS

My concern has been focused in particular on the endless increases in the cost of grade and high school education for our children in private and parochial schools.

I speak as a parent who has been through the mill, so to speak—and by my own choice. I further speak as a former city legislator who saw this mounting problem years ago and attempted even then to pave the way for some relief.

As a parent, I have been fortunate to be able financially to send all my children to parochial schools and to pay their tuition. But what of those many thousands of parents who cannot afford the full burden of tuition today and yet would like to exercise their option to send their children to non-public schools?

Before I came to Congress, I was a member of the Common Council of the City of Buffalo, New York. In our city, unlike many others, the school budget is part of the city budget. It is not handled as a separate tax item.

I realized even then the crisis which was developing in the cost of operating the parochial schools. I was aware, too, that without those parochial schools our city budget would literally go through the ceiling.

SOUGHT HELP YEARS AGO

I arranged a meeting with the head of the local parochial school system to discuss the overall situation and to see what we might do about it. I suggested that, before the situation got completely out of hand, the diocese should apply for school aid from the city and the state.

My logic then, as it is today, is that it is only fair that the people who are helping to hold down the public school budget should receive at least some help in return.

We had a full discussion and I offered to prepare such legislation as might be necessary. After consideration, the school officials notified me that the church hierarchy had decided against seeking any school aid at that time.

I said then, and I say again now: If our non-public schools in Buffalo were to remain closed in the coming school year, there not only would be fiscal chaos in our city but also our public school system would become a shambles.

Property assessments already are at the full level of taxation. If the public school system had to take on the job of educating pupils now in non-public schools, local tax rates would have to be increased tremendously to meet the additional costs.

NEED FOR AIDE BREAKTHROUGH

Actually, it is really a humanitarian gesture on the part of the Buffalo diocese to keep its schools open. Frankly, for my own part, if there isn't a breakthrough on aid for non-public schools, then I am prepared to see them closed down so the impact of their contribution to the local budgets can be realized fully.

The old argument on separation of Church and State has led to court rulings on Government aid, which to my mind are ridiculous. The courts complain of their heavier case load because of new legislation, but they ignore the problems they create for themselves by opening Pandora's boxes time after time.

The matter of direct aid for non-public schools is not within your Committee's province of course, but it has a direct bearing on the pending legislation.

In order to try to meet rising costs, non-public school systems are being forced to raise their tuition rates. Tuition rates in Buffalo have been rising steadily and our diocese faces a huge $1.5 million deficit this fall—that's before the school year starts.

Nevertheless, the diocese just last week decided to go ahead with the 1972–73 school schedule without change. Incidentally, $1 million of that $1.5 million deficit in the Buffalo area stems from a court injunction barring State aid for so-called "mandated services."

TAX CREDIT IS FAIR APPROACH

The Buffalo diocese of eight Western New York counties has 33 parochial high schools serving 16,000 students, and 178 elementary schools serving about 50,000 students.

As I said before, I hate to think what would happen to our local public school system if the diocese and its parishes were forced to close down our parochial schools.

I am not here to make the case for private and parochial schools. What I do seek is a reasonable Federal tax credit for the families who are paying tuition for their children. The Carey bill and my bill call for a tax credit and that is indeed the only fair approach.

Our formulas differ. Mine has a higher maximum, but I believe the allowance should be no less than the $200 maximum which is provided by the Carey bill.

Mr. Chairman, the need for tax help for these families, in my opinion, is very real. I am delighted that your Committee has called these hearings to explore the ramifications, and I am hopeful that legislation can be enacted promptly to deal with this very pressing educational and social problem.

With your permission, Mr. Chairman, I would like to include as part of my remarks some timely data on the Diocese of Buffalo schools which may be of interest in your deliberations.

EDUCATION DATA FOR DIOCESE OF BUFFALO, N.Y.

For diocesan high schools, the tuition rate has increased from $150 per pupil per year in 1967 to $400 per pupil per year in 1971. Tuition for private secondary schools in the diocese varies from $400 to $850 per year.

The tuition rate for most parochial grade school students in Buffalo ranges from $60 to $150 a year. A few schools charge only a registration or supply fee ranging from $10 to $25 per pupil.

In the same period, the operational budget for diocesan high schools increased from $3,043,755 in 1967 to $4,706,985 in 1971. The teacher salary schedule for step one, a bachelor's degree, increased from $4,600 in 1967 to $6,400 in 1971.

Diocese secondary school population was 19,936 in 1967, reducing to 15,824 in 1971, when the diocese closed four schools. The staff consisted of 660 religious and 444 lay teachers in 1967, and 511 religious and 541 lay teachers in 1971.

As for diocese elementary schools, there were 73,964 students in 1966, and 52,636 in 1971, a 28% decline. There were 1,367 religious and 1,003 lay teachers in 1966, with 915 religious and 1,219 lay teachers in 1971.

On the average, 62% of a parish budget is used to maintain its schools.

FISCAL RESPONSIBILITY ACT OF 1972

The SPEAKER. Under a previous order of the House, the gentleman from North Carolina (Mr. GALIFIANAKIS) is recognized for 5 minutes.

Mr. GALIFIANAKIS. Mr. Speaker, today I am introducing the Fiscal Responsibility Act of 1972. This legislation is designed to help put this great country of ours back on the road to economic solvency. It is a path we have somehow lost sight of in the last few years, and as a result we have found ourselves with a federal deficit of $27 billion for fiscal year 1972.

We cannot continue to spend funds we do not possess. We can no longer allow the executive branch to subvert the expressed will of the Congress by politically motivated impoundments. And we can no longer in the words of Senator WARREN MAGNUSON—

> Run a business ten times as large as A.T. & T. or GM combined . . . with machinery as obsolete as a quill pen and a slanting bookkeeper's desk.

No problem is so simple that it will disappear by merely appropriating vast sums of money. We must face up to reality: Money alone is not a panacea for societal ills. Too often it is more akin to Pandora's box; a box from which springs forth wasteful programs. Instead of partaking in careful scrutiny and constant evaluation of existing programs and their needs, Government in the past has behaved like those children who go back to their empty piggy banks and shake out fantasy coins.

This body, as the elected representatives of the people, must resurrect our citizens' faltering faith in their Government. We could not make a better start than by assuring the taxpayers that we will spend their money wisely.

As families have long known, this can only be accomplished by establishing, and abiding by, a self-imposed budget. Then and only then, will we be able to view our national priorities and our budget with one and the same eye. The Fiscal Responsibility Act of 1972 asks Congress to do just this, to initiate a spending ceiling that is realistic in terms of both the needs of our people, and our ability to meet these needs. This bill states explicitly that if Congress decides to disregard its own ceiling, except in the case of providing relief with respect to natural disasters, that Congress shall simultaneously provide the means for raising additional revenues to cover the resulting increase in expenditures. It is my hope that the prospect of having to raise taxes will compel Congress to look carefully at any appropriations that call for more funds than its own budget can accommodate.

The ceiling is but one part of the Fiscal Responsibility Act of 1972. This bill also seeks to change the fiscal year so that it will coincide with the calendar year. Such a change will help enable Members of Congress to plan budgets more effectively on a long-range comprehensive basis.

Another section of the bill establishes a Federal impoundment procedure which will regulate and limit the manner in which a President may withhold appropriated funds.

The final section of the bill authorizes Congress to undertake a study of alternative budgetary and fiscal procedures. One such alternative the study would consider is the feasibility of establishing a 6-month period out of every 2 years during which the Congress would consider all appropriations measures for those 2 years. The study would also review in depth the uncontrollable portion of the budget, and determine whether or not there are some in this category that should be appropriated annually.

The Fiscal Responsibility Act of 1972 is a bill intended to help Congress help itself, and by so doing, help the American people. It is a bill intended to assure the American people that their Government is wisely investing their tax dollars. And it is a bill intended to combine fiscal responsibility and people responsibility.

I hope this bill will receive the prompt consideration it deserves.

ROCKY HILL'S "THINKING OF YOU": A GOOD PROGRAM

The SPEAKER. Under a previous order of the House, the gentleman from Connecticut (Mr. COTTER) is recognized for 5 minutes.

Mr. COTTER. Mr. Speaker, Every so often a project comes to my attention that I feel necessary to share with my colleagues.

Last week I was informed that one of the towns in my district, Rocky Hill, was undertaking a novel and interesting program to keep Rocky Hill services informed of local news. This all volunteer project called "Thinking of You," will send each serviceman a monthly communication comprised of town news secured from local papers, and local job opportunities.

Further, this news will assist the servicemen in securing employment when their military obligations are over. This month's newsletter will assist in this task by providing up-to-date job opportunities and act as liaison between potential employers and service men and women.

The newsletter will also provide a convenient source of information in vocational and work study programs available to service personnel.

This entire effort, which begins in September, will be handled by volunteers with the following groups participating: Stepheney seniors, Mrs. Dorman; Youth council, Joseph Urgo, Gregg Batterson; parks and recreation chairman, Richard J. Emonds; town manager, Dana Whitman; and Mrs. Lillian Yarrington.

In conclusion, Mr. Speaker, I commend this program to my colleagues for their inspection and comments. I am hopeful that this novel program will be taken up by other towns and cities, not only in Connecticut, but in other States.

SPIRALLING MEAT PRICES

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, last Tuesday, August 15 in Columbus, Ohio, Secretary of Agriculture, Earl L. Butz stated:

> The price of beef had reached a plateau and will ease off some in the next few months.

He also stated that beef has dropped by $2 a hundredweight and will drop off another $2 between now and the election.

However, information made available to me this morning from the Department of Agriculture indicates the beef prices have increased from $31.80 per hundredweight during the first half of 1971 to $35.86 for the first half of 1972, a 12.7-percent increase. The projected increase for the third quarter of 1972 will be a whopping 14.2 percent increase from $35.86 to about $37 per hundredweight.

This report from his department repudiates the Secretary's stump speeches.

What hurts the consumer is the $4 billion more they are paying for beef in 1972. This bonanza in beef is hurting every family. Secretary Butz's policies may spell profit for the large-fat-profit beef producers—but they are rapidly alienating the American consumer from any support for farm programs.

RABBI JACOB MANN

The SPEAKER. Under a previous order of the House, the gentleman from Massachusetts (Mr. BURKE) is recognized for 5 minutes.

Mr. BURKE of Massachusetts. Mr. Speaker, last Sunday, the congregation of the Beth Israel Synagogue in Quincy, Mass., honored one of the South Shore's leading religious leaders after 30 years as spiritual head of that synagogue. Born in Jerusalem, Rabbi Mann has been a religious leader for most of the 42 years he has been in this country. A leading dynamic spokesman for the Jewish community in the South Shore, the rabbi has received numerous awards on several occasions for his civic leadership in the South Shore area. I know my colleagues in the House want to join me and the members of his congregation in congratulating the rabbi on 30 selfless years of devotion to his flock and his community and wish him every success in the future. I am inserting at this time into the RECORD a recent newspaper story on Rabbi Mann's career by the Quincy Patriot Ledger staff reporter, Howard Levenson.

[From the Quincy Patriot Ledger,
Aug. 12, 1972]

MANY FACETS OF QUINCY RABBI'S WORK

(By Howard Levenson)

QUINCY.—The long and distinguished career of service for which Rabbi Jacob Mann is to be honored tomorrow began when he left his native Palestine 42 years ago "looking for a job."

He came to this country and became rabbi for a congregation in Torrington, Conn., where he remained for about ten years. Since 1942 he has been the spiritual leader of the Beth Israel Synagogue on Grafton Street in Quincy Point.

In addition, Rabbi Mann has served for many years as the Jewish chaplain at the Massachusetts Institute of Correction in Bridgewater and at the Massachusetts Hospital for Crippled Children in Canton. He is a prominent spokesman for the Jewish community of Quincy, which he represents at numerous public functions.

Rabbi Mann has made seven visits to his homeland since 1959. He feels that since the state of Israel was founded in 1948, "there has been an absolute revival of the Jewish religion . . . a great inspiration in all branches . . . The most encouraging thing is the growth of yeshivas (Jewish seminaries) in many parts of the country."

The Beth Israel family, including the Synagogue, Women's Council and Brotherhood, will recognize Rabbi Mann's contribution to community life with a testimonial at the synagogue tomorrow evening.

Rabbi Mann was born in Jerusalem in 1909, when Palestine was ruled by the Ottoman Turks. He was one of eight children of a third generation Palestinian father and a New York City-born mother.

He attended parochial schools and was ordained as a rabbi at the age of 21 on graduation from a yeshiva bearing the name "Etz Chaim" (Tree of Life).

His pulpits in Torrington and in Quincy were both obtained through a placement agency.

When he became rabbi at Beth Israel, he also became principal and sole teacher of the synagogue's six-grade Hebrew school. For five afternoons a week, Sunday through Thursday, until the school was replaced by the Hebrew school at the Jewish Community Center on Merrymount Road, he had charge of between 40 and 50 students.

Rabbi Mann said that it was normal for a rabbi in a relatively small community to be a jack of all trades. However, he has always performed functions for Beth Israel that in most other synagogues are parceled out among several different people. He has delivered sermons, served as a cantor and handled such clerical tasks as sending notices to remind members of the congregation of "yahrzeit," the anniversary of the death of a relative.

In 1962 he was appointed Jewish chaplain for the several branches of the Massachusetts Institute of Correction in Bridgewater. Since then he has visited inmates once or twice a week, conducting religious services, individual counseling sessions and interfaith group therapy sessions.

Rabbi Mann said that in preparation for the chaplaincy he had to take a 24-week training course with examinations at the end. He received instruction from penal experts, psychiatrists and psychologists, he said.

For the past 15 years he has conducted once-weekly sessions in religious training at the Massachusetts Hospital School for Crippled Children in Canton.

Since its founding about ten years ago he has been head of the Hebrew school at Temple B'nai Shalom in Braintree. He also taught for several years at the Jewish Community Center Hebrew School, which was closed several years ago.

About 25 years ago he founded the kashruth commission of the Orthodox Rabbinical Council of Boston. The commission supervises the preparation of meals for many of the gatherings held in Boston by Jewish organizations, making sure that kosher laws are strickly observed. Rabbi Mann performs this function for the Statler Hilton Hotel.

Rabbi Mann spends most of his time when visiting Israel in Jerusalem, although on the first trip he did a great deal of traveling in the young country.

During his visit in the summer of 1967 he visited the holy places that had been off-limits on his earlier visits because of Arab occupation. He kissed the Wailing Wall in the Old City of Jerusalem and found the graves of his father and two sisters in a desecrated cemetery in the Mount of Olives.

Rabbi Mann said that he might consider moving back to Israel in the future, perhaps upon his retirement, but not now: "I feel that I am so much involved in religion where I am . . . The affection and the respect shown to me by the people I work with makes it hard for me just to reestablish my home back where I was born."

His daughter Esther has lived in Israel for the past several years. She is now head law librarian at Bar-Ilan University in Ramat Gan on the outskirts of Tel Aviv.

His two sons are both ordained rabbis. Dr. Jonah Mann is professor of mathematics and dean of admissions at City College in New York City. Abraham Mann is rabbi of Temple Israel, Long Beach, Long Island, New York.

Mrs. Mann is the former Isabelle Marentz, former principal of the Quincy Elementary School.

The rabbi's first wife, Mrs. Leah Mann, also a native of Palestine, died several years ago.

The rabbi was honored at an interfaith testimonial held in 1959 at the Quincy Jewish Community Center. In 1965 he received the "Citizen of the Year" award of the Quincy Jewish War Veterans Post.

The reception Rabbi Mann received at the dedication ceremony for the Islamic Center of New England, located in Quincy, is indicative of the esteem in which he is held throughout the South Shore. When his greeting to a representative of the Arab legation in Washington, D.C., was rebuffed, Rabbi Mann turned away politely and received a warm welcome from members of the host Muslim community.

TRIBUTE TO SAMUEL Z. WESTERFIELD

The SPEAKER. Under a previous order of the House, the gentlewoman from New York (Mrs. CHISHOLM) is recognized for 5 minutes.

Mrs. CHISHOLM. Mr. Speaker, I would like to join my distinguished colleagues in paying tribute to an outstanding and dedicated U.S. Ambassador, Dr. Samuel Z. Westerfield, Jr., who died suddenly last month while serving our country in Liberia.

Dr. Westerfield was an eminent economist. After obtaining his AB degree magna cum laude from Howard University, at the age of 20 years, he served as an instructor at his alma mater. At later dates, he was granted an assistant professorship at West Virginia State College and Lincoln University. After completing his studies for his MA and Ph. D. at Harvard University, his prominent work in the field of education led to his appointment as dean of the school of business administration and professor of economics for 9 years at Atlanta University.

In 1961, he commenced his career in government as associate director of the debt analysis staff in the Treasury Department and moved up to the post of Deputy Director of the Office of International Affairs in the Treasury. Dr. Westerfield chose to stand up for the underdeveloped countries, in terms of economic power, when it was not a popular practice. His efforts helped pioneer the way for U.S. participation in the economic development of the world. He took the time and courage to analyze the problems developing economies face and stood up for his convictions in the services he performed in the Foreign Service and as Ambassador. His appointment by President Nixon was an asset to the State Department and all Americans who were represented by a man who was respected by Liberians and Americans.

Samuel Westerfield will be greatly missed in this country by his family, distinguished friends, colleagues, students, neighbors, and he will also be missed greatly in Africa where he served diligently, honorably, and excellently for all. During his lifetime, Ambassador Westerfield showed us that a great public servant can serve all mankind with distinction and because of his outstanding work and personality, he will be remembered for many years to come.

NADER REPORT

The SPEAKER. Under a previous order of the House, the gentleman from South Carolina, (Mr. DAVIS), is recognized for 5 minutes.

Mr. DAVIS of South Carolina. Mr. Speaker, as everyone is well aware, we in Congress are currently the subject of a thoughtful, in-depth, supposedly objective report by Mr. Ralph Nader. Let me state for the record that I have never met "Mr. Citizen." I am told on one hand he is dedicated, tough, and zealous. On the other hand, General Motors and several other companies have a different set of adjectives for him. I plan to make no snap judgment about Mr. Nader himself, but I would like to make a comment for the record on the people he employs and apparently trains. Since most employees do things the way the boss wants, I can only surmise Mr. Nader has given his blessing to the tactics being used by his investigators in the Congress project. I heard this was going to be an unbiased, truthful, and objective report. If all the investigators are like the ones I have met I can only shudder at what might come out of the endeavor. All of the people that I have met from the Congress project are rude and unprincipled. They lack even the most rudimentary elements of courtesy. They flap their mouths when they should be listening. They demand, threaten, and berate and then scream they are getting no cooperation.

I would like to make a specific reference to one of the investigators who has been calling on me. She is called Sally Keeble. Miss Keeble first called my office without a previous introduction and demanded an appointment from my secretary. She was told she would have to call back and talk with me. She did call back and I talked to her and listened to another demand for an interview. Well, Mr. Speaker, I tried to explain my position. This coming August the 29th we are having a primary in South Carolina—one that has been postponed twice before. I tried to explain to Miss Keeble that my time right now is at a premium, but that after the primary I would be glad to sit down with her for an interview. I must not have done too well, because yesterday I got a letter from the person in question. I would like to quote from that letter:

Page one, paragraph 1: Quote; "You refused to give me an interview."

Page one, paragraph 3: Quote; "I would like to make it clear this profile will be written whether or not you give me an interview."

And finally, page 2, paragraph 1: Quote; "I hope you would rethink your decision not to give me an interview."

I have a little trouble understanding this letter. It sounds like I have barred her from even approaching within a hundred yards of my office. I have never said at any time that I would not give an interview, but merely to wait until I get finished with the primary campaign. Mr. Speaker, this sounds like the Western sheriff telling his lynch mob to give the fellow a fair trial before hanging. I have tried, without success, to explain to Miss Keeble that her extensive questioning will take several hours that at this time I do not have to spare.

Perhaps Miss Keeble can read as well as she can demand, because if so I want to put into the RECORD that I will be glad to talk with her after my primary in South Carolina.

I would also like to mention that in this letter, Miss Keeble states, quote: "We would appreciate it if you would fill in and return at least part of the written questionnaire." Now before I get accused of not cooperating with Congress project and Miss Keeble, let me state that I have at no time seen anything even remotely resembling a questionnaire from Congress project. They claim to have sent it to my office, but Mr. Speaker, I have not seen such a letter. I might also add that none of my staff has either.

Frankly, I am appalled at the tactics being used by this consumer protection outfit. I wonder if truth will have any merit in this report. I wonder how many others will be accused of noncooperation. I doubt if they will let anything like objectivity get in the way of their report. I have heard of such tactics, but usually under the auspices of the Gestapo, secret police, or a goon squad.

Mr. Speaker, let us get down to basics. I have only to answer to the people of the First District of South Carolina. I am in the process of doing that right now. I take care of the First District constituents myself. Instead of a "Congress Report" I am presently using the "Davis Report." I answer for that report every 2 years.

POLICE MANPOWER ACT OF 1972

The **SPEAKER.** Under a previous order of the House, the gentleman from New Jersey (Mr. DANIELS) is recognized for 5 minutes.

Mr. **DANIELS** of New Jersey. Mr. Speaker, I am introducing today legislation which if passed would recognize an approach to law enforcement ignored by the administration but which makes sense to millions of Americans. Under the Law Enforcement Assistance Administration in the Department of Justice, we have supplied police departments with gadgets and gimcracks, rather than effective means of enforcing the law on the streets every day.

It is absurd to supply local police forces with armored vehicles, heavy artillery, and electronic gadgetry when the major day-to-day problems which most affect citizens are muggings, armed robberies, rapes, and assaults. An armored car or an electronic radio signal finder awaiting use in the police warehouses is not going to protect a merchant from an armed robber. A policeman on the beat would. That is what this bill is all about.

The Police Manpower Act of 1972 would, for the first time, provide Federal funds exclusively for the purpose of increasing police manpower on the streets. The bill would provide $2 billion a year for the next 6 years, not for gimmicks, but for well-trained policemen on the streets and on the beat. The funds would be used for recruitment and salaries of an additional 140,000 police officers in municipalities chosen on the basis of need.

The bill provides that upon application, communities' law enforcement needs would be analysed by a federally financed study.

Thereafter, Federal funds would be awarded by the Law Enforcement Assistance Administration according to the findings of the studies and the ranking of the applicant cities according to the severity of their crime problems.

Mr. Speaker, crime is the No. 1 concern of the American people. There has been no significant reduction in crime or the concern for personal or public safety in the last 3 years.

Life magazine found in a survey of its readers that: 78 percent felt unsafe in their own homes at night; 80 percent in large cities felt unsafe on the streets at night; 43 percent were victims of crime within the last year; 41 percent felt their police protection was inadequate; and 71 percent indicated would pay higher taxes for better protection.

Higher taxes are in fact not needed to pay for better police protection. Reallocation of current law enforcement priorities from gadgets and unnecessary equipment, as well as a general reallocation of our national priorities, would provide sufficient funds to provide safe streets for our citizens. For example, since 1968 Federal subsidies in excess of $20,000 to agricultural producers amounted to over $1½ billion. This is only one loophole that could be closed up to provide for better police protection.

We have provided long term antipoverty programs that are working to prevent crime and give poor people a chance to make it, we are providing employment programs, we are working to improve educational and vocational training. But these are long term programs and although they are working, the average citizen should not be forced to endure for the long term the fear and too often the pain and suffering of crime.

This legislation would protect the average man and woman on the street and it would provide it now.

The text of the bill follows:

H.R. —

A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to enable units of general local government to increase the numbers of police

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Police Manpower Act of 1972".

SEC. 2. (a) Parts F, G, H, and I of title I of the Omnibus Crime Control and Safe Streets Act of 1968 are redesignated G, H, I, and J, respectively.

(b) Title I of the Omnibus Crime Control and Safe Streets Act of 1968 is amended by inserting immediately after part E the following new part:

"PART F—POLICE MANPOWER ASSISTANCE

"SEC. 471. It is the purpose of this part to enable units of general local government to increase significantly the number of police as quickly and as effectively as possible.

"SEC. 472. There is authorized to be appropriated, in addition to any other sums authorized to be appropriated for the purposes of this Act, the sum of $2,000,000,000 for the fiscal year ending June 30, 1973, and for each of the next five fiscal years, for the purposes of this part, and no other sums authorized to be appropriated for the purposes of this Act shall be used for the purposes of this part.

"SEC. 473. (a) The Administration shall make, either through its staff or by contract with outside experts, a study of the needs and efficiency of the local police force of each consenting unit of general local government under whose jurisdiction is a population of over 10,000, as reported in the most recent available Federal Bureau of Investigation's crime index, in descending order of the severity of such unit's crime problem, as reflected in the most recent available Federal Bureau of Investigation's schedules of crime index offenses, studying as many such units as its feasible and practical. Such studies shall be made as soon as possible and practical, but only with respect to those units of general local government who consent to such a study in order to qualify for grants under this part.

"(b) (1) The planning studies shall consist of the following:

"(A) identification of deficiencies and proposal of solutions including recommendations for optimization of allocation of existing resources;

"(B) determination of the extent of assistance required; and

"(C) development of a time and budgetary schedule for the needed implementation.

"(2) The methodology of the planning study shall include the following:

"(A) extensive interviews and discussions with members of the law enforcement agency, and consultation outside of the agency with citizen groups, community government personnel, and other governmental agencies, to include those State, regional, and local agencies affected by and contributing to law enforcement within the community;

"(B) inspection of facilities and equipment;

"(C) review of recorded data and documents; and

"(D) actual field observation of the agency.

"(3) The following analytical method shall be utilized:

"(A) examination of present practices;

"(B) examination of past practices where applicable to existing operation and administrative situations;

"(C) consideration of outstanding contemporary practices conducted elsewhere;

"(D) consideration of alternatives and constraints; and

"(E) development of specific implementation programs, to include rankings by priority.

"(4) The planning study shall include the following:

"(A) examination of crime and police problems in the community, police manpower and material resources, and community attitudes and resources, including contribution and inputs by agencies of the State and other units of general local government where applicable;

"(B) evaluation of the existing organizational structure;

"(C) in-depth review of existing administrative and managerial procedures, including planning operations, direction, and supervision, internal inspections and control techniques and devices, fiscal management operations, and community relations;

"(D) analysis and evaluation of allocation and distribution of line, staff, and administrative personnel by time, function, and area;

"(E) examination of existing personnel management systems and procedures including recruiting and selection practices, promotion procedures, performance evaluation practices, training and education activities, salary structures, working conditions, employee relations, and disciplinary procedures;

"(F) examination of existing operational procedures including analysis and evaluation of patrol, traffic, investigative, and vice control operations;

"(G) analysis and evaluation of the agency's technical communications system, to include radio, telephone, teletype, and complaint recording and dispatching;

"(H) analysis and evaluation of records management activities including investigative, indentification, arrest, and administrative records-keeping practices, report processing, and information retrieval and storage;

"(I) analysis of service functions including custody of persons and property, building space utilization, and adequacy and maintenance of equipment;

"(J) any other matters relating to the efficient administration of law enforcement within the jurisdiction;

"(K) analysis of adequacy of the local funding of law enforcement; and

"(L) analysis of local manpower resources and the projected effects of this program.

"SEC. 474. (a) The Administration is authorized to make grants to any unit of general local government with respect to which a study has been made under section 473 of this title, in order to enable that unit to make net additions to its police force, consistent with the findings and recommendations arrived at through such study and contingent upon adherence to such recommendations.

"(b) No grant under this section shall be used to diminish the level of local efforts and resources allocated to police manpower purposes, nor shall any programs and projects assisted under this section be administerd so as effectually to permit a weakening of the standards of police appointment or performance.

"(c) No grant under this section shall be made to any unit of general local government that, with respect to the hiring and advancement of police, discriminates on the basis of race, creed, color, sex, or national origin.

"SEC. 475. (a) There is established the Police Manpower Assistance Council (hereinafter referred to as the 'Council'), which shall consist of twelve members to be appointed by the Attorney General. It is the sense of the Congress that each member of the Council shall be from a different public interest group, and that the Council shall have representatives from at least eight of the following groups:

"(1) the United States Conference of Mayors:

"(2) the National League of Cities;

"(3) the Urban Coalition;

"(4) Urban America, Incorporated;

"(5) the National Association of Counties;

"(6) the National Governors' Conference;

"(7) the American Bar Association;

"(8) the International Association of Chiefs of Police;

"(9) the Police Foundation;

"(10) Common Cause;

"(11) the National Association for the Advancement of Colored People; and

"(12) the Brookings Institution.

"(b) Each member shall serve for a term of four years, and shall receive no compensation for his services as such member except for that provided for persons intermittently employed in the Government service in section 5703 of title 5 of the United States Code.

"(c) The Council shall hold such meetings and adopt such rules as are necesesary to the transaction of its business and the performance of its duties under this title. The Council is authorized to hire such staff, and at such salaries, as it shall find necessary.

"(d) The Council shall have authority—

"(1) to certify or revoke certification of any person, whether such person is an employee of the Administration or an outside consultant to it, who is to perform any study required under section 473(a) of this title, and no such study shall be valid for the purposes of this title unless performed by a person with respect to whom a Council certification under this subsection is in force, and

"(2) to exercise general and specific oversight concerning the administration of this part, including the review and resolution of disputes between the Administration and any unit of general local government with respect to the propriety or interpretation of any conditions and terms of any grant made under this part, and this authority may be exercised in the implementation and operative stages of programs and projects assisted under this part as well as at the application, planning, and study stages of such programs and projects."

THE PEKING CONNECTION: COMMUNIST CHINA AND THE NARCOTICS TRADE

(Mr. WAGGONNER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, many of us here in the Congress are worried by the amount of drugs that make their way into our country from many nations abroad. We all know and have read of the dangerous drugs that make their way here from Turkey, Mexico and other nations, but little is being said by this administration about the drugs that are being produced and clandestinely brought into the United States from Communist China.

Recently I came upon an extensive study which calls on our government to make a "fair, thorough and objective examination" of the amount of dangerous drugs making their way on the American market from mainland China.

This 36-page study, commissioned by The Committee For A Free China and written by Allan C. Brownfeld, columnist, author, lecturer and winner of a a Wall Street Journal Foundation Award, cites authoritative United States, Soviet, Dutch, Argentinian, Republic of China, Egyptian, British, Japanese, Hong Kong, Filipino and German sources for its conclusions.

The study titled, "The Peking Connection: Communist China and the Narcotics Trade," concludes:

> If our society is serious about putting an end to the flow of narcotics into our cities and into our military installations abroad, we must, initially, determine precisely who it is that is producing and marketing the drugs involved. The evidence, as we have seen, indicates that the government of Communist China bears a large portion of the responsibility.

"The Peking Connection" states that in the face of such far-reaching substantive evidence, the U.S. Government "refuses to name Communist China a suspect, if not an active participant, in the narcotics traffic." It asserts:

> What is most exasperating is the burden of proof now falls on those who have accepted at face value years of official assertion by the Executive Branch of Government that Red China was in fact engaged in the drug traffic.

The study asks:

> Should it not be the obligation and responsibility of the government of the United States—faced with a mountain of incriminating evidence—to prove or disprove the validity of Red China's involvement in narcotics trafficking?

Among the many citations are:

Chou En-lai's statement to Egyptian President Nasser that—

> We are planting the best kinds of opium especially for Americans.

Prof. Stefan Possony of the Hoover Institution asserting:

> Between two-thirds and four-fifths of the high grade heroin sold on the international

market is and can only be supplied by mainland China.

Representative Seymour Halpern, of New York, saying:

> There is reason to believe that opium produced in Communist China, particularly in the Yunnan Province does enter the Golden Triangle—Burma, Thailand, Laos—drug conduit in Southeast Asia.

Consistent testimony by Harry J. Anslinger throughout the 1950's when he was U.S. Commissioner for Narcotics that Red China was heavily engaged in illicit drug trade.

A charge by U.S. Narcotics Commissioner Henry Giordano in 1963 that—

> The Red Chinese are extensively engaged in drug traffic.

A 1970 Fact Sheet of the Bureau of Narcotics and Dangerous Drugs which states:

> In the Far East, opium is cultivated in vast quantities in the Yunnan Province of China and the Shan and Kachin States in Burma. Although much is consumed by opium smokers in the region, considerable amounts of the drug find their way to the United States.

A report by Prof. James Turnbull of the Royal Military College of Science which states:

> The Chinese Communist government export illicitly 2,000 tons of opium a year to the non-Communist world.

A British narcotics expert, A. H. Stanton Candlin, who says that:

> When President Nixon visited Chou-En-lai he saw the biggest drug pusher in the world, with 800,000 acres under cultivation.

A Pravda article by a Soviet correspondent based in Tokyo who charged that Communist China was the biggest opium, morphine and heroin producer in the world.

An Argentinian English-language paper which reported:

> The Chinese Communists were exporting large quantities of the cheapest but highest quality heroin to Vietnam in a plot to paralyze the American troops.

A Filipino Senate chairman saying that the value of narcotics smuggled into his country from the Chinese mainland via Singapore and Hong Kong had reached over $1,000,000.

The eyewitness testimony of a Chinese refugee before a House Foreign Affairs Subcommittee that she had seen the Chinese Communist army growing opium in Yunnan Province.

Yet, says the study:

> The evidence amassed by the Bureau of Narcotics and Dangerous Drugs, the evidence presented by Harry J. Anslinger, the material put together by Professor Turnbull, the statements of President Nasser, the Japanese narcotics experts, Pravda and others, seems to have made little impression upon the rest of official Washington at the executive level.
>
> Good relations cannot be developed between the United States and its Asian allies, an assault with narcotics which is as real and dangerous as an assault with tanks, guns and planes.

Mr. Speaker, I include the entire study in the Congressional Record so that my colleagues and the American people may learn the extent to which the Red Chinese are attempting to infiltrate their dangerous drugs upon the youth of our Nation.

The Peking Connection: Communist China and the Narcotics Trade

(By Allan C. Brownfeld)

FOREWORD

It has been said in recent days that the fight against narcotics addiction is the nation's number one domestic priority.

Thousands of servicemen are returning from Vietnam with drug problems, and these newly returned addicts are fueling an already serious situation in our cities.

There is significant evidence leading to the conclusion that Communist China is one of the primary sources of the opium which is then refined into heroin to which Americans in Southeast Asia have been subjected.

In 1965, for example, the Egyptian publisher and longtime confidant of the late President Nasser, Mohammed Heikal, quoted Communist China's Premier, Chou En-lai, as stating that, "The more troops the U.S. sends to Vietnam, the happier we shall be, for we feel we shall have them in our power, we can have their blood . . . Some of the American soldiers are trying opium, and we are helping them. We are planting the best kinds of opium especially for Americans."

After an extensive study of the drugs coming into the American and world markets, Professor Stefan T. Possony of the Hoover Institution at Stanford University, declared in November, 1971 that, "Between two-thirds and four-fifths of the high grade heroin sold on the international market is and can only be supplied by mainland China . . . The heroin offensive appears to have accelerated in 1965."

Although few Americans are aware of the fact, our own government placed a formal complaint before the United Nations in 1955 concerning the opium being produced in Yunnan Province by the Communist Chinese government. Since 1955 it appears that Communist Chinese efforts in this field have increased dramatically.

Yet today, at a time when the United States Government repeatedly declares its commitment to end the illegal traffic in narcotics, it refuses to seriously consider the role being played in the drug traffic by the government of Communist China.

In fact, one is led to the conclusion that the Administration places the entire burden of proof regarding Red China's involvement in the dope trade on the shoulders of American citizens who are deeply concerned about this narcotics traffic.

The Committee For A Free China takes on this task only because we anxiously seek the truth, and we do not wish to see the realities of something as horrifying as narcotics proliferation swept under the proverbial rug.

Discussing the effort by White House spokesmen to end all consideration of the role of Communist China in the drug market, columnist Jack Anderson wrote in the Washington Post of May 26, 1972:

"In an unusually conciliatory move toward Peking, the White House is vigorously mobilizing the administration to fight what it calls 'arrant nonsense' about Red China's role in world dope trafficking.

"The White House gesture toward Mao Tse-tung comes even as President Nixon is wooing Mao's arch-rival in the Communist world, Soviet Party head Leonid Brezhnev.

"A White House memo contains evidence that Richard Nixon, once the implacable foe of Communist China, is now defending China. The memo was circulated quietly to the Departments of State, Defense and Treasury, and the U.S. Information Agency.

"The memo urges them to fight 'propaganda' against Red China. Included with the memo is a two-page briefing paper prepared by the federal intelligence agencies on Red China and opium."

The two-page briefing paper, according to columnist Anderson, contends that a "persistent propaganda campaign . . . is being promoted in this country by a number of groups who have consistently opposed normalization of relations between the U.S. and the PRC . . . no evidence has yet been produced to indicate any attempt on the part of Peking to introduce opium or heroin into Vietnam."

The White House also maintains, without providing any evidence of its own, that China strictly controls opium production. Anderson states that "Even in the old opium belts of Yunnan Providence, states the briefing paper, there is no 'significant illicit cross-border movements' to the outside world."

The White House approach to this question is not only "unusually conciliatory," as columnist Anderson noted; it also overlooks the real evidence which *is* available, both with regard to Communist China's acknowledged past history in narcotics production as well as its current role.

The Committee For A Free China commissioned Allan C. Brownfeld, columnist, author, lecturer and recipient of a Wall Street Journal Foundation award, to review all of the available literature in this field, as well as to talk with experts in this country and in the Far East, including Hong Kong, long known as a major port of entry for narcotics. The conclusions drawn in Mr. Brownfeld's study are at variance with the conclusions drawn by the White House, whose conclusions appear to be political and unrelated to the real story of the production of and traffic in narcotics engaged in by the government of Communist China.

It is clear that in any instance where the machinations of a totalitarian government are at work, it is not possible to know in detail all of the internal and external practices engaged in by that government. To say that we do not know all there is to know about this subject is obvious. But what we *do* know certainly merits an investigation. The evidence which *is* available leads not to the exoneration of Communist China, but to its conviction.

The facts, however, must speak for themselves. They, and not political rhetoric, will lead to a solution of the drug problem which all of us say we want to solve, but which some seem to be aiding and abetting by permitting other goals to stand in the way of a thorough exploration of the world as it really is.—The Committee For A Free China, June, 1972.

On March 20, 1972, President Nixon called drug abuse the nation's "Number One domestic problem" and said that despite the need to save money "this is one area where we cannot have budget cuts."

The Washington Post declared that the President's statement concerning narcotics included "some of the strongest language he has used about drug abuse." The President said that the heroin pusher is worse than a murderer or burglar because what he does "strikes at the very heart of the society in which we live."

In our efforts to prevent narcotics from entering the country we have taken action in Turkey, in France and elsewhere in the world to see that narcotics traffic is stopped at its source.

Yet, despite our efforts, narcotics addiction increases, both within our own country and among American servicemen in Vietnam and elsewhere in Southeast Asia. In addition, the flow of narcotics is heavier than ever before despite the fact that new restrictions have been imposed on the previously identified main sources of raw opium from which heroin is produced, namely Turkey and Iran.

In recent days there has been much discussion about the possible role played in the production and distribution of narcotics by the Communist Chinese government.

Many and diverse spokesmen—journalists, political leaders, academicans—have declared that Communist China is deeply involved in the drug traffic, and is using this traffic for the twofold purpose of gaining foreign exchange and subverting both American servicemen and non-Communist Asian societies.

Let us consider some of the statements which have been made on this subject.

Speaking on the C.B.S. radio network on February 23, 1972, commentator Jeffrey St. John declared that "Ever since the establishment of the Reds on the China mainland they have been actively involved in drugs. However, it has only been in recent years that narcotics have served a specific ideological end, coinciding with the mushrooming of the drug problem in Western nations like the United States."

Testifying before a Congressional committee in July, 1971, Dr. Robert Baird, a New York drug expert with 24 years in the field of drug addiction, contended that the Chinese Communists are now preparing to use drugs to demoralize the American population, especially young people, and for ideological purposes. Dr. Baird declared that we are being misled into thinking that Turkey is the primary source of narcotics, and he estimated that Communist China produces 55 to 60 percent of the world's hard drugs.

In a report in October 1971, to the House Foreign Affairs Committee entitled, "The International Narcotics Trade and Its Relation to the United States," Rep. Seymour Halpern (R-New York) stated that "... there is reason to believe that opium produced in Communist China, particularly in the Yunnan Province, does enter the Golden Triangle—Burma, Thailand, Laos—drug conduit in Southeast Asia."

Rep. Halpern noted that "It has been difficult, because of China's great wall of isolation, to document the extent of her opium production in relation to her own consumption and to her medicinal requirements. Several experts have estimated, however, that the minimal medical need for her huge population would require about 100 tons of opium production per year. It is known that the People's Republic of China has the capacity for large cultivation, particularly in the Southern provinces. . . . There have been numerous rumors that a good portion of China's vast crop finds its way into illicit channels."

The Washington Report of the American Security Council for January 13, 1972 reported that Hong Kong police have stated that illegal drugs smuggled out of Communist China and bound for the Free World increased nearly 1,000 percent in 1971, most of it in opium, the raw material from which heroin is made. Police in Hong Kong seized 12,500 pounds of opium last year, as compared with only 877 pounds in 1970.

Rep. Philip M. Crane (R-Illinois) stated on April 12 that "At a time when there is a euphoric feeling that peace may be at hand with the Communist Chinese, a feeling not borne out by the fact that the Peking government continues to sponsor subversion and terror throughout Asia, one important question remains unanswered and, to a large measure, unasked. That question is this: how involved is Communist China in the flow of narcotics in Southeast Asia, and elsewhere in the world?"

Citing the available evidence, Rep. Crane concluded that, "At a time when thousands of young Americans, particularly servicemen in Vietnam, are becoming addicted to heroin and other dangerous drugs, it is incumbent upon our government, if it is sincere in its desire to stem the tide of such drugs, to investigate the possible involvement of Communist China in their production and distribution."

A report published in England in April, 1972 declared that "The Chinese Communist government exports illicitly 2,000 tons of opium a year to the non-Communist world."

Prepared by James Turnbull, Professor of Applied Science at Britain's Royal Military College of Science, the report states that "The annual sales are estimated to be worth $500 million to Peking."

Professor Turnbull writes that "The covert dissemination of opium narcotics, in particular the addictive drug heroin, for commercial and subversive purposes represents one of the gravest threats to the armed services and societies of the free world."

Published by the Foreign Affairs Publishing Company, Ltd., this report includes a foreword by a Conservative member of Parliament, Geoffrey Stewart-Smith, who writes: "James Turnbull has produced a devastating exposure of the way in which the allegedly 'trustworthy' Chinese People's Republic is carrying out a massive secret chemical warfare strategy by exporting opium and heroin to the non-Communist world. In view of the growth of drug taking in Eastern Europe, it is possible that the Chinese Communists are doing the same thing to their 'fraternal' Communist states there too."

Speaking to the 43rd Annual Conference of the Copley Newspapers at Borrego Springs, California, on February 14, 1972, Lt. General V. H. Krulak (U.S. Marine Corps, Ret.), stated that "The Chinese Reds do want hard money and opium is probably China's greatest export staple. They are doing everything they can to improve and expand opium culture, and it is estimated that they earn almost a billion clandestine dollars a year from their dope sales."

That there is a widespread feeling that Communist China is deeply involved in the narcotics traffic is clear. Concern, however, is far from being conclusive in determining what role the Communist Chinese do, in fact, play in narcotics production and traffic. Let us turn to the available evidence and to the very real history of Communist Chinese involvement in narcotics.

Speaking to a group of Congressional aides this past February, A. H. Stanton Candlin, a British narcotics expert who has spent many years in the Far East, declared that "When President Nixon visited Chou En-lai he saw the biggest drug pusher in the world, with 800,000 acres under cultivation."

This idea was confirmed by Mohammed Hassanein Heikal, editor of Cario's semi-official Al Ahram newspaper and a confidant to the late Egyptian President Nasser, who reported that Premier Chou En-lai told Nasser in 1965 that Communist China planted opium in Vietnam, hoping to demoralize U.S. troops there with drugs. The London Sunday Telegraph of October 24, 1971 quotes President Nasser as stating that "One of the most remarkable things Chou En-lai said that night when talking about the demoralisation of the American soldiers (in Vietnam) was that 'some of them are trying opium, and we are helping them. We are planting the best kinds of opium especially for the American soldiers in Vietnam.'"

According to Mr. Candlin, the Chinese Communists are now using a policy of "psycho-chemical warfare" first used by the Japanese on the Chinese themselves in the 1920s and 1930s. The Japanese established brothels and spread morphine. It was done by intelligence services of the army and the Chinese method being used today "can be traced to the Japanese. They saw it done to themselves and they are improving on it."

Corraboration is set forth in the volume, "Traffic In Narcotics," published in 1953, by Harry J. Anslinger, the United States Commissioner for Narcotics for many years.

In 1950, after the Chinese Communists established control of the Mainland, Mao Tse-tung forbade opium smoking in China and a few opium growers were executed with great publicity. Yet shortly thereafter, Commissioner Anslinger placed an American complaint before the United Nations to the effect that the Communist Chinese were smuggling narcotics into Japan. His evidence was overwhelming and proved that during the early 1950s China was heavily engaged in the illicit drug trade.

As the U.S. Representative to the United Nations Commission on Narcotic Drugs, Mr. Anslinger had many occasions to warn the free nations of Communist China's illicit narcotics trade. Here are several excerpts from his remarks before the U.N. Commission, in April, 1955, concerning the opium being produced in Yunnan Province:

"At the end of 1953 a group of smugglers, including an official of the Bank of Canton, (smuggled) 23 pounds of heroin and morphine from Yunnan to Chiengmai to Bangkok and thence to another transshipment point . . .

"Despite the efforts of the Burmese Government to control the illicit traffic in narcotics, hundreds of tons of cleaned and packaged opium in 1-kilogram units are brought into Burma each year from Yunnan Province . . .

"The hub of the traffic on the Yunnan side of the border is Tengyueh. Along the border are found trucks, military vehicles, carts, mules and pack trains used for the transportation of opium . . ."

Several months before his retirement in 1962, Commissioner Anslinger further illustrated the extent to which Yunnan contributed to the Communist Chinese narcotics traffic. The following is from the Report of the Seventeenth Session (1962) of the U.N.'s Commission on Narcotic Drugs:

"92. With reference to the question of the origin of opium in the Burma-mainland China-Laos-Thailand border area, information was reported by the representative of the United States concerning investigations carried out in recent months in cooperation with control authorities in the Far East.

Three witnesses, former inhabitants of Yunnan province in mainland China, had made detailed statements to United States Treasury Department officials on the cultivation of opium in Yunnan and its export from there to the Shan states in Burma. One witness had himself been a cultivator, and in 1953 and 1956 he had also, with his mules, joined caravans transporting opium to the Shan frontier, where he assisted in its transshipping into trucks for transport to a trading company at Kentung, Burma. Two caravans, of 108 and 82 mules, had transported over 4 and 3 tons respectively, two sealed tins of 20 kilograms being carried by each mule. The cultivator estimated that some 6 tons of opium had been produced annually in the area where he lived, and that the total production of the region in 1961 had been of the order of 1,000 tons."

Speaking before the U.N. Commission on Narcotic Drugs on April 15, 1953, Mr. Anslinger set forth the proposition that the Communist Chinese government did, in fact, engage in and sanction the illicit export of opium and its derivatives. He said:

"When the Communists occupied the whole of China, opium-smoking was prohibited in the land by order of the Communist Administrative Department, but it soon became known that traffic in narcotics would be permitted if it was contrived behind the scenes so those who wished to export opium applied to the government organization controlling special items and received licenses to export opium which amounted to a license to buy and sell opium and heroin. Tientsin and Canton are the chief opium and heroin export centers in China.

"Within the Communist government there is the Opium Prohibition Bureau of the Peoples' Government. Within this Bureau the responsible persons are: Po I Po, Chief of the Finance Division; Yih Chih Chuang, Chief of the Trade Division; and Wang Feng Chi, who as Chief of the Hwapei Opium Prohibition Bureau is the actual person in charge.

"The Opium Prohibition Bureau amounts to a government monopoly, which in the Tientsin district, is known as the Yuta Concern which is located at 5 Aomen-lu, 10 Ward, Tientsin. Wang Tsu Chen is the head of this concern, Li Tsu Feng is the managing director, and Sung Han Chen is an active partner . . . The opium business in the Canton district is monopolized by the South China Trade Bureau under the name of 'Lin Chi Hang.' Wang Jui Feng, a senior Communist leader, is in charge."

After providing additional details of opium production in other areas of China, Mr. Anslinger outlined the coordination of the narcotics personnel and agencies with other governmental departments:

"The traffic in narcotics is closely related to other organs of the Communist government. For example, there is a close relation with the People's Bank of China and the Bank of China, both of which have local branches throughout the country with special counters to handle loans, extend credit, and handle mortgages for opium. The transportation of opium is guarded by the armed forces. These agencies along with the Tobacco Monopoly are also the organs for handling the transactions in opium. The responsible persons of the Tobacco Monopoly in the various districts have close connections with the big opium dealers. They employ the names of recognized firms for their export business and conduct narcotic transactions under the protection and cover of various subterfuges."

When Mr. Anslinger made these charges at the United Nations, the Soviet Union responded that there was no truth in the charge that Communist China was engaged in illicit production and traffic in narcotics. After the Sino-Soviet split, however, the Soviet Union altered its estimate of Chinese Communist innocence in this field.

An article in Pravda of September 13, 1964, written by a Soviet correspondent in Tokyo, based on first-hand observations in Peking and supported by statements of the Japanese National Narcotics Committee, charged that Communist China was the biggest opium, morphine and heroin producer in the world. Total proceeds from the illicit narcotics traffic were alleged to yield some 500 million dollars annual revenue for the Chinese Communist Party. Independent reports from other agencies in Tokyo, West Berlin, and London confirmed the magnitude of this illicit export traffic to the outside world. Soviet sources, basing their assertions on Japanese reports, indicating that some 8,000 tons of opium were produced in China in 1958. This staggering figure represents about ten times the total world requirement for legitimate use.

In a speech on September 21, 1961, Rep. Francis E. Walter (D-Pennsylvania) referred to Communist Chinese "dope warfare" against American and United Nations troops during the Korean War. He added that many of the narcotics were peddled "at bargain prices by young women pushers near all military installations in Korea." He stressed that the products were of high quality and reported that during 1952 the Japanese police arrested over 2,000 pushers near American installations in Japan. He stated that opiates were coming into Hong Kong, Burma and Thailand from the North and he quoted the U.N. Commission on Narcotic Drugs as the source of his information. During the Korean War, U.S. troops found an opium processing plant in Pyongyang which was producing prepared opium and morphine.

In his study, Professor James Turnbull notes that after World War II ended ". . . drug-taking in Japan rose rapidly. By 1949, heroin addiction in the country had reached alarming proportions. Reports from the GHQ of the Supreme Commander of Allied Power in Tokyo, based on arrests and seizures in the intervening period till 1951, revealed that large amounts of Chinese opium and heroin were reaching Japan from North Korea and Hong Kong through the ports of Yokohama, Kobe, Kure and Sasebo. In 1960 considerable amounts of Chinese heroin of Hopei origin were seized in Japan."

A Japanese National Committee to combat the narcotics traffic was established under the chairmanship of Mr. Tsusai Sugahara. Reports of this Committee were quoted by the *Pravda* correspondent in Tokyo to the effect that Peking was netting annually from Japan some $170 million for drugs. Approximately 25% of this sum was estimated as going to the support of the Japanese Communist Party. The total narcotics traffic in Japan is currently valued at approximately $500 million, two thirds of which represented transshipments to the United States through the port of San Francisco. The estimated wholesale price of Chinese heroin in Japan was some $4,000 per pound in 1960.

Increasingly in recent years United States spokesmen up to the highest level have asserted that 80% of the heroin brought into the United States is manufactured from Turkish opium. When asked whether or not Communist China was involved in the narcotics traffic, the response has consistently been negative.

At a news conference held on December 28, 1971, Nelson Gross, senior adviser to the Secretary of State and Coordinator for International Narcotics Matters, was asked, "Do you have any evidence pro or con that any of the opium comes from China?" His response was the following:

"We have no evidence that any opium is coming from China at all. In fact, we have even had reports that some has moved up from Burma across the border into China. I might say here that the Chinese and our own government have had virtually an identity of interest and an identity of policy for a century. We have consistently been with the Chinese Government over the years in trying to eradicate not only production but obviously trafficking and use of opium and derivatives."

Mr. Gross was then asked, "How would you know if it were coming from China or not?" His response:

"Well our intelligence sources indicate that it is coming from those areas (indicating "golden triangle" area on map). There is more than enough supply in those areas to account for all of the material which comes either into Southeast Asia, into victim areas—South Vietnam or the United States. We have no reports—and we would tell from those who might be arrested as to where they were acquiring the material—we have no report of any coming from China."

Mr. Gross declares that there is "no evidence." Yet the Bureau of Narcotics and Dangerous Drugs on March 10, 1970 in a statement before the House Appropriations Subcommittee headed by Rep. John Rooney (D-New York) on Departments of State, Justice and Commerce, the Judiciary and Related Agencies, discussed the BNDD's overseas operations which are divided into three regions:

"The third Region is in Asia with a Regional Office in Bangkok and District offices in Seoul, Hong Kong and Singapore. The countries of Burma, Thailand, Laos and China (Yunnan Province) are sources of opium which move to Bangkok, Macao, and Hong Kong to be made into heroin which enters the West Coast of the United States."

The Bureau of Narcotics and Dangerous Drugs refutes Mr. Gross' "no evidence" statement even further in its 1970 Fact Sheet 2, entitled, "Illegal Traffic in Narcotics and Dangerous Drugs." In this paper it states the following:

"There are two main currents of illicit traffic in opium and the opiates. One begins in the Middle East and ends in North America. The other pattern is from Southeast Asia directed to Hong Kong, Japan, China (Taiwan), and the west coast of America . . . In the Far East, opium is cultivated in vast quantities in the Yunnan Province of China and the Shan and Kachin States in Burma. Although much is consumed by opium smokers in the region, considerable amounts of the drug find their way to the United States."

The evidence amassed by the Bureau of Narcotics and Dangerous Drugs, the evidence presented by Harry Anslinger, the material put together by Professor Turnbull, the statements of President Nasser, the Japanese narcotics experts, Pravda, and others, seems to have made little impression upon the rest of official Washington at the Executive level.

A memo dated February 15, 1972, was sent by a Member of Congress to his colleagues on the Task Force on Drug Abuse of the House Republican Research Committee. It was entitled, "Alleged Involvement of the People's Republic of China in Illicit Drug Traffic." This memo declared that "The government of the People's Republic of Chinas has for years officially forbidden the private production, consumption, and distribution of opium and its derivatives. There is no reliable evidence that the PRC has either engaged in or sanctioned the illicit export of opium or its derivatives to the Free World nor are there any indications of PRC control over the opium trade of Southeast Asia and adjacent markets."

The memo came from the White House but was on blank paper. Discussing this material, Rep. John Ashbrook (R-Ohio) declared that "The memo, which was confirmed as a White House memo by my colleague was, interestingly enough, on plain white paper with no heading, no agency identification, no attribution—a real 'backgrounder.' It was real propaganda, too . . . The claim that the Chinese people are forbidden to produce opium for their own consumption is of course true . . . but the production of opium by the Red Chinese for illicit export is a long established policy which, of course, they deny."

Mr. Ashbrook notes that "The memo does indicate that there is evidence that there has been 'cross-border movement of opiates between China and Southeast Asia.' This, of course, confirms to some extent the BNDD claims that illicit opiate shipments have come from Yunnan Province. However, the White House memo puts the responsibility for such shipments on individual Chinese efforts which, they infer, violate Red Chinese government regulations. Information . . . shows that such individual efforts would violate Government regulations only if such traffic were for domestic consumption in China, whereas illicit export is approved and encouraged by the Government of Red China."

When the Bureau of Narcotics and Dangerous Drugs initially stated that 80% of the heroin brought into the United States was manufactured from opium grown in Turkey, this figure included not just Turkish opium but Middle Eastern and especially Iranian opium. Iran remained a major opium producer and purveyor long after 1955, when it officially prohibited the planting of poppy seed. Cultivation was again authorized in 1969.

Turkish authorities have been restricting poppy cultivation from 21 to 9 provinces, with most of the planting restricted to four. As of June, 1971, all cultivation was prohibited. Production itself was curtailed before 1971. During this same period, heroin consumption in the U.S. and elsewhere went up dramatically. With a dynamic growth of consumption in the U.S. and elsewhere, and a concurrent reduction in the output of Turkish opium, the contribution of Turkey to the American heroin market cannot possibly have remained static at the 80% level.

Discussing this 80% figure, Professor Stefan T. Possony of the Hoover Institution, notes that, "U.S. experts watching the international narcotics trade have been asserting for years that 80% of the heroin consumed in the United States originates in Turkish opium. After being transformed into morphine somewhere in the eastern Mediterranean area, the morphine is shipped to France, converted into heroin, and smuggled to America. This 80% figure appears, for example, in the writings of Ramsey Clark, former Attorney General, and it was prominently used in 1971 when the then Postmaster General Winton Blount suggested the United States take economic sanctions against France. Evidently, magic numbers can have rather explosive consequences."

The 80% figure used by Mr. Clark, Mr. Blount and many others has finally been declared by the Bureau of Narcotics and Dangerous Drugs to be inaccurate. On June 2, 1971, BNDD Director John E. Ingersoll testified to the House Select Committee on Crime and bluntly de-magicized the magic figure: "That was the figure used by the old Bureau of Narcotics. . . . When I became Director of the new Bureau. . . . I asked for data to support that precise figure and when it was not forthcoming, I dropped the use of the 80% figure which has been used traditionally for sometime. The best I can say now is that still the overwhelming majority comes from that source (Turkey) but whether it is 80% or whether it is 70%, I just cannot tell you."

Mr. Ingersoll also declared that the 80% figure "represents the percentage of opium (opiates) discovered in illicit traffic in the United States which is of Turkish origin." That is, 80% of the heroin seized has come from Turkey. It does not follow that 80% of the total American import of heroin is derived from Turkish opium nor that 80% of the imported heroin was processed in French refineries. Professor Possony points out that "The figure may actually mean *only* that the nets peddling the Turkish-French product are far less secure than other distribution channels."

Mr. Ingersoll added: "Once opium is processed into heroin and is seized in the form of heroin in the United States, it is beyond our technical capacity to trace it scientifically to its origin." The evidence provided by the Bureau of Narcotics and Dangerous Drugs is, as a result, in the nature of "intelligence" and "common knowledge of traffic patterns," to use Mr. Ingersoll's words. There is *no* scientific method through which the Turkish-French origin could be proved in the laboratory.

Professor Possony states that "The 80% figure originally referred to Turkey *and* Iran. Turkey significally reduced poppy acreage and also cut down opium production. Meanwhile, heroin consumption was increasing sharply in the United States and Europe. Yet in spite of these variations, which necessarily must have altered the arithmetic drastically, the magic figure remained immutable. Whenever a question was raised, the BNDD simply increased its 'estimate' of the illicit opium output in Turkey."

In continuing to maintain that Turkey is primarily responsible for the increase in the narcotics traffic without having any real evidence to substantiate this assessment, the Bureau of Narcotics and Dangerous Drugs and other government spokesmen are, in effect, turning their backs upon the significant body of evidence which exists and which points to the involvement of Communist China in the narcotics traffic.

In an article which appeared in the Congressional Record of October 13, 1971, DeWitt S. Copp writes, "A shocking British government document has come into this reporter's hands; it is Great Britain's 1969 estimates of the contribution Communist China makes to the world's illicit production of opium. According to the British, as of two years ago the illegal world production of the drug from which heroin is derived was '5,000 tons, 1,000 tons coming from the Middle East and minor producers,' the remaining '4,000 tons' emanating from 'Southeast Asia (including Burma, Thailand and Laos)' and the 'Chinese People's Republic.' Of this amount, the official British estimate is '3,500 tons' coming from Red China."

Mr. Copp continues: "The confidential document goes on to point out . . . that the average yield of opium per hectare of poppy field is seven kilos and that the total area under cultivation is estimated at a half-million hectares or 200,000 acres. The poppy-growing provinces are listed as Yunnan—where production is figured at 1,000 tons, Szechwan, Kwangsi, Kwangtung, Hopei and Honan. The annual revenue to Peking is placed at a half-billion U.S. dollars."

There is some undisputed history with regard to the past involvement of the Communist Chinese in opium and heroin production. In the course of the long march from southern China to the Yenan caves in Shensi, some 400,000 Communists were forced into a mountainous region which lacked agricultural and other income-producing resources. The Communists turned to the cultivation of opium as the most expeditious means of survival and of financing the "protracted struggle."

They began to market their product by 1938–39, and they were helped in their efforts by the Japanese who rescinded the prohibition on opium smoking that had been imposed by the Chinese Nationalist Government. The Japanese were anxious to stimulate opium consumption among the Chinese. The Communists were eager to trade opium for metals, including gold, and they reportedly also used opium as a bank reserve.

Recounting some of this past history, Professor Turnbull recalls that "The Japanese invasion of China in 1937 provides an example of the exploitation of narcotics for subversive purposes. During their occupation of the country, the Japanese made determined attempts to spread opium addiction in China. A significant development in this technique was the setting up of laboratories in Manchuria for the conversion of opium into morphine and heroin."

When the Communists came to power in 1949, reports Professor Turnbull, "their first drive was against the drug addicts. A series of decrees were promulgated forbidding imports of narcotics, and curtailing the domestic drug traffic. Significantly, no mention was made of actual opium growing in China, or of any prohibition regarding its export from the country . . . The drug traffic was, in effect nationalised under the Central Finance and Economic Committee in Peking which became the central authority for all commercial dealings in opium narcotics expressly for distribution and sale outside China."

It is well known that heroin addiction among American troops in Vietnam steadily rose toward record proportions beginning in December, 1969. It has also been stated that a heavy heroin influx followed shortly after the Cambodian invasion in the spring of 1970. This influx was estimated from service deaths resulting from drug overdoses by Assistant District Attorney John Steinberg of Philadelphia, who investigated the Vietnam drug scene in the fall of 1970 as a special consultant to the Senate Subcommittee to Investigate Juvenile Delinquency. Shortly after the Cambodian operation "large quantities of heroin began arriving in Vietnam . . . uniform packaging and refining indicated a single highly organized source."

Reviewing the available information, Professor Possony stated that, "I am satisfied that while much detail remains hidden and statistical accuracy is not attainable, the overall story has emerged rather clearly. The various sources have—on the whole—been mutually confirmatory. The sources do reveal a cleavage of opinion on the role of Maoist China, but I believe this difference can be resolved. I also want to record that denials of Chinese Communist involvement which I have seen were in the nature of flat assertions and were never accompanied by analysis."

Professor Possony notes that "In terms of production, the Chinese Communists have the capacity for replacing suppliers like Turkey who may go out of business. They are also able to satisfy a larger market and/or growing market demands."

According to Ch'in Yung-fa, writing in the March 1972 Issues and Studies, published by the Institute of International Relations on Taiwan, "Since the establishment of the Peiping regime, exportation of dangerous drugs on a global scale has become one of the most important national policies of the Chinese Communists. Today, mainland China has become one of the major suppliers of dangerous drugs in the international drug market."

Mr. Ch'in reports, "On February 1950, when the Communist troops led by Ch'en Keng and Sung Jen-ch'ung entered Yunnan Province, they brought large quantities of drugs to Kunming for sale. Since very little profit was gained, opium was transported by men and animals to Burma. From there it was transported to Rangoon via Mandalay and then to northern Thailand for sale. This marked the beginning of Communist dumping of drugs in Southeast Asia by way of Yunnan Province."

According to the Issues and Studies article, beginning in 1951, Loping, Kwangnan, Funning, Yensan, Chiupei and Luhsi in northern Yunnan were designated as a "special zone" for opium cultivation. Products were procured at official prices by the "Special Products Management Committee" of the "people's government" in each county. These products were then exported by the "Yunnan Provincial Trading Company." In addition, morphine and heroin processing factories, including ten big pharmaceutical factories, have, according to the author, been built in Yunnan Province.

The estimate presented by Mr. Ch'in, a specialist in Chinese Communist military affairs, is that "the Chinese Communists process about 10,000 tons of narcotics a year. From 1952 to 1957 the annual production and sale totaled about 2,000 tons, but it increased to 8,000 tons a year between 1958 and 1964. From 1965 to the present the annual export has been 10,000 tons, earning a net profit of over $800 million U.S. dollars per year."

There is a great deal of independent evidence available which points to the validity of the conclusions drawn by Mr Ch'in.

On October 15, 1970, the chief of the narcotic division of the Hong Kong Police revealed that large quantities of narcotics were seized in 1969 by Hong Kong police, including 10,500 lbs. of opium, 310 lbs. of heroin and 250 lbs. of morphine. All persons involved were punished according to regulations. The police official, however, said that to avoid "political issues," all Chinese Communists arrested had been released.

According to an article entitled, "The Inside Story of Chinese Communists' Sale of Narcotics," written by a former high ranking Chinese Communist Party cadre and published in the Hong Kong Times on December 12, 1950, there were three major financial resources in Communist China for export. These were "white goods," referring to rice, wheat, and cotton; "yellow goods," referring to gold, silver, U.S. dollars and bonds; and "black goods," referring to opium. The article noted that the "white goods" were used to pay the salaries of military personnel, government employees and teachers; the "yellow goods" to finance construction and military projects; and the "black goods" to pay for part of military expenditures and secret service costs and to eliminate the deficit.

Tsusai Sugawara, Chairman of Japan's National Commission for Control of Narcotics, has disclosed that the Chinese Communists make a profit of 60 billion yen (approximately $170 million U.S. dollars) from the sale of narcotics to Japan each year; however, the amount is less than one third of the total export.

In an article entitled, "How the Maoists Smuggle Opium," published in No. 30 issue of the semi-monthly, *Intelligentsia*, B. Bulatov, a correspondent for the Soviet Literaturnaya Gazeta, estimated that the annual production of opium on the Chinese mainland is about 8,000 tons of heroin.

Investigating the increase in narcotic consumption among American servicemen in Vietnam at the time of the Cambodian invasion, John Steinberg, an investigator for the U.S. Senate subcommittee on Juvenile Delinquency, discovered that heroin which was 99.5% pure was being sold for as little as $1.00 a vial. Heroin which was only 10% pure, he pointed out, could be sold for at least $10.00 a vial. It was, thus, clear that the increase in narcotics was by no means only a money making venture, but had other purposes. Why did the increase occur after Cambodia? The evidence points clearly in the direction of Communist Chinese involvement for the political purposes of subverting by weakening its intended victims.

This fact was confirmed in the English language daily Vanguard published in Argentina. On October 31, 1970 it reported that "The Chinese Communists were exporting large quantities of the cheapest but highest quality heroin to Vietnam in a plot to paralyze the American troops. The local price was only US $20 per ounce compared with US $4,000 per ounce in the United States while the quality of heroin was 99 to 100 per cent refined."

In 1969, American deaths in Vietnam resulting from drug addiction averaged two persons a month. The figure rose, however, to two per day from January to October, 1970. *Vanguard* noted that "In the last six months the percentage of drug addicts among American troops in Vietnam had risen from 30 to 50 percent. In some military units 70 to 80 percent were reported. On October 31 (1970) a group of GIs was even trying morphine publicly before personnel of the CBS television network."

The chairman of the Labor and Immigration Committee of the Philippine Senate said on April 30, 1966 that the value of narcotics smuggled into his country from the Chinese Mainland via Singapore and Hong Kong had reached $1,161,290. He said that the Hong Kong-based Communist drug traffic was intended to narcotize both the bodies and minds of the Filipinos and to damage economic construction in the Philippines in order to create dissatisfaction and incite rebellion among the Filipinos.

The Communist Chinese production of opium was confirmed in testimony presented May 17, 1972 by Miss Yuan Moun-ru before the Subcommittee of Asian and Pacific Affairs of the House Foreign Affairs Committee in Washington, D.C. The witness was described in these terms: "Miss Yuan was born in Szechuan Province of China. Both her parents were medical doctors . . . Miss Yuan herself is an engineer with a degree in mechanical engineering from Chung King University. Because of differences with university authorities Miss Yuan was classified as a 'rightist' and was assigned by the Communist Party to work as a laborer in the mines and in factories for some ten years. In May, 1969, Miss Yuan escaped from the People's Republic by way of Burma."

In her testimony, she declared, "My route of escape from China to Burma is via Yunnan Province. I rode through Lu river valley and the district of Kaonigon Mountains. I saw with my own eyes the Chinese Communist liberation army growing opium in that area. So were the Burmese Communists and their mountain army under Chinese Communist influence. It did not surprise me, because the Chinese Communists in order to defeat 'American imperialism,' have never hesitated to employ whatever means available to them. They would be glad to see their enemy degenerated, and collapsed without their firing even a single shot."

Mr. Lawrence Sullivan, Coordinator of Information for the U.S. House of Representatives, said on December 13, 1961: "For the first time in human history, the systematic production and distribution of narcotic drugs has become an organized government monopoly in Red China. In ten years, Mao Tse-tung has built up a virtual monopoly in opium, heroin and morphine."

The 1966 edition of the *Encyclopedia Americana* stated: "It is to be assumed that even if the production of opium is forbidden, that country (mainland China) is still by far the most important producer."

Writing in *Human Events* on October 16, 1971, DeWitt Copp reported of the existence of a British government document which estimated that as of 1969, the total illegal world production of the drug from which heroin is derived was 5,000 tons. Of this amount the official British estimate is 3,500 tons coming from Red China. Mr. Copp reported that, "No doubt the authenticity of the British document will be challenged . . . However, supportive evidence is offered from a ranking official of the Dutch Narcotics Bureau and Jacques Kiere of the French Bureau of Narcotics and Dangerous Drugs."

The Dutch official declared that "Smuggling of Red Chinese narcotics is on the increase in Holland. The main port of entry is Rotterdam and Amsterdam in that order. Most of the drug seized is heroin. Ninety percent of the crew members apprehended have been Chinese. Several of the ships involved have been Red Chinese. Our laboratories have verified that the drugs originate in Communist China."

The French official declared that: "The Bureau has always stated that Communist China is involved in poppy cultivation and illicit drug trade. We have much evidence on that."

In a recent publication, Interdoc reviewed a book by a German author, Dr. F. W. Scholmann, entitled: "The Maoists, Peking's Efforts in Western Europe." The reviewer says in part:

"Scholmann's account of the role of Peking's embassies in the West is absorbing, as is that of trade missions, press agencies and the like. In fact, this is the first book to my knowledge to give an outline of the organization and pattern on Communist China's silent approach to the West . . . Attention is paid to the political—not gastronomical—role of the Chinese restaurants and the organization in which the Communist restauranteurs are often the leading men. Nor has the writer avoided the embarrassing subject of the export of narcotics from China. It is said to reveal that Chinese Communist propaganda in the West seems to be financed largely from the proceeds of opium and other narcotic sales."

In contrast with all of the above, it is particularly disturbing to note that the United States Government, on the one hand, declares its interest in fighting narcotics addiction, both at home and among our servicemen in Vietnam, yet, on the other hand, refuses to name Communist China as a suspect, if not an active participant, in the narcotics traffic.

The hesitancy is something new. In 1963, for example, U.S. Narcotics Commissioner Henry Giordano charged that "The Red Chinese are extensively engaged in drug traffic."

Others in Asia have made the same charge. The Chairman of the Japanese National Committee for Struggle Against Drug Addiction stated in 1964 that "Peking has become the world's principal producer of opium poppies which yield opium, morphine, and heroin." The Prime Minister of Thailand accused Peking of flooding that nation with narcotics. In Hong Kong, a doctor at the anti-narcotic center stated, "There are upwards of a half million addicts in the British Colony supplied with narcotics flowing out of Communist China."

Discussing the new refusal to mention Communist Chinese participation in the narcotics traffic, Rep. Ashbrook stated that "When the President journeyed to Red China many of us who had observed the Red Chinese participation in the opium traffic hoped that at least Mr. Nixon would pressure the Red bandits to stop this illicit contribution to world misery . . . It now appears that Mr. Nixon never even broached the subject . . . to Mao or Chou. Henry Kissinger vetoed bringing up the issue because it would have been too explosive at the initial meeting . . . The Communists won once more and American interests were subordinated . . . "

What is most exasperating to Members of Congress is that the burden of proof now falls on those who have accepted at face value years of official assertion by the Executive branch of government that Red China was, in fact, engaged in the drug traffic.

As a practical matter of deep concern to millions of Americans, should it not be the obligation and responsibility of the Government of the United States—faced with a mountain of incriminating evidence—to prove or disprove the validity of Red China's involvement in narcotics trafficking?

Syndicated columnist Paul Scott explained our government's refusal to discuss the real culprits in the international narcotics traffic this way: "Discussion of the heroin issue with the Chinese Communists also would contradict the official Nixon Administration position that 'there is no hard traffic from the Asian mainland.' This 'fig leaf' policy, as it is referred to within the American intelligence community, was adopted by the White House as part of the new Nixon policy toward accommodating Red China as a part of a new global balance of power strategy.

"Under this preconceived policy," writes columnist Scott, "government officials must not reveal any information of heroin traffic from China or the direct involvement of the Peking government. . . . Since the President's major foreign policy objective is to improve relations with Communist China, it is very doubtful that he will make any decision that might cause public embarrassment to the Peking government at this time."

It is interesting to compare this Administration attitude of accommodation and refusal to even discuss the role played by Communist China in the narcotics traffic with the harsh words President Nixon has directed at drug pushers. On March 20, 1972, the President made a trip to New York to inspect the first of nine planned regional offices of the Justice Department's new offices of Drug Abuse Law Enforcement. A UPI dispatch of that date, reporting on the President's visit, stated in part:

"Vowing 'no sympathy whatever' for the drug pusher, President Nixon called today for tougher law enforcement and harsher court penalties to help sweep narcotics from the Nation's streets.

"There isn't a penalty that is too great for drug traffickers who prey upon youth, the President declared. That is 'the most reprehensive of all crimes. It is worse than a crime like murder, a crime like robbery, a crime like burglary.'

"The President declared that 'For those who traffic in drugs, those who make hundreds of thousands of dollars . . . and thereby destroy the lives of young people throughout this country, there should be no sympathy whatsoever and no limit insofar as the criminal penalties are concerned.' "

Is the Administration willing to apply this "no-sympathy" policy to those in Communist China who as an intrinsic part of government policy support the narcotics traffic which has engulfed our servicemen in Vietnam and aims at the destruction of our very will to resist aggression and to defend ourselves? Is the only target the street pusher in New York or Chicago or Los Angeles? Must there not also be major concern with the source of the narcotics which has ruined so many lives, and threatens to ruin so many more?

Good relations cannot be developed between the United States and Communist China if those relations are based on a failure to confront the very real assault which Peking is making upon the United States and its Asian allies, an assault with narcotics which is as real and as dangerous as an assault with tanks, guns, and planes.

The evidence that Communist China is a major participant in the narcotics traffic is overwhelming. Professor Turnbull writes, "The covert dissemination of opium narcotics, in particular the addictive drug heroin, for commercial and subversive purposes represents one of the gravest threats to the armed forces and societies of the Free World. The subversive operation must be recognized as a peculiar form of clandestine chemical warfare, in which the victim voluntarily exposes himself to chemical attack."

If our society is serious about putting an end to the flow of narcotics into our cities and into our military installations abroad, we must, initially, determine precisely who it is that is producing and marketing the drugs involved. The evidence, as we have seen, indicates that the government of Communist China bears a large portion of the responsibility. Those who argue that it does not have the real burden of proof upon their own shoulders. The American people are entitled, at the very least, to a fair, thorough, and objective examination of this question. They will not be satisfied until all the facts are laid out for their examination. When this is done, the real role of Communist China in the narcotics traffic will be clear for all to see.

ABOUT THE AUTHOR ALLAN C. BROWNFELD

Allan C. Brownfeld received his A.B. from the College of William and Mary, his J.D. from the Marshall-Wythe School of Law of the College of William and Mary, and his M.A. from the University of Maryland.

The recipient of a Wall Street Journal Foundation Award, he has written for such newspapers as the Houston Press, the Washington Evening Star, the Richmond Times Dispatch and the Cincinnati Enquirer. His articles have appeared in such journals as the Yale Review, the Texas Quarterly, Orbis, Modern Age, the Michigan Quarterly, Worldview, University Bookman, Commonweal and the Christian Century.

Mr. Brownfeld is the author of two books, "Dossier On Douglas," published in 1970 and "Hung Up On Freedom," a collection of his newspaper columns, published in 1972. His essays appear in several college textbooks in the field of Political Science. Mr. Brownfeld serves as Washington editor of Private Practice magazine, and his column appears each week in Roll Call, the newspaper of Congress.

He is the recipient of the George Washington Medal of Freedoms Foundation, Valley Forge, Pennsylvania, where he is a regular lecturer. He also lectures regularly at the Air Force Special Operations School, Eglin Air Force Base, Florida.

ISSUES & STUDIES—VCL. VIII, MARCH 1972, NO. 6, INSTITUTE OF INTERNATIONAL RELATIONS, REPUBLIC OF CHINA

APPENDIX I

LOCATIONS AND AREAS OF ORDINARY OPIUM PLANTATIONS

Location and districts of plantation	Total area (mu)
Northeast China: Counties on Sino-Korean border such as Yenchi, Hunch'un, Holung, Changpei, Fusung ,Linkiang, Yian, Kuantien and Chingyu	40,000
Northwest China: Shensi—Luehyang, Changwu; Kansu—Liangtang, Chingchuan, Hoshui, Chingning, Chingyuan, Wuwei, Changyeh; Ninghsia—Chungwei; Sinkiang—Yiwu, Nanhu, Suilai, Chinghua, Changchi; Tsinghai—Tungjen, Yushu; and Shensi-Kansu border districts	250,000
Inner Mongolia: Jehol—Chaoyang, Chengteh, Chihfeng	100,000
East China: Kiangsu—Tunghai, Kuanyun, Lienshui, Liuho; Chekiang—Yuhang, Wukang, Anchi	700,000
Central China: Honan—Nanyang, Neihsiang, Chech'uan, Fangcheng; Hupeh—Anshih, Laifeng, Hofeng, Tungshan, Huangpeh; Kiangsi—Juichin, Huich'ang, Yuntu, Hsinfeng; Anhwei—Hsuancheng, Taiping, Hsiuning, Nanning; Hunan—Paoching, Sangchih, Yungshun, Chinyang, Huit'ung, Wukang, Hsinning, Ch'angteh	1,700,000
Szechwan Basin: Szechwan—T'ungkiang, Nankiang, Pachung, Chiangching, Weiyuan	30,000
Southwest: Kwangsi—Silung, Silin, Paise, Chenpien, Makuan, Wenshan, Yenshan, Chiupei, Lusi, Ningerh, Szemao, Chenyueh, Mengla, Lantsang, Tsangyuan, Shuangchiang, Kungshan, Lichiang, Hoch'ing, Tali, Chingtung, Kengma, Chenkang, Lungling, Juili, Lungch'uan; Kweichow—Pichieh, Chinglung, Hsingyi	2,000,000
Sikand and Tibet: Sikang—Yaan, Sich'ang, Hiuli; Tibet—Langma. Teh-ch'ing	
Kwantung Mountain Area: Kwangtung—Ch'ingyuan, Tungwan, Yingteh, Juyuan, Yangshan, Lienhsien, Kwangning, Szehui, Yunfu, Uangkiang, Wuhua, Hsingning, Tzechin, Loch'ang, Yangchun, Fengch'uan, Kaoyao, Loting, Lufeng, Huahsien; and Hainan Island	330,000

Remarks: The Chinese Communists bought marihuana seeds from India and Brazil in 1968, and planted them in Hainan Island; however, the production is unknown.

APPENDIX II

LOCATIONS AND AREAS OF SPECIAL OPIUM FARMS

Organizations in charge and name of farm	Area (mu)
Water and Soil Conservancy Bureau, Ministry of Agriculture:	
Third Experimental Farm	20,000
Fifth Experimental Farm	16,000
Central Bureau of State Farms, Ministry of Agriculture:	
Model Farm directly under central authority	12,000
Chinchow Farm, Liaoning	7,000
Frog Pool Farm, Liaoning	
Hsungyu Farm Liaoning	
Princess Ridge Farm, Kirin	3,000
Chiuchan Farm, Kirin	
Lingwu Farm, Ninghsia	
Tarim Farm, Sinkiang	
Kupeikou Farm Hopei	
Chihung Farm, Hopei	
Huanghua Farm, Hopei	
Yungnien Farm, Hopei	
Kaoli Farm, Hopei	
Paoting Farm, Hopei	
Yellow River Valley Farm, Honan	
Hulan Farm, Chekiang	
Nanhsung Farm, Kwangtung	
Agricultural Products Bureau Ministry of Agriculture:	
Special Farm directly under central authority	Unknown
Chaoyang Farm directly under central authority	Unknown
Northwest Agricultural and Forest Bureau, Ministry of Agriculture: Second Farm	2,000
Chinese Academy of Sciences:	
Special Products Farm, Institute of Sciences	800
Experimental Farm for Narcotic Plant Seeds	
Botany Institute	
Sinkiang Military Region: August First Farm	1,000
Tibet Military Region: Chiangtze Farm	700
Inner Mongolia Military Region:	
Koerhsin Farm	1,500
Taolin Farm	
Ninghsia Hui Autonomous District: Yinchuan Farm	500
Heilungkiang People's Government: Chiamuszu POW Farm	1,000
Liaoning People's Government: Peipiao Herb Farm	8,000
Hopei People's Government: Huachuan Water Conservancy Farm	Unknown
Kiangsu People's Court: Huapei Hsinjen Village Reclamation District	2,000

APPENDIX III

NARCOTICS REFINERIES

Area and name of factory	Products
Northeast China:	
Dairen Pharmaceutical Works	opium, morphine
Dairen: Dashuang Pharmaceutical Works.	heroin
Shenyang (Mukden) Pharmaceutical Works.	morphine
Mukden: China Company Nicotine Refinery.	nicotine
Liaoning: Peipiao Pharmaceutical Works.	opium
Liaoning: Chinchow Chemical and Pharmaceutical Works.	morphine, opium
Fusung, Kirin: Northeast Chemical Pharmaceutical Works.	morphine, ether
Yenchi, Kirin: Special Product Refinery of Northeast Korean Nationality Autonomous District.	opium
North China:	
Peiping: Narcotic Laboratory affiliated with Medical Institute of Academy of Science (with four branches).	morphine
Peiping: Narcotics Works under direct control of Pharmaceutical Bureau, Ministry of Health.	opium
Peiping: Raw Materials Works, Narcotics Control Bureau, Ministry of Health.	opium
Peiping: Narcotics Works of China Pharmaceutical Company (with three branches).	opium, morphine
Peiping: Special Products Refinery	opium, heroin
Tientsin: Special Products Manufactory.	heroin
Tientsin: Chinese Products Export Company Refinery, Ministry of Foreign Trade (with five branches).	opium
Tientsin: Refinery under direct control of Monopoly Enterpise of Ministry of Commerce (with nine branches).	opium
Chingwan, Hopei: Special Products Experimental Refinery, Ministry of Agriculture.	opium
Kupeikou, Hopei: Native Products Refinery.	opium, morphine
Taiyuan, Shansi: Chemical and Pharmaceutical Works.	morphine
East China:	
Hangchow, Chekiang: Chekiang Pharmaceutical Works	opium, morphine
Shanghai Pharmaceutical Works	opium, morphine
South China:	
Paoan, Kwangtung: Paoan Pharmaceutical Works Canton: Kwangtung Chemical and Pharmaceutical Works	morphine, heroin
Central China:	
Hankow: Special Products Refinery, Agricultural Products Purchase Bureau	opium
Southwest China:	
Kunming, Yunnan: China Chemical Materials Company, Special Materials Refinery (with four branches)	morphine, ether
Tali, Yunnan: Yunnan Provincial Materials Works under direct control of China Pharmaceutical Company	opium
Northwest China:	
Chengtu, Szechwan: Szechwan Pharmaceutical Works, the Third Branch	morphine
Chungking Opium Laboratory	morphine
Kangting, Sikang: Sikang Pharmaceutical Works	
Chiang tze Tibet: Tibet Refinery, the Second Branch	

APPENDIX IV

BRANDS OF NARCOTICS PRODUCED BY THE CHINESE COMMUNISTS

Type and brand	Grade
Opium:	
138	B
139	A
Ginseng	C
Shun-feng	C
Lao-pei-kou	A
Ta-chen	A
Heng-tiao	C
Kang-fu	A
Sung-pao	B
Hung-hsing (Red Star)	A
Chin-feng (Golden Phoenix)	A
Fan-chuan (Sail Boat)	B
Morphine:	
Tsai-feng (Variegated Phoenix)	B
Yin-lung (Silver Dragon)	B
Lung-tze (Dragon Son)	A
Chin-ying (Gold-Silver)	B
Hei-chi (Black Chicken)	A
Lo-to (Camel)	B
Huang-shang-huang (King of Kings)	C
Hsung-chi (Cock)	B
Hung-shih (Red Lion)	A
Heroin:	
Pei-chi (North Pole)	B
Hung-chin (Red Gold)	A
Yin-ting (Silver Tripod)	A
Shih-chiu (Lion-Ball)	A
Hsiang-pin (Champion)	A
Chin-yu (Gold Fish)	B
Hsiang-nan	B

THE NEED FOR BETTER REGULATION OF "PRIVATE CLUBS" IN NEW YORK CITY

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I would like to bring to the attention of my colleagues a situation in my congressional district which illustrates how necessary it is, that in our zeal to protect the civil rights of the individual, we remember that the public also has civil rights which must be guarded.

On Manhattan's east side and in Greenwich Village there has been a recent proliferation of bars and so-called private-after-hours clubs which operate as centers for drug trafficking. The Tambourine bar on East 81st Street is an alleged example of this type of bar. But whether chartered as private clubs or not, these places are taking advantage of a laxity in our laws and are creating, with virtual impunity, not only a public nuisance but a public danger.

Constituents of mine living near these bars are rightfully angered and frightened. Their streets are crowded with people who are obviously "stoned," and assaults, stabbings, and shootings take place in and around some of these places.

These clubs are cancers spreading crime and infecting otherwise decent neighborhoods. The police have responded as best they can to all complaints but they cannot close these places down. They and other local authorities are forced to resort to the ineffectual issuance of summonses for petty violations; but business is woefully good, and the owners simply remove violations, pay the fines and continue operations.

Because some of these places are involved in illegal drug dealings and probably linked to organized crime, I have asked the Federal Joint Task Force to investigate several of them. But clearly there needs to be a method of continual local law enforcement supervision. The State liquor authority has the legal power to close down any establishment where liquor is served if it is found to be a public nuisance, but has failed to exercise sufficient initiative to protect the public from the menace these bars have become.

The State liquor authority must do more than check occasionally to see if the gin is watered. It must actively and continually monitor the social impact that any bar has on the community, so that it can move quickly to revoke the bar's license if it is proven at a hearing to be a source of public disorder. If State legislation is needed to accelerate the administrative and court appeal procedures during which one of these bars might be able to stay open, then we must have that legislation. At the present it is only after long delay, after the situation becomes intolerable, that the SLA begins to act.

In the case of privately chartered clubs where no liquor is served—and many of those are not private at all but profit-making businesses—legislation placing them under the city's department of consumer affairs for licensing is needed, thus allowing the department's inspectors to enter the premises for periodic inspection.

Obviously the right of any individual to assemble in private with others having a common interest must not be abridged. But we must also recognize the right of the public to live in a decent safe community, and when the bars and so-called private clubs threaten that right, then there must be adequate controls to protect the public.

DISCLOSURE OF PERSONAL FINANCIAL ASSETS

(Mr. VAN DEERLIN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. VAN DEERLIN. Mr. Speaker, I have made it a policy, before each general election campaign, to submit for the RECORD a full public disclosure of my personal financial assets.

I intend this as no reflection on Members who do not choose to make such disclosure. The law requires only the financial statements which all of us file with the House Committee on Ethics.

However, those statements are limited in scope, and portions are sealed from public scrutiny except under exceptional circumstances. I continue to feel that the people of my district are entitled to know whether I, as my party's nominee for a 2-year term in Congress, am free of financial ties which might influence my actions as their representative.

Under California's community property law, Mrs. Van Deerlin and I jointly own a mortgaged residential rental property of about 2½ acres in Poway, Calif. We acquired this in 1951, at a price of $12,500. We have equity of $28,500 in our present residence at 3930 Argyle Terrace, NW., Washington, D.C. We own one commercial and one residential lot with total value of about $7,000 in Imperial County, Calif.; 2½ unimproved acres worth $750 in Mojave County, Ariz., and 10 undeveloped acres, value undetermined, near Hilo, Hawaii.

We own no corporate stocks and no bonds of any nature. My salary as a Member of Congress constitutes virtually our entire gross income. For the year 1971 we paid $5,838 Federal income tax and $1,181 California State tax on an adjusted gross income of $39,287.07.

My Internal Revenue Service forms and/or State tax forms are available for inspection by news media.

CHERNOFF TO THE RESCUE

(Mr. VAN DEERLIN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. VAN DEERLIN. Mr. Speaker, we have been hearing much this week about the troubles of the American Revolution Bicentennial Commission. In the wake of disclosures published by the Washington Post, a bill continuing the Commission's funding authorization was removed rather suddenly from the House calendar, with the implicit hope that new provisions can be inserted to pull this agency out of its tailspin.

As one who would like to see the commission succeed, in putting on a 200th birthday party which will reflect the values and aspirations of the widest possible cross section of our populace, I would like to offer one suggestion.

My proposal is prompted by a letter sent last January by Jack LeVant, then the Commission's executive director, to David G. Mahoney, its chairman.

In this letter, text of which is found on pages 28536–28537 of yesterday's RECORD, Mr. LeVant states that the Commission would succeed if it were a "one-man show," free of undue interference from outsiders and with a cohesive staff.

Mr. LeVant goes on to say that a

> Perfect example of one-man control is that of Osaka and our friend Howard Chernoff.

Now as it happens, Mr. Chernoff, a fellow resident of San Diego, is also an old friend of mine. He has rendered distinguished service under two administrations—first as a top aide to the USIA director in the Johnson administration and more recently, under President Nixon, as the ambassadorial-rank official in charge of the U.S. exhibit at the Osaka international trade fair.

As Mr. LeVant says of Mr. Chernoff's performance in the latter job:

> He placed before the President on a "take it or leave it" basis what all would be involved in the way of money, help, authority, and endorsement. Osaka was an outstanding success.

I should point out that Mr. Chernoff also earned the praise of no less a judge of character than our distinguished colleague, the Honorable JOHN J. ROONEY of New York, whose Appropriations Subcommittee exercised jurisdiction over the trade fair.

All of which leads to a rather obvious conclusion.

Why not follow through on Mr. LeVant's warm endorsement, by naming Mr. Chernoff as the top man in the American Revolution Bicentennial Commission?

I am convinced Howard would be just as efficient in handling the bicentennial bureaucracy as he was in shaking up the international trade paper shufflers and earlier, a bloated USIA staff.

LEGISLATION TO CREATE AN ASIAN STUDIES INSTITUTE

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, on March 16, 1971, I introduced H.R. 6168 which amended the International Education Act of 1966 to provide for the establishment of an Institute of Asian Studies at the University of Hawaii. The bill is pending in the Select Education Subcommittee of the House Committee on Education and Labor. Hearings will be held August 24 in Hawaii.

I believe that an Asian Studies Institute is urgently needed to help fulfill the objectives of the International Education Act of 1966: "that strong American educational resources are a necessary base in strengthening relations with other countries; (and) that this and future generations of Americans should be assured of ample opportunity to develop to the fullest extent possible their intellectual capacities in all areas of knowledge pertaining to other countries, peoples, and cultures." When this bill was passed, we seemed to be on the verge of a revitalization of our entire foreign studies effort. The act provided for a sweep of programs almost stunning in their scope.

Under the act, there would be new international programs in our schools and new agencies and staffs to promote the programs. Yet after the adoption of this act, funds were never appropriated. It has remained dormant on the statute book, an immensely promising program, but without funds to give it life.

One tangible evidence of the Federal Government's commitment to international education is the National Defense Education Act of 1958, title VI of which provides funds for the establishment of foreign area and language centers at American institutions of higher learning. At the end of my Statement I have attached a list of all Federal programs related to international education. It is obvious that no new initiatives have been proposed. This is illustrative of the rather low priority attention we are giving to what I believe is an urgent national obligation to broaden the scope of education in our own country, especially in the elementary and secondary schools, to include hemispheres of knowledge which in the past have been largely ignored as unimportant to the average American's understanding of his world.

In 1960, Congress under the leadership of the then majority leader, Lyndon Johnson, established the Center for Cultural and Technical Interchange Between East and West. In 1969, the Center formally reorganized its structure into a technical "problem-oriented" center highlighting Institutes of Population, Food, Communications, Culture Learning and Technology and Development. The East-West Center as it is called has been since its inception under the administrative control of the State Department.

The East-West Center's primary concern has been technical and scholarly interchange with learned persons and its statutory and legislative directions have not been towards the development of concepts for our total society. I have attached a recent letter from the Center's Chancellor, Mr. Everett Kleinjans which deals in detail with some of the Center's projects.

My bill, H.R. 6168 proposes to establish an Asian Studies institute, to be administered by the Department of Health, Education and Welfare. Its location at the University of Hawaii will complement the East-West Center's activities. The Institute would provide the United States with a large, cohesive, highly organized, multidisciplined enterprise. In time it could parallel in importance such Federal institutions as the National Institute of Health, and the National Science Foundation.

In the 1972 Amendments to the Higher Education Act Congress provided for the establishment of ethnic study centers across the United States. Ethnic heritage studies in themselves while needed will not do the full job. This is simply a way to stimulate study concerned with self-identity. Understanding of another country, apart from its culture, will only come about when a multitude of disciplines and programs have succeeded in raising our cultural intelligence quotient to a degree where we truly appreciate the achievements and accomplishments of peoples of other parts of the world.

It is true that we have many eminent scholars in our academic institutions who are aware of the enormous history of Asia: its science, technology, literature, art, and music. But they and we have not met our responsibility to inform and educate the public in general about Asia and its people. This is the purpose of my bill.

Americans have been taught in our public schools that the roots of our civilization is Western. The Asian countries are passed over as part of the underdeveloped world from which we can learn nothing of value. As long as this neglect exists, who can blame Americans for not knowing or caring about Vietnam and being awed suddenly at the notion of our President having dinner in Peking?

Our scholars have been preoccupied with other matters and have failed to meet the vacuum of knowledge which persists. This lack of education about non-Western societies has compounded our inability to explain and expound upon our foreign policy. The collection of artifacts in the museums and personal libraries of the wealthy does not influence public policy, nor does it make foreign policy more understandable to the average American.

We must insist upon the study of Asian culture and history in the earliest years of our schooling. Asian studies must not only be a pursuit of a few wise scholars at universities, but it must become a standard part of our school curriculum, both elementary and secondary.

It is not enough just to train specialists whose knowledge will not be widely disseminated. Too many scholars, having once been educated in the field of Asian studies, have confined themselves to academic pursuits. These experts speak and write only to themselves. We need to take greater advantage of their training and expertise and use their knowledge to reach the people at large and reduce the ignorance level about non-Western foreign affairs.

We must structure and staff a curriculum that will develop a knowledge and appreciation of all people everywhere. Our school system has traditionally emphasized Western civilization. Children grow up in virtual ignorance of the fascinating history of Asia. They do not know the impressive contributions of Asians to science, technology, literature, art, music, and culture in general. To Americans, orientals are merely "inscrutable" and mysterious. Similarly, we have ignored the rich heritage of Africa and South America.

We must start somewhere and start now to instill in the entire American public an awareness of Asians as people. This will require a major adjustment in our educational system and our national attitude. Our schools must develop textbooks and curricula which fully depict the culture and the values of Asians, as well as the Africans and Latin Americans.

How else are we to pass on to our children, and to a new generation of leaders, the knowledge that all Asian life is just as precious as ours. Americans have to all realize that all Asians have their separate and unique art and culture from which we have learned much and from which we can learn more.

It is, therefore, a myopic mentality that has required our country to persist in its educational direction which fails to recognize that the history, culture, and politics of Asia are equally important as the study of Europe, its history, culture, and politics. If America is to reach full bloom as a nation which fulfills the ideal of democracy, it must develop an attitude in its people which accepts an Asian life as being equal to that of other human beings, and accords it full dignity.

The Asian Studies Institute, instead of only producing new experts in the field of Asian studies, will serve as a pool of collected competence: of scholars whose presence on the same campus under a unified administration operating with substantial institutional resources, will make their collective skills greater than the existing independent, decentralized Asian studies departments in various institutions throughout the United States. The opportunity to draw on such resources will strengthen our Nation.

It would be my hope that the institute's primary focus would be to concentrate its efforts in developing a comprehensive review of our elementary and high school curriculums so that it could more adequately present the world as it is—made up of many, many diverse nations, non-European, but nevertheless important to our future.

In an age when all nations must learn to live together if any are to survive, the peril of ignorance is just as great as the peril of nuclear holocaust; and these two threats compound each other.

For the benefit of my colleagues of the House, I would like to insert in the RECORD the following articles and statements:

SUMMARY REPORT

Fiscal Year 1973 Budget Requests in International Education:

(a) *Office of Education:*

1. *Foreign Language and World Affairs Programs, NDEA Title VI and Fulbright-Hayes 102(b)(6)* The NDEA VI programs support fellowships and Language and Area Studies centers on 106 American Campuses. In addition, ten undergraduate and six graduate programs in innovative areas of international education which seek to enhance international understanding in an increasingly interdependent world and/or focus on

global problem areas such as ecology, public policy, urban development, population, etc. will be included in the FY 1973 budget.

The Fulbright-Hayes 102(b)(6) programs support PhD dissertations, faculty research and foreign curriculum consultants in special fields dealing with international education.

	Fiscal year 1972 budget request	Fiscal year 1972 appropriation	Fiscal year 1973 budget request
NDEA, title VI	13,940,000	13,940,000	13,940,000
Fulbright-Hays 102(b)(6)	1,360,000	1,360,000	1,360.000
Total	15,300,000	15,300,000	15,300,000

2. Research and Training Special Excess Foreign Currency Program.

This program of the Office of Education provides grants to support overseas research and training projects of American schools, colleges, universities and non-profit organizations in "excess" foreign currency countries.*

FY 1972: Budget Request, $3,000,000.

FY 1972: Appropriation, $3,000,000.

FY 1973: Budget Request, $5,000,000.

(b) Department of State Mutual Cultural and Educational Exchange Program.

This program supports mutually beneficial cooperative activities with other countries, specifically student and faculty exchange and assistance to privately sponsored foreign students in the United States. Significantly, the budget request is almost equal to the 1966 appropriation of $52.9 million which was the largest budget ever for CU.

FY 1972: Budget Request, $45,000,000 including $5 million in excess foreign currencies.

FY 1972: Appropriation, $40,500,000 including $4.5 million in excess foreign currencies.

FY 1973: Budget Request, $52,400,000 including $4 million in excess foreign currencies.

(c) Library of Congress Overseas Acquisitions Program.

This program supports cataloging, microfilming, and book procurement programs of American libraries in excess foreign currency countries. This year's budget request is increased $100,000 in excess foreign currency to provide for support of the program in Poland.

FY 1972: Budget Request, $2,889,000 including 2.6 million in excess foreign currencies.

FY 1972: Appropriation, $2,891,000 including 2.625 million in excess foreign currencies.

FY 1973: Budget Request, $2,991,000 including 2.725 million in excess foreign currencies.

(d) National Science Foundation.

1. Scientific and Informational Research Activities Aboard.

This program supports translations and reviews of scientific literature as well as scientific research in excess foreign currency countries.

FY 1972: Budget Request, $3,000,000.

FY 1972: Appropriation, $3,000,000.

FY 1973: Budget Request, $7,000,000.

2. International Cooperative Scientific Activities. This dollar program supports scientific seminars, cooperative research and scholarly exchange activities jointly sponsored by the National Science Foundation and counterpart agencies in countries such as the Republic of China, Italy, Japan and Rumania.

FY 1972: Budget Request, $4,000,000.

FY 1972: Appropriation, $4,000,000

FY 1973: Budget Request, $4,700,000.

(e) National Endowment for the Humanities.

The Endowment supports programs in the humanities broadly defined to include areas of academic endeavor which enhance man's understanding of man. Using this broad interpretation, the Endowment has supported a number of international and intercultural activities including planning and development grants, project grants, research and fellowships. International education comprises a small part of the total NEH budget but support for it is growing and there is no quota limitation on kinds of programs funded.

FY 1972: Budget Request, $26,500,000 plus up to 3.5 million in funds to match private contributions.

FY 1972: Appropriation, $24,500,000 plus up to 3.5 million in funds to match private contributions.

FY 1973: Budget Request $35,500,000 plus up to 3.5 million in funds to match private contributions.

(f) Smithsonian Institution Research in Excess Foreign Currency Countries.

This program supports scientific and cultural research by American museums and universities in excess foreign currency countries.

FY 1972: Budget Request, $5,00,000.

FY 1972: Appropriation, $3,500,000.

FY 1973: Budget Request, $6,000,000.

(g) Woodrow Wilson International Center for Scholars.

The Woodrow Wilson Center provides fellowships for foreign and American scholars in a broad field of academic endeavors. The fellowships must fall within the Center's concern for "significant international, govermental, and social problems, and alternative means for resolving them." The United States international responsibility in the post-Viet Nam era; the political, cultural, and international dimensions of the problems of human environment; and international law as relates to the uses of oceans are the three major concerns of the center.

FY 1972: Budget Request, $683,000.

FY 1972: Appropriation, $695,000.

FY 1973: Budget Request, $831,000.

THE EAST-WEST CENTER,
OFFICE OF THE CHANCELLOR
Honolulu, Hawaii, July 24, 1972.

Hon. PATSY T. MINK,
U.S. House of Representatives
Washington, D.C.

DEAR REPRESENTATIVE MINK: I have heard that you will be in Honolulu next month for hearings on your bill to establish an Asian Studies Institute in Hawaii. We at the Center hope that Congress will pass your bill. The Asian Studies program at the University already is a good one, but the proposed Asian Studies Institute can build on these strengths including the additional academic and cultural resources of Asia provided by the East-West Center. If you feel it desirable, I, or members of my staff, will be happy to testify at the August hearings.

Because we need your help and understanding in our constant drive to improve this institution so that we continue to work for some of the same goals for which you yourself are working, I hope you will take the opportunity to visit us when you are here. We certainly do not have all the answers—no one does in this delicate business of trying to promote mutual understanding among diverse peoples. But the challenge is an exciting one and we at the Center feel as strongly about it as you do.

I would like to share some thoughts with you regarding the development of problem-oriented programs and the direction of their implementation. We are trying to put our ideals into concrete form. Given the conditions and attitudes prevailing in the world today, you certainly know how difficult a task this is.

The basic reason for the establishment of problem-oriented programs was to create a more effective vehicle for achieving the original educational and cultural exchange goals established by Congress when the Center was founded. We accept the goals as stated in the amendments to the Mutual Security Act of 1960, that the Center shall be an "educational institution" with the goal of promoting "better relations and understanding between the United States and the nations of Asia and the Pacific through cooperative study, training and research."

When I came to the Center in 1967 I found the institution to be basically a grant administering agency involved in an exchange-of-persons program. There was little academic or educational content within the Center itself. Therefore, it was not the "educational institution" that Congress had envisioned. In addition, the furthering of cross-cultural interchange and understanding occurred largely outside the classroom in the context of varying degrees of extracurricular social interaction in the dormitories and cafeteria. Academic or intellectual interchange at the Center was ad hoc or incidental.

Because the Center does not fit the conventional university model, I saw the possibility for developing an innovative educational institution which would combine cross-cultural encounter on both the social and intellectual levels with interdisciplinary and multi-professional approach to education. I argued that the problem-oriented approach would strengthen the Center by facilitating the achievement of its original goal. This educational approach would build academic integrity and intellectual interchange into the internal structure and content of the Center. The Center would become a true "educational institution" as mandated by Congress.

The options, as I saw them, were to organize: (1) with a disciplinary focus (rejected because the University is so organized; (2) with a geographic focus (rejected because the University already had strong area programs, and the Asian students who make up two-thirds of our degree participants had come during the first ten years in such fields as business, agriculture, engineering, etc.); (3) around the kinds of people brought to the Center as it was organized during its first ten years (rejected because it separated research, education, and training; it did not integrate programs, budgets and administrative structure; and it had reached the ceiling of its creative potential); and (4) around problems of common concern East and West (accepted).

Problem-oriented programs are educationally significant because they set forth actual problems of urgent relevance, require matching theory and practice, generate and promote the exchange of knowledge about alternative solutions, and create an atmosphere of practical involvement for all participants.

Problem-oriented programs are significant for cultural interchange because participants and staff members from many diverse cultures come together to work on areas of common professional concern. In the process, respect and trust develop among the team members to a degree not possible in casual, or even planned, social contact. Drawn together by a common bond of professional interest, the participants learn to cooperate with each other despite their cultural differences. As a consequence, a long step toward mutual understanding is taken.

---

*Excess foreign currencies are generated by the sale of surplus American agricultural products under the Agricultural Trade Develepoment and Assistance Act of 1954 (PL 480) and are considered in excess of normal U.S. Government requirements in the countries concerned. Their use by U.S. educational institutions and agencies has no inflationary impact in the U.S., does not contribute to the outflow of U.S. dollars and is not a direct burden on U.S. taxpayers. "Excess" countries include Burma, Guinea, India, Israel, Morocco, Pakistan, Poland, Tunisia, the United Arab Republic, and Yugoslavia. (However, funds in Israel are very limited and Morocco will be "excess" for fiscal year 1972 only.)

The concept of problem-oriented programs evolved over a period of many years. The original University of Hawaii proposal for an International College (1959) called for "the solution of major issues of concern to all peoples. . . ." In 1961, the first major group of consultants, led by Dr. Clark Kerr, then president of the University of California, recommended that "the Center should focus its programs on certain subject areas rather than diffusing its activities throughout a great many fields."

In 1966 an East-West Center/University of Hawaii Task Force recommended the development of problem-oriented programs. In 1967 this group, after consulting with 40 faculty members, submitted a Five Year Program Projection stating that "the East-West Center should identify major problems of Asian concern, of American concern, and of Common concern. . . . Thereafter, all elements of the Center should jointly approach the solution of designated problems. . . . Several problems have been suggested which might provide the focus of integrated Center programs. Among these are: Modernization . . . Conflict Resolution . . . Food and Population, Language, Communication."

In late 1967 I wrote "The Search for Understanding," which was a proposal to build problem-oriented programs into the Center. In the spring of 1968 the fifth draft of this proposal was considered by a joint meeting of the National Review Board and the Board of Regents. They recommended the incorporation of problem-oriented programs into the Center's operations. In 1969, after public hearings, the University of Hawaii Faculty Senate and Council of Deans adopted "The Academic Plan II for the University of Hawaii." Chapter 27 of that document dealt with the East-West Center, outlining in detail the plans for problem-oriented programs. The Board of Regents formally adopted this plan at its meeting in April, 1969. The Department of State in the spring of 1970 encouraged us to move "expeditiously" into these new programs.

It is significant, I believe, that the international programs at the UCLA graduate school and that Teachers College of Columbia University in the last couple of years are moving toward an interdisciplinary, problem-oriented approach to relate higher education more closely to the vital issues of our times. The entire campus of the University of Wisconsin at Green Bay is organized in this manner. The Ford Foundation Fellowship program and the Board of Foreign Scholarships have adopted the same approach. Proposals for the United Nations University stress the problem-oriented curriculum.

To summarize, the decision to move into problem-oriented programs was made after years of careful consideration stimulated by numerous proposals, consultations, and recommendations aimed at bringing the Center closer to the fulfillment of its Congressionally-mandated goals of both education and mutual understanding.

By design, all East-West Center programs are broadly interdisciplinary, with a social sciences orientation, but focusing on humane concerns including the humanities. Although we recognize that technology is a part of all cultures and creates a focus for mutual interaction, none of our programs is restricted solely to technological concerns.

Participants and staff represent a broad spectrum of interests and nationalities. For example, in the Technology and Development Institute, besides students taking degrees in such areas as engineering and economics, there are students in social work, political science, sociology, education, anthropology, and geography. In the Food Institute, in addition to students in fields directly related to agriculture and fisheries, there are participants in anthropology, geography, history, political science and social work. In the Communication Institute students' interests range from Asian studies, educational administration, and library studies to educational communication and speech communication. The staff of the Population Institute has representatives from nine different countries and nineteen different disciplines.

Research and seminar activities also cover a broad range of interests. For example, the Population Institute has two staff researchers, including a professional historian, working on a research project concerning demographic patterns in Tokugawa, Japan. Another staff member is carrying out research and developing a study project on "The Value of Children to Parents: A Cross-National Study of Motivations for Childbearing." The Technology and Development Institute has developed an annual student workshop which fosters ecological thinking and values in order to enhance understanding of the consequences of technological development on the environment. The theme of the first workshop was "The Responsibility and Role of the University to the Community." Research themes in the Communication Institute include "The Role of Communication in Promoting Understanding Between Peoples of Different Cultures" and "Evaluation of the Impact of New Communication Technology on Intercultural Understanding."

Although all of our programs are concerned with cultural interchange and humane interests, the Cultural Learning Institute has a special commitment to humanistic studies. For example, research plans for the program include a study of the socioliterature of Asia and the Pacific and a study of national and cultural identity problems in the United States, Asia and the Pacific. Study projects include the Indonesian Humanities Program which provides participants with the opportunity to enhance their knowledge of the humanities and to devise by themselves a curriculum suited to Indonesian educational needs; the Pacific Cultural Centers Program, which will lead to the establishment of cultural centers run by local people in the Pacific area; the Summer Program in East-West Intercultural Studies, which provides Asian and American educators, opportunities to discuss aspects of Eastern and Western cultures and to consider how cross-cultural understanding can contribute to the solution of important problems facing mankind; and a proposal in which Americans and Asians will work together to produce films and textual materials illustrating different aspects of Asian civilizations, including their history, art, philosophy and religion.

The Open Grants category provides the Center additional flexibility which brings participants to the Center whose interests are not directly relevant to the five problem-oriented institutes. The entire range of scientific, social and humanistic concerns is represented. The topics for two seminars planned for this year are "Ethics and Human Organizations" and "Alternative Futures." Students are offered many opportunities to put the concept of cultural interchange into practice. For example, an American with professional interests in Japanese garden design recently served as an intern with an eminent landscape designer in Japan. Also, an American student of drama is planning to study the art of Kabuki in Osaka.

Finally, a proposed new program in Humanities and Human Service is being designed for inclusion in our next budget request to Congress. Unfortunately, although funds for this program were included in this year's budget request, Congress cut this portion from our final budget for FY 1973. Therefore, implementation of this program is contingent on Congressional approval of our FY 1974 budget.

No nation or ideology has magic answers to the massively consequential problems facing mankind today. We hope that by getting people East and West to put their attention on these problems they will not only learn to cooperate but also cast light on the problem involved. The problems chosen for study were specifically those of common concern to the United States as well as Asia and the Pacific area.

Detailed planning for the new programs was done by teams of experts from both East and West. Consultation on a mutual basis continues. For example, the Communication Institute International Advisory Committee is composed of three Asians and three Americans. The Institute itself is now directed by an Asian, Michio Nagai. The Population Institute's International Advisory Committee includes ten Asian and Pacific members and four from the United States. The Food Institute program was instituted as a result of recommendations made by a group of three Asian experts working together for a year as Senior Fellows. The East-West Technology and Development Institute is directed by an Asian, and a series of planning conferences with dominant Asian/Pacific participation has set the path for its programs. The proposed new program in Humanities and Human Service is being designed by professional people East and West. Consultation is a two-way street in drafting and implementing East-West Center programs.

Our participants represent a mixture of individuals from over 30 Asian/Pacific countries and the 50 states of America and the District of Columbia. All degree students from the United States are required to study an Asian/Pacific language in depth. We are steadily striving to increase the number of international staff members in order to increase mutuality at all levels. A few years ago there were practically no Asian/Pacific citizens on the professional staff. Now, out of a total staff of 179, there are 21 Asian/Pacific citizens including two Institute Directors and two Assistant Directors. This figure will continue to grow in the next few years.

Through regular seminars, discussions, and research projects, American students, fellows and staff members learn from their Asian/Pacific counterparts. To cite a few examples, last year the East-West Population Institute held regular seminars, many led by Asians including a Filipino, a Korean, an Indian, a Ceylonese, and a Chinese. This year Open Grants held seminars in which many Americans participated. Seminar leaders included a Korean, an Indian, a Ceylonese, and a Chinese. The leader of an East-West Technology and Development Institute workshop on management development, which included American participants, was Dr. Abelardo Samonte, vice president for academic affairs of the University of the Philippines. In addition to Asian/Pacific participants at a recent Enterpreneurship Workshop organized by the East-West Technology and Development Institute, there were U.S. representatives of the "Black Capitalism" program in Chicago and a program for unemployed engineers in Los Angeles.

In the East-West Culture Learning Institute, Dr. Thelma Kintanar of the Philippines is directing a research project on socioliterature of Asia and the Pacific and Dr. Masanori Higa of Japan is leading a project on national and cultural identity problems in the United States, Asia, and the Pacific. The Institute is planning to assist the public school system in North Carolina to further develop its Asian Studies curriculum.

We still have a good way to go in attracting more non-American staff members to broaden our intercultural basis, but progress in the past two years has been encouraging. Even more difficult, from my own standpoint as an administrator, is to redirect our programs and the thinking of all our staff—including Asians—away from the conventional "teaching" approach to one of cooperative learning. You may be interested in a memo I recently directed to all staff members on this matter and also circulated in *Intrachange* (attached) for the benefit of all participants and key faculty of the University of Hawaii. In the memo I make the point: "Given the fact that we at the East-West Center come from various countries with different levels of national, economic and industrial resources, mutuality is difficult to attain. It may be easier to say what it is not than what it is. We must avoid the concepts of technical assistance with their donor/recipient syndromes. Rather we should strive for intellectual and scientific cooperation. . . . If we can see cooperation as the other side of understanding and act accordingly, then the two will be mutually enhancing. The more understanding, the better we cooperate. The more cooperation, the better we come to understand. In the process we achieve equality and foster mutual respect."

Thus, although we are not yet where we want to be in attaining our goals we are striving to build mutuality and respect by basing our entire programmatic structure on areas of relevance to the United States as well as the Asian/Pacific area and by gathering staff and participants from the entire area to work together to generate new ideas and to share experience and knowledge. I am convinced that the Center is moving in the direction originally established for it by Congress. As I mentioned earlier, please visit us when you are here. I know we will have much in common to talk about.

Sincerely yours,

EVERETT KLEINJANS,
Chancellor.

NATIONAL COUNCIL OF ASSOCIATIONS
FOR INTERNATIONAL STUDIES,
Albany N.Y., August 3, 1972.

Congresswoman PATSY T. MINK,
U.S. House of Representatives,
Washington, D.C.

DEAR MRS. MINK: The National Council of Associations for International Studies is an organization composed of a dozen regional associations of colleges, which in turn represent some 400 institutions of higher education across the country from Vermont to Hawaii. The basic purpose of the National Council is to strengthen the international and intercultural dimensions of undergraduate education by assisting its member organizations and their constituent colleges through the development of programs and materials for faculty and students. It is natural, therefore, that we should be actively interested in your bill to amend the International Education Act of 1966 to provide for the establishment of an Asian studies institute (HR 6168).

At its July 12th meeting in New York City, the Executive Committee of NCAIS took formal action in reaffirming its support of the fundamental objective of your bill (in the language of Section 501 of the bill) "to promote understanding between the United States and nations of Asia and the Pacific . . ." The Executive Committee also went on record in expressing its appreciation to you for your initiative in arranging the forthcoming hearings in Honolulu on your bill as a means of stimulating dialogue on an important set of issues of public educational policy. These issues include, in our view, not only the need for strengthening advanced studies and research but also the need to broaden awareness and appreciation of Asian cultures and societies throughout the American educational system at the school and college level.

The Executive Committee did not take a specific position on the substantive provisions of your bill to establish an Asian studies institute in Hawaii. My personal view is that, to the degree that such an "institute" could be designed to serve as an effective means of strengthening awareness and appreciation of Asian societies and cultures throughout the United States at both general and more advanced levels of education, as an essential element in promoting mutual understanding between the American and Asian peoples, it would be a useful step forward, although I am inclined to think that, if it were to serve these objectives as I have stated them, it would be necessary to provide for a geographically more varied set of institutional relationships than would be possible if the institute were based exclusively in Hawaii. On the other hand, as a former Senior Specialist at the East West Center and as one with an active and direct interest in the growth of Asian studies at the University of Hawaii for well over a decade, I can say on the basis of more than casual knowledge of intellectual and educational resources in Asian studies in Hawaii, that Hawaii would have an important contribution to make and should certainly play a significant role in the implementation of an institute or center as (to quote again from your bill) "a national and international resource for academic and scholarly education, Asian history, language, and culture, and for research into problems of particular concern to Asians or of interest to non-Asians."

I hope very much that this letter can be made part of the record of the forthcoming hearings on your bill. I regret very much that I personally cannot be present to testify and thus to participate more actively in the dialogue which you have stimulated on an important set of educational issues.

Yours sincerely,

WARD MOREHOUSE,
President.

HOUSE RESOLUTION 337, SUPPORTING U.S. HOUSE OF REPRESENTATIVES BILL 6168 TO AMEND THE INTERNATIONAL EDUCATION ACT OF 1966 AND TO PROVIDE FOR THE ESTABLISHMENT UNDER THAT ACT OF AN ASIAN STUDIES INSTITUTE

Whereas, there is a need in Hawaii for a higher education institution clearly dedicated to academic and scholarly education, Asian history, language and culture, and research directed to problems of particular concern and interest to Asians; and

Whereas, the East-West Center located at the University of Hawaii has increasingly tended to reflect the attitudes and objectives of the Department of State, the sector of government responsible primarily for foreign policy; and

Whereas, present program orientations at the Center operate under the assumptions of foreign policy rather than educational concerns; and

Whereas, such problem-oriented approaches assume that Asians have problems and the West has solutions, thus undermining two-way communication between Asia and the West; and

Whereas, there is need for a complementary center concerned with educational, cultural, and other resources which would continue to depend on the presence of students and scholars from Asian nations such as presently at the East-West Center; and

Whereas, these students and scholars would continue their work on problem-oriented areas such as food, population, communication, and health in institutes and thus enhance the activities of a newly created Center on Asian Studies provided in H.R. 6168; and

Whereas, the University of Hawaii has developed plans for a comprehensive Faculty of Asian Studies, headed by a Dean of Asian Studies on the Manoa campus to administer regional programs for the East, Southeast, and South Asia; country study centers; and undergraduate and graduate interdisciplinary programs on an inter-college and inter-departmental basis; and

Whereas, in February, 1972, the University Board of Regents approved the establishment of a CENTER FOR KOREAN STUDIES which will stress cooperation among the humanities, social sciences; mutual relationships between the University and island community; and the enhancement of inter-societal relations between Hawaii and the societies of Korea, thus basing its programs on educational rather than foreign policy assumptions; and

Whereas, among the graduate areas of selective excellence is ASIAN STUDIES, according to University of Hawaii scholars and administrators who appeared before the Hawaii State House of Representatives Higher Education Committee in a March, 1972 hearing on graduate studies; and at that hearing there was presented evidence of a need to expand, develop, and renovate present Asian library facilities; now, therefore,

Be it resolved by the House of Representatives of the Sixth Legislature of the State of Hawaii, Regular Session of 1972, that it does and hereby is, in support of the intent and purpose of H.R. 6168; and

Be it further resolved that it strongly urges the scheduling of hearings on the bill here in Hawaii so that relevant University of Hawaii, East-West Center, and interested parties might testify in the presence of the U.S. House Select Subcommittee on Education; and

Be it further resolved that certified copies of this resolution be transmitted to the Chairman and members of the U.S. Congress House of Representatives Select Sub-committee on Education, members of the U.S. Congressional delegation from Hawaii, President of the University of Hawaii, Chairman of the Board of Regents, Chancellor of the East-West Center, Chancellor of the Manoa campus, Director of Asian Studies, President of the East-West Center Grantees Association, and President of the Associated Students of the University of Hawaii.

COMMENTS ON THE MINK BILL

(By Fred W. Riggs)

The bill introduced by Representative Patsy Mink to create a national institute of Asian studies comes at a timely moment in view of the reassessment of international studies that is now taking place in the United States. It deserves to be given careful consideration and the underlying issues require serious study. Certainly Representative Mink should be congratulated and thanked for bringing this important issue to public attention.

There is, indeed, a grave crisis in higher education to which the Mink bill is a response. In order to understand the nature of this crisis we need to separate three aspects of the bill: Hawaii, Asian studies, and the overall national need for improved international education.

1. THE HAWAII ASPECT

Although those of us who live in Hawaii would naturally be delighted to have a national facility for Asian studies headquartered in our state, we believe the location of such a facility is a secondary question and should be decided only after the decision has been made to create a national institution. Certainly it would be much better for Hawaii if such a facility existed even though it were headquartered elsewhere than if there were no such institution.

2. THE ASIA ORIENTATION

Similarly, with respect to *Asia*, clearly the considerations which dictate the need for an Asian studies institute also point to the urgent need for similar facilities relating to Africa, Latin America, the Soviet bloc, etc. Whether to start with an institute focused on Asia or to begin by recognizing the broad need for a national approach to international and foreign area studies is a strategic rather than a substantive issue.

It may well be that political and financial considerations dictate a strategy in which only one world area would be taken up at a time. Certainly the current great issues of Vietnam, Pakistan and China justify a high priority for Asian studies. Perhaps it would be easier to secure support for one area at a time, just as the East-West Center was launched before the North-South Center. However, serious attention should be given to an alternative strategy whereby Congress would be asked from the start to authorize the establishment of national institutes dealing with all parts of the world.

3. THE UNIVERSITY BASIS

The most critical issues that need priority consideration at this time, however, are not those relating to the location or even the scope of a national approach to area studies. Rather, these issues arise from the increasingly apparent *inability of our universities*, as now constituted, to provide the support needed for the kind of functions which simply must be performed.

Five overriding issues need to be considered in this connection. They relate to the organization, character, level, disposition, and domain of area (or Asian) studies, as described below:

a. *University Organization: Area versus Discipline, Profession and Problem.* Four basic organizing principles are applicable to the structure of any academic enterprise: discipline, profession, problem, and area. All are important, and each overlaps all of the others. In the organization of government agencies and private corporations, such distinctions are normally reflected in the establishment of "staff" units which cut across "line" divisions. However, for a variety of reasons it has been very difficult, if not impossible, to incorporate these principles in the internal structure of universities. Let us consider here, not the causes of this situation, but its consequences for area and international studies.

The basic organizing concept in universities is the *discipline*, which refers to organized bodies of knowledge. The academic departments in the liberal arts colleges constitute the intellectual and normally the political core of university organization. We have all been conditioned to think that fundamental knowledge must always come packaged in these disciplinary containers.

The second basic organizing principle is the recognized *careers* open to university graduates, such as law, medicine, agriculture, business, social work, librarianship or engineering. The preparation of future members of these professions has been institutionalized in the professional schools which cluster around the disciplinary departments found in any University.

These two principles account for the bulk of all academic organizations. The power exercised by these organizations is reflected in the virtual monopoly that disciplinary departments and professional schools exercise over the appointment, promotion, and awarding of tenure to members of any university faculty. So powerful is their grip that it is virtually an academic heresy to suggest that the university *should have* scholarly bodies based on other principles which would also have the authority to hire and fire on a long-term basis.

There are, however, two other principles around which academic enterprise might well be mobilized; problems and areas. The demand for academic relevance relates in large part to *problems*, not to disciplines or professions. To mobilize an academic team capable of coping with any serious social problem—problems such as pollution, quality of life, urbanization, population growth, world peace, race-relations, crime and drug abuse—means to bring together a wide variety of talents, persons rooted in diverse disciplines and professions.

Yet it is extraordinarily difficult to secure the *primary* right to name scholars to a university faculty because of their ability to help solve such problems. Even where problem-oriented institutes exist, they are normally handicapped by the need to secure the support first of disciplinary departments which alone have the authority to make long-term academic appointments.

The creation of the East-West Center, the Environmental Center, the center for futures study, etc., at the University of Hawaii, has been possible only because of *external* funding, providing resources supplementary to the regular university budget. Even in these problem-oriented establishments, most of the participating faculty have come in on a joint appointment which normally gives a prior claim on the loyalty of participants to their academic departments.

The East-West Center, precisely because of its national status and funding, does have the ability to make independent scholarly appointments, a fact which demonstrates the feasibility as well as the need for nationally based problem-oriented institutions. Looking around the country we notice other institutions such as Brookings, RAND, the Stanford Research Institute, Batelle, and the like, which are all problem-oriented and typically organized *outside* of—though in proximity to—universities.

The need, in other words, for problem-oriented academic organizations has been met, though somewhat unsystemetically, by the creation of a swarm of non-profit research corporations whose survival in the penumbra of the universities is made possible only by the continuing—and largely project-based—support of the federal government and private foundations.

No such good fortune has blessed the *area-oriented centers*, which are also needed if the United States is to survive in an increasingly congested and interdependent world. Without questioning the primary need for an autonomy of disciplines, professions, and problems, it is surely also true that the way these elements come together in localized configurations is always and everywhere unique. Granting that the deepest knowledge of any area is likely to be possessed by the people who live there, there is nevertheless a need for people living elsewhere to gain some more or less reliable perception of what is happening in neighboring areas.

We cannot continue to rely on the crisis-oriented reporting of the mass media, or the nationalistically biased "intelligence" of the military security forces. Yet the *universities* cannot, as now constituted, build area programs into their fundamental budgetary structure. At best, area specialization can be smuggled into some of the disciplinary departments, most notably in the humanities. To the extent that cross-disciplinary area programs or centers have been established at American universities, their survival is precariously contingent on external funding by private foundations and governmental grants.

This is scarcely surprising, of course. It is more surprising that the donor agencies should ever have thought area-oriented institutions could thrive within any university once *external subsidization* was withdrawn. The inherently desperate condition of any area-oriented establishment on a university campus, however, has led to a continuing flow of paltry and quite inadequate funds parcelled out between a large number of competing universities, no one of which has been able, thereby, to attain the critical mass needed to serve the national need adequately.

The Mink bill points the way to a *viable alternative* approach. If a national institution for Asian (or other world area) studies were to be created, outside the framework of a university, and assured permanent funding, it could not only meet a general national need, but it could service the universities as well. There is, then, a national need for area-oriented establishments, outside of though related to, our universities, which would parallel in scale and vigor the problem-centered institutions which have already become a part of the national scene.

b. *The Character of Area Studies: Research versus Teaching.* The organizational dilemmas pointed to above grow out of the notion that the primary function of universities is to teach—research and public service are seen as secondary by-products, even as luxuries. The teaching of disciplines is justified as necessary for a liberal education, and the professional schools obviously prepare graduates for careers in their chosen career lines. Increasingly the Ph.D. has become, also, a professional degree for those selecting academic careers.

This clamps a *self-perpetuating mold* on the academic establishment. Student demand is clearly contingent on career opportunities. Since area studies programs lack the authority and resources to make appointments, career opportunities are inherently limited. Consequently few students will seek to take area programs for advanced degrees, thereby confirming the view that there is little demand, and hence no real justification in academic terms for area programs.

The long-term justification for *hard* money investments in faculty has, indeed, overwhelmingly been student demand. Area studies, therefore, have been treated as a *teaching* program, justified by the need to increase the number of experts on selected foreign areas. An underlying premise for existing commitments to the idea of centralizing national resources for area study in a major university center of selective excellence appears to be the belief that there will be enough students to justify at least one good program on each subject. Two flaws may be noted: first, even if all the American students who wanted to study Burmese or Nepali were willing to go to University X where this subject was being taught—and it were not to be taught anywhere else—there still might not be enough demand to justify the investment of sufficient resources by University X to teach Burmese or Nepali well; and second, subjects like Burmese or Nepali will not be demanded by students without reference to other subjects taught at the same institution. For a variety of quite legitimate reasons students prefer one institution to another. It should be possible for students, within limits, to choose the universities that best meet their personal needs, and still study the subjects they want to take up. I believe it is possible to achieve this goal only if we reject the notion that area studies must be based on teaching needs.

In order to see that a different approach is possible and fruitful, consider the structure of Southeast Asian area studies at Kyoto University, where a pattern that is also familiar in continental Europe prevails. This Center has no students, yet it offers tenured appointments to scholars who becomes regular members of the faculty at Kyoto University. They devote themselves exclusively to research, adding to the stock of available knowledge in Japan about Southeast Asia, but they do not offer courses or give degrees. Nor do they seem to think it necessary to provide instruction in Southeast Asian studies in Japan, except at a very modest level.

Typically the Center recruits for its staff scholars who have secured advanced degrees in various professional or disciplinary fields.

Recruits are then given some language training and sent to Southeast Asia for a couple of years of field study and research during which they make themselves expert on the area, and perfect their language skills. The nearest American equivalent to this may be the American Universities Field Staff, and the Institute of Current World Affairs, which subsidized the field study of many of the AUFS experts. However, because the AUFS tries to cover the whole world, and depends on contracts with American Universities and extended personal visitation tours, their efforts are necessarily diluted by contrast with the focus that the Southeast Asia Center at Kyoto University can achieve.

One of the hang-ups which impedes the strengthening of Asian studies in the United States is surely the suspicion harbored by foundation executives and legislators that we already have enough "area specialists" to take care of the demand. If area centers continue to produce more and more graduates, may they not become a glut on the market. For how many Burma or Nepali experts will there be positions, and how many of them face a bleak future doing something else—driving taxis or teaching English? Of course, we might think about how to create jobs to take advantage of the skills of our area specialists, but this takes us back to the organizational questions raised above.

The prevailing structure of American universities is based on the inextricable linkage of research and teaching—but must we accept this linkage as a fetish never to be questioned? There are, indeed, significant exceptions. The Smithsonian Institution, RAND, Brookings come to mind. Consider also the National Center for Atmospheric Research. NCAR has a large research facility located on a mountain side above Boulder, Colorado where, like a Gothic fortress, it towers in splendid isolation from both the city and the University of Colorado. It has a large research staff, some fifty of whom have Ph. D.'s in a wide variety of disciplines, plus a much larger number of auxiliary personnel. Funding for NCAR has become a line item in the budget of the National Science Foundation, and it also secures support from a variety of other sources, through grants and contracts.

Surely the study of Asia, or of Latin America, Africa, the Middle East, is as *important* to the United States and as deserving of Federal funding as atmospheric research. As is all too obvious we have, though reluctantly, poured billions into a tragic war in Vietnam. If some millions had been wisely invested in a major research center on Asia (or Vietnam), is it not conceivable that we would have discovered a way to protect our fundamental interests in Southeast Asia without such a vast loss of lives and treasure, and without such catastrophic costs for the people whose lands have become a gigantic battleground?

In short, we *need to know* a great deal more about Asia (and other areas) than we now know, and this information can be produced by research and made available to the public through many channels of communication—but we do not need to produce a growing number of unemployable experts on many world areas. I suspect that if we made good use of the experts who are already available, and helped them to improve their skills, we could do well enough, and it would not be difficult to increase—as the Kyoto Center does—the number of experts when they are needed.

We will continue to need courses and teaching materials relating to Asia, not just in one or a few universities, but indeed in many. However, this can be done much better than it is now being done if a solid research core could be institutionalized through independent, non-teaching establishments.

c. *Academic Levels: Scholarly Professionalism versus Clientele Needs.* When thinking about the diffusion of knowledge generated in and through our universities, we immediately confront a major obstacle in the form of *academic professionalism.* Just as the need for students rests on an economic imperative—the reluctance of funding sources to pay for educational costs not justified by enrollment figures—so the deeply engrained professionalism of scholars rests on the institutionalization of their career prospects.

The primary criterion for promotion, for tenure, for salary increases and academic status is the *evaluation* of scholars by their disciplinary peers. Although the cliché—publish or perish—oversimplifies the dynamism of this incentive system, it speaks to a basic reality in American higher education. The disciplinary departments are linked to national professional societies which have become the chief arbiters of merit on the campus. In the name of objectivity and standards, we have thrown chains at the national level around the cells that imprison us locally.

If this seems like an overstatement, consider some of its *consequences.* We prefer to teach graduate students, because seminars can be linked to research and publications more effectively than can undergraduate courses. If our research leads to knowledge of general interest or value, we will nevertheless prefer to publish our findings in academic journals, hopefully those sponsored by our professional societies. Anyone who seeks to reach a larger public through the schools or the mass media will incur the scorn of his associates and win the label of "popularizer," or "dilettante."

Under these circumstances it is understandable that insofar as area programs have been established at American universities, their faculties should strive for academic status—against the overwhelming odds described above—by seeking to enhance their disciplinary identification and research output. Yet clearly if area studies are to become soundly established, they need to satisfy the needs of large *clienteles* outside the inhospitable reaches of the academic disciplines. These clienteles include not only the undergraduate students in our college and universities, but also the pupils in primary and secondary schools, the teachers and colleges of education, the mass media and the general public, and especially our policy makers and Americans working overseas.

Even if a set of university-based area study programs could be successfully institutionalized, it seems doubtful that they could successfully meet the needs of this larger clientele for more adequate information and explanation of world areas. Only a *national approach,* through institutions based outside, though linked with, the universities can be expected to generate the substantial flow of knowledge required to meet these needs. The Foreign Policy Association used to have a small research staff which prepared and published reports on world affairs, essentially from an area orientation. The effort was utterly inadequate, of course, but with small scale short-term foundation funding, one could not have expected much more. Yet the experience of the FPA shows that it is quite possible to employ good scholars, outside the universities, not only to do area-based research, but also to package and present their findings to a larger public, including schools, teachers, opinion leaders, the mass media, and Americans overseas. A national institute(s) for Asian (and other area) studies, if adequately funded, could certainly do the same with far greater effectiveness.

d. *The Disposition of Materials: Libraries or an Information System.* With notable exceptions, assuredly, the university-based area centers have been burdened by mounting costs in the form of heavy investments to establish and maintain research libraries. Insofar as several centers have been created to work on the same area, they have competed with one another for scarce materials, thereby raising the unit costs of building these collections, taking into account both the need for specialized library personnel and the expense of making acquisitions from remote areas not well supplied with book industry facilities.

The work of the *Center for Research Libraries* in Chicago has demonstrated how costly and unnecessary this approach is. It is astonishing not only that universities persist in their anachronistic ambition to build large research collections, but also that funding agencies continue to make limited—and quite inadequate—funds available for this purpose.

The basic premise of the CRL is the distinction between *frequently* and *infrequently* used materials. If we take one use in five years as a criterion, it would be safe to say that the vast majority of materials held in most research collections are infrequently used. Such materials could just as well be housed in a national lending library, where they would be equally available to scholars at any research library on relatively short notice. This would permit universities and area centers to use their limited funds for the acquisition of frequently used materials, not just one copy of each item but, indeed, multiple copies of the most frequently used materials, thereby making them rapidly available to users. The price that readers now pay for the privilege of having immediate access in research libraries to materials that they very rarely ever want is the long delays they typically encounter in gaining access to the materials they wish to see most frequently.

A national lending library on any topic need not be housed in Chicago, of course. If clear criteria can be established, there is no reason why a *network* of libraries could not house national lending collections, provided it was clearly understood that the primary obligations of the libraries concerned was to supply all users, nationally, on an equitable basis, not giving preference to local users.

Books and journals are, of course, not the only kind of research materials needed for the strengthening of Asian, as of other areas, studies. Indeed, the ratio of *unconventional* to conventional materials is probably much greater in third world countries than in the Western world. These materials are particularly difficult for ordinary university libraries to handle, and the categories of "ephemeral," "fugitive," and "documentary" materials merge into that of "archival" holdings. Modern methods of materials holding, including the use of microforms, and computerized information systems, are necessary tools for the collection, storage, and utilization of these materials. Central libraries or archives are essential if these materials are to be made available to scholars.

A good deal of *frustration* has been generated by the false hope—at least I think it is an illusory expectation—that many of these materials can be imported, duplicated, and sold in a volume large enough to cover costs. Such is the underlying premise of private foundation support for the centers of Chinese and Slavic materials administered through the Association of Research Libraries in Washington. I believe the lending library principle is much sounder. Of course, if something is out-of-print and in demand from a national lending library, then that library should have the authority to duplicate and sell copies with, if necessary, royalties to copyright holders. Users need not be dependent on borrowing copies if they are willing to pay for private possession. The miracles of modern reprography have transformed the technology of information handling, but we continue to think in terms that antedate the Xerox machine, the microfiche reader, and photo offset duplicator.

A number of *microform projects* have already been established through the Center for Research Libraries, providing for African, South Asian, and Southeast Asian materials. These programs need to be vastly expanded by subsidization, since they now depend largely on the pitifully small budgets that can be generated by contributions from subscribing libraries. Because of the national interest in foreign areas, permanent and continuing support of basic national collections on these areas ought to be a Federal responsibility. The Library of Congress provides some of these services on a most limited and inadequate basis. There needs to be a national library network, which can be widely dispersed, not localized in the capital city. The basic point is that it is less expensive to bring materials to the person than persons to the materials, to use the mails rather than public transportation, in order to make library research possible.

If an *information system* rather than a research library approach is to work, however, it is essential that improved bibliographic access be provided. One can now go to the Library of Congress and browse through a substantial collection of uncatalogued and unclassified materials in Thai. However, it is not permissible in any adequate information system to compel the researcher to hunt through materials in this random fashion. A national service obviously cannot be provided if bibliographic support is not also available. In short, a substantial part of the budget for any national collection and lending library program has to be matched by support for *automated bibliographic services* whereby potential users, no matter where they may be located, can quickly discover the existence and location of materials they may wish to consult. Such a service can, of course, at least in principle, not only provide periodical and cumulated listings of research materials, but can quickly generate by computer print-out selective bibliographies to meet the needs of various categories of users, plus the selective dissemination of information (SDI) for individual researchers.

To some extent all these services can be partially supported by users. However, I believe that we are still some distance from the time when they can be fully supported—if ever. Meanwhile they must be *subsidized*, not only to create the facilities and services, but to maintain them. This is something that I believe Congress ought to be willing to finance as a national service, and for Asian (or other) area studies, this should be through a national facility for the disposition of research materials.

e. *The Appropriate Domain: National versus International.* So far we have spoken of the nation's needs as though they could be met nationally. However, I am convinced that our long-run interest in knowing about the rest of the world can only be satisfied in close collaboration with scholars and agencies in other parts of the world.

This has already been well established in the organization of Southeast Asia Microforms, an *international consortium* to pool resources for the preparation and utilization of microfilm and microfiche copies of archival materials relating to Southeast Asia, no matter where they are held, whether in the region, or in Europe, North America, Japan, or elsewhere.

It does not make sense for Americans to decide now to *catalog* works in Indonesian without consulting with Indonesians who, above all, have an interest in the bibliographic and library processing of materials in their own languages.

The *purchase* of materials from abroad is made possible by and affects the publishing and book selling industry (including government documentation) of the countries concerned.

American scholars seeking to do *field research abroad* can do so only with the consent and collaboration of foreign scholars. Their failure for some time to give much weight to this fact means that the confidence and goodwill of the growing number of foreign scholars—many trained in American institutions of higher learning—has been eroded, and field research has become increasingly difficult to do in many countries. Moreover, the research that foreign scholars wish to do in and about their own countries increasingly generates knowledge of interest to American scholars. Consequently Americans need to have good opportunities to meet and pool information with their opposite numbers abroad, to exchange publications, and to participate in jointly planned research efforts.

Similarly, we cannot train experts on foreign areas any longer if we expect them to travel abroad for field research without entering into *collegial relations* with foreign scholars in the countries where they carry out their inquiries. The best place for anyone learning a foreign language to perfect his language competence—if he requires more than a superficial knowledge—is in a country where the language is normally spoken. We cannot, in other words, really take seriously the question of learning about the rest of the world (including Asia), unless we think in terms of meaningful cooperation with scholars in these countries.

Such cooperation must, of course, be based on *reciprocity*. We can scarcely imagine that foreign scholarship will not be affected by Americans studying in their domains. Indeed, it is only if we see the complementarity of the American wish to learn more about the world in which we live, and the wish of indigenous scholars everywhere in this world to develop their own competence and understanding of their own countries, that we can work out a valid basis for strengthening foreign area studies. The artificial dichotomy between support for international studies as an exclusively American concern, and assistance to foreign institutions as a matter of international development, needs to be overcome. Indeed, one of the reasons our foreign aid programs have been so ineffective is surely our lack of deep knowledge about the dynamics of change in these societies, and one reason our understanding of these areas has been so superficial is that we have persisted in our attempts to do it alone.

If the propositions just stated make sense, then clearly any national facility for the strengthening of Asian (or other area) studies should be established in such a way, and so located, as to facilitate *international cooperation* in the achievement of its objectives. This implies not only a willingness to consult in advance with scholars from other parts of the world but, indeed, to bring them into the planning process from the start in such a way as to make certain that their national interests are fully considered in the creation of new institutions and the adoption of their governing policies.

4. SOME OPERATING ASSUMPTIONS

A national (or international) approach to the strengthening of Asian (or other area) studies should not be at the expense of university-based centers. Quite the contrary, a truly effective national facility outside the boundaries of any one university would be able to provide invaluable services to any, or all, universities so that each could do a better job of combining instruction on foreign areas with basic preparation in the disciplines, for professional careers, and in relation to pressing public problems. Among the techniques that could be used to achieve these goals are the following:

a. *Curriculum and teaching materials.* One of the perpetual concerns of teachers is the need for improved teaching materials. Most teachers are too busy to spend much time preparing new materials, and they are often also ill-equipped for this purpose. In fields where the potential student market is not large, textbook publishers are also reluctant to finance production. Consequently the teaching materials available for courses which attract few students are often makeshift improvisations.

One of the essential functions of a national institute or center for Asian studies ought, therefore, to be the preparation of suitable texts and related *teaching* materials. Of course to the extent that student demand exists, there would be a market and sales could generate funds to be ploughed back into the budget of the institute. Publishers could also be used as intermediaries, paying royalties to the institute, and handling sales and production costs whenever the market was large enough.

Curriculum materials can, of course, be designed for *all levels*. Not only undergraduate instruction, but also materials for primary and secondary schools, and for teacher training, could be prepared, working closely with experts on curriculum and teaching problem at each level. The lower the level in the school school system, the more area materials need to be integrated into broader subjects rather than taught separately. Thus one might expect to find materials on Chinese history included in a World History course at the high school level, and made the basis of a separate course only at the university level.

Programed learning techniques, especially for *language study*, could also be used by experts at a national institute. Consequently, for example, students might be able to study any world language at institutions of their choice. They might attend intensive language courses sponsored by a national institute during one or two summer sessions. During intervening years, they could continue study by themselves, using language tapes and other instructional materials, meanwhile sending transcriptions of their work to the national institute for evaluation of progress. Eventually, if they were serious language students, they would spend some time in a country where the language is commonly spoken in order to perfect their command of it. By this means they could combine language training with the study of other subjects at whatever university seemed best able to meet their needs. A national institute would also, of course, prepare materials for the general public, and especially for opinion leaders and Americans working abroad.

b. *Student subsidization.* The Foreign Area Fellowship Program, sponsored by the Ford Foundation, through the SSRC, should surely be continued and strengthened. It enables students from any university who have shown exceptional capacity for an ability to study and do research in a selected area to go there for advanced study. The same principle might be used by a national institute, either independently, or through grants administered by the FAFP. This would have the effect of enhancing, in a relatively controllable manner, the supply of new graduates skilled in the study of selected areas of the world.

The NDFL principle is complementary to that of the FAFP. It enables recipient institutions to attract students who wish to enroll for residential study programs. If a national institute for Asian studies were to administer a program of this type, it could *assign fellowships* to selected universities so as to increase the number of students participating in any program that the institute wanted to strengthen, thereby contributing to the strengthening of selected centers of excellence.

c. *Research grants.* Another important way to strengthen a teaching faculty is to provide funds for institutional support of research. A double objective is thereby achieved: the institution can attract, support, and hold a larger and more able faculty than might otherwise be possible. Secondly, it will contribute to the common stock of knowledge.

Under Title VI, the NDEA program makes grants to *area centers* which are used to stimulate research, improve teaching, and enhance interdisciplinary coordination. However, it is my impression that Title VI funding is rarely if ever substantial enough to support major research projects such as are funded by the National Science Foundation, for example. Moreover, given the wide range of areas and disciplines that the NDEA staff has to monitor, plus the fact that its staff consists essentially of administrators rather than researchers, it is not surprising that NDEA avoids, for the most part, substantive decisions about research projects.

However, if a *national institute* were to engage in research, it would have on its own staff persons highly qualified to judge the projects of scholars located at different universities. A prototype of such a staff can be found at the Russell Sage Foundation, where scholars in residence conduct their own studies, while also stimulating and giving advice on studies carried out at universities with support from the foundation. An institute serving a national purpose might, accordingly, decide to allocate a certain amount of money for research on, let us say, Cambodia. It would not only carry on its own research, but advise on additional studies to be carried out on campus. By splitting available funds between "in-house" research, and contracted university-based research, a continuing partnership between scholars in the institute and on campuses would be maintained.

If this pattern were followed, it would also be possible to choose between inviting a scholar to come to the national institute as a visitor for, let us say, an academic year; or subsidizing his research in residence; or financing a field trip. One consideration in making such grants would clearly be the *institutional context* of the candidate, whether or not he had colleagues with whom he needed to work, and whether the host institution could help cover expenses.

I believe that it would be quite feasible for a national institute, working as the institutes in the East-West Center now work, to *strengthen selected universities* for the study of particular areas, and to do so gradually, responding to opportunities and campus-based initiatives, without having to make conspicuous and apparently arbitrary choices among universities. Moreover, insofar as the beneficiaries of research grants could be widely distributed geographically, the political basis of support in Congress for such an approach would surely be enhanced.

d. *Visiting Staff Appointments.* In addition to research grants from a national institute to scholars based at a university, the institute could use another option to protect and enhance centers of excellence at a few universities. It would arrange for its regular staff members to spend some time as visiting professors at a university thereby following a good precedent already established by the American Universities Field Staff (AUFS). Indeed, any institute should expect research staff members to spend a good deal of their time away from headquarters, partly in the field conducting research, and partly at cooperating universities.

In this respect the campus-based activities of institute staff members would resemble that of current AUFS personnel. They might visit several universities interested in the area they cover, but the number would be fewer than those included in AUFS itineraries. They would also, on occasion, want to remain *in residence*, for a full semester or a year, taking on regular teaching assignments. If institute staff members visited universities and gave guest lectures, they would soon become well known locally, and would receive invitations to stay on campus. A cost-sharing basis could be used, whereby the host university would cover part of the salary of a visitor, the institute paying the rest.

By a judicious combination of new teaching materials, research grants to resident faculty, visiting staff, and student fellowship awards—augmenting cash awards to area centers by the NDEA under Title VI—it would be possible for a national institute to contribute much to the strengthening of a few carefully selected *centers of excellence.* The selection of these centers would evolve gradually, and would appear to be much less arbitrary than the much feared designation of major centers under the revised NDEA formula, as now projected. It should also be much more attractive to Congress than the plan now contemplated by the IIS.

e. *Seminars.* The present context for making decisions about university-based centers of excellence hampers cooperation because scholars at leading institutions often meet one another in a context of scarcity where each is bidding for a maximal slice out of a finite pie—he feels he is playing a zero-sum game. The general ambience of the area studies associations normally militates strongly in this direction.

Although it has some counter-productive features, the Southeast Asia Development Advisory Group (SEADAG) has pioneered in establishing international substantive or problem oriented seminars which can generate *countervailing forces* against the zero-sum psychology. Let us suppose that a national institute for Asian studies would sponsor seminars, some on a single country, and others on problems that are widespread in Asia, using a comparative approach. Participation would be based on substantive competence rather than institutional affiliation. The institute could enable seminar participants to undertake field research, or to visit the site of the national institute as scholars in residence.

If this were done, the seminar participants would soon come to feel a much stronger *identification* with the national (and international) interest in the problems under study than they would with the particular universities at which they happened to be employed. They would then become more detached in thinking about the institutional interests of their universities and more committed to a professional concern for the field or subject, viewed nationally (or internationally).

I believe, therefore, that a program of general seminars on selected problems within the general scope of an institute's program (e.g., Asian studies) would not only contribute significantly to the enhancement of knowledge and competence on the chosen topics, but it would make it much easier to allocate scarce resources among competing universities in a rational manner.

5. STRATEGIC IMPLICATIONS

Whether or not the Mink bill can be enacted, or other legislation designed to implement the ideas put forth above can be introduced, it is important to consider the organizational means by which these proposals might be successfully carried out. Certainly a wide range of private and public agencies need to be considered—and consulted—in this connection. I do not propose to discuss this topic in the present memo, however. I believe we should first direct attention to the major substantive issues. Once some degree of consensus has been reached on these issues, we ought then to be able to move ahead to consider the practical and strategic problems that would be involved in any effort to implement these ideas. Clearly the most promising general ideas could be completely nullified by inept execution. The greatest care must therefore be given to the strategic, the organizational and financial, the administrative, aspects of the questions raised by the Mink bill. However, that should be done at a later stage—meanwhile let us focus our attention on the central issues of principle as they have been raised above.

HAWAII INTERNATIONAL
SERVICES AGENCY
Honolulu, Hawaii, February 9, 1972.

H.R. 6168: A BILL TO AMEND THE INTERNATIONAL EDUCATION ACT OF 1968

The Asian Studies Institute can be a vital resource for the nation as a whole as well as Hawaii. By virtue of its mid-Pacific location, Hawaii can, and must, play a critical role in this country's trans-Pacific relations which with each passing day are of more strategic importance to United States interests. Suffice to mention here the emerging relationships we can already forecast between the U.S. and Japan and the U.S. and China.

The Asian Studies Institute must first be an institution for the needs of the U.S. But, in view of the shape of the "Pacific Community of Nations" to come within the decade, the Institute must also serve the Pacific region at large if it is to fulfill its objectives adequately. We therefore urge that funding for the Institute be no less than as proposed in H.R. 6168 if not more.

This Agency has been intimately involved in assisting Hawaii's myriad international programs and interests since 1967. It is our candid assessment that this State has the necessary human, social and cultural resources to insure the success of the Asian Studies Institute. Conversely, it is our evaluation that the Asian Studies Institute has long been needed in Hawaii to complement the State's existing resources vis-a-vis Asia and the Pacific.

[From Bridge Magazine, June 1972]

CHINA THROUGH THE BOOB TUBE

An audio tone at 6:30 P.M. in San Francisco (7:30 in Denver, 8:30 in Minneapolis, 9:30 in New York) signalled America's first live look at the People's Republic of China. On all three major television networks, viewers could see, in the crisp, clear Peking morning, the landing of the Presidential plane.

As the "Spirit of '76," the converted jetliner carrying President Nixon, approached the airport, the chief American security official radioed to an agent on the ground: "What about the crowd?" Answer: "There is no crowd." The Secret Service agent aboard the plane asked: "Did you say 'no crowd'?" Answer: "That is affirmative—no crowd."

From the beginning, both the news media and the Government of the United States viewed the People's Republic of China with blinders on. As the mission entered its later stages, the media, especially broadcast journalists, remained incapable of shaking off their parochial preconceptions and ignorance of China.

Television coverage of the President's journey to Peking was modelled after coverage of the first spectacular moon shot. And television newsmen, particularly the superstar anchormen, were genuinely appalled at the lack of excitement at the Peking airport that first day.

The dismay persisted as the Presidential party drove through Tien An Men Square during the lunch hour with a sprinkling of people paying little or no attention to the motorcade. The newsmen had probably expected cymbals, clanging gongs and huge red banners fluttering in the wind.

When it became apparent that such symbols of Chinese hospitality were not forthcoming, John Chancellor of the National Broadcasting Corporation pontificated: "This is a cool, correct, cordial reception."

At the airport, television pool cameras lingered along the long line of the People's Liberation Army honor guard. And, as the President moved along the line of officials that were there to greet him, the television cameras dutifully followed.

However, the broadcasters were able to provide very little interpretation of the significance of what they were witnessing. Indeed, they had difficulty identifying the various Chinese leaders.

When the President was being driven into Peking, the networks showed file film of Chinese people joyously welcoming other world leaders in previous months, including Emperor Haile Selassie of Ethiopia, again accentuating what they felt was the "cool" nature of the Chinese reception.

While President Nixon did not receive the tumultuous welcome that the networks had expected, his reception was by no means a snub by the Chinese. The presence of an honor guard at the airport was in itself significant, since this was a practice that had been abolished during the Cultural Revolution. Again, in spite of the fact that the United Stated did not have diplomatic relations with the Government in Peking, and indeed continued to maintain support for the Nationalists on Taiwan, the presence of almost the entire government at the airport was a signal honor.

The only high officials who were not present were those who held only party, not government, posts, accentuating the fact that this was a government-to-government visit.

The television networks trapped themselves into covering the expected masses of people jamming Tien An Men Square and missed the small, subtle gestures that mean so much in dealing with the Chinese.

Although television cameras eventually ventured into the late-night restaurants, the department stores, the communes and the schools of Peking, the broadcast newsmen were handicapped by their naivete. A few reporters expressed shock and became depressed after observing the regimentation at a Peking secondary school.

Some correspondents, among them Eric Sevareid of the Columbia Broadcasting System and John Chancellor of NBC, complained that the Chinese were exercising tight control of news, restricting their freedom to deviate from official guided tours.

Despite brief forays into the unknown, the broadcast newsmen stuck in the main to their usual formulas for reporting grand occasions. Attempts at an analysis of Chinese intentions slipped into vague, vacuous generalizations.

Perhaps the problem lay with the networks, which refused to assign even one specialist in Chinese language, history or culture to the trip. If the news media had assigned reporters familiar with the history and culture of the Chinese people, possibly including Chinese-American reporters, who would have had the advantage of low visibility and language facility, Americans back home would have had a better understanding of the very special treatment that was accorded President Nixon. Reporters with the proper background and training could have interpreted the small, subtle, seemingly insignificant gestures that suggest the true feelings of the Chinese.

Undoubtedly, the experience in China has been educational for the television and press correspondents. Unfortunately, their education has been at the expense of the American public, which was denied the knowledgeable analysis and in-depth understanding that the situation cried out for. Instead, the media sent reporters who, in Dan Rather's words, felt they had "landed on some kind of moon," who had no knowledge of Chinese history, culture, politics or language.

And, as Bernard Kalb pointed out, "we had eight days for 800 million people, that's a day for every 100 million Chinese." Since the networks, news agencies and press were undoubtedly aware of the magnitude of their task, it must be considered a dereliction of duty on their part to send people who were patently unqualified.

Aside from the ignorance that was on daily display on television screens during the Nixon trip, too many American reporters found it impossible to keep their racist attitudes under control.

Walter Cronkite, in speaking about acupuncture sets that include little dolls and needles, could not restrain a remark that likened this to voodooism. Mr. Cronkite even repeated the ancient cliche by saying of the Chinese, "Everyone looks exactly alike."

Even Eric Sevareid, who is supposed to be something of a philosopher, is not blameless. He described an encounter between "a very lovely, tall blonde girl with the White House staff," who dressed "in a very feminine way, very blonde," and some Chinese women. According to him this woman said the Chinese were "challenging" and "defiant" as they looked at her. Mr. Sevareid is probably unaware that his cultural prejudice is showing. He implies that "tall and blonde" are two universal attributes of beauty, attributes that Chinese women lack since none are blonde and few are tall.

But the media, which wore self-imposed blinders while in China, appear unaware of the egg on their face. Charles Collingwood, in a debriefing session, said to the CBS correspondents: "Well, in spite of all the inhibitions, all of you did a great job." Mr. Collingwood went further by saying his colleagues are "accredited, genuine, certified experts on China." One hopes that he at least said that with his tongue in his cheek.

X-RAY TECHNOLOGISTS AND X-RAY EQUIPMENT SHOULD BE REGULATED AND LICENSED

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I am introducing a bill today, H.R. 16429, the Radiation Health and Safety Act of 1972, which has as its purpose the reduction of unnecessary radiation exposure that patients and technologists are subjected to. This bill has previously been introduced as S426 by Senator JENNINGS RANDOLPH.

This bill would require the Secretary of Health, Education, and Welfare to issue and promulgate criteria and minimum standards for the training of radiologic technologists for the accreditation standards of schools training radiologic technologists and for the licensure of radiologic technologists. These standards would be the national minimums required in these fields. The bill would make it unlawful for an educational institution not accredited to conduct such training and would make it unlawful for an individual to apply radiation to a patient for diagnosis or treatment unless he or she is a licensed medical practitioner, a licensed dentist, a licensed dental hygienist, or a licensed radiologic technologist or technologist-in-training.

It is a fact that 95 percent of the radiation to which the American public is exposed comes from medical X-ray exposure. Only 2 percent of man's exposure comes from the nuclear power industry which is stringently regulated while strangely medical and dental X-ray usage is not in most cases subject to control. K. Z. Morgan, Director of the Health Physics Division of the Oak Ridge National Laboratory has stated that medical X-ray exposure could be reduced to less than 10 percent of its present level by the use of better equipment and improved techniques, while at the same time improving X-ray diagnosis.

There is no evidence to suggest that there is a radiation exposure level so low that the probability of damage is zero. Indeed, there are those who believe that the present American population and generations yet unborn are and will be indicated that present medical X-ray diation exposure, all of which is cumulative in its effect. The International Commission on Radiological Protection has indicated that present medical X-ray exposure is causing 3,000 deaths per year in the United States from various forms of cancer and genetic damage and may be introducing each year into future generations approximately 30,000 deaths from malignancies, stillbirths, and spontaneous abortions because of the genetic damage.

The most sophisticated and modern of X-ray systems cannot protect the health and safety of patients unless the technicians operating the equipment are adequately trained and licensed. In some States, we license car mechanics and TV mechanics. Does it not make sense that we license X-ray technicians who handle the most sophisticated of equipment—equipment which can provide extended life if properly used or shorten life when improperly used.

I have heretofore introduced H.R. 15732 which amends the Public Health Service Act to direct the Secretary of Health, Education, and Welfare to prescribe radiation standards for, and conduct regular inspections of, diagnostic and other X-ray systems. That bill would require that existing X-ray machines meet new performance standards mandated by Public Law 90–602 required of all newly manufactured machines. Further, the bill requires annual inspections of existing equipment to ensure their continued operation at the stated performance level. Equally important in the bill is a provision requiring doctors and technicians to cover patients with protective shielding so as to make certain that the patient's body is not subjected to more X-radiation than is absolutely necessary.

I have asked experts in the field to comment on the need for both bills. This matter is so grave involving so many lives that I feel compelled to set forth the extended correspondence both pro and con I have had, so that our colleagues and those interested in this matter will be aware of the support for this necessary legislation.

The text of the bills and correspondence follows:

H.R. 16429

A bill to amend the Public Health Services Act to provide for the protection of the public health from unnecessary medical exposure to ionizing radiation

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That this Act may be cited as the "Radiation Health and Safety Act of 1972."

SEC. 2. It is the purpose of this Act to—

(a) assure adequate training of radiologic technologists by providing for the establishment of criteria and minimum standards for accrediting schools for the training of radiologic technologists;

(b) provide for the establishment of criteria and minimum standards for the licensure of radiologic technologists; and

(c) provide for State adoption and administration of programs for the accreditation of education institutions training radiologic technologists and programs for the licensure of radiologic technologists with authority for the Secretary to take necessary action in the absence of State action.

SEC. 3. Title III of the Public Health Service Act is amended by inserting after part F, subpart 3, section 360F, the following:

"Subpart 4.—Radiologic Technologists

"DECLARATION OF FURPOSE

"SEC. 360G. The Congress finds and declares—

"(a) that, consistent with the recommendations of the National Council on Radiation Protection and the International Commission on Radiological Protection and Measurement, it is in the national interest and in the interest of public health and safety to minimize exposures of the public to ionizing radiation from all sources;

"(b) while the operation and use of radiologic equipment and methods is essential in modern medicine, even the most advanced equipment and methods will not adequately protect the health and safety of patients subjected to radiologic diagnosis or therapy and the health and safety of radiologic technologists applying radiologic equipment and methods, including their progeny, unless these technologists are fully trained and qualified in the operation of such equipment or the application of such methods so as to avoid unnecessary exposure to ionizing radiation;

"(c) that it is in the overall public health interest to have an adequate and continuing supply of well-trained radiologic technologists and that any person who operated radiologic equipment or employs radiologic methods should be required to demonstrate competence by training, experience, and examination; and

"(d) that the protection of the public health and safety from unnecessary exposure to ionizing radiation from all sources is the primary responsibility of State and local government, within minimum criteria and standards established by the Federal Government."

"RECOMMEND CRITERIA AND STANDARDS"

"SEC. 360H. (a) The Secretary shall, as soon as practicable, but not later than one year after the date of enactment of the Radiation Health and Safety Act of 1971, develop and issue to the States criteria and minimum standards for the accreditation of education institutions conducting programs for the training of radiologic technologists and minimum criteria for education institutions conducting programs for the training of medical and dental practitioners. Such criteria and standards shall be published in the Federal Register.

"(b) The Secretary shall, as soon as practicable, but not later than one year after the date of enactment of the Radiation Health and Safety Act of 1971, develop and issue to the States criteria and minimum standards for licensure of radiologic technologists, and such other advice and assistance as he deems necessary. Such criteria and minimum standards may distinguish between radiation technologists including medical and dental technologists, radiation therapy technologists, nuclear medicine technologists, and photoroentgen technicians, and technologists-in-training. Such criteria and standards shall be published in the Federal Register.

"(c) In establishing criteria and minimum standards under this section the Secretary shall consult with State health departments and appropriate professional organizations including, but not limited to, the American Society of Radiologic Technologists, the American Registry of Radiologic technologists, the American Dental Association, the American Academy of Dental Radiology, the American Medical Association, the American College of Radiology, the American Osteopathic College of Radiology, the American Osteopathic Association, the American Board of Health Physicists, the American Association of Physicists in Medicine, and the Health Physics Society.

"(d) The Secretary shall give to the States such other advice and assistance as will encourage them to enact and enforce appropriate laws and standards. Such advice and assistance may include model laws and training curriculums, and training aids.

"(e) The Secretary shall, from time to time, revise the criteria and standards material issued by him pursuant to this section.

"STATE ACCREDITATION AND LICENSURE

"SEC. 360I. (a) The training and licensure of radiologic technologists who intend to apply ionizing radiation to humans for diagnostic or therapeutic purposes in any State or States shall be subject to the provisions of this section.

"(b) Consistent with the policy declaration of this subpart, State and local government shall be encouraged to minimize exposures of the public to ionizing radiation from all sources and shall not be displaced by Federal action except as otherwise provided under subsection (c) or (d).

"(c) After receiving any criteria and minimum standards issued pursuant to section 360H for the accreditation of educational institutions conducting programs for the training of radiologic technologists, the Governor of a State may file with the Secretary a letter of intent that such State will within two years of the issuance of the criteria and minimum standards adopt as a minimum, the standards for accreditation of educational institutions conducting programs for the training of radiologic technologists issued by the Secretary. If, after two years, a Governor fails to adopt such standards, or is unable to adopt such standards or more stringent standards, the minimum standards issued by the Secretary for the accreditation of educational institutions for the training of radiologic technologists shall become the standards in such State. If the Secretary determines that such State standards are consistent with the criteria and minimum standards issued pursuant to section 360H; that an adequate means of enforcement by State action is provided; and that the State program is consistent with the purposes of the subpart, such State standards shall be the standards applicable to such State.

"(d) Upon application of a Governor, the Secretary may grant an extension under subsection (c) for not more than two years if after review the Secretary determines that good faith efforts have been made by the State and reasonable assurance is provided that an effective program to implement the purposes of this Act will be provided by the State within the period of the extension.

"(e) After receiving any criteria and minimum standards issued pursuant to section 360H for the licensure of radiologic technologists or technologists-in-training, the Governor of a State may file a letter of intent that such State will within two years of the issuance of the criteria and minimum standards adopt as a minimum the standards for licensure of radiologic technologists and technologists-in-training issued by the Secretary. If, after two years, a Governor fails to adopt such standards, or is unable to adopt such standards or more stringent standards, the minimum standards issued by the Secretary for licensure of radiologist technologists shall become the standards in such State. If the Secretary determines that such State standards are consistent with the criteria and minimum standards issued pursuant to section 360H; that an adequate means of enforcement by State action is provided; and that the State program is consistent with the purposes of this Act, such State standards shall be the standards applicable to such State.

"(f) For the purpose of implementing licensure of radiologic technologists, the Secretary may certify appropriate State or professional licensing organizations.

"(g) The Secretary may make grants to States in an amount up to two-thirds of the first year and one-third of the second year costs of planning, developing, or establishing programs to carry out the purposes of the Radiation Health and Safety Act of 1972.

"(h) The Secretary may make grants to educational institutions under section 314 (E) of this Act (Partnership for Health Amendments of 1967, Public Law 90–174) or the Health Manpower Act of 1968 (Public Law 90–490) to carry out the purposes of the Radiation Health and Safety Act of 1972.

"(i) The Secretary shall annually review programs established pursuant to this subpart and shall suspend the effectiveness of any standards or regulations as to accreditation or as to licensure with respect to any State or certified professional licensing organization when he determines that administration of such State program is inconsistent with the purposes of this subpart or revised criteria and minimum standards issued pursuant to subsection 360H(e)."

"PROHIBITED ACTS

"SEC. 360J. (a) Upon the effective date of regulations and standards established pursuant to the subpart, it shall be unlawful for any institution to conduct a program for training of radiologic technologists unless accredited by the Secretary or a State program approved by the Secretary, or for any individual to apply ionizing radiation to humans for diagnostic or therapeutic purposes unless he is a licensed medical practitioner, a licensed dentist, a licensed dental hygienist, holds a valid radiologic technologist's license, or holds a valid license issued according to the standards promulgated under Section 360H(b) and is under the immediate supervision of a radiologist or licensed radiologic technologist.

"(b) The district courts of the United States shall have jurisdiction, for cause shown, to restrain violations of this section. The district courts of the United States shall also have jurisdiction in accordance with section 1355 of title 28 of the United States Code to enforce the provisions of this section.

"(c) (1) Any violation of this subsection by the owner or operator of an educational institution, or an individual applying radiation to human beings for diagnostic or therapeutic purposes shall be subject to a civil penalty of not more than $1,000. For the purpose of this section, any such violation shall be with respect to each act or omission made unlawful by this section.

"(2) Any such civil penalty may on application be remitted or mitigated by the Secretary. In determining the amount of such penalty, or whether it should be remitted or mitigated and in what amount, the appropriateness of such penalty to the size of the business of the person charged and the gravity of the violation shall be considered. The amount of such penalty, when finally determined, may be deducted from any sums owed by the United States to the person charged.

"(d) Actions under this section may be brought in the district court of the United States for the district wherein any act or omission or transaction constituting the violation occurred, or in such court for the district where the defendant is found or transacts business, and process in such cases may be served in any other district of which the defendant is an inhabitant or wherever the defendant may be found.

"(e) Nothing in his subpart shall be construed as requiring the Secretary to report for the institution of proceedings minor violations of this subpart whenever he believes that the public interest will be adequately served by a suitable written notice or warning.

"(f) The remedies provided for in this section shall be in addition to and not in substitution for any other remedies provided by law.

"ANNUAL REPORT

"SEC. 360K. The Secretary shall submit to Congress an annual report evaluating the implementation of this part by the Federal Government and State and local governments, and containing such recommendations for legislation as he considers appropriate."

H.R. 15732

A bill to amend the Public Health Service Act to direct the Secretary of Health, Education, and Welfare to prescribe radiation standards for, and conduct regular inspections of, diagnostic and other X-ray systems

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "X-Ray System Radiation Control Act of 1972".

PERFORMANCE STANDARDS FOR X-RAY SYSTEMS

SEC. 2. Section 358(a) of the Public Health Service Act is amended by adding at the end thereof the following new paragraph:

"(6)(A) Whenever a performance standard for a class of X-ray system is prescribed under authority of this section (hereinafter in this paragraph referred to as 'primary standard'), the Secretary shall by regulation prescribe a performance standard applicable to systems of such class manufactured, assembled, or imported prior to the effective date of such standard, which regulations shall except as provided in subparagraph (B) (i) take effect not more than thirty months after the enactment of the primary standard (subsection (c) of this section notwithstanding), and (ii) specify the same level of performance as the primary standard.

"(B) The Secretary may by regulation exempt for a limited period any X-ray system manufactured before the effective date of a primary standard from any requirement of a standard required to be prescribed under subparagraph (A), if he determines that the public health benefits from compliance with such requirement are outweighed by (i) the costs of bringing such system into compliance therewith or (ii) the detriment to public health resulting from discontinuing the use of the system. If he exempts any system from any requirement of such standard, he may prescribe an interim requirement with which such system must comply during the period of such exemption."

REQUIREMENTS APPLICABLE TO USE OF X-RAY SYSTEMS

SEC. 3. (a) Subpart 3 of part F of title III of the Public Health Service Act is amended by inserting after section 359 the following new section:

"SPECIAL PROVISIONS APPLICABLE TO X-RAY SYSTEMS

"SEC. 359A. (a)(1) Commencing not more than thirty months after the date of enactment of the X-ray Systems Radiation Control Act of 1972, the Secretary shall carry out a program of inspection of all X-ray systems to which standards under section 358 (a) apply and which are in actual use in the United States, for the purpose of determining whether such systems comply with applicable standards prescribed in accordance with section 358(a) of this Act. Each X-ray system shall be inspected at such intervals as the Secretary may prescribe by regulation, but not less frequently than once every twelve months.

"(2) Within thirty days after inspection of any X-ray system under paragraph (1), the Secretary shall notify the person who has control over such system whether such system complies with applicable standards prescribed in accordance with section 358(a).

"(3) The Secretary may—

"(A) to the extent provided by regulations, delegate to any agency of a State (or political subdivision thereof) any authority of the Secretary under this subsection, and section 360A(g), or

"(B) may contract with any State (or political subdivision) to carry out any of his functions under this subsection.

"(b) The Secretary shall prescribe regulations requiring, in appropriate cases, the use of protective shields for persons undergoing diagnosis or treatment by means of an X-ray system.

"(c)(1)(A) Subject to subparagraph (B), no person may operate any X-ray system more than twenty-four months after the person who controls such system has been notified under subsection (a)(2) that such system does not comply with applicable standards prescribed in accordance with section 358(a), unless the person who controls such system satisfies the Secretary that such system complies with such standards.

"(B) The Secretary may prescribe a period for compliance under subparagraph (A) shorter than twenty-four months in any case in which he determines such shorter period is necessary to protect the public health from an imminent hazard.

"(2) No person may operate any X-ray system in violation of regulations prescribed under subsection (b).

"(d)(1) Effective thirty months after the date of enactment of the X-ray System Radiation Control Act of 1972, no person may sell or otherwise transfer any X-ray system to which standards under section 358(a) apply unless prior to such sale or transfer he notifies the Secretary and receives the Secretary's authorization to sell or transfer such system. The Secretary may not authorize such sale or transfer unless he is satisfied that such system complies with applicable standards under section 358(a).

"(2) The Secretary may by regulation exempt a manufacturer from the requirements of this subsection to the extent he determines is consistent with the purposes of this part."

CONFORMING AMENDMENTS

SEC. 4. (a) Section 355 of the Public Health Service Act is amended by striking out "and" at the end of paragraph (4); striking out the period at the end of paragraph (5) and inserting in lieu thereof "; and "; and by adding at the end of such section the following new paragraph:

"(6) the term 'X-ray system' means an assemblage of components for the controlled production of X-rays for irradiation of any part of the human body for purposes of diagnosis, visualization, or treatment."

(b)(1) Subsection (a) of section 356 of such Act is amended by inserting after paragraph (1) the following new paragraph:

"(2) pursuant to section 359A, establishing an inspection program for X-ray systems in actual use and procedures for shielding of patients;".

(2) Such subsection is further amended by redesignating paragraphs (2) through (6) as paragraphs (3) through (7), respectively.

(c) Section 358(a)(1) is amended by inserting before the semicolon at the end of subparagraph (C) the following: "(subject to the requirements of paragraph (6))."

(d) The second sentence of section 360(a) of such Act is amended by striking out "samples of electronic products" and inserting in lieu thereof "any electronic product (or, if regulations of the Secretary of Health, Education, and Welfare so provide, samples of such products)".

(e) Section 360A of such Act is amended by adding at the end thereof the following new subsection:

"(g) For purposes of carrying out section 359A, officers or employees duly designated by the Secretary, upon presenting appropriate credentials and a written notice to the owner, operator, or agent in charge, are authorized (1) to enter, at reasonable times, any establishment in which an X-ray system is located, and (2) to inspect, at reasonable times and within reasonable limits and in a reasonable manner, such system. Each such inspection shall be commenced and completed with reasonable promptness."

(f) Section 360B(a) of such Act is amended by striking out "or" at the end of paragraph (4); by striking out the period at the end of paragraph (5) and inserting in lieu thereof "; or"; and by adding at the end thereof the following new paragraph:

"(6) for any person to violate any provision of section 359A (c) or (d)."

(g) Section 360F of such Act is amended by inserting after the first sentence the following: "Notwithstanding the first sentence of this section, a State (or political subdivision thereof) may establish or continue in effect a standard which is applicable to an aspect of performance of an X-ray system (or component thereof) and which the Secretary determines is more stringent than a standard prescribed pursuant to section 358 which is applicable to the same aspect of performance."

STATE OF ALASKA,
DEPARTMENT OF HEALTH
AND SOCIAL SERVICES,
Juneau, Alaska, July 26, 1972.

Re H.R. 15732 and S. 426.

Hon. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR MR. KOCH: We have reviewed these two bills concerning the surveillance of radiological equipment and its use.

Past surveys in our State have shown a definite need for tighter control in this area. While our Department of Environmental Conservation is responsible for radiation within the State, we still feel additional medical controls are needed. In reviewing the bills we favor the provisions in HR 15732 for State programs, training and licensure.

I thank you for the opportunity to review these bills and support the passage of an X-ray surveillance bill.

Sincerely,

FREDERICK MCGINNIS,
Commissioner.

STATE OF CALIFORNIA,
Berkeley, Calif., July 24, 1972.

Hon. EDWARD I. KOCH,
House of Representatives,
Longworth Office Building, Washington, D.C.

DEAR CONGRESSMAN KOCH: We are pleased to respond to your July 10, 1972 letter requesting our comments on H.R. 15732 and S. 426. What follows represents the best professional judgment of our staff; it should not be construed as an official position of the State of California.

H.R. 15732

The intent of this bill appears to be: a) to require "retrofitting" of existing medical and dental X-ray equipment to bring it up to standards for new equipment; b) to require, by or through HEW, periodic inspection of such equipment; and c) to mandate regulations for protective shields for patients subjected to X-ray.

These are all laudable objectives, but we would foresee considerable practical difficulties in implementation. There are hundreds—if not thousands—of different kinds of X-ray machines in current use. Many, possibly most, of these machines could not be altered to meet all of the standards for new equipment. Moreover, it would require a massive effort to determine for which machines it would be practicable to require alteration to meet which of the standards.

It might be preferable to alter the language on page 2 of the bill to require the Secretary to make a feasibility study and then to impose requirements as determined to be feasible.

We would be concerned with two aspects of Section 359A. First, no cognizance is given to the fact that a number of states, including California, have excellent ongoing programs of inspecting X-ray equipment. We would strongly urge that the Secretary be *required* to recognize any existing state program which met certain standards.

We also question the feasibility of annual inspections. This would require a large increase in resources in say a state like ours, where we believe that we already have an excellent program. We do not consider this to be justified on a cost/benefit basis, in comparison with other urgent public health needs.

As regards subsection (d)(1), page 5, a paperwork nightmare might well be created by having *every* sale or transfer of an X-ray machine in this country be approved in Washington. The benefit to be gained does not justify this, in our opinion.

One or more lines appear to have been inadvertently omitted after line 22, page 5.

S. 426

We are fully supportive of the purposes of this bill. In fact, we would have only one problem with it, albeit a rather substantive one. It fails to recognize that several states, including California, have ongoing programs for certifying X-ray technologists and schools for their training which are at least equivalent to those that would be provided by S. 426. It would be most unfortunate if, because of some perhaps small differences from the criteria developed by the Secretary, these programs could not continue to be recognized. We would recommend a "grandfathering" provision for existing state programs to be effective unless and until the Secretary determined one or more to be substantially deficient. Also, if a state program were found to be substantially deficient, reasonable time should be permitted to make appropriate corrections.

We appreciate the opportunity to comment on these two bills.

Sincerely,

William J. Kurtz,
Director of Public Health (Acting).

Dover, Dela., *July 24, 1972.*

Hon. Edward I. Koch,
Longworth Office Building,
Washington, D.C.

Dear Sir: The following are comments on H.R. 15732 and S. 426 relating to radiation protection:

1. H.R. 15732—The Division of Public Health (DPH) and the Authority on Radiation Protection (ARP) concur with the purpose of this act. ARP adopted regulations (July 22, 1969) requiring the registration of all x-ray equipment and establishing standards for equipment. The Radiation Control program of the DPH has a goal of inspection of all x-ray equipment in the State.

We feel that under Sec. 359A. a(3) the Department of Health, Education and Welfare and the Delaware Division of Public Health should cooperate and coordinate their activities so that duplication of effort does not occur.

2. S. 346—DPH and ARP also concur with the conclusion that the most advanced equipment will not protect the health and safety of patients unless the technicians who operate it are fully trained and certified. To this end ARP has been working with representatives of the University of Delaware and with experienced persons in the radiologic field to develop and install a training course at the University which would assist operators of x-ray equipment in obtaining certification. The Authority has also been studying and discussing the pamphlet "Model Legislation for Users of Ionizing Radiation in the Healing Arts" in order to determine the proper procedure for certification of persons in Delaware.

We are extremely interested in providing an acceptable, workable certification program at the State level. The regional office of the Bureau of Radiological Health has been assisting us in this regard. We shall appreciate the continuation of such assistance so that our efforts are coordinated with the Federal effort to provide protection of the public against unnecesary radiation.

Very truly yours,

Edward F. Gliwa, M.D.,
Acting Director,
Division of Public Health.

Jacksonville, Fla., *July 28, 1972.*

Hon. Edward I. Koch,
House of Representatives,
Washington, D.C.

Dear Mr. Koch: Thank you for the opportunity to comment on H.R. 15732 and S. 426.

X-RAY SYSTEM RADIATION CONTROL ACT OF 1972.—H.R. 15732

Florida's x-ray regulations require many of the provisions outlined in H.R. 15732. We feel in general that this is a good Bill and should be supported. The following comments are made for your consideration in improving the Bill:

1. The inspection program by DHEW would require considerable financial support to the States if contracts are made with the States to perform annual inspections. At the moment, Florida has approximately 12,000 x-ray units. The overall cost in Florida for annual x-ray inspections would amount to approximately $250,000 per year.

2. The provision on page 5 concerning the sale or transfer of x-ray machines appears to be too restrictive. We feel that a provision should be made to permit sale or transfer to an authorized person or user without DHEW approval.

RADIATION HEALTH AND SAFETY ACT OF 1971.—S. 426

Senate Bill, S. 426, introduced by Senator Jennings Randolph is an excellent Bill and we encourage its introduction on the House side. The Florida Society of Radiologic Technologists has made several efforts in the past to introduce a similar Bill in the Florida Legislature. We feel that the training of most x-ray technicians has been neglected. Established training requirements and licensure of these technicians will do much toward reducing the radiation exposure to the general public.

The implementation of the provisions of this Bill would also require additional financial burdens and should be supported by the Federal Government.

We appreciate this opportunity to comment.

Sincerely,

Wilson T. Sowder, M.D.,
Director, Division of Health.

State of Hawaii,
Honolulu, Hawaii, July 26, 1972.

Hon. Edward I. Koch,
House of Representatives,
Washington, D.C.

Dear Congressman Koch: Thank you for sending us a copy of S. 426 which relates to diagnostic X-radiation.

We have been concerned with the proper use of medical x-ray during examinations so that both the operator and the patient may be protected. One of the principal methods utilized in this control is the licensing of x-ray technicians. We are in full accord with the purpose of S. 426 which will assure adequate training for x-ray technicians, provide for the licensing of these technicians, and provide the states with Federal guidelines in both the training and licensures.

We appreciate your effort in this endeavor and will provide you with any assistance we can give you.

Very sincerely,

Walter B. Quisenberry, M.D.,
Director of Health.

State of Idaho,
Boise, Idaho, July 17, 1972.

Re S. 426 and H.R. 15732.
Representative Edward I. Koch,
House of Representatives,
Washington, D.C.

Dear Mr. Koch: Thank you for your letter of July 10, 1972 and the opportunity to comment upon two bills (S. 426 and H.R. 15732) relating to the use of radiation in the healing arts.

S. 426 "Radiologic Technicians" * Having reviewed this particular bill once again, I am in full support of its enactment as long overdue legislation. I do, however, offer the following suggested changes and supporting comments:

Refer: Section 360(G)(c). "(c) that it is in the overall public health interest to have an adequate and continuing supply of well-trained radiologic *technologists* and, *working under the supervision of persons licensed to practice a healing art,* that *such persons* who *operate* radiologic equipment or *employ* radiologic methods should be required to demonstrate competence by training, experience and examination; and"

Comment: The above suggested change clarifies the subsection to such extent that (a) radiologic technologists must work under the supervision of licensed healing art practitioners and (b) by striking the wording "any person", essentially exempts "persons licensed to practice a healing art" from the provisions of the act.

Refer: Section 3601(a). "(a) The training and licensure of radiologic technologists who intend, *under the supervision of a person licensed to practice a healing art,* to apply ionizing radiation to humans for diagnostic or therapeutic purposes in any State or States shall be subject to the provisions of this section."

Comment: Suggested addition to this subsection clarifies the idea that a radiologic technologist can only apply ionizing radiation to humans when working under the supervision of a person licensed to practice a healing art.

Refer: Section 360J(a). "(a) . . . or for any individual to apply ionizing radiation to humans for diagnostic or therapeutic purposes unless he is *a person licensed to practice a healing art and authorized to use such radiation, or when acting under the supervision of such a person,* is a licensed dental hygienist, holds a valid radiologic technologist's license . . . etc."

Comment: The above suggested change (a) permits persons licensed in aspects of the healing art other than medicine or dentistry to utilize ionizing radiation in their practices, if so authorized (e.g., chiropractors and podiatrists) and (b) again clarifies that use of ionizing radiation on humans by a radiologic technologist shall be only under the supervision of a licensed practitioner.

H.R. 15732 "X-Ray System Radiation Control Act of 1972." The provisions of this bill appear fairly applicable to complementing the x-ray system standard-setting authority of the federal government. The following comments are offered in its regard:

Refer: Section 359A.(a) (1), line 9, page 3. ". . . the Secretary shall carry out a program of inspection of [all] X-Ray systems to which standards under section 358(a) apply and which are in actual use in the United States, . . ."

Comment: Suggest the deletion of the word "all" in that it implies that *all* x-ray systems of a certain type that are in actual use will be inspected by the federal government, where I feel it is intended that a respectable sampling of a certain system is meant and not actually *all*.

Refer: Section 359A.(a) (1), line 16, page 3. ". . . inspected at such intervals as the Secretary may prescribe by regulation, but not less frequently than once every twelve months."

Comment: It is unclear to me the rationale for doing an inspection of the same system every twelve months.

Refer: Section 359A.(c) (1) (A), line 10, page 4. "(c) (1) (A) Subject to [subparagraph (B),] *section 358(a) (6) (B)*. . . ."

Comment: Suggest change of wording to refer directly back to section 358 for clarification reasons.

General Comments re H.R. 15732. It could be that the bill is truly unclear to me, however, it appears that (a) the federal government is about to enter an area that involves "consumers" who use x-ray systems; (b) the regulation of x-ray systems used by "consumers" has traditionally rested with the state governments and (c) it was my impression that "performance standards for x-ray systems" was to be directed to the manufacturer of such equipment only.

Thanks for the opportunity to review and comment upon this pending legislation.

Sincerely,

Michael Christie,
Chief, Radiation Control Section,
Environmental Protection Division.

Department of Public Health,
Springfield, Ill., August 2, 1972.

Hon. Edward I. Koch,
U.S. House of Representatives, Longworth Office Building, Washington, D.C.

Dear Congressman Koch: Thank you for providing us with copies of the two bills, S. 426 and H.R. 15732 that you are going to submit to the House of Representatives. In that you asked for comments concerning each bill, we respectfully submit the following:

S. 426—Our Department has had an opportunity to review this bill which was sponsored by Senator Randolph in the United States Senate. We have also had the opportunity to study Senator Randolph's earlier bill S. 3973 which contained basically the same information. We believe that in substance, this bill would assist our society in reducing unnecessary radiation exposure from the improper use of x-ray machines. In an era where so much concern is being expressed about the effect of radiation on the general population, it seems natural that people using x-ray equipment should demonstrate their competency in performing their tasks. Most states require registration of many professions, yet the x-ray technician, a signficant public health influence, has not been required to be licensed.

Two points, however, do come to mind during the review of S. 426. This bill was expanded over the provisions of the earlier bill to include minimum criteria for educational institutions training medical practitioners. Our interpretation leads us to believe that the term medical practitioner might not include other health professionals such as dentists, podiatrists and chiropractors. Our second comment concerns appropriations necessary to carry out these licensure programs. If this bill is enacted, most states would probably attempt to establish their own programs under the guidelines of this bill. State finances being as they are, however, would probably prohibit the participation necessary to adequately carry out these programs.

H.R. 15732—Although we were unable to make a full review of this bill within the allotted time, we found two areas on which we wish to comment. The provision for the annual inspection of all x-ray systems would be impossible with existing personnel working in the field of radiological health. Our program in Illinois does maintain a very active inspection program, however, we are only able to accomplish 4,400 machine inspections per year. If we were required to perform annual inspections of the over 11,000 machines in our state, a considerable increase of headcount would have to occur.

Our second comment pertains to the lack of appropriations in this bill to assist states in performing the required inspections. Many states presently receive some federal funding to assist in carrying out radiological health programs. This funding would be inadequate if a state was to sign an agreement with the Secretary to inspect all x-ray machines on an annual basis. Additional appropriations would then be necessary.

Thank you for allowing us to comment on these two proposed bills. If we can be of further assistance, we will be most happy to cooperate with you.

Yours sincerely,

Franklin D. Yoder, M.D.,
Director of Public Health.

Kansas State Department of Health,
Topeka, Kans., July 19, 1972.

Hon. Edward I. Koch,
House of Representatives,
Washington, D.C.

Dear Mr. Koch: The attached memorandum has been prepared by Mr. R. C. Will, Chief of the Radiation Control Section, in response to your request of July 10, 1972.

I trust this datum will be of help to you.

Sincerely,

E. D. Lyman, M.D., M.P.H.,
Director of Health.

July 18, 1972.

To: Edwin D. Lyman, M.D., M.P.H., State Health Director.
From: Robert C. Will, Chief, Radiation Control Section.
Subject: Information Pertinent to Representative Edward I. Koch's Letter of July 10, 1972 Concerning HR 15732 and S 426, Relating to Diagnostic X-Radiation.

It is our understanding that the latter, S 426, has the approval of the American Society of Radiologic Technologists. Furthermore, the Kansas Society of Radiologic Technologists, in conjunction with the Kansas Medical Association and the Kansas Chapter of the American College of Radiology, have prepared a certification or licensure bill which is in consonance with S 426 for submission to the Legislature at the appropriate time. Subject bill is patterned after the California act and, while it has not been determined that the Board of Health is to be the administrative agency, this Department sees no conflict with the Kansas Radiation Protection Regulations.

Relative to HR 15732, on the presumption that the Secretary of Health, Education and Welfare would delegate certain authorities under the Act to the State of Kansas under contract or agreement, the Department would be faced with a manpower problem. Currently, there are in excess of 2,500 x-radiation facilities in the State, with more than 3,500 x-ray devices in those 2,500 installations.

Of the six full-time professional and technical staff members, three are assigned to the Radiation Producing Devices Registration and Control Unit. One professional man working one-third time for the Radiation Control Section, maintains the registration program at the headquarters office. The devices are re-registered on a two year cycle. To enable the three field men to inspect so large a number of devices in an extensive geographical area such as is Kansas, it has been necessary to set up a priority system.

Modified where necessary due to individual characteristics or problems, medical installations are assigned priority one and are inspected annually. Chiropractic and Podiatric installations are priority two, inspected biannually; Veterinary, Dental and Industrial or Research, priority three, inspected on a three year cycle. In certain cases, where the record indicates a high degree of proficiency, excellent equipment, and a verified effective radiation protection program, installations in the priority three group may be reclassified to a priority four, inspected on a four to five year cycle.

Even with a priority system of this type, each of the three inspectors must visit roughly 300 installations annually, write up the results of his findings, prepare forms for submission to such agencies as the Food and Drug Administration's Bureau of Radiological Health, the Medicare Program, and the Department's Hospital Facilities Section.

Thus, it is estimated that it would require no less than 12 field men to perform annual inspections of the type required by the increased scope (inclusion of performance standards) HR 15732.

Secondly, the requirement that existing equipment meet the new performance standards after thirty months from the time of enactment of HR 15732 would result in further limiting the dwindling medical care afforded the remote rural population of a state such as Kansas. At present, the Department carefully weighs the benefit-vs.-risk factors when considering exemptions for older equipment in many of these small communities. Were we to adhere to the letter of the law, the physician would be forced to scrap equipment which he uses infrequently, and then generally only in extreme emergencies or on geriatric patients to whom the exposure problem is of less concern. The problem seldom exists in larger communities, but even in these, there is the question of the economics of enforcing performance standards which would require costly replacement of parts or alterations to equipment in lieu of enforcing regulations which are designed specifically to protect the patient, the user, and the public.

As new equipment is manufactured, the performance standards can readily be applied by the Department of Health, Education and Welfare at the point of origin, relieving the now overburdened State Radiation Control Section Programs of this highly technical engineering problem.

Lastly, the Kansas Radiation Protection Regulations state, in relation to protective shielding, that "The useful beam shall be restricted to the area of clinical interest. Particular attention shall be paid to protection of genetic tissue either by beam orientation and collimation or the use of gonadal shielding." In practice, the Department requires that both beam orientation and collimation and the use of gonadal shielding be employed.

In view of the fact that the radiation protection regulations of the fifty states and many local political subdivisions are, for all practical purposes, identical, it is felt that sufficient authority to accomplish the intent of the amendment to the PHS Act as set forth in HR 15732 now exists.

COMMONWEALTH OF KENTUCKY,
DEPARTMENT OF HEALTH,
Frankfort, July 26, 1972.

Hon. EDWARD I. KOCH,
Congress of the United States, House of Representatives, Washington, D.C.

DEAR SIR: As you requested in your letter of July 10, 1972, we have reviewed House Bill 15732 and Senate Bill 426, relating to diagnostic x-radiation.

We concur with the overall intent of House Bill 15732, and feel that such legislation is needed to assure that x-ray systems meet performance standards established for the reduction of unnecessary radiation exposure to the population. There are some areas which we would recommend being amended:

(1) Section 358 (a)(6)(B)(i) should be deleted. It is our opinion that the time schedule for the implementation of prescribed standards should be left to the judgment of the Secretary.

(2) Section 359A. (a)(1) should be amended to remove the following wording: "but not less frequently than once every twelve months." We believe that annual inspections of all x-ray equipment coming under this Act would be a monumental task and an unwise use of funds and personnel, therefore the frequency of inspections should be determined by the Secretary.

(3) Section 359A. (a)(3)(B) should be amended to substitute the word "Act" for the word "subsection."

(4) Section 359A. (b) containing the statement relative to protective shields should be deleted. It is our opinion that references to the need for protective shields should be stated in regulations and not be expressed in the basic law.

(5) Section 359A. (d)(1) should read, "effective thirty days after the date of enactment of the X-Ray System Radiation Control Act of 1972, no person may sell or otherwise transfer any x-ray system to which standards under Section 358(a) apply unless such system complies with applicable standards under Section 358(a)." We believe that specific authorization from the Secretary for the sale and transfer of each system coming under the Act would again be a monumental task and an unwise expenditure. We believe the Secretary should establish a system for assurance of compliance under this Section.

We agree completely with the general intent of Senate Bill 426. We specifically like the wording used in Section 360H. (a) regarding teaching institutions. For us to support this Bill the following recommendations should be considered:

(1) The Bill does not provide definitions for radiologic technologists, photo-roentgen technicians, radiation therapy technologists, dental technologists or nuclear medicine technologists.

(2) There is a need and a place for operators of x-ray systems which are used as single purpose units only. Specifically, facilities which only perform chest radiography, extremity radiography, or other single type projections should have operators specifically trained for these projections, but not necessarily trained for multi-type projections. It appears that Senate Bill 426 does not provide for this limited type operator.

(3) Section 360I. (c) and (e) is too restrictive to equally apply to all states. The individual problem of each state differ considerably in respect to the use of x-ray systems. It is very difficult to see how one federal standard can be applied uniformly, without causing many hardships, and possibly even reducing or stopping needed x-ray services in certain areas.

(4) Section 360I. (e) omits four of the six classifications identified in Section 360H. (b).

(5) Section 360J. (a) does not identify all professions, which under many state statutes, are permitted to use x-ray systems. It appears that this section of the Bill is in conflict with the authority granted by state legislation.

Thank you for the opportunity to review and comment on these two Bills. I trust these comments provide adequate indications of our views.

Sincerely yours,
WILLIAM P. MCELWAIN, M.D.,
Commissioner of Health.

LOUISIANA STATE DEPARTMENT
OF HEALTH,
New Orleans, La., July 26, 1972.

Hon. EDWARD I. KOCH,
Congress of the United States, House of Representatives, Washington, D.C. 20515

DEAR MR. KOCH: Many thanks for sending us a preview copy each of H.R. Bill 15732 and S. 426 relating to diagnostic x-radiation.

It is obvious to those of us working in the public health field that many persons are being exposed to unnecessary radiation, especially X-ray, by unqualified persons. We are also aware of defective X-ray equipment being operated within the State without suitable safeguards for protection of personnel and other persons, many of whom are unware of the exposure.

In view of the situation, the correction of which is extremely important for the health of the people of this State, I believe that appropriate legislation is necessary. In Louisiana, registration of X-ray equipment is required and is quite specific regarding radiation protection. The problem is essentially one of inspection and enforcement of regulations for which there is insufficient funding. I believe a Federal grant program in this area would be helpful to up-grade the State program.

We are also of the opinion that Senate Bill 426 providing licensure and minimum standards of training of X-ray technicians will be very helpful for improving the quality of X-ray services provided.

Sincerely yours,
RAMSON K. VIDRINE, M.D.,
State Health Officer.

STATE OF MARYLAND,
DEPARTMENT OF HEALTH AND
MENTAL HYGIENE,
Baltimore, Md., July 20, 1972.

Hon. EDWARD I. KOCH,
Congress of the United States, House of Representatives, 1134 Longworth Office Building, Washington, D.C. 20515

Dear Congressman KOCH:

In response to your letter of July 10, 1972 concerning the two bills, H.R. 15732 and S. 426 which relate to diagnostic x-radiation, I believe that each bill reflects on an important problem area and that such legislation is warranted.

The following comments on the two bills are offered for your consideration:

H.R. 15732

1. Most of the States have existing radiation laws and regulations and radiation protection programs. I believe that most all of these programs include inspections of x-ray equipment against the recommendations of the National Council on Radiation Protection and Measurements or some comparable organization. I would hope that the on-going programs of the States will be given recognition and that any new work expected of the States under this bill will be compatible with that already underway.

2. The bill prescribes inspection not less frequently than every 12 months. After the original inspection of the equipment, I question the need for a re-inspection as often as every 12 months.

3. On Page 5 in lines 22 and 23 there is an error where apparently some words have been left out.

S. 426

1. Some of the States already have laws requiring licensing of medical x-ray users including the professional people as well as technologists. I am not convinced that licensing of professionals is the best solution, but some improvement is needed in this area.

(a) The training requirements of the law perhaps should be expanded to include the medical and dental schools.

(b) Educational institutions for the training of other health professionals, i.e., schools of chiropractic, podiatry and even veterinarian schools might also be included.

2. Certain minimum training in radiation techniques and safety might also be required for professionals now in practice. Opportunities for the professional to take short refresher courses or correspondence courses in radiation protection should be provided. After a reasonable length of time, completion of certain training could be made mandatory in order to register x-ray equipment.

I hope that you will find merit in these suggestions, and appreciate your consideration in affording us the opportunity to comment on these bills.

Sincerely yours,
NEIL SOLOMON, M.D., Ph. D.,
Secretary of Health and Mental Hygiene.

STATE OF MICHIGAN,
DEPARTMENT OF PUBLIC HEALTH,
Lansing, Mich., July 21, 1972.

Representative EDWARD I. KOCH,
House of Representatives, Congress of the United States, Washington, D.C. 20515

DEAR REPRESENTATIVE KOCH: This letter is in response to your request for comments on H.R. 15732 and S. 426.

Amendment of the Public Health Service Act to provide for inspection of x-ray systems as called for in H.B. 15732 would be redundant to state radiation control inspection of x-ray systems. Michigan has had a program of this type since 1958 as have many other progressive states including New York. By moving the basic statutory control from state to federal government a large source of revenue to carry out the radiation control through registration or license fees would be deleted. Radiation control for public health would be set back by the passage of this act in my opinion based on 25 years of experience in this field.

With a few modifications S. 426 is the type of legislation which would be helpful to control the human element of public radiation exposure. The following changes are suggested for that bill.

Subpart 4.—Radiologic Technicians:

Change to TECHNOLOGISTS to be consistent with wording of remaining bill.

Section 360G (c):

Change "technician" to "technologist."

Section 360H (b) line 9:

". . . . medical and dental technologists, . . . " add ". . . . medical and dental (radiologic) technologists, ..." because the term medical technologist designates a B.A. college degree in medical techology which has nothing to do with radiation.

"Limited X-Ray Technician" should also be included to provide for licensure to perform chest and extremity radiography in private medical offices without need for knowledge of more elaborate procedures. This provision is needed for physicians in rural areas that are many miles removed from the nearest hospital.

Section 3601:

Should be Section 360I

Section 360I (c) line 15:

". . . . or more stringent standards," Some provision for reciprocity between states should be included based upon minimum standards to allow mobility of the work force between states.

Section 360I **(f)**:

". . . . appropriate state or professional licensing organizations." The state agency currently conducting an active radiological health program should be designated as the licensing agency.

Section 360I (g):

If the states are required to implement such a program for "national radiation safety and health" these costs should be 100% federally funded!

Section 360J (a):

". . . . under the immediate supervision of a radiologist or licensed R.T." would severely limit x-ray practice in private medical offices and also diagnostic nuclear medicine. Many such offices employ only one such individual and would not have a radiologist or R.T. for immediate supervision. Perhaps this is the intent?

Thank you for the opportunity to comment on this legislation. If I can be of further assistance, please do not hesitate to contact me again.

Sincerely,

Bureau of Industrial Health
and Air Pollution Control
D. E. Van Farowe, *Chief, Division of Radiological Health.*

State of Minnesota,
Department of Health,
Minneapolis, July 27, 1972.

Hon. Edward I. Koch,
1134 Longworth Office Building,
Washington, D.C. 20515

Dear Sir: In reply to your recent request we offer the following comments concerning the two Bills which relate to diagnostic x-radiation, H.R. 15732 and S. 426. It is common knowledge that medical exposure constitutes a large portion of the radiation exposure to the public. It is also well known that this exposure can be significantly reduced with proper equipment and operating techniques. For this reason it seems necessary that regulations covering these areas should exist and be enforced.

H.R. 15732 proposes to charge the Secretary of Health, Education, and Welfare to establish standards for x-ray systems. We agree that standards of this nature should be promulgated and enforced. In Section 3 of the Bill reference is made to a program of inspection whereby each x-ray system is inspected at least once every twelve months. While this is a desirable frequency, the task is formidable. The funds required to conduct such a program would be astronomical. Either some allocations of funds or alteration in frequency of inspection should be considered. Another paragraph of Section 3((c)(1)(a)) allows for up to 24 months for compliance unless otherwise specified for a particular unit. That would seem inconsistent with the requirement for an inspection every 12 months. In Section 3 a portion of Section 539 A(d) speaks to the sale and/or transfer of an x-ray system. It is not clear if this includes transfers such as relocation of offices by a practitioner and sale from one practitioner to another. If all such transactions are included, again this will require excessive amounts of time if normal functioning is not to be impeded.

Section 4(a)(6) defines "x-ray system" in terms of human body irradiation. Is this designed to exclude x-ray systems used by veterinarians? Inasmuch as operators of these systems are exposed it would seem as if they ought also to be included.

While the concept of regulating the performance and sale or transfer of all diagnostic x-ray systems is sound, the regulation must at the same time be enforceable. It would be more effective to have a less stringent regulation that is enforced than a more stringent one that due to lack of time or money cannot be enforced.

S. 426 proposes to establish minimum standards and criteria for radiologic technologists education and training. It is vital for radiation protection that radiologic technologists be capable of operating radiologic equipment and employ radiologic methods with minimum exposure to the patient. We note that Section 3(c) of the Bill has reference to "any person who operates radiologic equipment". In some smaller clinics and private offices persons with no formal training in the field operate x-ray units. Although the Bill does not speak to this directly, is this an attempt to eliminate these untrained operators? We feel that such operators should be eliminated and the Bill should be so worded to make the intent clear. Some states have attempted to include licensed practitioners among those required to demonstrate competence through some type of examination. It should be made clear whether or not this group is among those required to demonstrate competence to obtain certification.

No provision has been written into the Bill for continued education and training for radiologic technologists. With rapid development of new machines and techniques it is vital that technologists find a method through which they can continually update themselves.

These comments are offered that they may be of assistance in your introduction of these Bills. We favor this legislation, but feel that some modification will make it more acceptable and effective. Please advise us if we can be of further assistance.

Yours very truly.

Warren R. Lawson, M.D.,
Secretary and Executive Officer.

Mississippi State Board of Health,
Jackson, Miss., July 28, 1972.

Hon. Edward I. Koch,
The House of Representatives,
Washington, D.C. 20515

Dear Sir: Your letter dated July 10, 1972, has been forwarded to me and I have been asked to submit my comments on the two bills, H.R. 15732 and S. 426.

Section 359A.(a)(1), Bill H.R. 15732, states "Each x-ray system shall be inspected at such intervals . . . , but not less frequently than once every twelve months." The federal government does not have enough qualified personnel to inspect all x-ray equipment this frequently. Some type of contract or agreement, including financial support, would be necessary for competent inspectors in the states to conduct such inspections. I would object to federal inspectors performing x-ray inspections in our state and certainly there would be some disagreement in state regulations vs federal regulations.

The issue in Bill S. 426 is good; however, I do not feel the federal government could properly enforce the regulations and standards issued pursuant to Section 360H., and certainly I object to the federal control of curriculum in educational installations. I feel the licensure of radiologic technologists can be controlled in the states by a professional licensing organization.

Please advise if I can furnish you with additional information concerning either of the above two bills.

Sincerely,

Eddie S. Fuente,
Supervisor, Radiological Health Unit.

The Division of Health of Missouri,
Jefferson City, Mo., July 12, 1972.

Hon. Edward I. Koch,
Representative, 17th District Congress of the United States House of Representatives,
Washington, D.C. 20515

Dear Representative Koch: This will acknowledge receipt of your letter dated July 10, 1972, transmitting copies of H.R. 15732 and S. 426. As requested, I have had the bills reviewed by the staff of the Missouri Division of Health and submit the following comments for your consideration.

It is rather difficult to evaluate House Resolution 15732 without a copy of the Act that this Bill amends. We believe that the Bill will establish standards for x-ray systems and will require an inspection of these systems at least every twelve months This responsibility for inspection can be delegated by contract to any state or political subdivision. We have not been able to determine if this contract provision applies in states that have established standards more stringent than the Federal standards.

The Missouri Radiation Law requires the registration of all radiation producing devices and materials that are not controlled or licensed by the Federal Government. As authorized by this law, the Division of Health registers x-ray machines and naturally occuring radioactive elements but does not register radioactive isotopes licensed and distributed by the Federal Atomic Energy Commission.

That portion of H.R. 15732 that establishes standards for x-ray systems apparently would, to some extent, duplicate and possibly pre-empt the Missouri Law I believe that the present Missouri Law is adequate to protect the public from excess radiation. H.R. 15732 would be of potential benefit to the public in those states that do not regulate radiation producing devices and would also be of benefit to the equipment manufacturers through the development of uniform standards.

S. 426 establishes national standards for the training and licensure of radiologic technologists. The State of Missouri does not presently license or regulate this profession, although bills to accomplish this have been introduced during several of the past legislative sessions. The application of ionizing radiation to humans for diagnostic or therapeutic purposes is performed in Missouri under the direction of licensed practitioners of the healing arts. It is also understood that establishments and institutions where this service is performed have adopted minimum standards for training and experience of radiologic technologists. I am not aware of any instances in the State of Missouri where the lack of state training standards and state licensure has resulted in harm to the public.

I appreciate this opportunity to submit comments on these two bills.

Sincerely,

Herbert R. Domke, M.D.,
Director.

State of Montana,
State Department of Health
and Environmental Sciences,
Helena, Mont., July 21, 1972.

Representative Edward I. Koch,
1134 Longworth Office Building,
Washington, D.C.

Dear Representative Koch: I have recently reviewed Senate Bill 426, "Radiation Health and Safety Act of 1971" and House of Representatives Bill 15732 "X-Ray System Radiation Control Act of 1972" and feel that the following comments are in order:

A. *Senate Bill 426:*

Section 360H(b)

It is essential that a provision be made to license a technician who would be qualified to perform limited radiographic procedures such as radiographing extremities and chests. In many rural areas it is impossible to acquire a fully qualified radiologic technologist. If no provision is made in this act to license technicians to perform limited radiographic procedures, the quality of medical care in many rural areas will deteriorate and emergency medical care will become almost non-existent.

Section 360I(g)

A provision should be made in this section for the Secretary to provide funding on a continuing basis to assist states in maintaining a licensing program for radiologic technologists.

Section 360J(a)

I was unable to find a definition of the term "licensed medical practitioner." Does this term apply only to physicians, or is it meant to include all members of the healing arts?

This Act does not make any provision to ensure that the "licensed medical practitioner" is competent to perform radiologic diagnostic or therapeutic procedures. "Licensed medical practitioners" should also be licensed to *perform* radiologic procedures. If a "licensed medical practitioner" is not licensed to perform radiologic procedures, he should be restricted to only *prescribing* such procedures.

B. *House Bill 15732:*

It is difficult to comprehend the chaos that results if a bill such as this should be enacted.

Federal agencies should restrict their activities in such areas as establishing performance standards to the control of manufacturers of new equipment.

Federal agencies should not be involved in the inspection of x-ray equipment in locations other than federal institutions and this function could be better handled if contracted to the States.

For any agency to inspect each x-ray unit at a frequency of not less than once each twelve months is absurd. Possibly fluoroscopes and therapeutic equipment should be inspected this often, but there is no need to inspect radiographic equipment at this frequency.

* * * * *

I urge you to support Senate Bill 426 with modifications such as I have suggested, and I also urge you to take all possible action to defeat House Bill 15732.

Respectfully,
LARRY L. LLOYD,
Health Physicist,
Radiological Health Program.

THE CITY OF NEW YORK,
COMMISSIONER OF HEALTH,
July 28, 1972.

Hon. EDWARD I. KOCH,
U.S. Representative, 17th Congressional District, New York, 1134 Longworth Office Building, Washington, D.C. 20515.

DEAR REPRESENTATIVE KOCH: Thank you for the opportunity to forward comments for Joseph A. Cimino, M.D., M.P.H., Commissioner of Health, on your bill, H.R. 15732, and on Senator Jennings Randolph's bill, S. 426, which you are considering introducing in the House of Representatives. Doctor Cimino is away on vacation.

I have the following comments on S. 426:

1) This is an excellent bill and, in my opinion, worthy of your support, since it will stimulate the uniform, safe regulation of radiologic technology throughout the United States.

2) I would prefer to amend Section 360 H(a) by changing line 11 to read, "medical and dental practitioners. Such criteria and". Dentists should also receive adequate training as part of their regular professional school curriculum.

3) I recommend changing the second sentence of Section 360H(b), starting on line 8, to read, "Such criteria and minimum standards may distinguish between various types of radiologic technologists, including medical and dental technologists, radiation therapy technologists, nuclear medicine technologists, photo-roentgen technicians and technologists-in-training."

4) In 360H(e), line 2, I believe the second word was intended to be "revise" instead of "devise".

5) I would like to reword line 17 of Section 360I(e) to read, "State and the Secretary shall take the necessary steps to assure enforcement of his minimum standards for training and licensure. If the Secretary determines that such".

6) I would prefer to either include a definition of "medical practitioner" to specify all members of the healing arts who are to be allowed the use of x-ray, by virtue of their professional licenses, or to authorize the Secretary to develop such a definition.

7) It is felt that section 360 J(a) should be reworded, beginning with line 10, to read, "he is a licensed medical practitioner, licensed dentist, a licensed dental hygienist, or holds a valid license issued according to the standards promulgated under Section 360 H(b) and is under the supervision of a radiologist or licensed radiologic technologist."

I have the following comments on H.R. 15732:

1) It is recommended that "twelve" be changed to "twenty-four" in the last line of Section 359A(a)(1). Annual inspections for all installations are not warranted.

2) The provisions of Section 359A(d)(1) are too burdensome, even though 395A(d)(2) could lighten the effect. It would be preferable to change 359A(d)(1) to merely require notification of sale or transfer of all X-ray systems, new or used. Section 359A(d)(2) could then be deleted.

3) This bill is considered very progressive since it establishes uniform minimum standards for equipment existing prior to the issuance of any primary standard, allows for selective local use of more stringent standards and also permits the continuance of State and Local X-ray regulatory programs.

I believe the above comments, if incorporated, will clarify and improve features of these bills and also produce greater flexibility in application. Thank you again for this opportunity to comment.

Sincerely yours,
ALAN J. GIBBS,
Acting Commissioner

STATE OF NEW YORK,
DEPARTMENT OF HEALTH,
Albany, N.Y., July 19, 1972.

Hon. EDWARD I. KOCH,
Congress of the United States, House of Representatives, 1134 Longworth Office Building, Washington, D.C.

DEAR REPRESENTATIVE KOCH: Following are our comments on the two bills, S. 426 and H.R. 15732 which you sent to us.

1. *S. 426*

This is generally a good bill. However, we do have one reservation concerning the fact that the two-year standard of education for all radiologic technologists is not specifically incorporated into the law. As you may know, there has been some talk in favor of the fragmentation of radiologic technology through special and limited licenses (for example, the Model Bill prepared by the Bureau of Radiological Health-F.D.A.). Since the "Model Bill" appears to have strong support in the Bureau of Radiological Health Services-F.D.A., which most likely would administer S. 426, after enactment, we believe some steps should be taken to safeguard against fragmentation of radiologic technology into an unlimited number of categories.

The way 360 H (b) is presently written, including the terms "radiation therapy technologists, nuclear medicine technologists, photo-roentgen technician", it may be possible by its implication, to limit categorization to the terms listed. However, we believe it is important to safeguard against this by incorporating appropriate wording into the law itself. The following is a suggested rewording of Section 360 H (a) and Section 360 H (b) in which the additional words to be inserted are underlined.

"The Secretary shall, as soon as practicable, but not later than one year after the date of enactment of the Radiation Health and Safety Act of 1971, develop and issue to the States criteria and minimum standards for the accreditation of education institutions conducting programs *of at least two years in duration* for the training of *medical* radiologic technologists and minimum criteria for education institutions conducting programs for the training of medical practitioners. Such criteria and standards shall be published in the Federal Register.

"(b) The Secretary shall, as soon as practicable, (sic) but not later than one year after the date of enactment of the Radiation Health and Safety Act of 1971, develop and issue to the States criteria and minimum standards for licensure of radiologic technologists, and such other advice and assistance as he deems necessary. Such criteria and minimum standards may distinguish between medical and dental *radiologic* technologists, radiation therapy technologists, nuclear medicine technologists, and technologists-in-training, *but shall establish no other categories for licensure of medical radiologic technologists with less than two years of training except for persons already in the practice of radiologic technology in a State prior to the adoption of such standards.* Such criteria and standards shall be published in the Federal Register."

While we would be more comfortable with a "tighter" bill amended along the lines suggested above, we believe S.426 deserves endorsement, since it is in the public interest.

2. *H.R. 15732*

The one basic objection we have to this bill is that it is slanted towards federal, rather than state, control. At the present time, about 47 states, including New York, have radiological health programs. Probably, many of these are not as effective as they should be, which may be an adequate justification for federal legislation in this area. However, assuring the safety of medical x-ray equipment should remain basically a state, rather than federal, responsibility.

Perhaps a change could be made that would make this bill acceptable to all states with Radiological Health Programs. The federal legislation should only prescribe minimum standards, and then give the individual states the right to establish their own programs meeting or surpassing these standards. This would apply for both the equipment itself and for the frequency of inspection of the equipment.

While we believe that x-ray-producing equipment in a hospital x-ray department should be inspected at least once every 12 months, some other types need not be inspected as often. For example, it would probably be adequate for a dental unit in a dentists office to be inspected only once every two or three years.

The federal legislation should only provide for direct inspection by HEW in those cases where states do not or cannot establish their own programs which meet the minimum federal standards. Instead of the bill having a "may" provision to delegate federal authority to states or contract with states, it should have a "shall" provision giving states primary authority and relegating residual authority to the federal government only in those cases where states do not meet their obligations under the law. (This would be simlar to S. 426 in its approach to this problem.)

We would also suggest that Section 359A (b) be expanded to read as follows (added parts underlined):

(b) The Secretary shall prescribe regulations requiring the use of *adequate filtration, beam collimating devices,* and protective shields (including gonadal shields in appropriate cases) for persons undergoing diagnosis or treatment by means of an x-ray system.

We also suggest that this bill be expanded to include the following additional paragraphs under Section 359A:

"The Secretary shall prescribe regulations requiring the use of mechanical restraining devices and restricting the situations under which persons other than the patient undergoing diagnosis or treatment by means of an x-ray system may be directly exposed to the primary x-ray beam."

"The Secretary shall prescribe regulations setting forth minimal standards for the operation of x-ray systems in the areas of: structural shielding, personnel monitoring, periodic radiation surveys, permissible occupational dose, permissible dose in uncontrolled areas, the posting of radiation signs, the wearing of protective gloves and protective aprons, restrictions on persons present in an x-ray room during x-ray exposure, the reporting of radiation accidents, and the designation of radiation safety officers."

"The Secretary shall prescribe regulations requiring that manufacturers of x-ray film used in x-ray systems designate on the film package the speed of the film and any such other information as may be required."

If you need any further information or you feel we can help in any way, please do not hesitate to contact us.

Sincerely yours,

HOWARD L. GOLDMAN,
Director.

STATE OF NORTH CAROLINA, DEPARTMENT OF HUMAN RESOURCES,
STATE BOARD OF HEALTH,
Raleigh, N.C., July 27, 1972.

Hon. EDWARD I. KOCH,
1134 Longworth Office Building,
Washington, D.C. 20515

DEAR REPRESENTATIVE KOCH: In response to your July 10, 1972 request I have enclosed detailed comments regarding H.R. 15732. North Carolina has an aggressive radiation control program and I am pleased that our comments have been sought in this matter.

H.R. 15732 would completely undermine the effectiveness of our ongoing program if the result is Federal inspectors enforcing Federal Regulations in North Carolina X-ray facilities. However, I am confident that unnecessary diagnostic x-radiation can be significantly reduced in North Carolina if adequate funds are attached to this bill and full authority is delegated to implement this important program at the State level.

You also requested my views regarding Senator Randolph's bill designated as S. 426. This is a program that I feel could be more effectively implemented at the Federal level. Although the intent of this bill is sound, I am not confident that licensure of technicians is the most economical approach. In addition, it would seem inconsistent to require a specified level of training and experience for radiologic technologists and exempt other operations of diagnostic X-ray equipment from licensure. At the present time the North Carolina State Board of Health could not accept the responsibility to implement this bill without full financial support from the Federal government.

Thank you for providing this opportunity to share my views with you.

Sincerely yours,

JACOB KOOMEN, M.D., M.P.H.,
State Health Director.

COMMENTS REGARDING H.R. 15732
JULY 26, 1972

1. Sec. 2. Section 358(a)(6)(A) appears to provide a workable solution to orderly upgrade existing x-ray systems. It is essential to provide the flexibility to exempt certain systems from particular standards and also have the capability to prescribe interim requirements.

2. The twelve month inspection frequency required by Section 359A(a)(1) is not efficient use of manpower or expenditures. In North Carolina the cost of providing a compliance program on this basis would require an additional one million dollars per year. A variety of inspection programs could be developed which are as effective and extremely more economical than repeated annual inspections of every x-ray system. For example, priority inspection systems based upon strong intelligence data may be a more reasonable approach. Statistical sampling techniques for certain classes of x-ray systems may be effectively used to determine their adherence to standards and identify problem areas. For these reasons the inspection periodicity should be left to the discretion of the Secretary.

3. The efficacy of using protective shields during particular diagnostic radiographic examinations as called for by Section 359(A)(b) is well documented. However, it is virtually impossible to regulate certain standards of medical practice. In this instance a clinical evaluation is necessary to determine when such shields are appropriate and how they should be used. This is an area where effective educational programs should be implemented in lieu of regulatory programs. To be consistent with this philosophy the definition of "x-ray systems" should be modified to delete reference to protective shields.

4. The compliance procedures contained within Section 359(A)(c)(1) do not provide the Secretary with adequate flexibility. The twenty-four month period is indeed a realistic upper time limit for achieving compliance, but it is cumbersome to require the Secretary to demonstrate an imminent hazard before prescribing a shorter period. It would also appear to conflict with the twelve month inspection frequency. The compliance procedures should be left to the discretion of the Secretary with only minimal guidance provided by the Bill.

5. Section 359(A)(d)(1) requires that each person who offers to sell, or transfer an x-ray system must receive prior approval from the Secretary. A more effective mechanism may be to require licensure of these persons. Such licensure would ensure that these persons understand the requirements of the standards and have the training, experience and equipment to properly assemble, install and service their particular x-ray systems. Development of such legislation is currently under consideration in North Carolina.

6. It would be unfair to require nationwide x-ray system manufacturers to produce equipment that would fully meet different standards for different states. It would appear that these manufacturers would have to design all equipment to meet the most stringent standards. For this reason the current language of "identical to" in Section 360F of the act should remain.

7. The most crucial requirement for fulfilling the intent of this proposed Bill is to provide adequate appropriations. If the state should accept the full delegation of authority provided by this Bill without receiving accompanying funds to establish the needed comprehensive programs to discharge these duties no real progress can be made. The only effective approach is at the state or local level. An estimated thirty-million dollars per year would be needed for all states to adequately fulfill the intent of this Bill if the comments listed above are incorporated.

STATE OF OHIO,
DEPARTMENT OF HEALTH,
July 24, 1972.

Hon. EDWARD I. KOCH,
1134 Longworth Office Building,
Washington, D.C. 20515

DEAR CONGRESSMAN KOCH: Thank you for your letter of July 10. We appreciate the opportunity of commenting on H.R. 15732 and S. 426.

I have asked Mr. James C. Wynd, my engineer in charge of the radiological unit of the Ohio Department of Health, to express his views and I am enclosing a copy of a memorandum which he has just written to me. I have reviewed his remarks and the legislation and find that I am in accord with his views.

I'm sure Mr. Wynd would be responsive to any further questions your staff might have regarding suggestions for amendments of which we are not aware.

We are pleased to support both H.R. 15732 and S. 426 with the proposed modifications.

Best wishes.

Sincerely yours,

JOHN W. CASHMAN, M.D.,
Director of Health.

Enclosure.

OHIO DEPARTMENT OF HEALTH MEMORANDUM
JULY 19, 1972.

To: John W. Cashman, Director of Health.
From: James C. Wynd, Engineer-in-Charge, Radiological Health Unit.
Subject: Comments on H.R. 15732 and S. 426 as per letter from Representative Koch of New York.

H.R. 15732

H.R. 15732 would accomplish the following with respect to diagnostic and therapeutic X-ray systems:

1. Extend to existing X-ray systems, within 30 months, the performance standards established by HEW for *newly manufactured* X-ray systems under the present authority of Section 358 of the Public Health Service Act.

2. Make mandatory the periodic inspection (every 12 months) of all X-ray systems, either by HEW or, subject to approval of the Secretary of HEW and possibly through contracts, by State or local agencies.

3. Require the Secretary of HEW to prescribe regulations requiring, as appropriate, the use of protective shields (presumably gonadal) for persons undergoing X-ray diagnosis or treatment.

Proposed performance standards for new *diagnostic* X-ray systems have been published in the Federal Register. The standards will apply to diagnostic X-ray systems and components manufactured and/or assembled after one year following publication of the performance standards in their final form (which should occur any time now).

To bring existing diagnostic X-ray systems up to these standards would in many cases be quite expensive and in some cases impracticable or impossible. Nevertheless, this requirement together with the requirement for patient shielding should effect a significant reduction in patient X-ray dose. A side benefit would be to stimulate the present trend toward discontinuing X-ray facilities in physicians' private offices with referral of patients to more efficient hospital radiology departments for X-ray diagnosis and treatment.

My only serious criticism of the bill is the stipulation in proposed Sec. 359A. (a)(1), lines 6 through 16, page 3, making it mandatory that all X-ray systems be inspected at intervals not less frequent than once every twelve months. Such an inspection program would require a huge staff or skilled personnel and for many types of X-ray systems would be entirely unwarranted once it has been determined that the systems comply with the applicable standards. If a mandatory inspection frequency is to be stipulated in the bill, it should be more like 24 or 36 months, especially in view of the fact that the bill permits operation of an X-ray system for up to 24 months without modification after the owner has been notified that the system does not comply with standards.

S. 426

S. 426 would require the Secretary of HEW to establish and issue to the States minimum radiation health and safety criteria and standards for:

(1) Accreditation of educational institutions conducting programs for the training of radiologic technologists or medical practitioners.

(2) Licensure of radiological technologists. If, within 2 years of the issuance of such criteria and standards (or within such extension of this period as the Secretary may grant) a State fails to adopt these or more stringent standards, the Federal standards and requirements will apply in that State.

S. 426 also authorizes the Secretary of HEW to:

(1) Make grants to the States for up to two-thirds of the first year and one-third of the second year costs of planning, developing or establishing programs to carry out the purposes of the Radiation Health and Safety Act of *1971*.

(2) Make grants to educational institutions to carry out the purposes of the Radiation Health and Safety Act of *1971*.

The bill would make it unlawful for an educational institution not accredited by the Secretary or a State to conduct training of radiologic technologists and would make it unawful for an individual to apply radiation to a human for diagnosis or therapy unless he is a licensed medical practitioner, a licensed dentist, a licensed dental hygienist, or a licensed radiologic technologist (or technologist-in-training).

The staff of the Radiological Health Unit have long observed that it does little good to require X-ray equipment to meet safety standards if the persons using the equipment are not trained and motivated to use it properly. S. 426 should result in marked improvement in the operation of X-ray equipment for diagnosis and therapy with minimal exposure to patient and operator and the requirements of S. 426 must be considered reasonable in view of the fact that several States have already voluntarily adopted such requirements.

Recommendation

It is recommended that the Ohio Department of Health indicate support for both H.R. 15732 and S. 426 with the suggestion that the provision in H.R. 15732 for *mandatory* periodic inspection of all X-ray systems be deleted or that the mandatory inspection frequency be changed from at least once every twelve months to at least once every 36 months. The Secretary of HEW could specify more frequent inspections for X-ray systems assigned a high inspection priority.

Oklahoma State Department of Health,
Oklahoma City, Okla., July 25, 1972.

Hon. Edward Koch,
Member, House of Representatives, 1134 Longworth Office Building, Washington, D.C. 20515

Dear Mr. Koch: This is in response to your letter of July 10 in which you asked us to comment on two bills dealing with diagnostic x-ray usage. Please excuse the delay in replying; however, it was necessary for my staff to review the bills.

Enclosed are copies of the comments prepared by members of the radiation control program. In short, they feel that there is no overwhelming need for the passage of either H.R. 15732 or S. 426.

We are sorry that we could not agree more fully with your point of view ir regard to these bills. However, we hope that our detailed comments will be of assistance to you in preparing legislation which will work to further reduce the unnecessary exposure received by the public from the use of diagnostic x-ray.

Please let us know if we can be of further assistance to you.

Very truly yours,
R. LeRoy Carpenter, M.D.
Commissioner of Health.

Oklahoma State
Department of Health,
Oklahoma City, Okla., July 24, 1972.

MEMORANDUM

To: Loyd F. Pummill.
From: Dale McHard.
Subject: H.R. 15732, "X-Ray System Control Act of 1972"

H.R. 15732 by Mr. Koch of New York State is similar to H.R. 12265, H.R. 12416, and H.R. 12963 which we have reviewed previously.

These bills are all intended to modify the provisions of P.L. 90–602, "The Radiation Control for Health and Safety Act of 1968," to provide for federal standards and inspections applicable to x-ray machines and associated equipment manufactured prior to the effective date of P.L. 90–602.

It has been our contention that P.L. 90–602 refers to manufacturing standards and not "user" standards. However, this is a matter of some controversy at the present time. H.R. 15732 would resolve the matter by making P.L. 90–602 applicable both as manufacturing and user standards (with regard to healing arts x-ray equipment) with the possibility that the philosophy would be further expanded to all items covered by P.L. 90–602.

This bill constitutes federal takeover of an area where at least some states have taken a very active interest by developing competent diagnostic x-ray control programs. We would consider Oklahoma to be one of those states.

On the question of whether federally-enforced minimum standards are desirable in this case, there is something to be said on both sides. On one hand, it is recognized that both the equipment and the patient who is exposed can move across state lines. Further, there is some justification (with regard to standardization) for the imposition of national standards. On the other hand, we know from practical experience in dealing in some environmental areas that the so-called partnership between federal and state agencies has not always been equitable to the states. Furthermore, we seriously question whether evermore federal laws which preempt additional areas traditionally looked after by the states is a true solution to the many administrative governmental problems of today.

In our opinion, H.R. 15732 suffers from vagueness and problems related to semantics and bill-drafting. There appear to be some considerable problems with the meshing of H.R. 15732, if enacted, to P.L. 90–602, even though the former would be an amendment to the latter.

As health physicists and administrators of radiation control programs, we must be quite skeptical about the actual need for H.R. 15732 (or any similar bill). While we are well aware that diagnostic x-ray continues to be the No. 1 radiation problem in the United States and is the No. 1 and major contribution of the man-made radiation exposure received by the general public, we have serious doubts that H.R. 15732 is the solution or even a good partial solution. On a more pragmatic level, we strongly question the need for and attainment of the goal of mandatory inspection at 12-month intervals of all healing arts x-ray equipment in the United States; in Oklahoma, this would be a logistic impossibility, even with the complete disruption of other radiation activities, with current staff. In fact, we doubt that the combined staffs of BRH and the various states could reach this inspection goal on a national basis at present staffing levels. Further, the inspections for compliance with the standards (which we assume will be quite similar to those published for comment in the Federal Register in October of 1971 but not yet republished) may be quite time-consuming to the practitioner and disruptive to his practice.

In general, we would recommend that the department support H.R. 15732 only to the extent of its intent of the upgrading of healing arts x-ray equipment. We do not believe that support should be given to the bill in its present form and format for the reasons indicated by our comments herein.

The following are our comments on specific provisions of H.R. 15732:

1. Section 358(a)(6)—This version is better than corresponding sections of previous bills by Koch with respect to the time permitted for phase-out of older equipment; we concur with the concept that phase-out should be allowed. The language is very ambiguous; what are the definitions of "a class of x-ray systems" and "primary standard?" We foresee the possibility that Section 358(a)(1) may preclude (or limit) the operation of 358(a)(6).

2. Section 359A(a)(1)—As noted elsewhere, we strongly disagree with the necessity or desirability of a yearly inspection program.

3. Section 359A(a)(3) A&B—As we understand the use of the word "subsection" in lines 1 and 5 of page 4, the delegation of authority to the states would be limited to that in 359A(a)(1) (inspection program) and would not include such Sections as 359A (c) and (d) (enforcement and authorization to sell or transfer used equipment). If we have correctly interpreted these provisions, then we heartily disagree with this concept. Further, we believe that the provisions of Section 360E of P.L. 90–602 make the inclusion of 359A(a)(3) (A)&(B) unnecessary.

4. Section 359 A (generally)—If the problems related to the comments herein are solved, this section could work to benefit the states if its end result were to be the support of acceptable, on-going state x-ray control programs with federal funds not presently being received.

5. Sub-sections 359 A (b) and (c)(2)—We do not understand either the intent or the practical effect of 359 A (b). The serious consequence of the vagueness of 359 A (b) is sharpened by the prohibition of operation contained in 359 A (c)(2).

6. Section 359 A (d)—As written, this paragraph would prohibit (without prior approval) the transfer of equipment to salvage or other non-x-radiation-producing uses.

7. Section 355 (6)—There is a typographical error in line 23 of page 5 of the bill. We have assumed that this line should read "(pur)poses of diagnosis or treatment." With this assumption, we are in disagreement with this definition. P.L. 90–602 covers x-ray equipment which is not used in the healing arts area; use of this definition would leave that other equipment in limbo with respect to the descriptive use of the word "x-ray." We suggest, for 355 (6), the use of the qualifiers "healing arts," "diagnostic," and/or "therapeutic," as applicable.

8. Section 356 (a)(2)—See comments pertaining to Section 359 A.

9. Section 360 F (g)—We strongly favor the concept expressed here.

Oklahoma State Department
of Health,
Oklahoma City, Okla., July 25, 1972.

MEMORANDUM

To: Loyd F. Pummill.
From: Coleman H. Smith and Dale McHard.
Subject: S.426, "Radiation Health and Safety Act of 1971"

S.426 has been introduced by Senator Randolph, and we have been advised that Congressman Koch intends to introduce the bill into the House side. S.426 has not been previously reviewed by this office.

For many years, this department has maintained a position of essential neutrality on the question of the desirability of the licensing of x-ray technicians. During that time, we have made an effort to keep abreast of all developments and to be aware of all the arguments and statements of fact, pro and con, concerning this question. To date, having heard both sides, the writers remain unconvinced that there is any compelling need to license such technicians with respect to radiation safety. Accordingly, we would recommend that the department neither support nor oppose the passage of S.426.

If licensing does become a reality, it is believed that the best administrative arrangement would be for the licensing board to be a separate state agency (along the lines of the Medical Examiners or Professional Engineers Boards) with some means of direct input to that board from this department on matters pertaining to radiation safety. Further, it is believed that such a board should be self-supporting.

The following are specific comments on this bill:

Section 2—"Technologists" are referred to here, but elsewhere in the bill the provisions appear to apply to all operators, including licensed practitioners of the healing arts.

Section 360 I (g)—This section provides for grants for two years to states in the planning, developing, or establishing a program; there is no provision for grants for operating funds. As written, this sub-section is not very attractive with regard to state participation.

STATE OF OREGON, HEALTH DIVISION,
DEPARTMENT OF HUMAN RESOURCES,
Portland, Oreg., July 28, 1972.
Hon. EDWARD I. KOCH,
1134 Longworth Office Building,
Washington, D.C. 20515

DEAR CONGRESSMAN KOCH: We appreciate the opportunity to comment on your bill for an X-ray System Radiation Control Act of 1972, and Senator Randolph's bill for improving the experience and training of radiologic technologists.

In connection with your bill, I have the following comments:

1. I assume there is a typographical error of omission of one or more lines following line 22, page 5, under the definition of an X-ray system. I am assuming that this definition covers both diagnostic and therapeutic sources of radiation ionization, including not only the usual X-ray machines, but also such sources as cobalt and VanderGraf accelerators, etc. If this is not so, you may wish to explore the definition more fully. This raises the question of whether or not you would like to have your bill include other sources of ionizing radiation to which the body is exposed for diagnostic or therapeutic reasons. I am referring to the various types of radioactive isotopes used for scanning tests, radium needles, and radioactive isotopes used for therapeutic purposes. If you would like to include some regulatory safeguards for these, I would suggest you communicate with whomever is your professional and technical consultant in this area and ask him to draft the necessary definitions. I realize that about a third of the states and the Atomic Energy Commission now have regulatory legislation in effect in this area, but it is my opinion that neither the Atomic Energy Commission nor many of the states do as satisfactory a job in this regard as can be done. Just as Senator Randolph's bill proposes to improve the skills of the technologists using the X-ray machines, I believe there is room for improving the skill of some of the "physician-technologists" utilizing some of these radioactive isotopes. Standards could be developed similar to those in the top five percentile of the states now operating in this area, and these standards could be made national, either enforced by the AEC officials, or by U.S. Public Health Service officials. I believe this would be preferable to having them enforced by officials of the Environmental Protection Agency. A case in point is that the AEC and some of the states (that allow a general license) permit any licensed physician with a modicum of special training in a particular radioactive isotope to use any radioactive isotope for diagnostic purposes and, in my opinion, this could result in more harm than good in some instances; and the situation could be benefitted by improved regulation.

2. Another item in your bill has to do with improved or further assistance of a financial nature from the federal to the state governments. While I realize that asking for more money is a ubiquitous request nowadays, frequently not justified; nevertheless, the only area in your bill that I see in this regard is the authority that you give for the Secretary to contract with the states to carry on any of these functions under the subsections. In the final analysis, I believe the enabling authority to delegate responsibility to state and local areas, assuming that they meet minimum national standards, is a major asset of our form of government and should be encouraged. In order to do so properly, there should be both monitoring or auditing of the delegated authority on a periodic and regular basis, and also, provisions for improving the training of the state and local people and, often, for improving their financing. While your contractual clause will help with the financing, I believe you should also add some grant authority to assist in training and enforcement on the state level, with diminishing grant funding, so that assistance can be given to the states for the first three to five years, then tapering off to zero. This combination of both grant and contract authority, with the former providing funds for both training and enforcement is, in my opinion, superior to contractual authority only.

3. In connection with the section starting on line 19, page 6, which has to do with the authority for federal inspections, I would make it clear that the written notice to which you refer need not be sent in advance. This could be done by adding, at the end of line 2, page 7, the following: "Such credential presentation and written notice need not be submitted in advance, but may be presented on entrance for the inspection."

With respect to Senator Randolph's bill, S. 426, the major comment that I have has to do with the individuals excluded from the professional training and proficiency requirements that are spelled out for the radiologic technologists. These are itemized in Section 360J(a). They include a licensed medical practitioner, a licensed dentist, a licensed dental hygienist, and a photoroentgen technician; as well as the trainees. I am not sure whether your "licensed medical practitioner" includes a licensed osteopathic practitioner and a licensed podiatric practitioner (foot specialist). In either event, I believe it would be desirable to mention them by name. This will exclude chiropractic practitioners and such exclusion may be a problem to you in the passage of the bill. My feeling is that there should be some third-party, disinterested person, preferably representative of state regulatory agencies or voluntary regulatory or accrediting agencies that should supervise or review the training and experience requirements in the curricula not only of schools of dental hygiene and schools of dentistry, but also in schools of medicine, schools of podiatry, chiropractic colleges, and anyplace where persons are taught to take X-rays for diagnostic or therapeutic purposes. This may be difficult to include in the bill, but if it is not included as a mandatory portion of the bill, I would urge you to include it as a recommendation or an optional portion and, perhaps, to include specific designation that some of the grant funds would be for the purposes of improving such training and experience in the various professional institutions concerned, such as medical and dental schools, schools of podiatry and chiropractic, etc.

Finally, I would like to commend both you and Senator Randolph for your efforts as embodied in the two proposed pieces of legislation, and to make it clear that the comments above represent my personal opinion. I have not formally cleared them with the Oregon State Board of Health in my capacity as Secretary of the Board; with the Administrator of the Oregon State Health Division, in my capacity as his Deputy; with the membership of the American Association of Public Health Physicians, in my capacity as President of the Association; with members of the Conference of State and Provincial Health Authorities of North America, in my capacity as President of the Conference; nor with my Council members in my capacity as Chairman of the American Medical Association Council on Environmental and Public Health. If I were to do so, you would not have received the comments by your deadline. However, should you wish support from any of the abovementioned organizations during Committee hearings on these bills, I would be glad to explore this.

Again, good wishes in your endeavors.

Sincerely,

EDWARD PRESS, M.D.,
State Public Health Officer.

COMMONWEALTH OF PENNSYLVANIA,
DEPARTMENT OF ENVIRONMENTAL
RESOURCES,
Harrisburg, July 18, 1972.
Hon. EDWARD I. KOCH,
House of Representatives, Longworth Office Building, Washington, D.C.

DEAR CONGRESSMAN KOCH: I am honored to reply to your letters to Mr. Gerusky of this Department and the Secretary of Health concerning H.R. 15732 and S. 426.

S. 426, relating to radiologic technology licensing was commented on earlier by Mr. Gerusky suggesting the changes as made in Section 3601(g). I believe his comments are incorporated in the Congressional Record following a request from Senator Randolph for specific comments. We heartily endorse the concepts of this legislation.

Your legislation, H.R. 15732, also has specific merits relating to minimum federal standards for the design and use of all x-ray equipment. However, we believe that the same comments should apply, i.e., that federal funding of state programs is absolutely necessary. Most achievements in x-ray protection have been innovative work of state radiation control programs such as Pennsylvania's. To give the federal government complete control of these programs is in effect selling their 15 to 20 years of productive work down the drain. If the federal government cannot assist in financing, at least on a 50–50 basis, many state programs will unfortunately fall by the wayside.

As an alternative, I suggest that you review S. 3588, which was introduced by Senator Schweiker from Pennsylvania. This bill combines both the bills you mentioned and achieves a third and most important goal—to put all federal radiation control programs into one agency which has broad powers but considers the rightful role of a federal-state joint effort towards reducing radiation exposure of all of our people from all sources.

Thank you for the opportunity to comment. I hope our suggestions have been helpful.

Sincerely yours,

HOWARD W. CHAPMAN,
Associate Deputy for Air, Water, and Community Protection.

COMMONWEALTH OF
PENNSYLVANIA,
DEPARTMENT OF HEALTH,
Harrisburg, July 12, 1972.
M.C. Hon. EDWARD I. KOCH,
House of Representatives,
Washington, D.C. 20515

DEAR MR. KOCH: Dr. Speller has asked that I forward your letter of July 10, concerning legislation regarding diagnostic X-radiation to Mr. Wesley E. Gilberton, Deputy Secretary for Environmental Protection and Regulation in the Department of Environmental Resources, since the Radiological Health Program was transferred to that Department.

You should be hearing from them in the near future.

Sincerely,

C. GAIL RHEN,
Administrative Officer,
Executive Office.

STATE OF TENNESSEE,
DEPARTMENT OF PUBLIC HEALTH,
Nashville, July 27, 1972.

Hon. EDWARD I. KOCH,
U.S. House of Representatives, 1134 Longworth Office Building, Washington, D.C. 20515

DEAR MR. KOCH: Thank you for your invitation to comment on Senate Bill 426 entitled "Radiation Health and Safety Act of 1971", a copy of which was attached to your letter dated July 10, 1972. Our comments are as follows:

1) We feel that minimum standards should be included in Section 360H.(b) for licensure or certification of all persons who operate medical x-ray equipment. We would not, however, be adverse to incorporating a grandfather clause to permit licentiates of the healing arts, who may not presently be able to meet requirements of the standards established, to continue administering x-rays where a practice has already been established. In fact, we would recommend such an exemption. This concession should be made primarily because of the probable interruption of essential medical services, which would result, if insistence on necessary and adequate training was strictly adhered to.

2) In the same section, additional categories of those subject to licensure should also include a place for persons trained in a limited number of radiologic procedures. In some of our small hospitals and clinics and in many private medical offices, it is not uncommon to see only a limited variety of x-ray procedures being performed, e.g., radiographs of extremities and chests. To require that such offices employ fully qualified x-ray technologists is unreasonable and will, in our opinion, pose an unnecessary burden on such limited x-ray practices. It can be noted in this bill that such a provision has been made for licensure of dental technologists who radiograph only a select portion of the human body. Likewise, appropriate provision should be made so medical facilities desiring to limit their practice to x-raying select portions of the human body may do so by employing a technologist trained and tested only in that area. Equally applicable here would be the approval of physicians, osteopaths, podiatrists, etc., and dentists to x-ray specific portions of the body without being fully qualified for all x-ray techniques and procedures. Thus, it is our opinion that multiple levels of training and certification should be established for technologists as well as for licentiates of the healing arts. The establishment of such will serve, in our opinion, to avert the probability of increased medical costs and the decreased availability of essential medical services presently inherent in the bill.

As an overall comment, we will recommend that Senate Bill 426 be amended so as to permit states to enact legislation patterned after model legislation proposed by the Surgeon General, United States Public Health Service, in 1970. Two (2) exceptions to the recommendation would be as follows:

1. Establishment of one (1) board instead of two (2) for carrying out the provisions of the Act.

2. Place most authority in this board with the exception that the Department of Public Health would act as administrative agency of the board.

This document is numbered BRH/ORO 70-80 and entitled "Model Legislation for Users of Ionizing Radiation in the Healing Arts," October, 1970. Incidentally, this model legislation was endorsed by the American College of Radiology in 1971 as "the most suitable approach to controlling unnecessary radiation exposure." (ACR Bulletin, Volume 27, Number 4.)

Also, as you requested in your letter, we are preparing comments to your bill, H.R. 15732, and will forward them to you in the near future.

Sincerely,

BILL GRAHAM,
Assistant Director,
Division of Industrial and
Radiological Health.

STATE OF UTAH,
DEPARTMENT OF SOCIAL SERVICES,
DIVISION OF HEALTH,
Salt Lake City, Utah, July 19, 1972.

Hon. EDWARD I. KOCH,
Member of Congress, 1134 Longworth Office Building, Washington, D.C. 20515

DEAR REPRESENTATIVE KOCH: I support both bills (HR 15732, S426) although your bill has more impact.

I have been trying to get increased activity in my State in this direction.

One of the problems we have had is the AEC has asked us to be an agreement state, but no funds have been available. I would hope that the transfer of responsibility from AEC to EPA in radiation activity would include some funding for state activity.

The Association of State and Territorial Health Officers has supported a number of resolutions urging increased activity in these fields of radiation control.

Sincerely,

LYMAN J. OLSEN, M.D.,
Director of Health.

STATE OF VERMONT,
DEPARTMENT OF HEALTH,
Barre, Vt., July 25, 1972.

Rep. EDWARD I. KOCH,
House of Representatives,
Washington, D.C. 20515

DEAR REPRESENTATIVE KOCH: In response to your letter of July 10, 1972 concerning bills H.R. 15732 and S. 426 relating to diagnostic X-radiation, I have the following comments.

S. 426 Sec. 360 H(a):

Criteria and minimum standards for accreditation of educational institutions conducting programs for the training of dentists and dental hygienists should also be established. Otherwise, dentists and dental hygienists with no specific qualifications could apply ionizing radiation to humans under section 360 J(a).

H.R. 15732:

I disagree with the concept that the federal government should preempt jurisdiction for radiation safety from state governments which have existing regulatory programs.

pp 4 lines 11–12—Twenty-four month period should be shortened drastically.

pp 5 lines 1–9—Should be a simple prohibition against selling or transferring X-ray equipment which does not meet standards of sec. 358(a).

Sincerely,

RAYMOND N. MCCANDLESS,
Health Physicist.

COMMONWEALTH OF VIRGINIA,
DEPARTMENT OF HEALTH,
Richmond, Va., August 1, 1972.

Hon. EDWARD I. KOCH,
House of Representatives, Congress of the United States, Washington, D.C. 20515

DEAR MR. KOCH: Thank you for the opportunity to comment on proposed legislation regarding ionizing radiation referred to in your letter of July 10, 1972.

After reviewing the two bills, H.R. 15732 and S. 426, we are basically in favor of S. 426 which deals with the heart of the X-ray exposure problem as we see it; that is, the need for adequate training and licensure of all X-ray users.

We are opposed to a requirement for annual inspections of all X-ray producing equipment as we believe that a schedule of reinspections on a priority basis primarily related to the number of patients exposed would be far more efficient. We are in favor of a schedule similar to that proposed by Mr. Bobby L. Dillard, Office of Regional Operations, Bureau of Radiological Health of the U.S. Department of Health, Education, and Welfare (See: *Radiological Health Data and Reports*, Vol. II, No. 8, August, 1970, "A Priority System for the Inspection of X-ray Facilities").

We believe that existing legislation and present conditions do not warrant further legislation for the control of X-ray equipment. However, minimum standards for training and licensure of all users of X-ray equipment, including medical practitioners and their employees are sorely needed.

If we can be of any further assistance, please do not hesitate to call us.

Sincerely,

MACK I. SHANHOLTZ, M.D.,
State Health Commissioner.

STATE OF WEST VIRGINIA,
DEPARTMENT OF HEALTH,
Charleston, July 25, 1972.

Hon. EDWARD I. KOCH,
House of Representatives,
Washington, D.C. 20515

DEAR CONGRESSMAN KOCH: Thank you for the opportunity to comment on the radiation control bills, H.R. 15732 and S. 426.

We believe the amendments contained in H.R. 15732 will be very beneficial to both Federal and State radiation control programs. The requirements for a twelve month inspection frequency may initially create problems in many state programs due to staff and budget limitations. However, both bills provide for some type of potential Federal funding so this may not be as serious a problem as we feel. The section prohibiting the sale or transfer of X-ray systems will eliminate a problem area that has been of concern to our program. We were quite pleased to see this provision in H.R. 15732.

We are very much interested in seeing S. 426 introduced as a house resolution. Again, we feel the provisions in this bill will eventually be very beneficial to both Federal and State radiation control programs. In the past most radiation control activities have been oriented toward the correction and elimination of deficient equipment. It is our belief that the provisions contained in S. 426 will give us a very workable tool to reduce the radiation exposure to the general public. We know that the finest equipment available, operated by an inadequately trained individual, can still result in unnecessary exposure to ionizing radiation.

As an aid to our radiation control program, we would respectively request your introduction and support of the radiation control bills.

Sincerely yours,

N. H. DYER, M.D., M. P. H.,
State Director of Health.

STATE OF WISCONSIN,
DEPARTMENT OF HEALTH
AND SOCIAL SERVICES,
July 25, 1972.

Hon. EDWARD I. KOCH,
Congress of the United States, House of Representatives, Washington, D.C. 20515

DEAR CONGRESSMAN KOCH: Thank you for your letter of July 10, 1972 and the opportunity to comment on the two bills, H.R. 15732 and S. 426.

I feel that H.R. 15732 should be amended to eliminate the requirement for annual surveys of x-ray installations since in many installations this is not necessary. Annual inspections of the x-ray equipment in busy installations such as hospitals and clinics may be desirable, but annual inspections of all installations would require large increases in the number of state employees engaged in x-ray survey work.

This bill should also be amended to eliminate the requirement that all existing x-ray equipment be modified to conform with the design or performance standards for new equipment. The cost of making ever some minor improvements in the design or construction of existing x-ray equipment could be excessive.

Senate Bill 426 should be amended to include the licensed practitioners in the fields of chiropractic, podiatry and dentistry.

Hoping that these comments will be helpful to you, I am

Sincerely yours,

George H. Handy, M.D.,
State Health Officer.

The State of Wyoming,
Department of Health and Social Services,
Cheyenne, Wyo., July 24, 1972.
Hon. Edward I. Koch,
U.S. Representative, 1134 Longworth Office Building, Washington, D.C. 20515

Dear Representative Koch: Your letter and bills H.R. 15732 and S. 426 have been referred to the attention of this Section.

We feel that our involvement is so minor in the subject coverage of S. 426 that we should not comment except in a very general way. If technology groups favor the measure, we feel that it should receive attention.

Wyoming is not an agreement state and lacks the enabling laws to negotiate for such status. Until this development takes place, it is unlikely that we can expect an effective state radiological state program. Our x-ray monitoring efforts are limited to the requirements of the Medicare program and requests from users on a voluntary basis. A uniform nationwide effort appears to offer some improvement for states like Wyoming where such programs are virtually nonexistent under present state laws.

Very truly yours,

Robert E. Sundin,
Director,
Air Quality Section.

Peter Bent Brigham Hospital,
Department of Radiology,
Boston, Mass., August 2, 1972.
Repr. Edward I. Koch,
1134 Longworth Office Building,
Washington, D.C. 20515

Dear Sir: This letter is a response to your request for comments on H.R. 15732 and S. 426.

My professional activities include serving as Radiation Protection Officer for the Diagnostic Radiology Department of Peter Bent Brigham Hospital and teaching radiation physics to x-ray technology trainees and radiology residents. I was recently appointed to the American Association of Physicists in Medicine and Health Physics Society Joint Committee on Diagnostic Surveys and inspections of diagnostic x-ray equipment. The purpose of this committee is to develop recommendations for performance standards and techniques for surveys of diagnostic x-ray equipment.

The biological effect of ionizing radiation is a controversial subject. Some believe that the effects of diagnostic levels of x-rays are insignificant. Others have recommended such stringent measures as therapeutic abortion when a fetus has been exposed to diagnostic levels of x-radiation.

When compared to the efforts of the Atomic Energy Commission to prevent the release of radioactive isotopes from power reactors, relatively little has been done to lower radiation exposures to the patient. I was therefore pleased that the X-ray System Radiation Control Act and Radiation Health and Safety have been presented to the Congress.

Specific Comments on the Bills:

S. 426:

Technology training programs should be spread throughout the country and not just localized in urban centers. This will encourage persons from rural areas to enter training programs and will provide more technologists for their communities.

H.R. 15732:

"Each X-ray system shall be inspected at such intervals as the Secretary may prescribe by regulation, but not less frequently than once every twelve months."

An annual inspection requirement is excessive in light of the shortage of personnel trained for this work. Demanding frequent inspections may result in superficial inspections. More consideration should be given to the quality of the surveys. Newly purchased equipment will be protected by the performance standards set for x-ray equipment manufacturers.

In addition to the bills mentioned above, there is a need for increased government support for graduate medical radiological physics education. The professional objective of the medical radiological physicist is the improvement of information content of diagnostic radiological examinations and the reduction of radiation exposures. He is also involved in the training of technologists and the use of radioactive isotopes within medical institutions. The shortage of such personnel is acute.

If I can be of further service, please feel free to contact me.

Sincerely,

Ben Arnold, M.P.H.,
Medical Radiological Physicist.

Suffolk County
Department of Health,
Smithtown, N.Y., July 25, 1972.
Hon. Edward I. Koch,
26 Federal Plaza, New York, N.Y. 10017

Dear Congressman Koch: Reference is made to your letter of July 10, 1972 requesting my comments on Bills S. 426 and H.R. 15732 which relate to diagnostic x-radiation. It appears that generally Bill S. 426 will present and assure adequate training for radiologic technologists. However, I feel that the provisions in the bill should include *all* users of x-ray machines.

In New York State, only chiropractors and radiologic technologists must take an x-ray examination to meet the State's licensure requirements. All other licensed healing art practitioners, such as physicians, dentists, dermatologists, osteopaths, and podiatrists, are not required to take a special examination to show that they are knowledgeable in x-ray physics.

However, though the professional practitioners mentioned above state that *they alone* take the x-rays in their private offices, the Suffolk County Radiation Inspectors have found unlicensed office personnel taking the x-rays. Of course, in those cases the violators were reported to the proper State regulatory agency for action.

Section 360J(c)(1): In addition to a monetary penalty, there should be a provision to revoke the license until such time when the violation has been corrected and a reapplication has been submitted for review.

Section 360H: The minimum standards, when established, should only apply to those licensees that apply ionizing radiation to humans and should be limited to licensed professional practitioners, radiologic technologists, nuclear medicine technologists, radiation therapists, and dental roentgenologists who are well trained in the radiation sciences.

Regarding Bill H.R. 15732, it appears that the provisions of the bill are adequate to conduct regular inspections of diagnostic and other x-ray systems. However, the following amendment should be considered. If an x-ray machine does not fully comply with the established standard, then that piece of equipment should be *immediately* suspended from operation until the owner corrects the deficiency and is inspected by representatives from the delegated radiation protection agency.

Thank you for giving me the opportunity to comment on these important documents. If I can be of further assistance, please do not hesitate to contact me.

Very truly yours,

Seymour Becker,
Public Health Physicist.

The American Registry of
Radiologic Technologists,
August 1, 1972.
Hon. Edward I. Koch,
17th District, New York, House of Representatives, Washington, D.C. 20515

Re: H.R. 15732 and S. 426.

Dear Sir: I am sorry that I could not respond to your letter by the date line of July 27 as you requested. Your letter was addressed to Mr. Lang the President of our Board of Trustees two years ago and just now filtered down to me.

I represent the National Certifiying Body for Radiologic Technologists. We have been in existence for 50 years and at present have 72,000 radiologic technologists registered. Our prime reason for existence is to provide examinations for graduates of A.M.A. approved schools of radiologic technology and certifying those candidates who successfully pass their exam. Our Executive Director Mr. Roland McGowan will send you one of our limited copies of a special 50th Anniversary brochure so that you can have some background on this organization. The trustees of this board are composed of four radiologists appointed by the American College of Radiology and four radiologic technologists appointed by the American Society of Radiologic Technologists.

Since we are concerned primarily with certification I would prefer not to make comment on the relative merits of either bill. I would strongly suggest that you contact the representatives of the American Society of Radiologic Technologists. They would be the spokesmen for and can best relate to the attitudes of the same technologists who will be required to perform under any proposed legislation. Mr. George Mead is their legislative consultant and his address is 621 Pershing Road, Silver Spring, Maryland.

I would, however, like to bring to your attention our expertise of 50 years experience providing examinations for highly specialized health workers. We would very much like to meet with writers of this type of legislation and congressmen such as yourself to make our presence known. If, indeed, there are ever federal standards for radiologic technologists we would like to offer our experience, integrity and knowledge towards providing examinations for these health workers. Several of my colleagues on our Board of Trustees would make every effort to visit Washington, D.C. at your convenience to meet with you.

Sincerely,

Dante DiLella, R. T., FASRT,
President, Board of Trustees.

Brookhaven National Laboratory,
Associated Unversities, Inc.,
Upton, N.Y., July 24, 1972.

Cong. Edward I. Koch,
House of Representatives,
Washington, D.C. 25015

Dear Ed: Your recent forwarding of H.R. 15732, which would direct the Secretary of HEW to prescribe standards for and to conduct regular inspections of diagnostic and other x-ray systems, and of S. 426, which would direct the Secretary to establish criteria for accrediting schools training radiologic technologists and for licensing radiologic technologists, is most appreciated.

In my judgment, both bills would be helpful toward reducing unnecessary radiation exposures from diagnostic x-ray, which are currently far the largest source of the exposure of the public to man-made radiation. I have nothing to add specifically to them, except to suggest that somewhere along the line some minimal time to radiation protection considerations should also be mandated in the training of physicians. As it is, this seems to be a hit or miss thing for other than radiologists.

It so happens that I was Chairman of this year's Resolutions Committee of the Radiological Section of the American Public Health Association. You may be interested in the resolution in this area that the Section Executive Council has recommended to the APHA for adoption at its next annual meeting (November, 1972 at Atlantic City).

Yours truly,

Andrew P. Hull,
Certified Health Physicist.

Oak Ridge National Laboratory,
Oak Ridge, Tenn., July 20, 1972.

Rep. Edward I. Koch,
House of Representatives,
Washington, D.C.

Dear Representative Koch: Thank you for your letter of July 10, 1972, and for the enclosed bills, H.R. 15732 and S. 426. You ought to be congratulated for the part you played in framing these two bills and in lending them your strong support. I am pleased you are considering introducing S. 426 in the House of Representatives.

I have read over these two bills rather carefully, and find them to be excellent. S. 426 provides primarily for the training of radiologic technologists. This is something which has been long overdue, and for which I have worked for many years. It seems inconceivable to me that we require drivers of school buses to hold drivers licenses, and yet in all of our states except New York, New Jersey and California, the operator of an x-ray machine can x-ray our children when he may have little or no training in the safe operation of such equipment. I am enclosing copies of two papers; one, "The Need for Radiation Protection," which I gave before the Southeastern Conference of Radiologic Technologists in Durham, North Carolina in January, and the other, "Comparison of Radiation Exposure of the Population from Medical Diagnosis and the Nuclear Energy Industry," which I gave last month before the American Nuclear Society in Las Vegas. From these papers you will note that the lack of education, training and certification, and the failure to use the proper techniques and equipment in medical diagnosis in the United States, are probably leading to thousands of unnecessary deaths in the form of malignancies, life-shortening and genetic mutations each year. The first step in correcting this situation is the requirement for education, training and certification of all those who use this most valuable medical tool. I have shown, in a number of Congressional hearings, and in many publications, that this dose can be reduced to less than 10% of its present value with relatively little effort, while at the same time providing better medical diagnosis in the United States. Altogether, I have listed more than 100 ways by which this can be accomplished, but without doubt, proper education and training requirements top the list. I firmly believe that Bill S. 426 is a giant step in the right direction, and I hope you will pursue your plan of introducing it in the House of Representatives. I believe, however, we must recognize that it is only a first (and most important) step, because it would still permit practitioners, chiropractors, osteopaths and others to operate and own x-ray machines without any education and training in their use. Only the state of California has laws which require that courses in x-ray and radiation protection be taught in the medical schools, and that there be questions in the state board examinations on these subjects. In short, I believe that not only x-ray technologists should have proper education, training and certification, but in addition all those who use x-rays or other forms of radiation on a patient. Ultimately, I believe that anyone who does so much as to prescribe the use of x-rays on a patient should have such education, training and certification. Otherwise, they cannot weigh appropriately the benefits of the information expected against the radiation risks to which the patient would be subjected.

Bill H.R. 15732 is excellent, but it too is only a giant step in the proper direction. It places particular emphasis on protective shields, when there are several score of other corrections and radiation protection devices which should be used to minimize patient exposure. I hope that subsequent bills will be directed at these other problems. I am particularly pleased that this bill authorizes the secretary to inspect x-ray equipment and its use. Hopefully, such inspections would take care of some of these other correctional matters, such as the use of proper diaphragms in collimators, voltage and current indicators, appropriate and proper operating timers, proper procedures in the development of x-ray films, etc.

I do not have a copy of the amended bill, but at the bottom of page five of H.R. 15732, lines 20, 21, 22 and 23 do not make sense to me. I wonder whether or not there could be a misprint. Perhaps the clause would make sense if I knew the wording to which it is to be appended, but I thought that I had better call this to your attention.

I am pleased to note that this bill puts some restrictions on the selling and exchange of x-ray equipment. This is a fine development, because much of the old x-ray equipment now finds its way into improper hands—sometimes even in small colleges and high schools, where it is not under appropriate supervision.

I am also enclosing an outline of the testimony I gave before Senator Kennedy's Committee on Health and Welfare on May 15, 1972.

Sincerely,

Karl Z. Morgan,
Health Physics Division.

The Johns Hopkins University,
School of Medicine,
Baltimore, Md., July 13, 1972.

Cong. Edward I. Koch,
1134 Longworth Office Building,
Washington, D.C. 20515

Dear Congressman Koch: Thank you for your letter of July 10 concerning H.R. 15732 and S. 426. I have reviewed both of these bills and believe that they represent a constructive solution to the education of radiation technologists in the United States and the control of x-ray equipment sold prior to the initiation of primary protection standards. I endorse the principles on which both bills are based.

I notice one printing error in H.R. 15732. On page 5, something is missing between lines 22 and 23. I assume that this error has been already detected by your staff.

Yours sincerely,

Russell H. Morgan, M.D.

University of North Carolina,
School of Dentistry,
Chapel Hill, N.C., July 19, 1972.

Congressman Edward I. Koch,
1134 Longworth Office Building,
Congress of the United States,
House of Representatives,
Washington, D.C. 20515

Dear Congressman Koch: Your letter of July 10, 1972 has been forwarded to me for comments on two bills, H.R. 15732 and S. 426.

With the increased use of ionizing radiation for medical purposes it is essential and desirable to have both bills enacted into law. H.R. 15732 because it insures proper standards for x-ray equipment. S. 426 is extremely important because it will ensure the competency of the individual actually using the equipment.

I do have a few comments about the two bills:

H.R. 15732, Sec. 359A (line 14–16) states that "Each x-ray system shall be inspected at such intervals as the Secretary may prescribe by regulation, but not less frequently than once every twelve months". Annual inspection of every x-ray machine would require large numbers of employees in order to conduct all surveys resulting from this requirement. Once the machine has been found to comply with performance standards periodic inspection at intervals between 2 and 4 years might be more desirable than annual inspection. The Secretary should always reserve the right to inspect at more frequent intervals, particularly individuals who refuse to abide by performance standards.

Bill S. 426, Sec. 360H (c) lists a number of organizations to be consulted in establishing criteria and minimum standards. I would suggest including the American Academy of Dental Radiology (A.A.D.R.) in that list since they are presently involved in establishing educational standards and criteria for dental students, dental hygienists and dental assistants. Additionally the A.A.D.R. tends to be more "radiation hygiene" conscious than the American Dental Association.

Bill S. 426, Sec. 360J (a) states that it will be unlawful for any individual to apply ionizing radiation to humans for diagnostic or therapeutic purposes *unless* he is a licensed medical practitioner, licensed dentist, or licensed dental hygienist . . . etc. This statement if taken literally would exclude the dental assistant from using ionizing radiation. Since the dental assistant is an integral part of the dental health team they should also be included in the list. The training of dental assistants and their licensure would apparently be included under the broad definitions in Sec. 360H and Sec. 3701 relating to radiologic technologists.

I hope these comments will be useful to you; if I can be of further assistance to you now or in the future please let me know.

Sincerely,

John W. Preece, D.D.S., M.S.,
Chairman, Oral Radiology Section.

University of Alabama,
School of Dentistry
Birmingham, Ala., July 20, 1972.

Hon. Edward I. Koch,
Congress of the United States, House of Representatives, Washington, D.C. 20515

Dear Congressman Koch: Your letter of July 10, 1972, relating to H.R. 15732 and S. 426 reached me while on vacation. I am pleased to have the opportunity to react to these bills. In order to expedite matters, I have asked my secretary to send the replies directly to you without my signature.

I very much approve of the intent of H.R. 15732. There is considerable need to establish standards for x-ray equipment presently in use and to develop regulations whereby inferior equipment must be either modified or replaced. On page 3, lines 15 and 16, I wonder about the need for inspecting equipment ("Each x-ray system") "not less frequently than once every twelve months." Equipment once placed in compliance is not likely to get out of compliance except by deliberate tampering. Such inspections, particularly of medical equipment as compared with dental, will require substantial time and effort. You might wish to consider somewhat less frequent surveillance.

Page 4, lines 6, 7, 8 and 9, relates to technique rather than to the x-ray system per se. While I have no opposition to regulations designed to assure the proper use of equipment, I wonder whether this portion of the proposed bill might not be some what out of place.

On page 4, lines 11 and 12, I wondered why you suggested a period as long as twenty-four months during which time a person might operate an x-ray system that does not comply with acceptable standards. Surely it should not take twenty-four months to either modify or replace inadequate equipment. For this reason, I would suggest a somewhat shorter time period. It is realized that lines 18, 19, 20, 21 and 22 on page 4 take this matter into consideration, but I would prefer the twenty-four month period to be reduced with a provision that the Secretary might permit a longer period if the need arose.

There seems to be one or more lines missing on page 5 between lines 22 and 23. I trust these comments will be helpful.

The remainder of this letter will relate to S. 426. The declared purpose of this act seems to relate specifically to radiologic technologists. However, there is no definition given to define what the term radiologic technologist includes. (I believe most people think of a radiologic technologist as a medical radiologic technician.) This situation becomes rather confusing when one reads under Sec. 360G(c) "that it is in the overall public health interest to have an adequate and continuing supply of well-trained radiologic technicians and that *any person* (my underline) who operates radiologic equipment or employs radiologic methods should be required to demonstrate competence by training, experience, and examination; and". Additionally, Sec. 360H(a) speaks to minimum criteria for education institutions conducting programs for the training of medical practitioners and (b) suggests that dental technologists may also be included in the overall term "radiologic technologists."

While I have no objection to legislation requiring the adequate training and licensure of medical radiologic technologists, I would like to see a bill that is more all inclusive, one that would assure the adequate training and certification of all people who use ionizing radiation in the diagnosis and treatment of human beings. It is noted under "PROHIBITED ACTS," Sec. 360(J)(a), that licensed medical practitioners, licensed dentists, licensed dental hygienists, etc., are excluded from those who would be unlawfully using radiation unless they were accredited. Except for medical radiologists and a few well trained dental practitioners (there is as yet no specialty of dental radiology although such should exist), most physicians, dentists and hygienists know very little about x-radiation and, in my opinion, should be certified before being permitted to use x-radiation on humans. A review of medical, dental and dental hygienist training curriculums and/or of the questions used in licensing examinations will verify this opinion. Rather than directing legislation primarily toward radiologic technologists, I would like to see developed legislation modeled after the suggested MODEL LEGISLATION FOR USERS OF IONIZING RADIATION IN THE HEALING ARTS published by the Bureau of Radiological Health in October, 1970 (BRH/ORO 70–8). Efforts to enact such legislation would bring down the wrath of the professions, but it is needed.

In concluding, I should like to make two suggestions. In Sec. 360H(a) where there is mentioned "minimum criteria for education institutions conducting programs for the training of medical practitioners," it would be well to insert the words "and dental" after the word "medical." Dental educational institutions must be required to improve their radiologic undergraduate instruction. I have data that supports the fact that present training is inadequate. In Sec. 360H(c), I should like to see added to the list of professional organizations the American Academy of Dental Radiology.

Thank you again for the opportunity of commenting.

Sincerely yours,
ARTHUR H. WUEHRMANN, D.M.D.,
Professor of Dentistry.

THE UNIVERSITY OF ROCHESTER,
SCHOOL OF MEDICINE AND DENISTRY,
Rochester, N.Y., July 25, 1972.

Hon. EDWARD I. KOCH,
House of Representatives, Congress of the United States, 1134 Longworth Office Building, Washington, D.C.

DEAR MR. KOCH: Thank you for letting me see the copies of H.R. 15732 and S. 426 relating to diagnostic radiation. I favor passage of both of these Bills. By far the largest single source of radiation exposure to the general population of the United States is in the uses of ionizing radiation, particularly x-rays, in the healing arts. This comes about partly because of the large numbers of individuals exposed, a fact which cannot be changed much without loss of the benefits of such procedures. But a part of the exposure is unnecessary because of use of out-moded or improperly operated or adjusted equipment and inadequately trained operators. For these reasons I fully endorse submission of these Bills and hope that they will be passed by the Congress.

I have comments on each Bill as outlined below:

I. *H.R. 15732*

A. *General*—In view of the very large number of x-ray systems in the United States, lack of trained manpower at either State or Federal level will be a serious bottleneck to implementation of these regulations. The Bill should include or have as a companion Bill means for increasing the supply of suitably trained inspectors and other personnel.

B *Specific points*

(1) p. 4, line 21–22. The term "imminent hazard" is subject to misinterpretation. An "imminent hazard" would exist only in cases of gross carlessness or malfunction. The hazard is primarily the development of late radiation effects which may be years in developing. I suggest the wording be changed to "serious hazard."

(2) p. 5, lines 10–13. This section is much too permissive and general. The Secretary should have this discretion but the general conditions for its use should be spelled out or everyone could be exempt.

(3) p. 5, lines 20–23. This paragraph is unclear. It appears to be incomplete. As written it would cover no "x-ray systems" since none are specifically developed "for procedures for shielding of patients". Should it not read

"(6)" "the term 'x-ray systems' means an assemblage of components for the controlled production of x-rays for irradiation of any part of the human body *including devices* and procedures for the shielding of patients"?

II. *S.426*

A. *General*—The problem of manpower exists in application of this Bill to. Section "h" states that the Secretary may make grants to educational institutions. I hope this can include *training* grants for the support or partial support of individuals (students) to be trained. If it does not the Bill should have a specific section added authorizing use of Federal funds for this purpose and be composed in language which would insure appropriation of such funds.

There should also be assistance available through the States or directly to the institution or individual for *retraining* of operators not employed so that they can meet licensure requirements.

Turnover of manpower in the field of radiologic technology is large now. Licensing should not be mandated in a way which would further reduce trained manpower available.

I hope the above is of assistance to you.

Sincerely yours,
J. N. STANNARD,
Professor of Radiation Biology and Biophysics; Past-President, Health Physics Society

---

UNIVERSITY OF PENNSYLVANIA,
RADIATION SAFETY COMMITTEE,
Philadelphia, July 25, 1972.

Hon. EDWARD I. KOCH,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KOCH: Thank you for your letter of July 10, 1972 concerning HR 15732 and S. 426. I am distributing copies of HR 15732 to the membership of our American Association of Physicists in Medicine Committee on Legislation and Regulations and will send comments later. As you are contemplating introducing a companion bill to S 426, and ask comments by July 27, it is not practical to poll our Committee. We have discussed S. 426 and its predecessor S 3973, however, so that while the following comments are personal ones, they reflect a number of discussions with our full committee and other interested individuals.

There is enclosed a copy of a letter from Professor R. O. Gorson to Senator Randolph concerning S 3973. After carefully reviewing the differences between this predecessor bill and S 426, I believe the comments expressed in Professor Gorson's letter are still applicable. While S 426 would permit criteria and minimum standards to distinguish between medical and dental technologists, radiation therapy technologists, nuclear medicine technologists, photo-roentgen technicians and technicians in training, I do not feel that this listing of several different types of technologist and technician resolves the very important considerations Professor Gorson discussed. A system of licensure should be flexible enough to permit the Secretary to provide for licensing different levels of competence even within one category of technologist and to react to changes in technology or equipment that may change criteria and standards both as to level and to type of special competence.

It would also seem desirable for a system of licensure to provide for exemptions or something of the nature of a limited permit. This is desirable as some special equipment may require essentially no special training or skill and other, such as highly sophisticated developmental apparatus, may require a specialty team including radiologist, engineer and others.

In closing, let me call attention to a recent contract between the NIH, Bureau of Health Manpower Education and the Educational Testing Service, Princeton, New Jersey, 08540. The contract is concerned with the credentialing of diagnostic radiologic personnel. An expert advisory Committee is in the process of being formed to guide the program. With this guidance, recommendations regarding levels of competence will be generated, examinations prepared for two levels of competence and recommendations developed concerning means of credentialing those concerned. You could get more information by contacting either Mrs. Jane Houis (pronounced "Hweess") or Dr. Eugene Ketcham at Educational Testing Service (phone 609-921-9000).

I hope these comments are of help. If there are any areas where we might help by further discussion, please let me know.

Sincerely,

JOHN W. THOMAS,
Radiation Safety Office.

THOMAS JEFFERSON UNIVERSITY,
JEFFERSON MEDICAL COLLEGE,
Philadelphia, August 7, 1970.

JENNINGS RANDOLPH,
Senator,
U.S. Senate,
Washington, D.C. 20510

DEAR SENATOR RANDOLPH: I have your letter of 31 July regarding S. 3973, the Radiation Health and Safety Act of 1970, and I welcome this opportunity to provide you with my personal observations and comments.

While I have certain misgivings and reservations concerning the bill and its implementation, I certainly concur with its basic objective of reducing unnecessary medical exposure to ionizing radiation. I think the bill should explicitly allow the Secretary more latitude in the exercise of his judgment in the application of subsequent regulations in certain gray areas. While I agree that technicians who are expected to operate a wide variety of radiological equipment should meet certain minimum standards of training and experience such as those required by the American Registry of Radiologic Technologists, I do not agree that all technicians must meet the same minimum standards nor must all operators be licensed technicians.

There are several reasons for this opinion. First is the observation that radiologic equipment varies widely as to type and degree of sophistication and degree of competence required of the operator. Some single purpose equipment such as chest photofluorographic units require only a very minimal amount of training to insure minimal exposure to the patient while achieving roentgenograms of adequate diagnostic quality. At the other end of the spectrum is equipment, such as remote controlled image intensified fluoroscopic equipment requiring the degree of competence likely to be achieved only by a highly trained diagnostic radiologist. It is therefore important to recognize on one hand the need for highly trained and educated technologists, with academic degrees in some instances, to carry out the responsibilities for patient care and to participate in all radiological procedures as is frequently required in the larger hospitals and in the offices of private practicing radiologists. Very few technologists today have the formal educational background and radiological training that will be required of those needed to practice at a professional level in the future. Accordingly, if we adopt only a *single* level of minimum standards for the accreditation of educational institutions and for the licensure of radiologic technicians, we may perpetuate a problem that exists today wherein many of the technologists are improperly trained for the responsibility that they are required to assume and other technologists are overtrained or are wasting their training in positions that require very little judgment.

Related to the above problem is the observation that there is at present (and into the foreseeable future) and acute shortage of not only highly trained radiologic technologists, but also all other classes of paramedical personnel as well as medical practitioners. Accordingly, if we are to effectively deliver health care while curtailing spiralling costs, we must find more efficient ways of using to the best of their ability all people, including technologists, regardless of their level of training or competence. It seems to me that the only way to accomplish this objective is to provide a range of training levels from the lowest to the most sophisticated so that each individual, regardless of his intellectual or technical limitations, may advance as far up the technical and professional ladder as his ability and initiative permit. By providing a sufficient number of plateaus of training, vertical mobility on the technical and professional ladder will be enhanced and anyone desiring to work in paramedical fields will be able to contribute to the delivery of health care at the level of his training and ability.

It seems to me that the above approach to the problem would help alleviate the high turnover rate of partially or completely trained technologists which are lost to the field for one reason or another. Our present system is very wasteful and inefficient in this regard. A great majority of the radiologic technician trainees are young women fresh out of high school who leave a few years after training to begin raising their families. More men could be attracted into the field if there were a vertical structure for continued advancement. At the same time, many women who leave to raise families might return to the field at appropriate levels, perhaps on a part time basis later in life.

The Congress can constructively contribute to the combined effort of all the radiological professions and organizations to reduce not only unnecessary exposure to the patient, medical, and paramedical personnel, but to reduce also the gross inefficiency and the high cost of the delivery of health care inherent in our present system by modifying S. 3973 to promote the estsablishment of multiple levels of training and certification or licensure.

There is another gray area that may have been overlooked in the drafting of the bill about which I am reminded recently by several radiological physicists. High energy accelerators for radiation therapy (linear accelerators and betatrons) coming on the market must be operated at least part of the time by highly specialized medical physicists and engineers. While radiation therapy technologists will be trained to carry out most of the routine operation there will be occasions of varying frequency depending upon the sophistication and idiosyncrasies of individual accelerators where the physicist or engineer will have to take over the operation with the concurrence of the responsible radiation therapist if the treatment is to be adequately and safely carried out. Allowance must also be made for the operation of experimental equipment by other than licensed technologists during the developmental stages and early clinical trials, usually in University Medical Centers. While the technologist may often be an important member of the research and developmental team, it is usually the engineer or medical physicist who must work closely with the radiologist in the design, construction, testing, and preliminary clinical evaluation.

I trust these comments will be of some value to you. If you have any questions, I would be glad to respond further.

Sincerely yours.

ROBERT O. GORSON,
Professor of Medical Physics.

ACCREDITATION OF MEDICAL FACILITIES

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, by virtue of my nearly 24 years of service on the Committee on Veterans' Affairs, I have been keenly interested over the years in the activities of the Joint Commission on Accreditation of Hospitals which accredits all community and private hospitals, including those operated by the Veterans' Administration.

My interest in this subject was aroused by the reading on numerous occasions of the results of the surveys made by the Joint Commission and the sparseness of those reports. While I am advised that the Commission goes into minute detail with regard to the operation of the hospital under investigation, the results which are made available to the hospital being reviewed and those which have been made available to the committee over the years would not lead one to the conclusion that a detailed report had been made. To substantiate this point, I am including as a part of my remarks a series of surveys just completed by the Commission, and forwarded to the Veterans' Administration and later submitted to the Committee on Veterans' Affairs.

The Veterans' Administration Hospital in Washington, D.C. operates nearly 700 beds. The report dated May 5 and May 8, 1972 is attached. It should be noted that this covers less than one letter size page:

VETERANS ADMINISTRATION HOSPITAL, WASHINGTON, D.C.

Date of survey: May 5, 8, 1972.

Surveyor: Charles R. Dugan, M.D., Carroll E. Dugan, R.N.

Reviewer: William F. Everett, M.D., Mary A. Everett, R.N.

RECOMMENDATIONS AND COMMENTS

Nursing services:

1. Nursing care plans should be more individualized to meet the needs of the patient.

2. There should be a representative of the nursing service on the medical records committee.

Environmental services:

1. Written reports and evaluations must be kept on all fire drills.

Medical record services:

1. Authenticated signatures should be accompanied by professional designation.

2. Nursing notes should be pertinent and complete.

Refer to: "Accreditation Manual for Hospitals."

Rating by Board of Commissioners: Accreditation for two years.

The Veterans' Administration Hospital in St. Louis operates 1,137 beds and the JCAH report on that facility is attached:

VETERANS ADMINISTRATION HOSPITAL
ST. LOUIS, MO.

Date of survey: May 30, 31, 1972; June 1, 1972.

Surveyor: Hugh Cunningham, M.D., A. Kent Schafer, Facha.

Reviewer: H. Charles Franklin, M.D., Nora C. O'Malley, R.N.

RECOMMENDATIONS AND COMMENTS

Environmental services:

1. Severely hazardous locations, such as soiled linen collection and trash collection rooms, should be protected by 2-hour fire-resistive construction and an approved automatic fire extinguishing system.

2. The paint shop area Cochran Unit is considered a severely hazardous area and should be adequately protected by 2-hour fire-resistive construction and an approved automatic fire extinguishing system. The no-smoking regulations in this area should be rigidly enforced.

3. Doors in fire separations, horizontal exits and smokestop partitions shall be such that they can be opened and closed manually. They should also close by actuation of the methods specified by National Fire Protection Association: Life Safety Code No. 101, Section 10–1245.

4. The emergency electrical power sources at Jefferson Barracks Unit should be surveyed for compliance with National Fire Protection Association Codes.

5. The patient areas in the Cochran Unit, which are blind cul de sacs, should be provided with enclosed exit stairwell towers in accordance with National Fire Protection Association: Life Safety Code No. 101, Section 10–1211.

Pathology services:

1. Personnel in the transfusion service or blood bank should have had sufficient training and experience to qualify them as technically competent in the immunohematological procedures performed. All personnel qualifications, methods and procedures for hemotherapy shall conform to: "Standards for a Blood Transfusion Service".

Pharmaceutical services:

1. The checking of drug storage areas by the pharmacy should include documentation of proper refrigeration temperatures where appropriate.

2. It is desirable for the pharmacist to review the prescriber's original order, or a direct copy, before the initial dose of medication is dispensed.

3. Only the pharmacist, or authorized pharmacy personnel under the direction of the pharmacist, shall dispense medications, make labeling changes, or transfer medications to different containers.

Special care units:

1. Because of the intensity of care given within the unit, and of the critical nature of the illnesses of patients cared for within it, written policies and procedures additional to basic hospital policies should be developed to guide personnel in the management of the unique situations within the unit.

Refer to: "Accreditation manual for Hospitals."

LONG-TERM CARE FACILITY (CATEGORY II) OF VETERANS ADMINISTRATION HOSPITAL, ST. LOUIS, MO.

Date of survey: May 30, 31, 1972; June 1, 1972.

Surveyor: Hugh Cunningham, M.D., A. Kent Schafer, Facha.

Reviewer: Harris B. Jones, Facha.

RECOMMENDATIONS AND COMMENTS

No recommendations.

Rating by Board of Commissioners: Accreditation for two years.

The VA facility at Wood, Wisc., a suburb of Milwaukee, operates 827 beds. The report on that hospital is attached.

VETERANS ADMINISTRATION HOSPITAL, WOOD, WISC.

Date of survey: May 25–26, 1972.

Surveyor: Arthur N. Springall, M.D., FACHA; Foster G. Ramsey, ADM.

Reviewer: William F. Everett, M.D.; Walter S. Shakespeare, FACHA.

RECOMMENDATIONS AND COMMENTS

Dietetic services:

1. Hoods over ranges in the dietary department should be protected by an approved automatic fire extinguishing system, such as carbon dioxide, dry chemical or steam. It is noted the present system is water type.

Environmental services:

1. Doors in smokestop partitions may be held open only by an electrical device which, upon actuation of the fire alarm, smoke detector or automatic fire extinguishing system, will be self-closing. They must be capable of being opened and closed manually.

2. Grab bars should be installed in all patient toilet and bathing areas.

Medical record services:

1. Medical records on discharged patients should be completed within a reasonable time following discharge.

Pharmaceutical services:

1. The pharmacist should maintain a record of his periodic inspections of drug storage and medication centers on the nursing care units.

2. Thermometers should be installed in all medication refrigerators.

Refer to: "Accreditation Manual for Hospitals."

LONG-TERM CARE FACILITY (CATEGORY III) OF VETERAN'S ADMINISTRATION HOSPITAL WOOD, WISC.

Date of survey: May 25, 26, 1972.

Surveyor: Arthur N. Springall, M.D., FACHA; Foster G. Ramsey, Adm.

Reviewer: Harris B. Jones, FACHA.

RECOMMENDATIONS AND COMMENTS

1. A written social service history should be obtained on each patient and included in the patients' medical record. This information should be available to the nursing supervisor to assist her in planning patient care.

Rating by Board of Commissioners: Accreditation for two years.

The Veterans' Administration Hospital at Portland, Oreg. operates 518 beds, and the report follows. In this case, it should be pointed out that one of the surveyors is a former long-time official of the Veterans' Administration and thus some question is raised with regard to objectivity.

VETERANS' ADMINISTRATION HOSPITAL PORTLAND, OREG.

Date of survey: May 5-8, 1972.

Surveyor: Roderick G. St. Pierre, M.D.; David L. Moore, Adm.

Reviewer: Henry K. Speed, Jr., M.D.; Nora C. O'Malley, R.N.

RECOMMENDATIONS AND COMMENTS

Dietetic services:

1. Exhaust hoods for cooking ranges should be equipped underneath with an approved automatic carbon dioxide or dry chemical extinguishing system.

Environmental services:

1. Openings in the linen chutes shall be equipped with doors having self-closing devices.

Refer to: "Accreditation Manual for Hospital."

Rating by Board of Commissioners: Accreditation for two years.

The VA Hospital at Columbia, S.C. (428 beds) has had many problems with regard to construction, but you would never guess it from the report the Joint Commission filed and which follows:

VETERANS ADMINISTRATION HOSPITAL COLUMBIA, S.C.

Date of survey: February 23, 24, 1972.

Surveyor: Charles R. Dugan, M.D., Carroll Dugan, R.N.

Reviewer: Henry K. Speed, Jr., M.D., Avis L. O'Connor, R.N.

RECOMMENDATIONS AND COMMENTS

Environmental services:

1. Procedures for collecting and storing soiled linen should be reviewed to change present practice of storing linen in stairwells.

2. As previously recommended, arrangements should be expedited for providing sufficient emergency electrical power.

Pharmaceutical services:

1. The pharmacist should document his visits to medicine areas of nursing stations to assure safety, security, and proper handling of medications.

Refer to: "Accreditation Manual for Hospitals."

LONG-TERM CARE FACILITY (CATEGORY II) OF VETERANS ADMINISTRATION HOSPITAL COLUMBIA, S.C.

Date of survey: February 23, 24, 1972.

Surveyor: Carroll Dugan, R.N.

Reviewer: Harris B. Jones, FACHA.

RECOMMENDATIONS AND COMMENTS

No specific recommendations noted at the time of this survey.

Rating by Board of Commissioners: Accreditation for two years.

The VA facility at Alexandria, La., not only operates 449 beds, but also a long-term care facility was surveyed in March and that report follows:

VETERANS ADMINISTRATION HOSPITAL ALEXANDRIA, LA.

Date of survey: March 7, 8, 1972.

Surveyor: Louis J. Fuhrmann, M.D.; Muriel W. Stutz, R.N.

Reviewer: William F. Everett, M.D.; Avis L. O'Connor, R.N.

RECOMMENDATIONS AND COMMENTS

Pharmaceutical services:

1. The pharmacy-therapeutics committee of the medical staff, in cooperation with the pharmacist, nursing service and other departments, as necessary, should recommend policies for the control, accountability and administration of drugs throughout the hospital.

Refer to: "Accreditation Manual for Hospitals."

LONG-TERM CARE FACILITY (CATEGORY II) OF VETERANS ADMINISTRATION HOSPITAL ALEXANDRIA, LA.

No recommendations.

Rating by Board of Commissioners: Accreditation for two years.

Date of survey: March 7, 8, 1972.

Surveyor: Muriel W. Stutz, R.N.

Reviewer: Harris B. Jones, Facha.

The VA facility at Togus, Maine (823 beds) for many years was primarily a neuropsychiatric facility and domiciliary was surveyed last November and the report follows:

VETERANS ADMINISTRATIVE CENTER TOGUS, MAINE

Date of Survey: November 17, 18, 1971.

Surveyor: Harry M. Lowd, Jr., M.D.; Nora C. O'Malley, R.N.; Philip J. Hall, Adm.

Reviewer: Henry K. Speed, Jr., M.D.; Mary Susanne Thomas, R.N.

RECOMMENDATIONS AND COMMENTS

Clinical services:

1. More space should be provided to prevent overcrowding in the patient care areas.

Medical staff:

1. The rules and regulations of the medical staff should be updated in order to conform with the new Standards of the Joint Commission on Accreditation of Hospitals.

Nursing services:

1. The nursing policies and procedures should be developed, periodically reviewed and revised as necessary by nursing representatives in cooperation with appropriate representatives from administration, the medical staff and such other hospital services or departments as are concerned.

Special care units:

1. The functions and duties of the medical director of the two intensive care units should be defined in writing.

2. The medical-surgical and cardiac care intensive care units' policies and procedures should be expanded to include necessary training required of employees, staffing pat-

terns, use and maintenance of equipment and medical staff obligations. These policies should be approved by appropriate medical staff and nursing personnel, and implemented.

Refer to: "Accreditation Manual for Hospitals".

LONG TERM CARE FACILITY (CATEGORY III) OF VETERANS ADMINISTRATION CENTER, TOGUS, ME.

Date of Survey: November 17, 18, 1971.
Surveyor: Nora C. O'Malley, R.N.
Reviewer: Mary Susanne Thomas, R.N.

RECOMMENDATIONS AND COMMENTS

1. The policy and procedures book should be revised to include policies and procedures specific to this area of patient care.

Rating by Board of Commissioners: Accreditation for two years.

These are simple examples, Mr. Speaker, which could be added to for every station operated by the Veterans' Administration. Again, the surveys may be of a very substantial character. The reports which are made available would not lead one to that conclusion:

> The Joint Commission on Accreditation of Hospitals developed from the Hospital Standardization Program, which had been established by the American College of Surgeons in 1918 to encourage the adoption of a uniform medical record format that would facilitate the accurate recording of the patient's clinical course."

The fundamental purpose of the Commission since its 1952 incorporation under the laws of Illinois as a nonprofit corporation are:

> 1. To establish standards for the operation of hospitals and other health care facilities and services.
>
> 2. To conduct survey and accreditation programs that will encourage members of the health professions, hospitals and other health care facilities and services voluntarily to:
>
> a. Promote high quality of care in all aspects in order to give patients the optimal benefits that medical science has to offer;
>
> b. Apply certain basic principles of physical plant safety and maintenance, and of organization and administration of function for efficient care of the patient;
>
> c. Maintain the essential services in the facilities through coordinated effort of the organized staffs and the governing bodies of the facilities.

The only reference in U.S. Code to the activities of the Joint Commission are found in section 1395bb of title 42 which follows:

> § 1395bb. Effect of accreditation.
>
> Except as provided in the second sentence of section 1395z of this title, an institution shall be deemed to meet the requirements of the numbered paragraphs of section 1395x(e) of this title (except paragraph (6) thereof) if such institution is accredited as a hospital by the Joint Commission on Accreditation of Hospitals. If such Commission, as a condition for accreditation of a hospital, requires a utilization review plan or imposes another requirement which serves substantially the same purpose the Secretary is authorized to find that all institutions so accredited by the Commission comply also with section 1395x(e)(6) of this title. In addition, if the Secretary finds that accreditation of an institution or agency by the American Osteopathic Association or any other national accreditation body provides reasonable assurance that any or all of the conditions of section 1395x (e), (j), or (*o*) of this title, as the case may be, are met, he may, to the extent he deems it appropriate, treat such institution or agency as meeting the condition or conditions with respect to which he made such finding. (Aug. 14, 1935, ch. 531, title XVIII, § 1865, as added July 30, 1965. Pub. L. 89-97, title I, § 102(a), 79 Stat. 326.)
>
> In 1965, Public Law 89-97 (Medicare) was enacted. The impact of this legislation on hospitals—their financing, the management of their services to the people and their standards of performance—was greater than that of any other recent single factor. Written into the Medicare Act was the provision that the hospitals participating in that program were to maintain the level of patient care that had come to be recognized as the norm. The standards of the Joint Commission on Accreditation of Hospitals are specifically referred to in the law and the *Conditions of Participation for Hospitals*, subsequently promulgated and published by the Social Security Administration, reflected the 1965 standards of the Joint Commission.
>
> The Board of Commissioners in August 1966 voted "to review, reevaluate and rewrite the hospital accreditation standards and their supplemental interpretations to attain two objectives:
>
> 1. To raise and strengthen the standards from their present level of minimum essential to the level of optimal achievable and to assure their suitability to the modern state of the art.
>
> 2. To simplify and clarify the language of standards and interpretations to remove all possible ambiguities and misunderstandings."

The Joint Commission as shown in records of the office of the Secretary of State, Springfield, Ill. that the original incorporators were: George Bughee, 18 E. Division Street, Chicago, Ill.; Paul R. Hawley, M.D., 40 E. Erie Street, Chicago, Ill.; George F. Lull, M.D., 535 N. Dearborn Street, Chicago, Ill.; Leroy H. Sloan, M.D., 55 E. Washington Street, Chicago, Ill.

The latest list of officers and its composition follow:

BOARD OF COMMISSIONERS

Richard E. Palmer, M.D., Chairman.
Carl P. Schlicke, M.D., Vice Chairman.
Wright Adams, M.D., Treasurer.

February 8, 1971.

It will be noted, Mr. Speaker, that the Joint Commission on Accreditation of Hospitals is composed entirely of representatives of associations which have a vested interest in the operation and management of hospitals, nursing homes, extended care facilities, etc. The organizations are the American College of Physicians, the American College of Surgeons, the American Medical Association, the American Association of Homes for the Aging, the American Nursing Home Association. The individual members are all doctors of medicine with four exceptions as noted above.

---

* Year appointment terminates (December 31)

It should be pointed out that the surveys made by the Joint Commission involve no unannounced inspections or surveys. A notice of the date of the survey is given in writing 30 days in advance to the institution surveyed. The usual time each day that is spent by the surveying team conducting the on-site survey is 7 hours. A hospital of 500 beds takes 2 to 3 days, and, of course, this depends whether or not the survey team is made up of two or three individuals. A VA hospital pays at a rate of $230 per day for each survey; I assume similar charges are paid by other hospitals. Until recently accreditation was for 3 years; now it is for 2. There are at least two ways of reviewing this change: better accreditation or a means for increasing the revenue of the Commission.

At the time that the hospital applies for accreditation or at which time the accreditation is to be renewed or reexamined, a voluminous form of 169 pages is submitted to the hospital for completion and returned to the Joint Commission to permit it to make a computer analysis of the data provided. This allegedly permits the survey to be directed toward problem areas.

A second form entitled "The Surveyor's Report" of some 43 pages is completed by the survey team during the visit. Before the team leaves the hospital it hold a summary conference with the hospital authorities. As an example of the broadness of the survey, the following hospital services are considered: Clinical services and governing body and management; medical staff; nursing services; anesthesia services; environmental services; medical record services; pathology services; pharmaceutical services; physical medicine services; professional library services; radiology services; social services; special care units.

So that the records may be completed on this subject, I am including as a part of the remarks an exchange of remarks I have had with the director of accreditations, Dr. John E. Porterfield, which follows:

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON VETERANS' AFFAIRS,
Washington, D.C., March 1, 1972.

Dr. JOHN P. PORTERFIELD,
Director, Joint Commission on Accreditation, Chicago, Ill. 60611

DEAR DR. PORTERFIELD: As the ranking minority member of the Subcommittee on Hospitals of the Committee on Veterans' Affairs, I have seen and read, during my service of nearly 23 years on the Committee many of your reports on individual Veterans' Administration hospitals wherein the Commission accredits the hospital under investigation.

I would like to have some information on the operations of the Commission. Would you please indicate, for the calendar years of 1965, 1966, 1967, 1968, 1969, 1970, and 1971 the number of hospitals which representatives of the Commission inspected for the purpose of accreditation, the number disaccredited (accreditation withdrawn or not granted if the inspection was the first time visit for the purpose of accreditation). Please furnish the same information for nursing homes which you have inspected. Indication should be made between those hospitals or nursing homes which are a part of the system operated by the Department of Medicine and Surgery of the Veterans' Administration and those which are operated under other public or private auspices. (The categories should be VA operated and others). It should be emphasized that I am requesting numbers and totals for the years indicated; not names or location of the facilities.

Would you please state the policy as to notice given the hospital tc be visited for the purpose of accreditation. Is notice given to the prospective hospital in writing or orally? Are unannounced inspections made, and if so, under what circumstances? How many hours does it take, on an average, to make up an inspection of a five hundred-bed hospital? How many individuals make up an inspection team for such a hospital?

I look forward to receiving this information at an early date and will appreciate your cooperation to that end.

Sincerely yours,
JOHN P. SAYLOR,
Member of Congress.

MARCH 13, 1972.

JOHN P. SAYLOR,
Member of Congress, U.S. House of Representatives, Committee on Veterans' Affairs, Washington, D.C. 20515

MY DEAR CONGRESSMAN SAYLOR: This is answer to your March 1, 1972 inquiry requesting information regarding hospitals and nursing homes that have been surveyed by the Joint Commission on Accreditation of Hospitals for the calendar years of 1965 through 1971. The attached sheets list these facilities.

In reply to the specific questions relative to the notice given facilities:

1. A notice of the date of survey is given in writing 30 days in advance.

2. Unannounced inspections or surveys are not made.

3. The usual time each day that is spent by the survey team conducting the on-site survey is seven hours; and a hospital of 500 beds takes 2 or 3 days, depending on whether the survey teams is made up of two or three individuals.

Sincerely yours,
JOHN D. PORTERFIELD, M.D.,
Director.

APRIL 27, 1972.

Dr. JOHN P. PORTERFIELD,
Director, Joint Commission on Accreditation of Hospitals, Chicago, Ill. 60611.

DEAR DR. PORTERFIELD: Thank you for your letter of March 13 which I received on April 14 after I had my office call the Commission in Chicago.

I have had a careful search made of the records in this office and the records in the Committee on Veterans Affairs, and this search fails to reveal that your original letter was ever received. Again, my appreciation for the carbon.

I have seen the somewhat voluminous form used when a hospital is inspected by members of the staff of the Commission, but the reports which have been furnished to me over the years by the Veterans Administration are summaries which, as you know, run between 1 and 4 pages. Is the full report made available to the individual hospital under accreditation study or does the institution just receive the brief report or summary which I have seen? I would appreciate hearing from you on this point.

Again, thank you for your help.

Sincerely,

JOHN P. SAYLOR,
Member of Congress.

MAY 12, 1972.

HON. JOHN P. SAYLOR,
Member of Congress, House of Representatives, Washington, D.C. 20515

DEAR CONGRESSMAN SAYLOR: In response to your inquiry of April 27, there are two voluminous forms used in connection with a hospital accreditation survey. The first of these, entitled *Hospital Survey Questionnaire,* is sent to a hospital when it applies for accreditation or reaccreditation. Hospital personnel must complete and return it to the Joint Commission for review before the survey visit. It is in essence a comprehensive program audit in terms of the Joint Commission standards. It is helpful as such to the hospital. It also serves to give the Joint Commission a computer analysis of the data provided, so that the survey visit may be directed toward problem areas.

The second form, the *Surveyors' Report Form,* is completed by the survey team during the survey visit. It is intended to validate the data previously submitted and to provide a record of direct observations made. This is returned by the survey team to the central office, where it is reviewed and becomes the basis for the accreditation decision and critique adopted by the Commissioners' Accreditation Committee. Copies of both documents now in use are forwarded for your inspection.

Before the survey team leaves the hospital, it holds a summary conference with the hospital authorities. At that time, both documents are reviewed and discussed and direct consultation is provided. While the hospital has usually retained a copy of the first document described above, it is not given a copy of the second document.

The formally approved critique, which is in fact a summary of the adverse findings and recommendations, is later sent to the hospital with the accreditation decision letter as a documentation of the summary conference which was held.

This same critique is subsequently used, where the hospital has been given two-year accreditation, as the interim survey report. The hospital is expected on the anniversary date of the survey visit to review the critique and to report to the Joint Commission on the improvements which have been effected or on the progress to that end.

Your continued interest is appreciated. If we may help you further, please let us know.

Sincerely,

JOHN D. PORTERFIELD, M.D.,
Director.

JUNE 15, 1972.

Dr. JOHN P. PORTERFIELD,
Director, Joint Commission on Accreditation of Hospitals, Chicago, Ill.

DEAR DR. PORTERFIELD: You will recall my letter of April 27 in which I asked you for certain information.

Having received no response, on May 31 my administrative asistant, Mr. Harry Fox, called your office and spoke with your secretary who advised that a letter together with considerable material had been forwarded to my office several weeks previous to the call. Your secretary then called Mr. Fox later in the same day and asked to whom the material should be addressed and was given that information. As of this date I have not seen the original letter or the carbon which was promised on May 31.

This is my third request for this information and I would urge you to promptly comply with what I believe most people would agree is a reasonable request for information of this type. I would suggest in view of the difficulties which we have experienced with my original inquiry, as well as the one embodied in my letter of April 27, that you certify the response which you make to this letter. It should be addressed to me at Room 2354, Rayburn House Office Building, Washington, D.C. 20515, Attention: Mr. Harry Fox.

Thank you for your cooperation.

Sincerely,

JOHN P. SAYLOR,
Member of Congress.

JOINT COMMISSION ON
ACCREDITATION OF HOSPITALS,
Chicago, Ill., June 19, 1972.

Hon. JOHN P. SAYLOR,
Member of Congress, Rayburn House Office Building, Washington, D.C. 20515

DEAR CONGRESSMAN SAYLOR: I am as depressed in reading as you were in writing your letter of June 15.

A reply to your April 27 letter was mailed to you on May 12 with a substantial bulk of informative enclosures. This was addressed to you, as you will see on the carbon, only at the House of Representatives since your letterhead gave no more precise information and this office does not have a Congressional directory.

When your Mr. Fox called on May 31, a duplicate set was mailed airmail to you the same day, now using the office address Mr. Fox furnished.

A third set is now forwarded to you by registered mail, return receipt requested. I am very hopeful we can beat the system this time.

There is no need to urge me to promptly comply. Your request is indeed reasonable and we have been doing our level best to fill it.

I cannot apologize for what was not the fault of this office, but I join you in deploring the circumstances which created this difficulty, whatever they are.

We are pleased at your interest in our work and will continue to try to respond promptly and adequately to any further requests you may make.

Sincerely,

JOHN D. PORTERFIELD, M.D.,
Director.

I invite Members' particular attention to the summary data on Commission survey attached to Dr. Porterfield's letter of March 13, 1972. It should be noted that during that 7-year period the highest percentage of nonaccredited was 5.6 percent in 1967 while the lowest percentage was 1.8 percent in 1971.

In the case of accreditation of long-term care facilities—a facility providing inpatient care for convalescent or chronic disease patients who require skilled nursing care and related medical services—begun in 1966, 45.1 percent were not accredited that year. It dropped to 24.9 percent in 1967; 18.2 percent in 1968; 7.6 percent in 1969; in 1970 it was 5 percent—first year of mixed facility survey—and in 1971 it was 2.6 percent.

Mr. Speaker, one can draw comfort from these percentage figures but from reports we read and hear about almost daily I wonder how much comfort we should draw.

Mr. Speaker, we are discussing here today a highly important subject literally running into billions of dollars, and it is estimated that HEW is spending now in excess of $5 billion under medicare. When ths amount is considered in conjunction with the funds voted for the construction of hospitals under the Hill-Burton Act, the operation of the Veterans' Administration system, which costs in excess of $2.6 billion per year, the operations of the National Institutes of Health, the Public Health Services, the medical aspects of the Department of Defense, subsidies paid to medical schools, and the medical scholarships involved, plus the huge amounts allocated for research, the interest of the Federal Government and all taxpayers is obvious. It should be pointed out, too, that it is estimated that we are spending each year for nursing homes approximately $2.6 billion, three-fourths of which comes from public funds, and that on July 19 of this year the Secretary of HEW announced that 68 percent of the 7,000 nursing homes surveyed did not meet minimal standards, and thus were accredited for 6-month periods only.

According to statements made in civil action number 2016–71 in the District Court for the District of Columbia which involved the approval by the Joint Commission of the San Francisco General Hospital, it is reported that:

> A. Dr. Robert Marvan, an intern at San Francisco General, reported that:
>
> (1) Worms were found on the head and maggots on the neck of a comatose patient who had undergone a tracheotomy;
>
> (2) Ants were observed in a patient's bed and in his I.V. bottle which leads to his bloodstream.
>
> B. Documentary evidence was presented which showed:
>
> (1) That medications and specimens (blood, urine, and stool) were stored with food in the same refrigerators;
>
> (2) That the surgical suite, cleaned in April of last year (1970), was once more an unsafe area; and
>
> (3) That no fire drill had been held for at least 8½ years."

This accreditation permitted the hospital to receive at least $2.1 million annually in medicare payments.

In this same suit, it was stated in referring to the D.C. General Hospital:

> At this meeting, house staff physicians, kitchen and maintenance employees of the hospital and community members who had been patients at the hospital offered oral testimony about drug shortages, lack of nurses, lost and incorrect medical records, inaccurate and unavailable lab reports, lost X-rays, and other deficiencies which render the hospital unable to provide medical care to the poor of the District of Columbia in compliance with Joint Commission standards.

In regard to the activities of the American Hospital Association, it is one of the principal governors of the Joint Commission on Accreditation of Hospitals. It should be pointed out that the Veterans' Administration has to pay each year a large sum of money to participate in the activities of this operation. It is currently at the figure of $73,747. This is determined by paying $6,880 for the first hospital, in this case the one operated at Hines, Ill., and $412 for each additional membership. The results of this membership as far as worthwhile benefits to the agency and to the veterans of this country are at least somewhat open to question. A copy of a letter from the Administrator of Veterans' Affairs on this subject follows:

VETERANS ADMINISTRATION,
Washington, D.C. June 29, 1972.

Hon. JOHN P. SAYLOR,
House of Representatives
Washington, D.C. 20515

DEAR MR. SAYLOR: Enclosed is the information you requested concerning Veterans Administration payments to the American Hospital Association.

We contract for annual membership on the basis of payment of $6880 which provides overall agency membership and includes the first hospital, in this case Hines, Illinois. Each additional hospital is charged at the rate of $412 per annum. The exceptions are the VA Domiciliary, White City, Oregon, whose rate is $255, and the VA Center, San Juan, Puerto Rico, whose rate is $275.

Our current year contract provides for maximum payment of $73,747. Our current expenditures are $72,506. Provision is made each year to increase or decrease charges as the number of VA hospitals changes.

If we can furnish any further information, please let me know.

Sincerely,
Deputy Administrator
(In the absence of
DONALD E. JOHNSON, *Administrator*).

Total	[2]72,506	96,189

[1] Total hospital operating beds as of Apr. 30, 1972.

[2] Includes $255 annual AHA dues for VA domiciliary, White City, Oreg.

Several conclusions may be drawn from the above record:

First. A well-developed pattern of accreditation has existed in this country for over 50 years;

Second. The Joint Commission on Accreditation of Hospitals is a private body incorporated as a not-for-profit organization in one State and doing business in all 50;

Third. The Commission is medically controlled—82 percent of the board of directors are doctors of medicine, 18 percent are not;

Fourth. There is no Commission representation on the board for nurses, engineers, social services, and others in the allied health professions;

Fifth. There is no representation for consumers—patients—or community interest in Commission surveys;

Sixth. While the accreditation process is important there is no record there was any public demand for the Commission activities, but rather the accreditation process was developed by the medical fraternity;

Seventh. The Federal Government—taxpayers—pay over 50 percent of the medical costs in the country;

Eighth. The Federal Government and individual citizens have no control or input in the accreditation process as now existing.

Mr. Speaker, I am introducing today three bills which I believe are necessary and which would correct in my judgment many of the deficiencies which exist in this field, and which would provide for an objective appraisal of hospital administration at all levels throughout the country, as well as nursing homes and remove from it the influence of accreditation by associations who have a vested interest in the operation of the facilities, which is the case today.

The first bill is one which relates entirely and exclusively to the Veterans' Administration. It provides simply that the Administrator may not pay to the Joint Commission on Accreditation of Hospitals any fee or other charges for a survey, until and unless the Administrator receives from the Joint Commission a copy of the surveyor's report and such other information as the Administrator may require.

The second bill authorizes the Secretary of Health, Education, and Welfare to require hospitals, as a condition to participation in Federal programs, to meet the accreditation standards established by him where he finds that the Joint Commission's accreditation policies do not assure the delivery of safe, effective, and economical health care in a hospital.

The last bill is a more comprehensive one, and it proposes to supplant the Joint Commission on Accreditation of Hospitals by establishing a Federal Commission to be composed of 32 members.

First. Including as ex-officio members the chief medical officer of the Veterans' Administration and a medical officer designated by the Secretary of Defense.

Second. Nine members will be appointed by the Comptroller General, six to be persons experienced in the administration of hospitals and three from members of the general public.

Third. Twenty-one appointed by the Secretary of HEW, six of whom shall be physicians and 15 from persons in the applied health professions, nurses, and engineers.

Appointed members shall serve for a term of 6 years. The chairman shall be elected for a term of 4 years by the Commission. The Commission shall meet at least every 3 months, but work of the board shall be conducted by a director who shall have overall responsibility for its operation. The Commission may authorize public hearings, hold such hearings set at such times and places and submit testimony as the Commission deems advisable. The hearings shall be open and there is no bar in the bill to receiving testimony from any source, including consumers of patient care and employees of a particular hospital.

Each hospital shall be charged an appropriate fee for this accreditation procedure so as to make the activities of the proposed Federal Commission tax free and not require an appropriation.

If the determination is made with respect to any public or private hospital that the hospital does not meet the accreditation standards and after the expiration of a 90-day period, no Federal financial assistance may be paid to or on behalf of the hospital from any source and the hospital shall not be eligible to participate as a provider of services under titles XVIII or XIX of the Social Security Act until such time as the Commission accredits the hospital. In the case of a Federal hospital, the head of the agency, after the expiration of the 90-day period, shall terminate its operations until the hospital is accredited by the Commission.

WYOMING'S GREATEST ASSET IN PERIL

(Mr. RONCALIO asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. RONCALIO. Mr. Speaker, Air Facts is a noted monthly magazine devoted to the development of private air transportation, edited by Leighton Collins. It recently featured an article by Terrance Honikman on the flying experiences of the author and his wife on a coast-to-coast vacation flight. It carried an excerpt which I quote in the hope that my constituents who still feel that Wyoming's air is pure and sweet and clean may take pause and reflect upon what others who come through my State have to say about how we who are living there are guarding its priceless resource, clean air.

The excerpt follows:

> So now we are left alone for 25 minutes while cruising across Wyoming skies at 180 knots. * * *
>
> The land over which we were flying is spectacular, when you can see it. For already the brown stain called smog has made its home over the Wyoming wilderness. * * * We were sickened by what we saw, for it was apparent that man's thoughtlessness has reached even to where he does not live in significant numbers. We have come to expect smog in and around large cities, but to find it for mile after eyestinging mile between the metropolitan areas raised some terrible questions. It seemed even more evil out there (in Wyoming).

The author was flying from Jackson to Rapid City, S. Dak., and was probably observing the results of the great industrialization that is so highly touted in Wyoming today—the trona industry in southwest Wyoming, power generation in various parts of State—and the prosperity that is heralded so keenly throughout Wyoming these days. How evil it is that in just a few years my beloved State of Wyoming, at elevations of 6,000 and 7,000 feet, may be suffering the same smog alert we are having in the District of Columbia today.

PERSONAL ANNOUNCEMENT

(Mr. DANIELSON asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. DANIELSON. Mr. Speaker, on Thursday, August 3, 1972, I was compelled to leave the floor at 5:15 p.m. in order to return to my district, and therefore I missed roll No. 298. On roll No. 298, a recorded teller vote, I would have voted "aye" on the Gonzalez amendment to H.R. 15989, to extend the Export Administration Act of 1969. This amendment removes the President's authority to control exports of cattle hides. The amendment was agreed to by a vote of 177 ayes to 158 noes.

On Tuesday, August 15, 1972, I was compelled to leave the floor shortly after 5 p.m. and therefore missed roll No. 327, final passage of the bill, S. 3824, the public broadcasting authorization, which passed the House by a vote of 377 yeas to 8 nays. If I had been present and voting, I would have voted "yea."

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. Aspinall, from September 5 until September 14, on account of primary election.

Mr. Conover (at the request of Mr. Gerald R. Ford), for September 5 and 6, on account of official business.

Mr. Gude (at the request of Mr. Gerald R. Ford), for from 5:30 p.m. today, for personal matters due to the marriage of his daughter.

Mr. Railsback (at the request of Mr. Gerald R. Ford), for today and tomorrow, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. Shoup), to revise and extend their remarks, and to include extraneous matter:)

Mr. Schwengel, today, for 30 minutes.

Mr. Dickinson, today, for 15 minutes.

Mr. Mathias of California, on August 18, 1972, for 5 minutes.

Mr. Don H. Clausen, on August 18, 1972, for 5 minutes.

Mr. Winn, today, for 5 minutes.

Mr. Harvey, today, for 15 minutes.

Mr. Brown of Michigan, today, for 5 minutes.

(The following Members (at the request of Mr. Mazzoli) and to revise and extend their remarks and include extraneous matter:)

Mr. Nichols, for 5 minutes, today.

Mr. Fraser, for 15 minutes, today.

Mr. Gonzalez, for 5 minutes, today.

Mr. Aspin, for 5 minutes, today.

Mr. Eilberg, for 5 minutes, today.

Mr. Dulski, for 10 minutes, today.

Mr. Galifianakis, for 5 minutes, today.

Mr. Cotter, for 5 minutes, today.

Mr. Vanik, for 5 minutes, today.

Mr. Burke of Massachusetts, for 5 minutes, today.

Mrs. Chisholm, for 5 minutes, today.

Mr. Davis of South Carolina, for 5 minutes, today.

Mr. Daniels of New Jersey, for 5 minutes, today.

Mr. Charles H. Wilson, for 10 minutes, on August 18.

Mr. McFall, for 5 minutes, on August 18.

Mr. Sisk, for 5 minutes, on August 18.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. Waggonner, notwithstanding it exceeds two pages of the Record, and is estimated by the Public Printer to cost $1,147.50.

Mr. Frenzel to extend his remarks

following Mr. Steiger of Wisconsin during general debate on H.R. 13915.

Mr. Mizell, immediately following the remarks of Mr. Ruth under the 5-minute rule on the Green amendment in the Committee of the Whole today.

Mr. Dickinson, immediately following the remarks of Mr. Ruth under the 5-minute rule on the Green amendment in the Committee of the Whole today.

Mr. Rousselot, to extend his remarks following comments of Mr. Ashbrook.

Mrs. Mink to extend her remarks in the body of the Record and to include extraneous matter notwithstanding the estimated cost of $1,530.

Mr. Koch and to include extraneous matter, notwithstanding the fact that it exceeds 14¼ pages of the Record and is estimated by the Public Printer to cost $2,422.50.

Mr. Saylor and to include extraneous matter, notwithstanding the fact that it exceeds 6 pages of the Record and is estimated by the Public Printer to cost $1,020.

(The following Members, (at the request of Mr. Shoup) and to include extraneous material:)

Mr. Railsback in two instances.
Mr. McClory in two instances.
Mr. Anderson of Illinois.
Mr. Price of Texas.
Mr. Derwinski in three instances.
Mr. Wyman in two instances.
Mr. Broyhill of Virginia.

Mr. Veysey.
Mr. Hansen of Idaho in three instances
Mr. Gude in two instances.
Mr. Riegle in two instances.
Mr. Rousselot.
Mr. Shriver in two instances.
Mr. Frey.
Mr. Smith of New York.
Mr. Frenzel.
Mr. Landgrebe.
Mr. Scott.
Mr. Steiger of Arizona in two instances.
Mr. Bray in three instances.
Mr. Brown of Michigan.
Mr. Dellenback.

(The following Members (at the request of Mr. Mazzoli) and to include extraneous materials:)

Mr. Gaydos.
Mr. de la Garza in 10 instances.
Mr. Aspin in five instances.
Mr. Brasco in two instances.
Mr. Giaimo.
Mr. Gonzalez in three instances.
Mr. Rarick in three instances.
Mr. Long of Maryland.
Mr. Fuqua.
Mr. Wolff.
Mr. Garmatz in two instances.
Mr. Harrington in four instances.
Mr. Hungate.
Mr. Diggs in three instances.
Mr. Colmer.
Mr. Roy.
Mr. Dorn in two instances.
Mr. Hamilton.
Mr. Eilberg in two instances.
Mr. Symington in two instances.
Mr. Vanik.
Mr. Anderson of Tennessee in two instances.
Mr. Nix.
Mr. Carey of New York.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 3441. An act to extend the traineeship program for professional public health personnel, and project grants for graduate training in public health under the Public Service Act; to the Committee on Interstate and Foreign Commerce.

S. 3752. An act to extend programs for assistance to medical libraries; to the Committee on Interstate and Foreign Commerce.

ENROLLED BILL SIGNED

Mr. HAYS, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker.

H.R. 16254. An act making certain disaster relief supplemental appropriations for the fiscal year 1973, and for other purposes.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 3824. An act to authorize appropriations for the fiscal year 1973 for the Corporation for Public Broadcasting and for making grants for construction of noncommercial educational television or radio broadcasting facilities.

ADJOURNMENT

Mr. MAZZOLI. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 43 minutes a.m., Friday, Aug. 18, 1972), the House adjourned until 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2262. A letter from the Architect of the Capitol, transmitting a report of all expenditures during the period January 1 through June 30, 1972, from moneys appropriated to the Architect of the Capitol, pursuant to section 105(b) of Public Law 88-454; to the Committee on Appropriations.

2263. A letter from the Assistant Secretary of the Navy (Installations and Logistics), transmitting notice of the proposed transfer of the Officers Motor Boat, Hull No. C-12928 to the Admiral Nimitz Center, Fredericksburg, Tex., pursuant to 10 U.S.C. 7308(c); to the Committee on Armed Services.

2264. A letter from the Chairman, Commission on the Organization of the Government of the District of Columbia, transmitting the final report of the Commission, pursuant to Public Law 91-405, as amended (H. Doc. No. 92-317); to the Committee on the District of Columbia and ordered to be printed with illustrations.

2265. A letter from the Clerk, U.S. House of Representatives, transmitting his semiannual report of receipts and expenditures of appropriations and other funds for the period ended June 30, 1972, pursuant to 2 U.S.C. 104(a) (H. Doc. No. 92-346); to the Committee on House Administration and ordered to be printed.

2266. A letter from the Administrator, National Aeronautics and Space Administration, transmitting a report on positions in NASA as of June 30, 1972, established under the authority of section 203(b)(2) of the National Aeronautics and Space Act of 1958, pursuant to section 206(b) of the act (75 Stat. 785, 791); to the Committee on Post Office and Civil Service.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HOLIFIELD: Committee on Government Operations. H.R. 15763. A bill to amend chapter 25, title 44, United States Code, to provide for two additional members of the National Historical Publications Commission, and for other purposes; with amendments (Rept. No. 92-1362). Referred to the Committee of the Whole House on the State of the Union.

Mr. RODINO: Committee on the Judiciary. H.R. 16188. A bill to amend the Immigration and Nationality Act, and for other purposes; with amendments (Rept. No. 92-1366). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DANIELSON: Committee on the Judiciary. H.R. 5416. A bill for the relief of Ossie Emmons and others; with amendments (Rept. No. 92-1363). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 12099. A bill for the relief of Sara B. Garner (Rept. No. 92-1364). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 15865. A bill for the relief of Richard L. Krzyanowski; with an amendment (Rept. No. 92-1365). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ABBITT:

H.R. 16417. A bill to amend title II of the Social Security Act to provide that an individual may qualify for disability insurance benefits and the disability freeze if he has enough quarters of coverage to be fully insured for old-age benefit purposes, regardless of when such quarters were earned; to the Committee on Ways and Means.

By Mrs. ABZUG:

H.R. 16418. A bill to amend the Public Buildings Act of 1959 to require public buildings to have bicycle parking facilities; to the Committee on Public Works.

By Mr. BINGHAM:

H.R. 16419. A bill to require States to pass along to public assistance recipients who are entitled to social security benefits the 1972 increase in such benefits, either by disregarding it in determining their need for assistance or otherwise; to the Committee on Ways and Means.

H.R. 16420. A bill to establish a national surface transportation trust fund, and for other purposes; to the Committee on Ways and Means.

By Mr. CONABLE (for himself, Mr. Betts, Mr. Carey of New York, Mr. Corman, Mr. Fulton, Mr. Gibbons, Mrs. Griffiths, Mr. Pettis, Mr. Ullman, and Mr. Vanik):

H.R. 16421. A bill to promote the foreign policy and security of the United States by providing authority to negotiate a commercial agreement with Rumania, and for other purposes; to the Committee on Ways and Means.

By Mr. DANIELS of New Jersey:

H.R. 16422. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to enable units of general local government to increase the numbers of police; to the Committee on the Judiciary.

By Mr. DORN:

H.R. 16423. A bill to provide for accelerated research and development in the care and treatment of autistic children, and for other purposes; to the Committee on Ways and Means.

By Mr. ESCH (for himself and Mr. Danielson):

H.R. 16424. A bill to provide for the use of certain funds to promote scholarly, cultural, and artistic activities between Japan and the United States, and for other purposes; to the Committee on Foreign Affairs.

By Mr. GALIFIANAKIS:

H.R. 16425. A bill to provide greater assurance of Federal fiscal responsibility; to the Committee on Government Operations.

By Mr. GARMATZ (for himself and Mr. Mailliard):

H.R. 16426. A bill to amend section 27 of the Merchant Marine Act of 1920, to provide a monetary penalty for the transportation of merchandise in violation of the coastwise laws; to the Committee on Merchant Marine and Fisheries.

By Mr. HARRINGTON (for himself, Mr. Carney, Mr. Dellums, and Mr. Mikva):

H.R. 16427. A bill to authorize the Secretary of Labor to provide financial and other assistance to certain workers and small business firms to assist compliance with State or Federal pollution abatement requirements; to the Committee on Banking and Currency.

By Mrs. HICKS of Massachusetts (for herself and Mrs. Grasso):

H.R. 16428. A bill to authorize and request the President to issue annually a proclamation designating August 26 of each year as "Women's Rights Day"; to the Committee on the Judiciary.

By Mr. KOCH:

H.R. 16429. A bill to amend the Public Health Services Act to provide for the protection of the public health from unnecessary medical exposure to ionizing radiation; to the Committee on Interstate and Foreign Commerce.

By Mr. McKEVITT:

H.R. 16430. A bill to amend the Social Security Act to prohibit the payment of aid or assistance under approved State public assistance plans to aliens who are illegally within the United States; to the Committee on Ways and Means.

By Mr. MANN (for himself and Mr. Taylor):

H.R. 16431. A bill to provide for a study of a proposed Southern Appalachian Slope National Recreation Area on the southern slope of the Appalachian Highlands in areas of the States of South Carolina, North Carolina, and Georgia; to the Committee on Interior and Insular Affairs.

By Mr. NELSEN:

H.R. 16432. A bill to provide for disciplined and responsible action in the consideration and execution of the Federal budget; to the Committee on Government Operations.

H.R. 16433. A bill to make illegal the manufacture of thin-gage steel drums; to the Committee on Interstate and Foreign Commerce.

By Mr. SAYLOR:

H.R. 16434. A bill to establish the Federal Commission on Accreditation of Hospitals, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 16435. A bill to authorize the Secretary of Health, Education, and Welfare to require hospitals as a condition to participation in Federal programs to meet accreditation standards established by him; to the Committee on Interstate and Foreign Commerce.

H.R. 16436. A bill to amend title 38 of the United States Code to prohibit payment of hospital inspection fees by the Administrator of Veterans Affairs to the Joint Commission on the Accreditation of Hospitals until certain information regarding such inspections is received by the Administrator; to the Committee on Veterans' Affairs.

By Mr. SCHWENGEL:

H.R. 16437. A bill to improve the committee system of the House of Representatives and the operation of the Federal legislative branch generally, and for other purposes; to the Committee on Rules.

By Mr. SHRIVER:

H.R. 16438. A bill to amend the Small Business Act to authorize assistance to small business concerns in financing structural, operational, or other changes to meet standards required pursuant to certain Federal or State laws; to the Committee on Banking and Currency.

H.R. 16439. A bill to amend title 38 of the United States Code to liberalize the provisions relating to payment of disability and death pension; to the Committee on Veterans' Affairs.

By Mr. TIERNAN:

H.R. 16440. A bill to provide payments to States for public elementary and secondary education and to allow a credit against the individual income tax for tuition paid for the elementary or secondary education of dependents; to the Committee on Ways and Means.

By Mrs. ABZUG:

H.R. 16441. A bill to provide for research for solutions to the problem of alienation among American workers in all occupations and industries and technical assistance to those companies, unions, and State and local governments seeking to find ways to deal with the problem, and for other purposes; to the Committee on Education and Labor.

H.R. 16442. A bill to amend the Social Security Act to make certain that recipients of aid or assistance under the various Federal-State public assistance and medicaid programs (and recipients of assistance under the food stamp and surplus commodity programs) will not have the amount of such aid or assistance reduced because of increases in monthly social security benefits; to the Committee on Ways and Means.

By Mr. ANDERSON of California (for himself, Mr. Koch, Mr. Coughlin, and Mr. Gude):

H.R. 16443. A bill to improve the efficiency of the Nation's highway system, allow States and localities more flexibility in utilizing highway funds, and for other purposes; to the Committee on Public Works.

By Mr. BURTON (for himself, Mr. Mailliard, Mr. Don H. Clausen, Mr. Aspinall, Mr. Saylor, Mr. Taylor, Mr. Skubitz, Mr. Johnson of California, Mr. Hosmer, Mr. Haley, Mr. Udall, Mr. Kastenmeier, Mr. Ryan, Mr. Meeds, Mr. McClure, Mr. Melcher, Mr. McKevitt, Mr. Terry, Mr. Camp, Mr. Abourezk, Mr. Holifield, Mr. Leggett, Mr. Waldie, Mr. Dellums, and Mr. Edwards of California):

H.R. 16444. A bill to establish the Golden Gate National Urban Recreation Area in San Francisco and Marin Counties, Calif.; to the Committee on Interior and Insular Affairs.

By Mr. BURTON (for himself, Mr. Mailliard, Mr. Moss, Mr. Corman, Mr. Hawkins, Mr. Rees, and Mr. Danielson):

H.R. 16445. A bill to establish the Golden Gate National Urban Recreation Area in San Francisco and Marin Counties, Calif.; to the Committee on Interior and Insular Affairs.

By Mr. DELLUMS:

H.R. 16446. A bill to amend the Age Discrimination in Employment Act of 1967 to extend the protection of that act to employees of States and their political subdivisions; to the Committee on Education and Labor.

H.R. 16447. A bill to provide the protection of the safety and health standards under the Occupational Safety and Health Act of 1970 for individuals participating in athletic contests betwen secondary schools or between institutions of higher education; to the Committee on Education and Labor.

By Mr. DONOHUE (for himself, Mr. O'Neill, Mr. Boland, Mr. Burke of Massachusetts, Mrs. Hicks of Massachusetts, Mr. Macdonald of Massachusetts, Mr. Drinan, Mrs. Heckler of Massachusetts, Mr. Keith, Mr. Harrington, and Mr. Conte):

H.R. 16448. A bill to designate the Federal office building being constructed in Fitchburg, Mass., as the "Philip J. Philbin Federal Office Building"; to the Committee on Public Works.

By Mr. EILBERG (for himself, Mrs. Abzug, Mr. Addabbo, Mr. Anderson of Tennessee, Mr. Barrett, Mr. Brinkley, Mr. Conyers, Mr. Danielson, Mr. Dent, Mr. Diggs, Mr. Fraser, Mr. Green of Pennsylvania, Mr. Gude, Mr. Halpern, Mr. Harrington, Mr. Helstoski, Mr. Matsunaga, Mr. Metcalfe, Mr. Mikva, Mr. Morgan, Mr. Nix, Mr. Rangel, Mr. Thompson of New Jersey, Mr. Williams, and Mr. Wyatt):

H.R. 16449. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide increased assistance to correctional programs, to establish more detailed guidelines for such programs, and to create a streamlined administration of such assistance; to the Committee on the Judiciary.

By Mr. FASCELL:

H.R. 16450. A bill to provide that meetings of Government agencies and of congressional committees shall be open to the public, and for other purposes; to the Committee on Rules.

By Mr. GUDE:

H.R. 16451. A bill to authorize the Commissioner of the District of Columbia to enter into cooperative arrangements with other governmental entities in the National Capital Region with respect to the procurement of supplies and services; to the Committee on the District of Columbia.

By Mr. HARRINGTON (for himself, Mr. Carney, and Mr. Stokes):

H.R. 16452. A bill to amend the Federal Property and Administrative Services Act of 1949 to provide for the use of excess property by certain grantees; to the Committee on Government Operations.

H.R. 16453. A bill to require a study of the practices, policies, and procedures of all Government agencies relating to the availability of certain goods and services through Federal supply and service sources, to amend the Federal Property and Administrative Services Act of 1949 to permit certain grantees and contractors of Government agencies to procure certain goods and services through Federal supply and service sources, and for other purposes; to the Committee on Government Operations.

By Mr. KEMP:

H.R. 16454. A bill to amend the Social Security Act to provide for revenue sharing grants to the States to assist them in meeting the costs incurred in operating public assistance programs; to the Committee on Ways and Means.

By Mr. PEPPER:

H.R. 16455. A bill for the establishment of a Council on Energy Policy; to the Committee on Interstate and Foreign Commerce.

By Mr. PEYSER:

H.R. 16456. A bill to amend the Elementary and Secondary Education Act of 1965 to protect schoolchildren from certain persons convicted of criminal behavior; to the Committee on Education and Labor.

H.R. 16457. A bill to amend the Social Security Act to provide that future increases in retirement or disability benefits under Federal programs shall not be taken into consideration in determining a person's need for aid or assistance under any of the Federal-State public assistance programs, and for other purposes; to the Committee on Ways and Means.

By Mr. PEYSER (for himself, Mr. Rangel, Mr. Keating, and Mr. Biaggi):

H.R. 16458. A bill to prevent the use of heroin for any drug maintenance program; to the Committee on Interstate and Foreign Commerce.

By Mr. RODINO:

H.R. 16459. A bill to establish an independent and regionalized Federal Board of Parole, to provide for fair and equitable parole procedures, and for other purposes; to the Committee on the Judiciary.

H.R. 16460. A bill to amend title 38 of the United States Code to liberalize the provisions relating to payment of disability and death pension; to the Committee on Veterans' Affairs.

By Mr. ROYBAL:

H.R. 16461. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide increased assistance to correctional programs, to establish more detailed guidelines for such programs, and to create a streamlined administration of such assistance; to the Committee on the Judiciary.

H.R. 16462. A bill to make United Nations Day a legal public holiday; to the Committee on the Judiciary.

By Mr. SAYLOR (for himself, Mr. Aspinall, Mr. Begich, Mr. Camp, Mr. Dent, Mr. Gude, Mr. McClure, Mr. Skubitz, and Mr. Ware):

H.R. 16463. A bill to provide for the establishment of the Clara Barton House National Historic Site in the State of Maryland, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. SMITH of New York:

H.R. 16464. A bill to provide that the emergency and extended unemployment compensation programs shall not end in any standard metropolitan statistical area until the unemployment rate in that area has fallen to the level prescribed for a State "off" indicator for that program; to the Committee on Ways and Means.

By Mr. BINGHAM:

H.R. 16465. A bill to amend title 38 of the United States Code to provide that any social security benefit increases provided for by Public Law 92–336 be disregarded in determining eligibility for pension or compensation under such title; to the Committee on Veteran's Affairs.

By Mr. BROWN of Michigan:

H.R. 16466. A bill to promote development and expansion of community schools throughout the United States; to the Committee on Education and Labor.

By Mr. DULSKI:

H.R. 16467. A bill to provide payments to States for public elementary and secondary education and to allow a credit against the individual income tax for tuition paid for the elementary or secondary education of dependents; to the Committee on Ways and Means.

By Mr. HARRINGTON:

H.R. 16468. A bill to provide for accelerated research and development in the care and treatment of autistic children, and for other purposes; to the Committee on Ways and Means.

By Mr. HARRINGTON (for himself, Mrs. Abzug, Mr. Badillo, Mr. Begich, Mr. Boland, Mr. Brasco, Mr. Brinkley, Mr. Burton, Mrs. Chisholm, Mr. Clay, Mr. Corman, Mr. Diggs, Mr. Donohue, Mr. Dow, Mr. Eckhardt, Mr. Edwards of California, Mr. Eilberg, Mr. William D. Ford, Mr. Flood, Mr. Gaydos, Mr. Gonzalez, Mr. Green of Pennsylvania, and Mr. Halpern):

H.R. 16469. A bill to provide adequate mental health care and psychiatric care to all Americans; to the Committee on Ways and Means.

By Mr. HARRINGTON (for himself, Mr. Hechler of West Virginia, Mr. Helstoski, Mrs. Hicks of Massachusetts, Mr. Hungate, Mr. Koch, Mr. Madden, Mr. Mitchell, Mr. Nix, Mr. O'Konski, Mr. Pepper, Mr. Podell, Mr. Rangel, Mr. Roe, Mr. Rosenthal, Mr. Roybal, Mr. Ryan, Mr. Steele, Mr. Stokes, Mr. Vanik, Mr. Waldie, and Mr. Charles H. Wilson):

H.R. 16470. A bill to provide adequate mental health care and psychiatric care to all Americans; to the Committee on Ways and Means.

By Mr. JACOBS:

H.R. 16471. A bill to provide retroactive payment of a lump sum death benefit to the survivors of policemen killed in the District of Columbia in the performance of their duties; to the Committee on the District of Columbia.

By Mr. RANDALL:

H.R. 16472. A bill to amend the Internal Revenue Code of 1954 to provide income tax simplification, reform, and relief for small business; to the Committee on Ways and Means.

By Mr. WYMAN:

H.R. 16473. A bill to grant discretionary powers to the President to enable him to deal effectively with any foreign nation which he determines is encouraging international aircraft hijacking; to the Committee on Foreign Affairs.

By Mr. HALL:

H.R. 16474. A bill to establish a cropland and water restoration program, and for other purposes; to the Committee on Agriculture.

By Mr. PRICE of Texas:

H.J. Res. 1290. Joint resolution proposing an amendment to the Constitution of the United States limiting the power of Congress with respect to deficit spending; to the Committee on the Judiciary.

By Mr. ECKHARDT (for himself, Mrs. Abzug, Mr. Ashley, Mr. Aspin, Mr. Carney, Mr. Conyers, Mr. Dent, Mr. Dingell, Mr. Edwards of California, Mr. Gonzalez, Mr. Harrington, Mr. Helstoski, Mr. Howard, Mr. Kastenmeier, Mr. Mikva, Mr. Mitchell, Mr. Moss, Mr. Podell, Mr. Rees, Mr. Rosenthal, Mr. Scheuer, Mr. Seiberling, Mr. Thompson of New Jersey, Mr. Tiernan, and Mr. Van Deerlin):

H.J. Res. 1291, a resolution to provide for the continued operation of the transportation properties owned or operated by Penn Central Transportation Company, to protect the security interest of the United States in such properties and to provide for the payment of just and reasonable compensation therefor; to the Committee on Interstate and Foreign Commerce.

By Mr. PERKINS:

H.J. Res. 1292, a resolution to delay the effectiveness of certain amendment to the interest subsidy provisions of the Guaranteed Student Loan Program in the case of certain students; to the Committee on Education and Labor.

By Mr. FISH:

H. Con. Res. 688. Concurrent resolution expressing the sense of the Congress with respect to further limitations of nuclear arms and the goal of ultimate nuclear disarmament; to the Committee on Foreign Affairs.

By Mr. FRASER (for himself, Mr. Gude, Mrs. Abzug, Mr. Bell, Mr. Bingham, Mr. Brademas, Mrs. Chisholm, Mr. Corman, Mr. Dellums, Mr. Dow, Mr. Eckhardt, Mr. Edwards of California, Mr. Harrington, Mr. Link, Mr. McCloskey, Mr. Mikva, Mr. Obey, Mr. Pepper, Mr. Podell, Mr. Rodino, Mr. Rosenthal, Mr. Seiberling, and Mr. Stokes):

H. Con. Res. 689. Concurrent resolution calling on the President to seek an international agreement prohibiting environmental warfare; to the Committee on Foreign Affairs.

By Mr. FREY:

H. Con. Res. 690. Concurrent resolution to require a court impact statement in each report of legislation from a committee of either House of Congress to that House; to the Committee on Rules.

By Mr. McCLURE:

H. Res. 1104. Resolution amending the rules of the House by adding rule XLV on House-authorized Federal budget; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII,

420. The SPEAKER presented a memorial of the Legislature of the State of California, relative to the Santa-Ynez River flood protection project—San Miguelito Watershed, which was referred to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mrs. ANDREWS of Alabama:

H.R. 16475. A bill for the relief of Mrs. Modesta Ugalino; to the Committee on the Judiciary.

By Mrs. HICKS of Massachusetts:

H.R. 16476. A bill for the relief of Domenico Tavella, his wife Lalia Tavella, and their minor children, Maria Tavella and Francisco Tavella; to the Committee on the Judiciary.

By Mr. ROONEY of Pennsylvania:

H.R. 16477. A bill for the relief of Lt. (jg.) Robert Jennings, U.S. Navy (Active); to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

ILLINOIS VOLUNTEER TUTORS HELP CHILDREN LEARN TO READ

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. PUCINSKI. Mr. Speaker, I am proud to report that the citizens of Illinois are taking imaginative and important action to meet the reading crisis in this Nation.

They have begun a statewide volunteer tutor effort to assist our boys and girls to learn to read.

This Nation's reading problem is serious.

Teachers estimate that 43 percent of the children in America's primary schools need special help with reading problems.

Educators tell us that 8 million schoolchildren need reading help, and that 1 out of 20 is held back a grade each year, usually because of reading problems.

Mr. Speaker, America's teachers and schools cannot alone supply the time, talent, and funds to meet this problem.

But citizen volunteer tutors dedicated and well trained, working under supervision of the classroom teacher, can provide our children with the individual assistance needed.

This approach is now underway in my State of Illinois, sponsored by Dr. Michael Bakalis and his State department of education, with the cooperation of the National Reading Center, of Washington, D.C.

Two tutor-training workshops recently were held in Chicago and Springfield, involving 255 volunteer reading tutor-trainers and coordinators from throughout our State.

More than 70 Illinois public and parochial school districts were represented in these workshops. The National Reading Center provides the tutor training program at no cost to the volunteers.

Thus far, the workshops have been held in 20 States and 5 metropolitan areas. They are available to all States in the Nation.

The trained volunteers from these workshops have now returned to their home communities. They are teaching other volunteers how to tutor primary-grade children in reading when school begins this fall.

The future of American democracy depends upon the American people's capacity for mature and rational decision. The ability to read is essential to a strong and progressive nation.

Every man, woman, and child in the United States has a right to read. We must work to assure the reality of that right, and we must begin our work with our children.

As a member of the National Reading Council, the body dedicated to the elimination of illiteracy in this Nation during this decade of the 1970's, I am particularly proud of the lead that Illinois citizens are taking in this national volunteer effort.

I invite my colleagues to join me in commending the thousands of volunteers in Illinois and in the many other States participating in the National Reading Center tutor training program.

I express my thanks and appreciation to the volunteers at work in the 70 public and parochial school systems of my State. The following organizations are among the many supporting this endeavor to give reading help to the children of Illinois:

ORGANIZATIONS SUPPORTING TUTOR-TRAINING IN READING FOR ILLINOIS CHILDREN

Council of Community Services of Metropolitan Chicago, Chicago Housing Authority, Englewood Urban Progress Center, Lutheran Welfare Services of Illinois, Northwest Cook County Volunteer Services Bureau, Operation Word Power, Voluntary Action Center, Woodlawn Urban Progress Center, University of Illinois, Menard Branch of the AAUW, Moline Association for Children with Learning Disabilities, Governors' Commission on Voluntary Action, Illinois State Library, East St. Louis Project Outreach Libraries, Prairie City Parent Teacher Organization, Retired Teachers Association and Shamel Manor No. 2 Shelter Care Home.

SKYROCKETING METHADONE ADDICTION

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. RANGEL. Mr. Speaker, one of the tragic offshoots of our unsuccessful attempt to rehabilitate the estimated 560,000 heroin addicts in the United States is that we are presently relying on a drug as dangerous and addictive as heroin itself—methadone—to treat 85,000 of our addicts.

I am deeply troubled by methadone maintenance and by the thought that we are depending on one drug whose long-range effects on the human body are still unknown to treat those addicted to another drug. Unfortunately, until research efforts to develop nonaddictive heroin antagonists are completed and as long as certain panicking politicians call for heroin maintenance programs, we have little choice but to accept methadone as one modality for treating addiction.

Out of the growing use of methadone under medical supervision has sprung an increasing diversion of methadone into illegal channels. Certain unethical physicians and pharmacists are also growing rich from dispensing methadone with the knowledge that it is destined for the black market. As a result, methadone overdose deaths are skyrocketing and may soon overtake the heroin overdose death rate.

Jim Markham, a journalist who specializes in covering the problems of the drug epidemic, has written an excellent article on the methadone addict which I am pleased to share with my colleagues at this time.

[From the New York Times, Aug. 14, 1972]

A NEW PROBLEM: THE METHADONE ADDICT

(By James M. Markham)

In New York and other large metropolitan areas, methadone-maintenance programs are rapidly expanding and reaching out to help thousands of heroin addicts. But at the same time controversy hounds methadone because more people—frequently nonaddicts—are dying from overdoses of the drug, while an uncertain number of others are becoming primary methadone addicts, bypassing heroin.

As a result, a debate is building over the controls that should govern the dispensation of methadone. While physicians involved in methadone maintenance argue they are being hobbled by Federal regulations, those who would regulate them insist that the Jekyll-Hyde properties of the synthetic opiate dictate extreme caution

"Pilot studies of the data indicate a steady rise in the number of primary methadone addicts over the past three years," observed Dr. Jerome H. Jaffe, head of the Special Action Office for Drug Abuse Prevention in Washington.

"The problem is small in terms of the heroin problem," he added, "but, in terms of trends, it indicates that substantial efforts are going to be needed to bring it under control."

Like others in the tangled field of addiction treatment, Dr. Jaffe notes that methadone, which is now dispensed to an estimated total of 85,000 addicts in some 450 programs across the country, has been an important rehabilitative tool, enabling many addicts to resume normal lives. But, as methadone programs continue to expand at a galloping pace, he sees a need for a balanced approach.

"We are aware of both the necessity for expanding and the need for further controls to prevent diversion," Dr. Jaffe said.

At the heart of the methadone debate is the issue of "diversion" of methadone from legitimate programs to the street, where addict-patients retail it to a varied clientele of genuine heroin addicts, poly-drug abusers and simple experimenters.

The following handful of recent developments highlights the nature of the diversion controversy:

Dr. Robert T. Dale, who operated one of the largest private methadone programs in New York, has, along with his wife, been declared a fugitive from justice. A warrant for his arrest was issued after agents of the Bureau of Narcotics and Dangerous Drugs said they had discovered that Dr. Dale was unable to account for 55,000 40-milligram methadone wafers. One or two wafers could maintain an addict for a day. The legitimate price of a wafer is 4 cents; on the street one costs from $5 to $10.

Dr. Elio Maggio, a psychiatrist who ran a private methadone program in the Bronx, was indicted for selling sizable quantities of the drug to six undercover agents who reportedly told him they were not even heroin addicts. The psychiatrist, who allegedly passed methadone to his customers through a slit in the door of his office, grossed $3,000 during a monitored two-day period, according to the Bronx District Attorney's office.

In Hudson County, N.J., Dr. Sidney A. Nelson, a Union City physician, and Joseph Klausner, a pharmacist, were indicted for selling and filling prescriptions for methadone for more than 1,000 "patients."

In the first seven months of 1972, there have been at least 57 methadone overdose deaths in New York City, according to the Office of the Chief Medical Examiner. In all of 1971, there were about 20.

In Washington, methadone has been almost as lethal as heroin this year. In the first six months, 19 people have died from heroin overdoses, 17 from methadone overdoses and 13 from a combination of the two drugs, according to Dr. James Luke, the capital's Chief Medical Examiner. In 1971, eight persons died from methadone overdoses.

Confirming what appears to be a pattern in many methadone overdose deaths around the country, notably in New York, Dr. Luke said: "These are younger people, most of them are teen-agers. Many of them take the methadone orally, although some of them inject it."

"It's hard to say whether they're addicts or not," Dr. Luke continued. "What is an addict? But there's a paucity of track marks—they are not New York City addicts."

FOUND IN AUTOPSIES

Around the country, in addition to recording a growing number of methadone fatalities, medical examiners and coroners are finding methadone in the bodies of addicts and drug abusers—along with heroin, barbiturates and alcohol—indicating that the synthetic opiate has joined the pharmacopoeia of the street.

If a nonaddict takes methadone orally or by injection, it produces a heroin-like euphoria, lending methadone a high potential for abuse by kicks-seeking drug users. Only when methadone is administered in regular, oral doses to a stabilized, tolerant individual does it produce little or no euphoria.

In a study of 95 heroin addicts in Brooklyn's Bedford-Stuyvesant section, Dr. Carl D. Chambers reports that 87 said they had been offered an opportunity to buy illicit methadone in the previous six months and that 53 said they had in fact purchased street methadone, with the majority of them stating that the drug was always available in their neighborhoods.

The primary suppliers of street methadone, according to the interviewed addicts, were other addicts who had "take home" privileges from ambulatory maintenance programs. The addicts gave several reasons for buying methadone: to insure against withdrawal (41 per cent), to "boost" other drugs and enhance their euphoric effects (40 per cent), to "clean up" or detoxify themselves (17 per cent) and to resell to others (2 per cent).

PROBLEM OF BLACK MARKET

The methadone black market has become sufficiently widespread to cushion the effects of heroin shortages on the street, according to some narcotics law-enforcement officials. While the East Coast is currently facing a heroin shortage, addicts, particularly in New York, have not been flooding rehabilitation programs as they have in past "panic" periods.

And when the heroin market is tight, the value of methadone rises. Last month two men in stocking masks held up the methadone program at Francis Delafield Hospital in Washington Heights, getting away with 17,000 milligrams of the drug—worth more than $2,000 on the street.

In San Francisco, researchers associated with the Haight-Ashbury Free Medical Clinic reported that transplanted "New York junkies, with habits bred in a methadone boom town, are found to be more methadone oriented" than their West Coast counterparts.

The researchers also found that the flourishing black market for the synthetic opiate had spawned a new, pathetic species of addict—"the phony-heroin consumer"—who is sold methadone by street-wise California junkie-pushers who maintain they are retailing the real thing.

"The connection's motive is obvious—he can sell the inexpensive methadone, obtained usually more or less directly from local methadone clinics, in place of heroin which he would have to obtain from abroad through many price-multiplying middlemen," the Haight-Ashbury study found.

The methadone black market, it is argued, is a fairly benign phenomenon as long as its clientele is restricted to established heroin addicts. But, in addition to the methadone overdose deaths, there is other disquieting evidence of primary methadone addiction.

SITUATION IN DETROIT

Dr. George Wilson, special assistant to the Michigan Director of Mental Health, said that this spring methadone-maintenance programs in Detroit began seeing a new type of "addict"—with no track marks, no established history of addiction, no morphine in the body.

"What we found was that a huge proportion—more than two-thirds—did not have a clear history of heroin addiction," Dr. Wilson said. "Some of them appear to be methadone addicts, people who were buying street methadone."

Detroit, which is thought to have perhaps the highest addiction rate per capita in the nation, has a long, unhappy and continuing history of badly run methadone programs that have fueled a bulging black market for the drug.

"What's bothering me," said Dr. Wilson, "is that we may be on the verge of creating a new generation of methadone addicts."

NEW FEDERAL REGULATIONS

Equally bothered by that possibility, the Food and Drug Administration is honing a new set of regulations that will probably restrict the number of private methadone programs—by insisting on higher, more expensive standards—which some officials feel have been responsible for some of the most blatant instances of diversion.

The new regulations are also expected to restrict take-home privileges for new patients who have not established their "trustworthiness"—a proposal that irritates some methadone administrators, particularly in New York.

"The regulatory agencies are losing themselves in a morass of unenforceable rules," commented Dr. Vincent Dole of the Rockefeller University, who pioneered the use of methadone in addict rehabilitation. "The key thing is to control the ratio of patients and doctors—to make sure programs don't get too large."

NONFOOD ITEMS IN SUPERMARKET BASKET

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. ZWACH. Mr. Speaker, we hear constant references from consumers about the increasing cost of their groceries and immediately someone has the idea that our food producers are making too much profit.

I have previously called attention to the fact that in general the food producer is still getting paid at the level of 20 years ago, while all the costs between the producers' gates and the supermarket cash register have been escalating.

I recently read an article by Dr. Don Parlberg of the U.S. Department of Agriculture that further pointed out that 28 cents of every grocery dollar is spent on nonfood items.

With your permission, and for the information of all of those who read the CONGRESSIONAL RECORD, I would like to insert this article on Dr. Parlberg's findings:

NONFOOD ITEMS IN SUPER MARKET BASKET

Have you ever sat down and figured what percent of your supermarket dollar is spent for nonfood items? Dr. Don Parlberg, director of economics for the USDA, has; and he determined that 28 cents out of every dollar is spent for nonfood items. The breakdown is as follows:

	Percent
Food items	72.3
Alcoholic beverages	5.0
Pet food	1.2
Tobacco	4.0
Health and beauty aids	3.6
Soap and laundry supplies	2.4
Paper products and foil	1.7
Housewares, etc	2.1
Magazines and books	.3
Miscellaneous	7.4

Let's not point our finger at food prices and ignore the rest of the items in the shopping basket.

FACT SHEET ON MENTAL ILLNESS IN CHILDREN

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HARRINGTON. Mr. Speaker, today, in my weekly insert on mental illness, I am including a fact sheet on mental illness in children. The mental health issue has been one that has been much discussed throughout the country. However, many people are not aware of what mental illness really is. Also, the events of recent weeks have shown that Americans continue to discriminate against their fellowman who has received some form of mental health treatment. A main element of this discrimination, like any discrimination, is ignorance. It is my intent today to help clear the air on some of the facts of mental illness in children.

Mentally ill children are those children whose progressive personality development is interfered with or arrested by a variety of factors so that they show an impairment in the capacity expected of them for their age. These impairments include a lack of a reasonably accurate perception of the world around the child, a lack of impulse control, unsatisfying and unsatisfactory relations with others, an incapacity for learning, or any combination of these.

Most Americans view mental illness as untreatable. Some do not even consider it a valid illness. In 1970 alone, over 150,000 children sought treatment at the community mental health centers, but only 10 percent received treatment. Estimates are as high as 10 million young Americans under the age of 25 who need some psychotherapeutic help. One out of every 10 young people or one out of every 10 Americans for that matter are afflicted with mental health problems that require specialized services.

Other factors involved in mental illness in children include:

First, boys outnumber girls 2 to 1 in

admissions to psychiatric hospitals and once they are hospitalized, they remain longer.

Second, most of the children in State and county mental hospitals are over 10 with more than half between the ages of 15 and 17.

These statistics do not say much, Mr. Speaker, until we realize that we are dealing with human lives. We are concerned with people, not pure numbers or percentages. I have introduced H.R. 16154, the Mental Health Act of 1972 and intend to reintroduce it tomorrow with more than 40 cosponsors. The services covered under that bill will help to relieve the mental health problems that plague young and old Americans regardless of cost. It is time, Mr. Speaker, that these people receive the proper treatment and without any stigma attached to their seeking help.

TEXAN POOLE TOPS BALLET

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. COLLINS of Texas. Mr. Speaker, Dallas is proud to see her sons achieve leadership in all fields. The most recent triumph was Dennis Poole. Dallas is a center of culture. This young Texan, Poole, won recognition as the best in ballet. He and his partner, Michelle Lees, danced their way to fame and first prize at the Sixth International Ballet Competition at Varna, Bulgaria, July 11 through 25. This competition, long viewed abroad as the "olympics" of the dance world, attracted competitors from 21 countries.

Mr. Poole and Miss Lees along with other members of Washington's National Ballet Company are to be commended not only for their marvelous performances on the dance floor, but for their noteworthy diplomatic gestures throughout the entire competition. With respect to this dual triumph for America, Miss Mary Day, director of the Academy of the Washington Ballet, commented:

> We were frankly surprised over the outcome . . . and terribly pleased. We went over there simply to show what we had to offer and are delighted that what we offered was so well received.

She added that the hosts, jurors, and dancers were marvelous to the Americans.

> We made a lot of new international friends, which was one of our objectives in the first place.

Texas-born, Mr. Poole started ballet lessons at age 8, going to New York at age 15 on a Ford Foundation scholarship to study at the American School of Ballet. He became a trainee with the Harkness Ballet, subsequently joining the Youth Dancers and the Harkness Ballet. He became a member of the National Ballet in the 1971–72 season and has danced leading roles in "Cinderella," "Sleeping Beauty," "Giselle," "Nutcracker," and "Swan Lake." Nationwide he has received high praise for his dancing at the barre in the prize-winning "Three Preludes." He is a principal dancer with the National Ballet for the 1972–73 season.

It is no wonder that at the age of 20 Dennis Poole has gained recognition by the national critics. Mr. Poole has become a "part of the young American promise." Texas and especially our Dallas community is proud to have our local son achieve rank as No. 1 in the world ballet.

THE TUNDRA TIMES—A TRIBUTE

HON. NICK BEGICH

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. BEGICH. Mr. Speaker, there are many things about Alaska of which I am extremely proud, but few of which I am so proud as the Tundra Times. This small newspaper, devoted to the Natives of Alaska, is simply one of the best things about the State.

I have recently received an excellent history of the Tundra Times which I would like to share with my colleagues. I am fully aware that many items are put in the RECORD for such attention, but never really receive it. Let me just say that I think you will all find this one of the most interesting stories you have read.

The history follows:

A SURVIVAL STORY

(By Lael Morgan)

One of the most astonishing survival stories of the Far North is that of the *Tundra Times*. This fall the little Eskimo-Indian newspaper celebrates its 10th year of publication, flourishing in the financial wasteland of the Arctic on an erratic circulation that wavers between 1,500 and 5,000.

More remarkable is the influence exerted by this hardy weekly and its Eskimo editor, Howard Rock. Working with one reporter, or often just a part-time staffer, Rock has shaken high offices in Washington, D.C., with the force of seismic seizure and helped change the face of Alaska.

"Perhaps more than anyone else, he helped weld together the frontier state's 55,000 natives for their successful, years-long fight to win the largest aboriginal land-claims settlement in American history," notes Stanton H. Patty, veteran Alaskan observer for the *Seattle Times*.

"He was their voice, at times about the only calm voice when crescendos of invective threatened to tear Alaska apart."

If credit is given where credit is due, however, Rock would not be the original hero of this tale. That honor belongs to the Atomic Energy Commission (AEC) to which Alaskans often assign the role of villain.

PEACEFUL USES OF ATOMIC POWER

In 1958 the AEC developed a plan to excavate a harbor with nuclear explosives in Alaska's northwest Arctic. The need for a deep water refuge on this storm-strafed coast had long been felt by the handful of seamen who ventured there and proponents of the blast believed it a good chance to test the peaceful uses of atomic power.

They failed, however, to take into account the 800 Eskimos who lived in the area of Cape Thompson, the chosen blast site. The isolated natives knew little about the work of the AEC, but they had heard of the Atomic Bomb and they began to worry that their game and perhaps their very existence might be threatened.

"There were attempts to lull us, the people of Noatak, Kivalina and Point Hope," recounts editor Rock who was born in Point Hope. "We were wheedled with rewards of acclaim from science and the peoples of the world if we would agree to go along with 'Project Chariot.'

"We, the people of the three villages, did not go for the enticements. We chose to remain in our home villages come what may. The love for our homes, however humble, and the deep sense heritage prevailed . . ."

To defend this heritage an unprecedented meeting of Eskimo leaders from 20 villages was held in the fall of 1961. It was called "Inupiat Paitot"—The People's Heritage.

Until this time there had been little communication between native communities and even less between natives and whites. Major Alaskan newspapers seldom carried news of Indians and Eskimos and showed little concern for the problems of native people.

As a result of Inupiat Paitot, it was decided the native people must have a voice of their own—a newspaper. To found it, Eskimo leaders chose Rock, then a well-known artist who was fluent in English but had no writing experience, and Tom Snapp, the only white journalist in the state who had been interested enough to cover the meeting.

Funding for the enterprise was to be investigated by the late LaVerne Madigan, then director of the Association on American Indian Affairs, who helped organize Inupiat Paitot.

At the outset the project seemed impossible. Either it failed to fit foundation specifications or philanthropists required elaborate proposals that would have cost several thousand dollars to prepare.

Finally, in desperation, Miss Madigan volunteered the names of her five richest board members and turned up a winner. Dr. Henry S. Forbes of Milton, Mass., headed the list. He was a retired physician, a descendant of Ralph Waldo Emerson and well ahead of time in concern for aboriginal rights.

Rock wrote him a formal, rather stilted letter and the answer—long in coming—was a question:

"What do you need a newspaper for and what are the issues?"

Rock left the reply to Snapp who had a ready answer. The reporter had been trying to cover native news for the *Fairbanks News Miner* but they'd limited him mainly to editing quaint little local-interest columns from the villages.

"It was frustrating. Personal columns! I wanted to cover the issues—education, hunting and fishing rights.

"I did a series on Project Chariot and they (the AEC) tried to stop it. I'd gone through all the Associated Press copy and found the AEC reports didn't match with what the scientists said. The scientists were upset. They'd found radiation in the food chain and the AEC had tried to cover this up. They were talking in terms of moving mountains and doing mining and they said it was no more dangerous than the luminous dial on a watch!"

After reading Snapp's 85 page reply, Forbes pledged to back the paper with $35,000 in its first year. His only requirement was that it start at once with Rock as editor and Snapp assisting.

AN UNLIKELY TEAM

It seemed an unlikely team and Snapp was a reluctant member. He'd come to Fairbanks in 1959 on vacation from the University of Missouri where he was about to start his second year's work on a Master's in journalism. He'd already been talked into postponing his schooling once, when the *News Miner* couldn't find a replacement for him, and he wasn't anxious to postpone again.

"His bags were packed and he was even

mailing boxes back to Missouri," Rock still recalls with a shudder. "I was just desperate and I begged him to stay."

Howard Rock had absolutely no grounding in journalism and he'd been long absent from his native state. Although raised in the traditional Eskimo fashion, he'd left Alaska at an early age to pursue a career in art. He studied under Max Siemes, a Belgian artist, worked his way through three years at the University of Washington and had become a successful painter and designer of jewelry in Seattle.

In 1961 he returned to Point Hope for a vacation and family reunion.

"After the excitement of the whaling season that was climaxed by the whaling celebration, I began to hear some of the problems and fears my folks were having," he recalls. "One subject that came up most often was the impending nuclear blast. They talked about radioactive fallout, contamination of food animals and probable genetic effects it might have. These subjects were altogether foreign to me. And my ignorance appalled me when the folks said more than once, 'You came at a most opportune time. It must be the answer to our prayers.' "

Rock set out to educate himself and found Tom Snapp a major source of information. The artist had suggested a native newspaper to his village council but it was Snapp (who turned out to be his roommate at Inupiat Paitot) who really made the idea jell.

Rock didn't know how or what to write and he didn't have the vaguest idea how to go about setting up a newspaper. In the end he got Snapp to unpack his suitcases and stay another year.

PARAKEET IN THE DISHWATER

"To start a paper is a tremendous job," observes Snapp who now publishes *All Alaska Weekly*, the liveliest general issue paper in the state. "Mine took five or six months but the Tundra Times had just two weeks."

Fortunately Snapp's sister had gone on vacation leaving him in charge of her trailer. The two men set up shop there, working round-the-clock three days straight, catching a night's sleep, then working three more straight days and nights.

"One problem was the parakeet," Snapp recalls with a smile. "I was supposed to take care of it and Howard just couldn't stand to see it caged up. He used to let it out and it was always flying headfirst into our dishwater.

"Of course we had to eat our meals right there . . . and the backshop kept complaining because we had peanut butter and jelly on our copy."

It was the midst of the political season and Snapp and Rock ran themselves thin collecting political ads.

"We stuck together just like that," Snapp brandishes crossed fingers. "That's what we did that whole year almost. That was the deal. He got a journalism education in that year he'd have had to go (to school) two or three years to get.

"We talked about what he knew. He was very proud of his Eskimo culture and he started telling me all these fantastic things like you go to the supermarket now and they have all these plastic bags they wrap everything in. Well, he said, 'We've had that for centuries.' What it was, was oogruk (giant seal) gut. They cleaned them out and made pokes out of them. And all that frozen food . . . They've been having frozen food like that for centuries.

"I started encouraging him and he started writing about all these things. He wrote for months about Arctic survival and his traditions and it ought to be reprinted. Some fantastic stuff.

"He had a natural bent for writing. It wouldn't have worked with just an ordinary person. He had an art background and an appreciation for humanity. He also had a rich heritage. He could appreciate both cultures and he believed you could mesh the two."

"INUPIAT OQAQTUT" WON'T GO OVER THE PHONE

One of the biggest hassles was finding a name for the publication. At first they picked "Inupiat Oqaqtut", Eskimo for "The People Speak."

"But what if we got a non-Eskimo for a secretary?" someone asked. "She would have the darndest time trying to put that over the phone."

Finally they settled on *Tundra Times* and flanked it with explanations in Alaska's four major native languages:

Unanguq Tunuktauq—The Aleuts Speak

Den Nena Henash—Our Land Speaks (Athabascan)

Ut kah neek—Informing and Reporting (Tlingit)

Inupiat Paitot—People's Heritage

The first issue hit the street Oct. 1, 1962, with the banner: Interior Secretary Udall Visits Alaska—Historic Rights and Claims Settlement is Number One Problem, Declares Official.

There was also an editorial explanation of *Tundra Times* intent.

"Long before today there has been a great need for a newspaper for the northern natives of Alaska. Since civilization has swept into their lives in tide-like earnestness, it has left the Eskimos, Indians and Aleuts in a bewildering state of indecision and insecurity between the seeming need for assimilation and, especially in Eskimo areas, the desire to retain some of the cultural and traditional way of life."

It promised unbiased presentation of native issues and added the paper would support no political party.

"With this humble beginning we hope, not for any distinction, but to serve with dedication the truthful presentations of native problems, issues and interests."

Snapp's former associates at the *News Miner* took one look and sent word they'd give the paper six weeks.

FILES IN THE ICE BOX

The Association on American Indian Affairs wasn't much more encouraged. When their representative arrived in Fairbanks to inspect the new Tundra Times headquarters, he found its staff struggling to settle a small office on the main street.

"We couldn't afford file cabinets or anything like that but the place came with an ice box and stove that didn't work," Snapp recalls. "We kept our papers in there and when the AAIA man wanted a tour of the plant that's about all we had to show him."

They also had more than the usual share of problems to report.

"Starting a native paper at this time was very rough because there was distrust against us," Rock explains. "It took a lot of nerve, really. We had things thrown through the door at night and I was threatened with beatings and things like that, but somehow we just kept right on going."

"We got all kinds of trouble along the way," Snapp adds. "One thing, the utility company asked for a much larger deposit because none of the incorporators had a credit reference. Once when I placed a long distance call that cost more than $100 the operator called back and told us we had to come down and pay the bill at once . . . in the middle of the night!

"Then there was the cost of printing. Outside I'd paid $3,000 for printing 32 times a year. Here, for 24 issues, they wanted $28,000.

"We were stepping on some awfully big toes."

The Atomic Energy Commission had called off plans for a major blast at Cape Thompson before the *Tundra Times* began publication but in April of 1963 it filed a new application for land withdrawal. The *Tundra Times* bannered the news and the project subsequently died.

The paper also reported findings of scientists on Russian atomic testing. Fallout had settled on the Alaskan tundra and been absorbed by caribou that grazed there. Eskimos who lived exclusively on this game were found to have a higher radiation count than any people in the United States. AEC began to monitor their exposure and the *Tundra Times* monitored the AEC.

Rock and Snapp also began actively pushing for settlement of native land claims.

"You see the federal Bureau of Land Management had never plotted native claims on their records so people would check and find no claims," Snapp explains. "All those claims the natives had been filing for years were with the Bureau of Indian Affairs down in Juneau or in the archives in Washington, D.C."

In 1962 five oil companies filed leases between the native villages of Nenana and Minto and private businessmen followed suit. The state got word of oil activity and started making tentative selection under the federal Statehood Act and no one paid any attention to native claims which had accumulated over the years.

"We didn't know who you could trust to get an attorney," Snapp shakes his head. "You couldn't tell who was your friend. We finally got Ted Stevens (now a U.S. Senator) who said we should file a protest. It would probably be dismissed locally but we could appeal."

The problem was that the natives had filed a number of conflicting claims on maps too crude for legal use, so Snapp and Rock bought huge, detailed maps and traveled to the villages to straighten out the contradictions.

"As soon as our first native suit was filed, there were two more, even bigger. That's when the first freeze came against the state," Snapp reports.

"Then Udall came to the *Tundra Times* banquet and announced the deep freeze," Rock adds with pride. "The natives had filed suits all over the state."

The paper also campaigned for abolition of "semi-servitude" for the people of the Pribilof Islands.

"In those days the Bureau of Commercial Fisheries controlled the Pribilofs. It was kind of a company store arrangement, where hunters were paid in kind for their seal skins. They had to barter with the government," Rock says.

"The *Tundra Times* did so well on that series the Bureau of Fisheries threatened to expose us as Communists," Snapp recalls.

Tundra Times reporting was so lively other newspapers in the state became interested in covering native news. Soon a number of white reporters were plugging away on the issues of subsistence hunting rights, education, equal opportunity and a decent standard of living for natives.

PRECARIOUS EXISTENCE

Tundra Times existence has remained precarious, however. Despite generous financing by Dr. Forbes (until his death in 1968) the overhead has remained high and circulation low.

Reading comes hard to many Alaskan natives and so does the $10 *Tundra Times* subscription fee, so often one copy of the paper services an entire village. The bulk of the subscribers are native leaders, government agencies, other newspapers and interested whites.

In 1966 the paper incorporated as the Eskimo, Indian, Aleut Publishing Co., Inc. (with a native controlled board) and many well-wishers began to purchase stock at $25 a share to keep the paper going. Rock has taken on additional fund raising ventures like the *Tundra Times* annual banquet and management of the Eskimo Olympics, and whenever the wolf is really at the door, something unusual turns up.

The current angel is Rural Alaska Community Action Program which purchases a page to publish its own news twice monthly. The Alaska Federation of Natives sometimes buys subscriptions for native villagers. So does the National Guard. And other organizations, both native and white, have provided loans or grants.

When Snapp resigned to go back to school, the little paper could not offer the kind of salary needed to attract a reporter of similar caliber but a good man turned up anyway. When he quit, another materialized out of the blue, and it's still happening.

During one bare budget siege, an east coast heiress volunteered to work for Rock free and turned out to be a remarkably good writer. She was followed by a top flight magazine editor from New York who worked for expenses one summer.

Currently the job is being held by a former interior decorator who writes like Faulkner, has a good feeling for the issues and lives on bread and water.

In addition, there is Tom Richards, Jr., a young Eskimo who was drafted following an outstanding apprenticeship with the paper. Rock, now 61, hopes Richards will eventually work into editorship and the young reporter is enthusiastic about the idea.

SETTLEMENT IS JUST THE BEGINNING

For Howard Rock, settlement of the land claims does not mean the end of a fight but a new charge. After meeting with other native leaders for announcement of the bill's passage, he wrote, "The (Congressional) vote was overwhelming, to be sure, for President Nixon to sign the measure. There was a 40 million acres of land award in the offing, and there was $962 million—a payment for lands lost. These are almost astronomical figures, but at the end of the voting, they were met with almost dead silence by the 600 native delegates . . .

"One would think that some measure of elation would be apparent. Instead something else happened. We do not know exactly what.

"The Alaskan native people have a profound sense of belonging to their lands, or a profound sense of ownership. The delegates must have sensed that as they voted, they were also voting to relinquish some 300 million acres of land forever—lands they and their ancestors were accustomed to using for their subsistence. Indeed this was what was happening and there were mixed feelings.

"We believe that the measure will be the closest to a substitute to the former way of living. It will not do away with subsistence living altogether. It can be a good basis for perpetuating charming cultures and traditions. It will provide food for the table. In order to make it do these good things, the provisions in it must be handled carefully, always with feelings that it is being done for the good of the present generation and for the the good of the native people in the future."

And that will take some watch-dogging. The 13 regional corporations set up to administer the bill will undoubtedly produce newspapers of their own but Alaska still needs—now more than ever—a strong, statewide native paper.

There should be more money to support one, too. In fact, under the management of Frank Murphy, the *Tundra Times* advertising revenues have increased considerably even though the claims settlement payment is still two years off. The paper has grown from eight to 12 and 16 pages since last summer.

Eventually Rock hopes to increase village coverage and circulation; add an easy-to-read supplement for those who speak English as a second language; develop a wire service for native news; build his own printing plant and go daily.

THE BIGGEST WHALE

Occasionally Editor Rock gets nostalgic, unearths his old sketch books and moodily thumbs through their yellowing pages. He has not picked up a paint brush since 1961, although the canvases he did at that time are now selling for $1,500 and $2,000.

He has no time for art now except for serving as a member of the Indian Arts and Crafts Board for the Department of Interior.

"I just think that expansion of the paper is more important than my painting," he says quietly. Then he smiles, recalling his beginnings and his family who have been famous Point Hope whaling captains for generations.

"My brother, Allan, used to tease me. He used to say 'You know Howard you're the only man in our family who never got a whale!' "

But perhaps Howard Rock has caught the biggest whale of all.

H.R. 13915—EQUAL EDUCATION OPPORTUNITY ACT

HON. OGDEN R. REID

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. REID. Mr. Speaker, I would like to make a short statement on H.R. 13915, the so-called busing bill. I very much regret that I will not be in Washington tomorrow when the House considers and votes on this bill, due to a longstanding commitment I made to my family over a year ago.

Therefore, I would like to go on record today as opposing this bill. If I could be present and voting, I would vote "nay" on final passage and "nay" on the amendment which proposes to reopen court orders and school desegregation plans already in effect under title VI of the Civil Rights Act of 1964. I voted for and strongly supported this civil rights legislation, and indeed introduced the very first Voting Rights Act in the House of Representatives. This is not the time to turn our back on fundamental rights of all Americans.

Although I do not support long-distance busing which would cause harm to the education or health of young children, this so-called antibusing bill is a bill which in fact handcuffs the courts of our Nation—supposedly a coequal branch of our Government—and, indeed, does violence to the very Constitution of our land. I supported the Higher Education Act which passed earlier this year, and I worked hard on it in conference, including supporting the Scott-Mansfield amendment limiting busing to achieve racial balance. However, as the New York Times noted in comparing that legislation with the bill which is now before us, the higher education bill "specifically put the brake on busing to achieve racial balance, which is a dubious goal, as against busing to further integration, which is an essential one." To return to separate but equal now, in 1972, would be to turn back the American dream in which every child has a stake.

What is truly needed if we are to equalize and expand educational opportunities for all children is a much higher priority for education: an increase in Federal funds for local school districts is vital, along with quality day care programs, early childhood education programs, smaller classrooms, qualified guidance counselors, and other special services. This bill provides no new money to upgrade our educational system, even while we as a nation still continue to spend more of our resources on the building of highways than on elementary and secondary education.

This bill, in summary, does not address itself to the basic question of the quality of education in this country. Dealing with unconstitutional segregation is a task of the courts, but dealing with the quality of education is a task of the Congress. We must attack that task realistically and promptly, but we must not prohibit the courts from doing their duty.

COMMON CAUSE: PART II

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HUNGATE. Mr. Speaker, in the CONGRESSIONAL RECORD of August 15, 1972, on page 28348. I called to my colleagues attention the first of three parts of an article on Common Cause. I would like to bring to their attention part II of that article for their further consideration:

COMMON CAUSE: PART II

Until Gardner joined the Johnson Administration in 1965, he had led an almost cloistered life, broken only by a hitch behind a Marine Corps OSS desk during World War II. For several years before the war he had worked quite happily in what he later described as "fine girl colleges in sylvan glens"—Connecticut College for Women and Mount Holyoke College. Books were his favored entry to life. During his undergraduate days at Stanford University he dropped out with plans to become a fiction writer, but at the end of a year he decided he needed to understand people better in order to write about them. Others might think the best way to do this would be to travel or get the right kind of job or in some other way arrange to mix with people. Not Gardner; his solution was to return to Stanford's books and switch his major to psychology.

In 1946 he became an official and in 1955 the president of the Carnegie Corporation and the Carnegie Foundation for the Advancement of Teaching. This was the life of a theoretician devoted to guessing what esoteric teaching projects deserved how much moola. For backing such ventures as the new math and the Russian Research Center at Harvard, Gardner was hailed by *The New York Times* as "the most powerful behind-the-scenes figure in American education."

If the reputation was deserved, it was obtained at a bargain price. As with most foundations, the benevolence of the Carnegie Corporation was marked by stinginess; it was worth more than $330,000,000, but under Gardner it was giving away only $12,000,000 of its taxfree dollars, or less than four percent, a year.

A foundation officer's ideas of the immediate problems of education are not necessarily related to the outside world. There is no indication that Gardner was much interested in using the Carnegie power and prestige during the period when it was his to command—which spanned the era between the Supreme Court's *Brown* decision in 1954 and the first major civil rights legislation of the Johnson regime—to promote desegregated education.

In 1963, when 97.5 percent of the black children in the South still attended wholly segregated schools, Gardner spoke at the University of Georgia. Only two years before, two blacks had needed police protection to register there, and feelings were still inflammatory. Gardner urged the Georgia students to "keep your horizons wide," to develop your potentialities," to "risk failure"—all admirable advice, no doubt, but nowhere in the speech (as preserved in *Reader's Digest*) does one find him alluding even vaguely to the most critical problem then confronting the students: racism. "If you want to get back to the source of your own vitality," Gardner counseled the Georgians, "to be refreshed and renewed, cut through the false fronts of life and try to understand which are the things that you really believe in and can put your heart into." Like white supremacy?

One must sympathize with his terrible isolation during this period. Even as late as 1965 he could write as though he were making a great discovery that "young people find that the moral precepts their parents have to offer are no longer relevant in a rapidly changing world." Gosh.

For 19 years Gardner was in the foundation icebox and then one day he was miraculously rescued by President Johnson, who pulled him out and made him his Secretary of Health, Education and Welfare. It was a time of enormous growth in the department, with L. B. J. grinding another social-welfare or education program through Congress every other day and depositing it on Gardner's doorstep for implementation, and at least Gardner carried out his duties with dignity under great stress.

But once again it was a period in his life unmarked by exceptional leadership in the delicate area of race relations, although, of course, his education agency was expected to exert a pivotal influence. As his stay at HEW neared its end, he admitted, "If we had taken literally the language of the Civil Rights Act, which instructs us not to give Federal money to anyone who discriminates, we would have cut off a far greater number of school districts than we actually did." At the time he made that declaration of obvious lawlessness, HEW was withholding Federal funds from only 34 districts of the literally thousands that were refusing to comply with the civil rights law.

Gardner was in his early 50s (he'll be 60 next October) before he even went into the street, which is pretty late to get started and may partly account for his subsequent erratic course.

Today, like so many of the men who happily served L.B.J., Gardner denounces the war as the worst blight on our existence. As a result of it, he says, "the erosion of the spirit that we have experienced is beyond calculation." No such remarks were heard from him during the great escalation. He knew the kind of Administration he was coming into; the build-up had already started in Southeast Asia when he joined HEW.

Johnson used Gardner as a show horse in his Vietnam snow job, trotting him out to indicate that the Administration didn't really want to destroy Vietnam but to bring it health, education and welfare—as Gardner's presence was supposed to symbolize when, in February 1966, L. B. J. hauled him out of a sickbed and took him along for the meeting in Honolulu with South Vietnam's leaders. Apparently Gardner enjoyed being used in this fashion. His response to the trip was a breathless "God, it was exciting!"

When he left HEW in March 1968, there were speculations among his many journalist fans that he did so out of opposition to the L. B. J. war. But Gardner publicly denied it and he did not condemn the war until Johnson had left Washington.

Today one of Gardner's favorite themes is the disastrous callousness and unresponsiveness of the Federal Government. He pounds away at this in every speech. But when he was an important part of that same Government, he never made any such complaint. Early in 1971 he told *The New Yorker*, "What was borne in on me during my years in Washington is that we aren't going to solve any of our problems with the existing machinery." Later the same year he told me that his time at HEW had persuaded him how decayed some of our political institutions are.

One finds no trace in the printed record of his having felt this way at that time. As recently as 1969 he wrote condescendingly of dissenters who believe in the "old and naive doctrine" that "corrupt and wicked institutions" have oppressed mankind.

The reason he has got by with this *ad hoc* hopping around without being caught is that he sticks to generalities—the vaguest sort of generalities—and avoids specific like poison.

Assuming that he is now really convinced the machinery of Government is decadent, surely he should be able to supply an example of the decadence from his two years and eight months at HEW—which, next to the Department of Defense, has the biggest budget and the biggest waste factor and the biggest employee mess in the Federal Government. I asked him for just one example, one specific example. His response was, "The unholy trinity among a bureau chief and a lobbyist and a member of the Appropriations Committee. There are hundreds of them all over town. Little threesomes. Fellows who have gone fishing together for years. Their wives have played bridge together. They are part of a permanent invisible Washington. Their names are not known. They rarely make the headlines. But they've seen Presidents come and go, they've seen Secretaries come and go, and they determine a great deal of what actually goes through Congress with respect to their field. This is roughly the kind of relationship you might have among, say, the head of vocational education in the Office of Education, the American Vocational Association and a member of the Senate or House Appropriations Committee."

That's a colorful and totally believable premise—sneaky little threesomes—but how about one concrete example of their destructiveness while he was at HEW?

"Gee," he said with an apologetic seizure in his throat, "I could have given you a lot of examples [once upon a time], but it's faded now."

Incredible? Not really. To Gardner, life has been an unanchored, unballasted, gaseous romanticism. Sometimes there has not been a single sandbag hanging from his balloon, and things down below in the solid world of specifics are just too small to make out. Excelsior. A Higher Calling. On his way up he admonishes us to have faith in "justice, liberty, equality of opportunity, the worth and dignity of the individual, brotherhood, individual responsibility," and then, as if sensing that maybe we had heard of those things somewhere before, he hurries on to concede that these have little meaning unless translated into "down-to-earth" programs. But when he is asked to point out exactly what he has in mind, he squints at the receding earth below and, waving vaguely, equates all those airy concepts with "a decent job for everyone who wants one."

Such is the typical view from a Gardner balloon: that the ultimate of the faith he had been preaching, the purest expression of human existence, the highest aim of all his exhortations against "sterile self-preoccupation," comes down finally to something that the Employment Act of 1946, if enforced, could provide.

But a man with that outlook is highly valued in some quarters. So in 1968, with Detroit and Newark still smoking and with the powers that be afraid that this time the blacks might really be out for theirs, the Urban Coalition was established and Gardner was put in charge of it. Concocted by big-city mayors, the standard labor leaders, the standard civil rights organizations and a representative covey of big businessmen, the Urban Coalition was supposed to have a tranquilizing effect. It was supposed to "establish a dialog," as they say.

Gardner's concept of how to proceed was captured in a speech he made in 1969 that went like this: "Our problems today—poverty, racial conflict, urban decay, archaic Government institutions, inadequate education, inflation, crime, air and water pollution, snarled transportation, and so on—are more complex and deep-seated than most Americans wish to recognize. But I want to talk about them not as problems *but as opportunities.*"

The italics are mine, but the rest is pure Gardner. Fortunately the ghetto blacks weren't paying any attention or they would probably have switched from gasoline to napalm. He was full of that sort of thing. The confrontation of the races, he said, "will be resolved only by patient, determined efforts on the part of the great, politically moderate majority of whites and blacks through programs of education, job training, health care and social services." God. After nearly three years in HEW did he still think a few rinky-dink programs could fix up a place like Bedford Stuyvesant? Did he really think that health care could offset a city full of the kind of apartment buildings in which the upstairs toilet leaks into the downstairs kitchen sink?

Today, when he's peddling a lobby to the middle class, his objective is to cut through apathy, and so he talks occasionally in a semi-quasi-revolutionary way about how the ballot will never get the job done, as the system now stands. "If you could increase by ten percent or even 15 percent the number of first-rate people in Congress, it would be spectacular," he says. But if you did, so what? For "there would still be the oil lobby, the Congressional-military-industrial complex." Good people, he suggests, are swallowed by the system; they disappear into its reeky conflict-of-interest bowels and are never seen again.

That's his line now, and it may be an accurate one. But if it's accurate for the middle-class whites, who aren't expected to react with more vigor than to reach into their wallets and produce $15 for a C.C. membership, why wasn't it also accurate for the rioting blacks of the late Sixties? Gardner didn't see it that way. In those days his line was that first among the "long-tested, well-established procedures of a free society," the chief means by which "citizens make their influence felt" was—the ballot. Put down that brick, darky.

The Urban Coalition of that era was a flop, but not necessarily because of any failure on Gardner's part. Perhaps the failure could be traced to the fact that by the time he left it, most whites were fed up with blackish organizations and blackish needs. Whether or not Gardner diagnosed his problem that way, it is clear that Common Cause was set up to appeal to another class, the white middle- and upper-middle and even wealthy class—the people whose daughters he had got along with so well as a professor, the people he had spent Carnegie Corporation money on, the people for whom he had held HEW to a program of gradualism. They were back in business together.

It was a brilliant step to take, a perfect marriage of talent and interests. The middle class was in despair. Yet it is also the center of whatever clout the people might have. No serious effort had ever before been made to organize it. And Gardner was just the man to launch the organization with respect.

No effort is made to disguise the predominant color. At Common Cause headquarters I was repeatedly told that if I really wanted to get a feel for the interplay between Gardner and his followers I should attend one of the "town-hall-type" meetings he has been holding around the country. A few weeks later there was a meeting in the Daughters of the American Revolution auditorium in Washington. On several notable occasions in the past the D. A. R. has refused to let Negro and antiwar artists perform in their hall. The ladies would have been pleased with the people who used their hall that evening. At first swing I could not see a single black face in the 2000 or so on hand; in a city whose population is 72 percent black, an all-white crowd of that size is rather unusual. Then I saw two black men in the first balcony, just at the edge of the stage. Obviously they wanted to hear everything. But as it turned out, their interest was not personal: They were reporters for *The Washington Post* and the Washington *Star*, ordered to listen.

The color and class on display that night constitute the strength of the citizen lobby, some of its leaders feel. C. C. president Conway says, "The thing about our members is they are where labor people aren't. The peculiar thing about our members is they are right smack in the middle of where the power in this country now resides—that's the suburbs, the areas surrounding the cities, in the small towns. Middle America." He said he had no idea how many blacks were among the membership, but conceded the obvious, that "until we're on issues that have a direct appeal to the blacks and browns and Indians and poor folks where they can see it, they're not going to join."

Unfortunately, Gardner's brilliant conception has not yet brilliantly achieved. Considering the lobby's immaturity, however, it has done OK. Perhaps its biggest problem was that during the first year and a half, it usually joined an issue too late to really make much difference (although Common Cause newsletters convey an entirely different estimate of its impact).

A TRIBUTE TO THE BALTIMORE AFRO-AMERICAN

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. CLAY. Mr. Speaker, the Baltimore Afro-American is a leading information and communication source for the black community of Baltimore, as are its counterparts in other national cities. At a time when many black citizens are realizing the need for more black involvement in media, both in terms of employment and programatical content, the Afro-American can take great pride in its outstanding service and inspiration to the community.

The paper was founded by John Murphy, Sr., on the philosophy of "faith in the common people" and the preservation of their liberties. For eight decades they have demonstrated their commitment to this goal, and in so doing, have gained widespread recognition and respect as a spokesman for the thoughts and aspirations of many black people.

On August 13, the Baltimore Afro-American celebrated its 80th birthday. I extend to the staff of that publication my most sincere congratulations and best wishes for the future.

VERMONT GOV. DEANE C. DAVIS

HON. RICHARD W. MALLARY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. MALLARY. Mr. Speaker, not too long ago many of the citizens of the State of Vermont of both political parties were saddened to hear that our Governor, Deane C. Davis, would not seek reelection. It was my privilege to know him well before his active political career and to be closely associated with him during his two terms as Governor.

I have known no person to excel him in his dedication or service to his fellow man in either his public or his private capacity.

To mention that Deane Davis, at age 30, served as Vermont's youngest superior judge in history, and that he currently serves, at 71, as the Nation's oldest Governor, is only to establish benchmarks in a long and distinguished career. To speak of his working his way through law school in a shoeshine parlor, of his overcoming physical handicap to become a great horseman, and of his personal efforts in rehabilitating the criminals he prosecuted, defended or passed judgment upon, is only to highlight the determination and compassion with which he lives.

As a member of the first Boy Scout troop in America, as a 33d degree Mason, as chairman of Vermont's Little Hoover Commission, and as an active lay Christian, Deane Davis personifies the highest qualities of civic and religious involvement. As a business executive, he envisioned the transformation of a local mutual life insurance firm into a progressive and profitable firm of national prominence and he carried his plans to fruition. As a man without a college education he set out in his youth to read for 1 hour every day on a variety of subjects in order to broaden his knowledge, and he pursued this form of self-education for 30 years. These events speak to the quality of the man.

Deane C. Davis has always lived in Vermont and has remained a faithful servant to its citizens. His continuous service, combined with his abilities and strength of character were sufficient to gain him the governorship of Vermont in 1968. It never occurred to him to sit back as a senior public servant to reap the rewards of political prominence. Instead, he set out to achieve an ambitious program of government reorganization, fiscal accountability, and environmental conservation. He pressed for and passed a reorganization program to transform an outmoded unmanageable administration into an efficient responsive system. He won a landslide victory in seeking a second term of office after introducing a sales tax by demonstrating that it is possible to provide quality services while remaining fiscally accountable. His comprehensive environmental legislation, which is facilitating environmental conservation without jeopardizing economic vitality or private rights, has become a model to the Nation.

In refusing to seek a third term as Governor of Vermont, Deane C. Davis has again opened the way for a new dialog with his fellow Vermonters as servant and friend. Whatever may be the form of that dialog, it will be to the benefit of his State and country, for, in the words of an honorary citation to Deane Davis from Middlebury College:

> He blends tireless diligence with persuasive logic, warm humanity with professional skill, translating the liberal ideal of the whole man into the field of public action.

THE RATIONALE FOR EARLY INTERVENTION

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HANSEN of Idaho. Mr. Speaker, Dr. Bettye M. Caldwell, director of the Center for Early Development and Education in Little Rock, Ark., is one of the most articulate, enthusiastic, and energetic spokesmen for young children whom I have met during my years of work on child-development legislation.

Dr. Caldwell recently shared her vast knowledge, talents, and experiences with Idahoans at the Early Childhood Conference I sponsored in Boise, and it is with great pleasure that I insert portions of her remarks in the RECORD:

THE RATIONALE FOR EARLY INTERVENTION

(Dr. Bettye M. Caldwell)

Congressman Hansen, Dr. Zigler, and dedicated guests, I am really very delighted to be here with you today. I sat there and smiled when Congressman Hansen introduced me as, I don't remember what all the words were, but I heard the one "enthusiasm". I have decided that is a kind of euphemism that people use for me. Now they never say that Bettye Caldwell is right or that she is this or that, they always say that she is enthusiastic and that is the truth. I am very enthusiastic about what I do; very grateful for the opportunities that I have had to play some small role in helping to develop programs for young children.

Now, my assignment today puts me on the side of the endeavored and it is a little bit different from the assignment I usually get, which is mainly to tell about what we are doing or really what I have done in the past or what I am doing now in Little Rock, Arkansas. Rather I have been asked to talk about some of the background factors that have gone into the current ferment about early childhood.

There certainly can be no doubt that the importance of early development is an idea whose time has come. It seems to me that it came to us right smack in the middle of the 20th century and when it arrived it seemed so obvious and so apparent to everyone, at first so void of opponents, that we must wonder how and then why it took us so long to recognize or appreciate the fact.

We have had many reminders and exhortations from specialists in many fields—people in poetry, philosophy, medicine, psychology, education. But until fairly recently, no one really paid too much serious attention to the importance of the first five or six years of life. Perhaps this is not too surprising when we reflect on Aries' suggestion that the idea of childhood per se—childhood, not just being little adults—is of relatively recent origin and that it certainly did not go back beyond the 18th century. Thus, the idea of early childhood, not childhood but very early childhood, as being an important developmental period does not go beyond about the middle of the 19th century.

Now in this country, in the 1920's and 30's, early childhood had a brief fling in America. But after rather vitriolic attacks from the heavily scientific wing of the social sciences, the advocates licked their wounds and slipped away to dream up apologies for what they had been suggesting should be done. Programs continued, but those in the universities operated mainly to provide subjects for research studies for professors and students and to train teachers so that they could provide subjects for professors and students for the next generation.

Then suddenly in the mid-60's (and I think we can date it officially as February, 1965, the month when Head Start was officially born—that doesn't include its pre-natal period)—early childhood education was rediscovered and it certainly was not a chance discovery. Rather I feel it was not that it was so much re-discovered, it was simply that we could not ignore it or overlook it any longer. Reasons for the discovery appeared every time we picked up an idea or turned it over or examined its implications. What were the reasons, why did we become so heavily concentrated, so focused on the importance of early childhood?

The first class of reasons that I would identify I have called inferential, and the second I have called emperical and I am going to review these briefly with you now. First of all, let us look at some of the inferential rationale for our current interest in early childhood.

Maybe I should define my term just a little bit. I am referring to ideas that were generated in another context sometimes bearing no direct relation to early intervention with humans, but from which one can infer the importance of early experience. And the importance of early experience is basically what early childhood intervention is all about. All of the programs are predicated on the assumption that this is indeed an important period. Not a critical period, not a magic period as Dr. Zigler said, but one which we cannot afford to ignore.

The first category of inferential reasons that I would sight is one that many of you might object to. I know sometimes people do not like to think that we build programs for humans on studies that have been done with animals, but I dare say that none of us would feel very comfortable having been vaccinated against measles or against polio and other things if we had not previously tried out the vaccine with animals. Much of the same kind of background work has been done with animals in relation to the importance of early experience.

If you think back to general psychology text books, you will find a lot of these studies under chapters that are concerned with perhaps maturation vs. learning, an old dichotomy that we don't slip into anymore, or heredity vs. environment. A whole host of different kinds of behaviors were looked at and a whole host of different kinds of variations of early experience were tried, but the main principle to emerge from these studies is that the timing as well as the type of experience may well have profound effects on development.

I certainly won't try to offer a comprehensive review of such experiments (a number of these are available), but I do wish to recognize the contribution of this line of endeavor to our current concern with early intervention and enrichment.

The studies have measured a variety of behaviors; sensory, perceptual and motor functions; learning and problem solving; and conflict forms of social behavior. Different types of early intervention were tried, sometimes depriving, sometimes enriching, and so on. One of the chief generalizations that emerges out of this vast body of literature is that the timing of experience was indeed critical and from the standpoint of many of the infrahuman animals that were used in these studies, manipulation of experiences during the early infancy of the animals seemed to have the greatest effect. Now with non-human animals this may be due to the fact that most complex forms of behavior are mediated by intrinsic processes which when fully developed are relatively less sensitive to variations in experience. The data, however, also points to the importance of experience during the time that neutral patterns which form the substrata for all complex forms of behavior are being established. So, whether or not we like the idea, we must recognize our indebtedness to the animal studies that pointed to the importance of early experience.

Now for a second kind of inferential data about the importance of early experience. Here I would turn to inferential studies; I am using Anastasi's term there, comparative studies, if you will, of children reared in different environments. Most of our information that we have here relates to cognitive development. I wish I could cite with as much authority studies that relate to the effects of different kinds of environments upon social and emotional variables. I think that we simply have to apologize at the outset of this and then go right on and look at what information we have. It seems to me that one of the reasons that we concentrate so much on cognitive development is a very poor one. Namely, we do think that we can measure it more accurately than we can measure other variables and, therefore we go right on, say giving these tests, even though we may be less concerned with change in this area than in some other areas. I say that as a way of apologizing for the fact that when we look at human studies again, much of the evidence relates to the effects of variations of experience on some kind of cognitive measure.

How do we measure different kinds of environments? One of the greatest inadequacies in our vast armamentarium of psychological and educational measuring devices, is a sensitive technique for measuring the environment—very much like what Dr. Zigler said that in a way Head Start is insulting to the poor because it assumes that everybody who lives in an environment identified by some financial cut-off point is in an environment that is of itself depriving.

We simply know that is not true. We have relied on this kind of cut-off point simply because it gives us a reasonably accurate, actuarial statement about what might transpire within those families. I say reasonably accurate is the best we can come up with. Usually the designation that is employed is something called a measure of socio-economic status that hopefully combines social as well as economic variables and a sociologist who introduced these terms years ago made the bad mistake of using a vertical-sounding hierarchy when really it ought to be horizontal. They speak of upper class, middle class, lower class, and so on.

Now when you take information about a child being reared in an environment that on a host of educational, economic variables is considered middle class and then look at this development and let us multiply that by a thousand and then take a thousand children who are in different social class as measured by the same index, you can come up with a pretty accurate statement that by and large on almost all psycho-educational variables you might choose to measure you will find differences associated with socioeconomic status.

It doesn't matter whether it is an achievement test, an intelligence test, or certain kinds of personality measurement and so on. You will clearly find it if you are working with fourth graders or high school students or first graders. We have found it with Head Start children, you will find it to some extent with three-year-olds. But below that point in the age spectrum do you stop finding it, or do you ever stop finding it; that is, when, in the developmental cycle, do the differences that are associated with social class appear? This is actually an extremely important scientific and practical question for us.

Until Head Start came along one of the real tragedies in the whole psycho-educational world was that we knew so little not, let us say, children of professors or about the development of children who were doctors in town who attended university nursery school where they could be adequately studied. We never really had access to a population of children younger than six, because we only get in contact with large numbers of children when they get into public education.

So, we did learn from Head Start children the performance of the children on various measures of some kind of cognitive or intellectual functioning showed that they were below national norm, which is perhaps but another way of saying that if they would have had a control group from the middle class they would have been different. So, now dropping on down, first grade—yes, Head Start which was really five-year-olds at first. What about much younger children? What about babies, for example, because this is an extremely important question to ask yourself. What do we know about infant development as a function of social class?

The answer dealt with 30, 40, 50 children. But in 1965, Nancy Bailey—who worked with infants for 40 or 50 years—standardized a new version of an infant scale that she had developed on about 1,500 children. She looked at the performance of children on her scale as a function of race, sex, and social class. At every assessment point, up to 15 months of age, there were no significant differences of performance on the Bailey scale as a function of sex, birth order, parental education, geographic residence, or race. In other words, the infants from all of these different sub-groups performed in a varied and highly similar fashion as a function of their overall maturity. Black babies tended to score higher than whites on the motor scales up to about a year, but the differences were not statistically significant beyond that point.

Now Dr. Bailey has not given us any data from this standardization beyond that point although such data are currently being prepared. They are going to be extremely important because we know that by age five we've got differences; here at age 15 months, no differences. Somewhere in that in-between developmental period the development of children from the less privileged environments begins to diverge from that of children who are growing up in more privileged environments and we very much need to pinpoint exactly when it occurs.

A recent study by two people named Golden and Burns suggests that if one looks only at test scores this difference still has not declared itself by the age of two. However, if you regard the full constellation of test behaviors you can see possible marginal differences by age two. These people used the Katelle Infinite Intelligence Scale and also an experimental procedure designed to assess a child's development within the Piaget framework. They examined three separate groups of children who were 12, 18, and 24 months of age. On neither test were statistically significant differences observed at any of the three age periods. However, the authors reported that children from the lower socioeconomic groups were far more difficult to test and that they frequently required more than one session to complete the procedures. Had the examiners not made efforts to get a valid score for each child, significant differences in mean scores might have appeared. You might want to reflect here back on what Dr. Zigler said earlier about motivational and attitudinal differences which may appear that are perhaps more basic than some of the cognitive ones that we can so easily measure.

This says in effect that if one does want to develop preventive programs and if the environment really is one of the main explanations for what is happening here, it says that it is extremely important to begin some kind of intervention during this early period, regardless as to whether those effects are going to last forever. It is important because if you don't, by even age three you are going to have to be dealing with a remedial program.

It is my deeply-held conviction that the only opportunity to develop truly preventive programs lies in beginning such programs in this period of 18 months to three years. Certainly during that time seems to be the period when the environment really begins to show itself. The comparative studies of children in different environments—that is my second inferential rationale for early intervention.

The third one is what I have called major conceptual analysis of the role of experience in development. If you have been around for the last ten years and been interested in young children, you have probably heard about Piaget, and about Joseph McVicker Hunt, about Ben Bloom and also I would add Jerome Bruner to that list. These are people I feel have made an important contribution to our rationale for early development, not by virtue of emperical studies that they have done proving the importance of early experience, but rather because of an exhaustive and scholarly analysis of what other people have done, but often not integrated with things that other people in perhaps similar areas might have done.

A decade ago, Joe Hunt published his magnificent book called *Intelligence and Experience*. In this book he attempted to survey all that was known at that point in time about the influence of experience on intelligence. Hunt felt that for too many years the thinking in psychology had been dominated by a belief in fixed inheritance of intelligence even though data from a variety of sources should have challenged this belief. As he put it, "Evidence from various sources has been forcing a recognition of central processes in intelligence and of the crucial role of life experience in the development of these central processes".

In his book, Hunt presented evidence that would challenge the belief in fixed intelligence and pre-determined development, and offered instead a model of information processing, which stresses the importance of experience for the development for the central organization of information necessary to solve problems. He also reviewed for American audiences the work of Piaget.

Piaget had been around on the American scene—he is another one who has been rediscovered many times. He was discovered and outlawed by some earlier people who said his work was not very worthwhile and he does publish mainly in French—and most of us are language illiterate. But Hunt tried to review for the American reader the basic tenets of Piaget and highlighted particularly Piaget's emphasis on the way that experiences help program the development of cognitive functioning in the human infant. For Joe Hunt the implications were very clear. Society must pay ever greater attention to what takes place in the lives of very young children and must stop leaving things to chance during this period.

The second of these conceptual analyses that I mentioned was made by Benjamin Bloom and it started from a different frame of reference. No matter what point you start from, you cannot escape the inference that the early years are very important. Bloom surveyed all of the longitudinal studies that had been published at that time. This was done eight years ago, and in it he looked to see what the authors had come up with about the measurement of change and a variety of characteristics within the same individual. He was interested in only longitudinal studies in which the subject had matured, that is, had reached early adulthood or beyond.

Bloom's chief interest in this analysis lay in identifying periods during which the characteristics under study were going through relatively stable growth—physical growth, intelligence, achievement motivation and so on—and those periods in which they were unstable and showed rapid change. In considering all the data that he could find relating to repeated measures of physical and personality characteristics, intelligence and achievement test data, Bloom concluded that the introduction of the environment as a variable makes a major difference in our ability to predict the mature status of a human characteristic.

Surprisingly little attention has been given to measuring environmental characteristics. We have been content to take something like socio-economic status and say that because it is accurate in some cases we will assume that it is accurate in all. Yet we know—absolutely—that is is not the case. In any data that I have ever collected, and I have happened to have worked primarily with the low-income background families, the variability that we find in all of the characteristics that we have measured tends to be greater than the variability from the same characteristics from a middle class sample.

I happen to think that is extremely important point. It says that if you are making this judgment about what a child might be experiencing in a middle class home there is a slight chance that you will be a little more accurate if you guess that is going to be right at the mean or median than you will be if you are making that assumption on the basis of a less privileged home. The variability tends to be greater in the latter situation.

We desperately need sensitive measures in this field that deal with the specific environmental characteristic likely to influence the particular growth characteristic in which we are interested. In calling attention to the impact of the environment, Ben Bloom suggested further that it will have more impact on a characteristic at a time when that characteristic is undergoing relatively rapid change than it will at a point in time when relatively little change is likely.

A final step in this logic is the realization that since most characteristics are perhaps changing most rapidly during infancy and early childhood, one might expect the environment to have its greatest impact during the first years of life. This realization led Bloom to suggest in his famous term that has now become an avarism with us that in regard to intelligence measured at age 17, about 50 percent of the development takes place between conception and age 4. He feels that the statement has often been misinterpreted but again the implications of the analysis are very clear. If the environment can be assumed to have its greatest impact during roughly the first four years of life, then very careful attention to the development of growth-fostering environments during this period is absolutely essential.

Furthermore, his analysis suggests that as far as education is concerned, we may well have had emphasis placed at the wrong points in time. Whereas we have had elaborate mechanisms for providing education for older children in our society, guidance for the growth and development of the very young has been a casual venture indeed.

We have fallen back on statements but we really don't know all of the answers. Therefore we must be very careful. We don't know all of the answers about how to educate 16-year-olds, as countless 16-year-olds will be happy to attest, but we go right ahead and design educational procedures nonetheless. It is fair to summarize this section on inferential rationale by saying in the middle of the decade of the 60's, no thinking person could ignore the first few years of life. We were but one step away from a social mandate to give careful attention to the development of programs that would foster learning cognitive development.

THE ARMY CAREER OF STAN SMITH

HON. OTIS G. PIKE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. PIKE. Mr. Speaker, I wish to present a rough chronology of the past year in which Specialist Stan Smith, allegedly of the U.S. Army, has received acclaim as an international tennis celebrity.

An official letter from the Office of the Secretary of the Army dated July 7 to me recounts Stan's year in a somewhat loftier tone. In part, the letter states:

> From June 1971 to 30 October 1971, Specialist Smith was directed to participate in national and international tennis competition under the auspices of the U.S. Davis Cup Committee in preparation for Davis Cup play. Following this, he was attached along with several other soldier athletes to the U.S. Army Recruiting Command to serve as a sports clinician in a nationwide sports clinic program. His duties required him to travel throughout the United States addressing high school and community groups. On 15 March, 1972, he was once again ordered to the U.S. Davis Cup Team to represent the United States in international competition, now in progress.

I urge you to compare this official statement of July 7 with a recapitulation gathered from the daily sports pages of the New York Times that follows:

RECAPITULATION

DATE AND TOURNAMENT

June 1-4, 1971, in Paris for French Open Tennis Tournament.

June 8-12, in Beckenham, England, for Kent Grass Tennis Tournament.

June 16-19, in London for the London Grass Tennis Tournament. Wins singles prize of $690.

June 21-July 3, at 1971 Wimbledon takes second prize purse of $5,400.

July 6-9, in Baastad, Sweden for Swedish Open Tennis Tournament.

July 13-17, at Washington (D.C.) *Star* International Tennis Tournament.

August 4-8, in Cincinnati for the Western Tennis Tournament. Wins Singles. Share of $30,000 purse not disclosed in AP dispatch.

August 16, upset in first match of the Pennsylvania Lawn Tennis Championship at Haverford, Pa.

September 1-16, at Forest Hills, N.Y. for U.S. Open Championship. Wins singles prize of $15,000 and $5,000 expenses. Prize money goes to Davis Cup Fund in return for Army's permission to let him compete.

September 16, drops out of California Tennis Championship in Sacramento.

September 22–25, in Los Angeles for Pacific Southwest Open Tennis Tournament.

October 8–10, in Charlotte, N.C. for Davis Cup challenge round.

October 25, in Wembley, England for $48,000 Wembley Open Tennis Tournament. Loses opening match.

November 1–7, in Stockholm, Sweden for $45,000 Stockholm Open Tennis Tournament. Wins doubles, purse undetermined.

November 23–27, in Buenos Aires, Argentina for South American Open Tennis Tournament.

December 1, Reuter's dispatch from London says Smith won Pepsi Grand Prix of Tennis first prize of $25,000 based on point standing in 31 international tennis tournaments.

December 4–12, in Paris for $50,000 Pepsi Masters Grand Prix. Wins $9,000 second place prize.

February 11, in San Diego, Calif., for $40,000 International Open Tennis Tournament.

February 14–20, in Salisbury, Md. for National Indoor Open Tennis Championship. Wins singles prize of $9,000.

February 22–27, in New York City for Clean Air Tournament. Wins single prize of $4,500 and also takes doubles share of $500.

February 24, named co-winner of Martini & Rossi Gold Racquet Award for 1971. Donates one-half share of $7,500 award to California charity.

February 29–March 5, in Hampton, Va. for U.S. National Indoor Tennis Tournament. Wins $9,050 single's prize.

March 8–12, in Washington, D.C. for $25,000 International Tennis Tourney. Wins undisclosed singles prize.

March 19, in Kingston, Jamaica for Davis Cup Regional Match.

March 27–31, in San Juan, Puerto Rico for Caribe Hilton Tennis Tournament. Wins $3,500 prize.

April 11–16, in Spain for Madrid International Tennis Tournament.

April 18–22, in France for $30,000 Nice International Tennis Tournament.

April 25–26, in Rome for Italian Tennis Championship.

May 8–12, in Bournemouth, England for $39,000 British Hardcourt Tennis Championship.

June 6–18, in Mexico City with Davis Cup Team for North American zone final against Mexico.

June 20, in England for London Grass Court Championship.

July 9, 1972, wins singles prize for $13,000 at 1972 Wimbledon.

Really, Mr. Speaker, is this the Army?

U.S.S. "THORN" REUNION

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. ROONEY of Pennsylvania. Mr. Speaker, the clock will be turned back a quarter century next week as the former crewmembers of the U.S.S. *Thorn* reunite at the Philadelphia Naval Station aboard their mothballed destroyer. What is unique about the event is that it is the first time that a ship and its crew will be reunited. Furthermore, I am particularly proud that one of my constituents, Mr Kaj "Swede" Swenson, is chairman of the reunion committee and as his fellow crewmembers have assured me, it has been his initiative, drive, and persistence that has sparked the reunion.

The U.S.S. *Thorn*, or the "Mighty T" as it is fondly remembered was commissioned April 1, 1943, and served with distinction during World War II. After the war it was retired to the Philadelphia Reserve Basin. Because time and the elements have taken their toll, the *Thorn* is currently slated to be towed to sea and sunk during target practice. Thus, although many crewmembers have expressed a strong interest in preserving the ship, the annual cost of berthing and maintaining the retired destroyer would be about $10,000.

Thus, the event takes on added significance since there may never be another chance for crewmembers to go aboard. Consequently, Mr. Swenson and his committee have conducted an extensive search for the members of the *Thorn* family, and it is expected that 250 people will be present for the August 25–26 festivities. To increase interest in the upcoming event, the committee has been publishing the *Thorn* Flashback, which prints letters from crewman fondly recounting incidents from their life aboard the "Mighty T."

The Navy, too, has been cooperating with the reunion planners by providing facilities for the dinner dance by unsealing and sprucing up the *Thorn*, itself, and by making it possible for returning veterans to take small souvenirs from the ship.

As the time for the reunion draws near, I want to recognize the outstanding work that Mr. Swenson has done in organizing the affair and send my best wishes to him and the rest of the crew, while at the same time realizing that the greatest rewards are yet to be reaped when the returning sailors will be able to renew friendships and rekindle the memories of the time they spent aboard a proud vessel that served and fought with distinction in World War II.

TRIBUTE TO THE ORDER OF AHEPA ON ITS 50TH ANNIVERSARY

HON. PAUL S. SARBANES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. SARBANES. Mr. Speaker, it is indeed a great honor and a matter of deep personal pleasure for me to salute on the occasion of its 50th anniversary the American Hellenic Educational Progressive Association, known with respect throughout our Nation as the Order of Ahepa.

It is a matter of great pride because, as a Greek-American and as an Ahepan, I am deeply aware of the significant contributions which the Order of Ahepa has made to the progress and growth of America. The Order of Ahepa was founded 50 years ago in Atlanta, Ga., by eight farsighted, patriotic, and civic-minded Greek-Americans who realized that the time had arrived for the establishment of an organization which would reflect the finest in the Greek and American ideals of freedom, democracy, good citizenship, and devotion to family and church. Since that historic moment in Atlanta on July 26, 1922, AHEPA's progress and achievements have surpassed even the boldest dreams of its visionary founders.

AHEPA's programs and activities have spanned two continents helping to strengthen the historically close ties which have marked the relationship between the United States and Greece. In truth, Ahepans have succeeded in combining the best traditions of these two great nations whose histories have been marked by a dedication to human justice and freedom.

As proud sons and daughters of Hellas, Ahepans have generously and often at great sacrifice aided a troubled Greece, in time of natural disaster, national peril, or philanthropic need. At the same time the Order of Ahepa has been a leader in preparing Greek-Americans for full and constructive participation in virtually every sphere of American life, be it in business, politics, education, labor, or the arts. In addition, Ahepans have played a major role nationally and locally in the establishment and support of such important Greek-American institutions as the Greek Orthodox Church, various educational and philanthropic facilities and a host of other important community projects.

Most importantly, however, the AHEPA family, which includes the auxiliary organizations of the Daughters of Penelope, Maids of Athens, and Sons of Pericles, has inculcated in their members, their families and friends a keen sense of civic responsibility and patriotism, a love of family and church and a devotion to democratic practices and ideals, all reflected in a devotion to their fellow man and a dedication to a just society. AHEPA has indeed reflected the finest precepts of Hellenism, formulated by the brilliant philosophers and law-givers of ancient Greece, and carried forward by the democratic ideals and institutions of the United States.

Mr. Speaker, I am happy to report that in my own State of Maryland there are nine active chapters of AHEPAN's and that in my own city of Baltimore, there are two active chapters, Worthington chapter No. 30 and the Lord Baltimore chapter No. 364. I should like to pay tribute to the members of these chapters by listing their officers and home cities. I know that my colleagues join me in wishing them and all other AHEPAN's continued good fortune in their efforts to carry on the finest traditions of our shared heritage.

MARYLAND AHEPA LEADERS

WORTHINGTON CHAPTER NO. 30, BALTIMORE

August A. Krometis, President.
Paul Cocoros, Vice President.
Michael N. Psaris, Secretary.
Nicholas Pistolas, Treasurer.

LORD BALTIMORE CHAPTER 364, BALTIMORE

Basilios A. Trintis, President.
Nick Gianakakis, Vice President.
John A. Demetriades, Secretary.
Basil Lambros, Treasurer.

OTHER LOCAL CHAPTER OFFICERS

Constantine J. Leanos, President, Annapolis.

Dimitrios G. Mandris, Secretary and Treasurer, Annapolis.

Richard Diamond, President, Cumberland.

Christ G. Charuhas, Secretary and Treasurer, Cumberland.
Constantine Nicholas, President, Silver Spring.
Alexander S. Lazarou, Vice President, Silver Spring.
Nicholas Stamos, Secretary, Silver Spring.
Mario Vouzikas, Treasurer, Silver Spring.
Stratis Skenderis, President, Rockville.
George D. Sirinakis, President, Hagerstown.
John Callas, Vice President, Hagerstown.
Peter Papandreu, Secretary, Hagerstown.
John T. Doukas, Treasurer, Hagerstown.
Charles J. Papuchis, President, Silver Spring.
Chris Fotos, Vice President, Silver Spring.
Stanley S. Xenakis, President, Silver Spring.
Andrew Manos, Vice President, Bethesda.
George D. Lampros, Secretary, Chevy Chase.
George Mellonas, Treasurer, Silver Spring.

CURRENT NATIONAL OFFICERS

Dr. G. Dimitrious Kousoulias, Ahepa Educational Foundation, Bethesda.
George J. Leber, National Executive Secretary, Silver Spring.

CURRENT DISTRICT LODGE OFFICERS

Socrates P. Koutsoutis, Treasurer, Laurel.

PAST NATIONAL OFFICERS

Andrew A. Papaminas, Past Supreme Lodge, Baltimore.
Louis P. Maniatis, Past Supreme Lodge, Bethesda.
J. William Holmes, Past Supreme Lodge, Silver Spring.

AID AND TRADE WITH THE ENEMY

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. SCHMITZ. Mr. Speaker, the most despicable practice I have encountered in my lifetime is that of successive Republican and Democrat administrations in carrying on aid and trade with the Communist nations which supply the weapons to kill our men in Vietnam. How any Member of this body, who supports such action, can go home and sleep with a clear conscience, is beyond my understanding. Many of them have sons, like mine, who some day will serve in our Armed Forces if they are not already doing so, and may well be a target for those weapons whose manufacture we make possible.

In Arlington Cemetery we keep a 24-hour watch over our honored dead, who made the supreme sacrifice to defend our country and freedom against its foes. Their loved ones mourn them still, and will never forget them. Many of these dead would be alive today if we had not done so much to build up and sustain the economy of the Soviet and satellite nations for the last half-century. But as long as the dollars roll in to fill the coffers of the "big money" men who in turn make many of the largest contributions to both Republican and Democrat presidential candidates, those who profit from aid and trade with the enemy could not care less about the cost in blood paid in places like Korea and Vietnam. Business and hypocrisy of the highest order must be carried on—as usual.

For 10 years, Antony C. Sutton, research fellow with the Hoover Institution on War, Revolution and Peace, has been researching Soviet technology. He has so far written two volumes on "Western Technology and Soviet Economic Development." Today he is presenting a summary of his findings to the platform committee of the Republican National Convention in Miami, Fla. This is his shattering conclusion:

> There is no such thing as Soviet technology. Almost all—perhaps 90 to 95 percent—came directly or indirectly from the United States and its allies. In effect the United States and the NATO countries have built the Soviet Union—its industrial and its military capabilities. This massive construction job has taken 50 years, since the Revolution in 1917. It has been carried out through trade and the sale of plants, equipment and technical assistance.

The evidence he presents in support of this conclusion is of the greatest importance to every American and especially to all who make policy here in Washington. It is imperative that every Member of this body read what he has to say—and act accordingly.

Mr. Sutton says that "this information has been blacked out by successive administrations." I intend to see that it is blacked out no longer. Simultaneously with placing it in the CONGRESSIONL RECORD today, I have released it to the Associated Press and United Press International and to major newspapers throughout the country. For once, let us submerge our differences and unite on an issue on which every man of conscience and honor in this country ought to be able to agree. These facts must not be suppressed or ignored because of concern about face-saving or a desire to pretend that unpleasant truths do not exist. Those who fail to print and publicize Mr. Sutton's evidence do so at the peril of the lifeblood of America.

Nor can it be hidden much longer in any case. This story will become too big to kill. You remember the old saying "murder will out." What Mr. Sutton reports is a very sophisticated kind of murder; the bodies involved are those of our own young men, crying out from their graves for justice. The truth about this murder through trade with the enemy is coming out, and it will be heard.

The article follows:

> The information that I am going to present to you tonight is known to the Administration. The information is probably *not* known to the Senator from South Dakota or his advisers. And in this instance ignorance may be a blessing in disguise. I am not a politician. I am not going to tell you what you want to hear. My job is to give you facts. Whether you like or dislike what I say doesn't concern me. I am here because I believe—and Congressman Ashbrook believes—that the American public should have these facts.
>
> I have spent ten years in research on Soviet technology. What it is—what it can do—and particularly where it came from. I have published 3 books and several articles summarizing the work. It was privately financed. But the results have been available to the Government. On the other hand, I have had major difficulties with United States Government censorship. I have 15 minutes to tell you about this work. In a few words: there is no such thing as Soviet technology.
>
> Almost all—perhaps 90–95 percent—came directly or indirectly from the United States and its allies. In effect, the United States and the NATO countries have built the Soviet Union. Its industrial *and* its military capabilities. This massive construction job has taken 50 years. Since the Revolution in 1917. It has been carried out through trade and the sale of plants, equipment, and technical assistance. Listening to Administration spokesmen—or some newspaper pundits—you get the impression that trade with the Soviet Union is some new miracle cure for the world's problems. That's not quite accurate. The idea that trade with the Soviets might bring peace goes back to 1917. The earliest proposal is dated December 1917—just a few weeks after the start of the Bolshevik Revolution. It was implemented in 1920 while the Bolsheviks were still trying to consolidate their hold on Russia. The result was to guarantee that the Bolsheviks held power: they needed foreign supplies to survive. The history of our construction of the Soviet Union has been blacked out—much of the key information is still classified—along with the other mistakes of the Washington Bureaucracy. Why has the history been blacked out?
>
> Because 50 years of dealings with the Soviets has been an economic success for the USSR and a political failure for the United States. It has not stopped war, it has not given us peace. The United States is spending $80 billion a year on defense against an enemy built by the United States and Western Europe. Even stronger, the United States apparently wants to make sure this enemy remains in the business of being an enemy. Now at this point I've probably lost some of you. What I have said is contrary to everything you've heard from the intellectual elite, the Administration, and the business world, and numerous well regarded Senators—just about everyone. Let me bring you back to earth.
>
> First an authentic statement. Its authentic because it was part of a conversation between Stalin and W. Averell Harriman. Ambassador Harriman has been prominent in Soviet trade since the 1930's and is an outspoken supporter of yet more trade. This is what Ambassador Harriman reported back to the State Department at the end of World War II: "Stalin paid tribute to the assistance rendered by the United States to Soviet industry before and during the War. Stalin said about two-thirds of all the large industrial enterprises in the Soviet Union has been built with the United States help or technical assistance." (he in original*). I repeat: "two-thirds of all the large industrial enterprises in the Soviet Union had been built with the United States help or technical assistance." Two-thirds. Two out of three. Stalin could have said that the other one-third of large industrial enterprises were built by firms from Germany, France, Britain, Italy, and so on. Stalin could have said also that the tank plants, the aircraft plants, the explosive and ammunition plants originated in the United States. That was June 1944. The massive technical assistance continues right down to the present day.
>
> Now the ability of the Soviet Union to create any kind of military machine, to ship missiles to Cuba, to supply arms to North Vietnam, to supply arms for use against Israel—all this depends on its domestic industry. In the Soviet Union about three-quarters of the military budget goes on purchases from Soviet factories. This expenditure in Soviet industry makes sense. No army has a machine that churns out tanks. Tanks are made from alloy steel, plastics, rubber, and so forth. The alloy steel, plastics, and rubber are made in Soviet factories to military specifications. Just like in the United States. Missiles are not produced on missile-making machines. Missiles are fabricated from aluminum alloys, stainless steel, elec-

trical wiring, pumps, and so forth. The aluminum, steel, copper wire, and pumps are also made in Soviet factories. In other words, the Soviet military gets its parts and materials from Soviet industry. There is a Soviet military-industrial complex just as there is an American military industrial complex. This kind of reasoning makes sense to the man in the street. The farmer in Kansas knows what I mean. The salesman in California knows what I mean. The taxi driver in New York knows what I mean. But the policy makers in Washington do not accept this kind of common sense reasoning, and never have.

So let's take a look at the Soviet industry that provides the parts and the materials for Soviet armaments: the guns, tanks, aircraft. The Soviets have the largest iron and steel plant in the world. It was built by McKee Corporation. It is a copy of the United States steel plant in Gary, Indiana. All Soviet iron and steel technology comes from the United States and its allies. The Soviets use open hearths, American electric furnaces, American wide strip mills, Sendzimir mills, and so on—all developed in the West and shipped in a peaceful trade. The Soviets have the largest tube and pipe mill in Europe—1 million tons a year. The equipment is Fretz-Moon, Salem, Aetna Standard, Mannesman, etc. Those are not Russian names. All Soviet tube and pipe-making technology comes from the United States and its allies. If you know anyone in the space business, ask them how many miles of tubes and pipes go into a missile. The Soviets have the largest merchant marine in the world—about 6,000 ships. I have the specifications for each ship. About two-thirds were built outside the Soviet Union. About four-fifths of the engines for these ships were also built outside the Soviet Union.

There are no ship engines of Soviet design. Those built *inside* the USSR are built with foreign technical assistance. The Bryansk plant makes the largest marine diesels. In 1959 the Bryansk plant made a technical assistance agreement with Burmeister & Wain of Copenhagen, Denmark (a NATO ally), approved as peaceful trade by the State Department. The ships that carried Soviet missiles to Cuba ten years ago used these same Burmeister and Wain engines. The ships were in the POLTAVA class. Some have Danish engines made in Denmark and some have Danish engines made at Bryansk in the Soviet Union. About 100 Soviet ships are used on the Haiphong run to carry Soviet weapons and supplies for Hanoi's annual aggression. I was able to identify 84 of these ships. None of the main engines in these ships was designed and manufactured inside the USSR. All the larger and faster vessels on the Haiphong run were built outside the USSR. All shipbuilding technology in the USSR comes directly or indirectly from the United States or its NATO allies.

Let's take one industry in more detail: motor vehicles. All Soviet automobile, truck, and engine technology comes from the West: chiefly the United States. In my books I have listed each Soviet plant, its equipment, and who supplied the equipment. The Soviet military has over 300,000 trucks—all from these United States built plants. Up to 1960 the largest motor vehicle plant in the USSR was at Gorki. Gorki produces many of the trucks American pilots see on the Ho Chi Minh trail. Gorki produces the chassis for the GAZ-69 rocket launcher used against Israel. Gorki produces the Soviet jeep and half a dozen other military vehicles. And Gorki was built by the Ford Motor Company—as peaceful trade. In 1968 while Gorki was building vehicles to be used in Vietnam and Israel, further equipment for Gorki was ordered and shipped from the United States. Also in 1968 we had the so-called "FIAT deal"—to build a plant at Vologograd three times bigger than Gorki. Dean Rusk and Walt Rostow told Congress and the American public this was peaceful trade—the FIAT plant could not produce military vehicles. Don't let's kid ourselves. Any automobile manufacturing plant can produce military vehicles. I can show anyone who is interested the technical specification of a proven military vehicle (with cross-country capability), using the same capacity engine as the Russian FIAT plant produces. The term "FIAT deal" is misleading. FIAT in Italy doesn't make automobile manufacturing equipment—FIAT plants in Italy have United States equipment. FIAT *did* send 1,000 men to Russia for erection of the plant—but over half, perhaps well over half, of the equipment came from the United States. From Gleason, TRW of Cleveland, and New Britain Machine Co.

So in the middle of a war that has killed 46,000 Americans (so far) and countless Vietnamese with Soviet weapons and supplies, the Johnson Administration doubles Soviet auto output. And supplied false information to Congress and the American public. Finally, we get to 1972 under President Nixon.

The Soviets are receiving now—today, equipment and technology for the largest heavy truck plant in the world: known as the Kama plant. It will produce 100,000 heavy ten-ton trucks per year—that's more than ALL United States manufacturers put together. This will also be the largest plant in the world, *period*. It will occupy 36 square miles. Will the Kama truck plant have military potential? The Soviets themselves have answered this one. The Kama truck will be 50 percent more productive than the ZIL-130 truck. Well, that's nice, because the ZIL-130 truck is a standard Soviet army truck. It's used in Vietnam and the Middle East. Who built the ZIL plant? It was built by the Arthur J. Brandt Company of Detroit, Michigan. Who's building the Kama truck plant? That's classified "secret" by the Washington policy makers. I don't have to tell you why.

The Soviet T-54 tank is in Vietnam. It was in operation at Kontum, AnLoc, and Hue a few weeks ago. It is in use today in Vietnam. It has been used against Israel. According to the tank handbooks, the T-54 has a Christie type suspension. Christie was an American inventor. Where did the Soviets get a Christie suspension? Did they steal it? No, sir! They bought it. They bought it from the United States Wheel Track Laver Corporation. However, this Administration is apparently slightly more honest than the previous Administration. Last December I asked Assistant Secretary Kenneth Davis of Commerce Department (who is a mechanical engineer by training) whether the Kama trucks would have military capability. In fact, I quoted one of the Government's own interagency reports. Mr. Davis didn't bother to answer it but I did get a letter from the Department and it was right to the point. Yes! We know the Kama truck plant has military capability, we take this into account when we issue export licenses. I passed these letters onto the press and Congress. They were published. Unfortunately for my research project, I also had pending with Department of Defense an application for declassification of certain files about our military assistance to the Soviets. This application was then abruptly denied by DOD. Obviously, the Administration can't take too much heat in *this* kitchen. It will supply military technology to the Soviets but gets a little uptight about the public finding out. I can understand that.

Of course, it takes a great deal of self-confidence to admit you are sending factories to produce weapons and supplies to a country providing weapons and supplies to kill Americans, Israelis, and Vietnamese—in writing. In an election year, yet. Many people—as individuals—have protested our suicidal policies. What happens? Well, if you are in Congress—you probably get the strong arm put on you. The Congressman who inserted my research findings into the Congressional Record suddenly found himself with primary opposition. He won't be in Congress next year.

If you are in the academic world—you soon find it's OK to protest United States assistance to the South Vietnamese but never, never protest United States assistance to the Soviets. Forget about the Russian academics being persecuted—we mustn't say unkind things about the Soviets. If you press for an explanation, what do they tell you? First, you get the Fulbright line. This is peaceful trade. The Soviets are powerful. They have their own technology. It's a way to build friendship. It's a way to a new world order. This is demonstrably false. The Soviet tanks in AnLoc are not refugees from the Pasadena Rose Bowl Parade. The "Soviet" ships that carry arms to Haiphong are not peaceful. They have weapons on board, not flower children or Russian tourists. Second, if you don't buy that line you are told, "The Soviets are mellowing." This is equally false. The killing in Israel and Vietnam with Soviet weapons doesn't suggest mellowing, it suggests premeditated genocide. Today—now—the Soviets are readying more arms to go to Syria. For what purpose? To put in a museum? No one has ever presented evidence hard evidence, that trade leads to peace. Why not? Because there *is* no such evidence. It's an illusion. It is true that peace leads to trade. But that's not the same thing. You first need peace, then you trade. That does not mean if you trade you will get peace. But that's too logical for the Washington policy makers and it's not what the politicians and their backers want anyway. Trade with Germany doubled before World War II. Did it stop World War II? Trade with Japan increased before World War II. Did it stop World War II? What was in this German and Japanese trade? The same means for war that we are now supplying the Soviets. The Japanese Air Force after 1934 depended on United States technology. And much of the pushing for Soviet trade today comes from the same groups that were pushing for trade with Hitler and Tojo 35 years ago.

The Russian Communist Party is not mellowing. Concentration camps are still there. The mental hospitals take the overload. Persecution of the Baptists continues. Harassment of Jews continues, as it did under the Tsars. The only mellowing is when a Harriman and a Rockfeller get together with the bosses in the Kremlin. That's good for business but it's not much help if you are a G.I. at the other end of a Soviet rocket in Vietnam. I've learned something about our military assistance to the Soviets. It's just not enough to have the facts—these are ignored by the policy makers. It's just not enough to make a common sense case—the answers you get defy reason.

Only one institution has been clearsighted on this question. From the early 1920's to the present day only one institution has spoken out. That is the AFL-CIO. From Samuel Gompers in 1920 down to George Meany today, the major unions have consistently protested the trade policies that built the Soviet Union. Because union members in Russia lost their freedom and union members in the United States have died in Korea and Vietnam. The unions know—and apparently care. No one else cares. Not Washington. Not big business. Not the Republican Party. And 100,000 Americans have been killed in Korea and Vietnam—by our own technology.

The only response from Washington and the Nixon Administration is the effort to hush up the scandal. These are things not to be talked about. And the professional smokescreen about peaceful trade continues. The plain fact—if you want it—is that irresponsible policies have built us an enemy and maintain that enemy in the business of totalitarian rule and world conquest. And the tragedy is that intelligent people have bought the political double-talk about world peace, a new world order and mellowing Soviets. I suggest that the man in the street, the average taxpayer-voter thinks more or less as I do. You do not subsidize an enemy. And when this story gets out and about in the United States, it's going to translate into a shift of votes. I haven't met one man in the street so far (from New York to California) who goes along with a policy of subsidizing the killing of his fellow Americans. People are usually stunned and disgusted. It requires a peculiar kind of intellectual myopia to ship supplies and technology to the Soviets when they are instrumental in killing fellow citizens.

What about the argument that trade will lead to peace? Well, we've had United States-Soviet trade for 52 years. The 1st and 2nd Five-Year Plans were built by American companies. To continue a policy that is a total failure is to gamble with the lives of several million Americans and countless allies. You can't stoke up the Soviet military machine at one end and then complain that the other end came back and bit you. Unfortunately, the human price for our immoral policies is not paid by the policy makers in Washington. The human price is paid by the farmers, the students, and working and middle classes of America. The citizen who pays the piper is not calling the tune—he doesn't even know the name of the tune.

Let me summarize my conclusions: *One:* trade with the USSR was started over 50 years ago under President Woodrow Wilson with the declared intention of mellowing the Bolsheviks. The policy has been a total and costly failure. It has proven to be impractical—this is what I would expect from an immoral policy. *Two:* we have built ourselves an enemy. We keep that self-declared enemy in business. This information has been blacked out by successive Administrations. Misleading and untruthful statements have been made by the Executive Branch to Congress and the American people. *Three:* our policy of subsidizing self-declared enemies is neither rational nor moral. I have drawn attention to the intellectual myopia of the group that influences and draws up foreign policy. *Four:* the annual attacks in Vietnam and the war in the Middle East were made possible only by Russian armaments and our past assistance to the Soviets. *Five:* this world-wide Soviet activity is consistent with Communist theory. Mikhail Suslov, the party theoretician, recently stated that the current detente with the United States is temporary. The purpose of the detente, according to Suslov, is to give the Soviets sufficient strength for a renewed assault on the West. In other words, when you've finished building the Kama plant and the trucks come rolling off—watch out for another Vietnam. *Six:* internal Soviet repression continues: against Baptists, against Jews, against national groups, and against dissident academics (like myself). *Seven:* Soviet technical dependence is a powerful instrument for world peace if we want to use it.

So far, it's been used as an aid-to-dependent Soviets welfare program. With about as much success as the domestic welfare program. Why should they stop supplying Hanoi? The more they stoke up the war the more they get from the United States. One final thought.

Why has the war in Vietnam continued for four long years under this Administration? With 15,000 killed under the Nixon Administration? We can stop the Soviets and their friends in Hanoi any time we want to. Without using a single gun or anything more dangerous than a piece of paper or a telephone call. We have Soviet technical dependence as an instrument of world peace. The most humane weapon that can be conceived. We have always had that option. We have never used it.

VERY ACCURATE PREDICTION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. DERWINSKI. Mr. Speaker, I periodically make it a point to go back and reread editorial commentaries to check if the comments or predictions carried in any specific editorial turn out to be reasonably accurate and appropriate. This morning, I rechecked an August 7, 1972, editorial in the San Diego Union which predicted that Mr. Ramsey Clark would be subject to a carefully staged tour of North Vietnam and, upon his return to the United States, he would claim expertise and trumpet his own views in every possible media outlet.

In inserting this editorial into the RECORD, I call the attention of the Members to the very accurate prediction of Mr. Clark's behavior pattern that it carried:

CERTAIN TRUMPET

The planned visit to North Vietnam by former Attorney General Ramsey Clark will follow a pattern as ingrained and predictable as the program of a computer.

Like Jane Fonda before him, Mr. Clark will be taken to carefully selected and staged damage areas at dikes that could have been accidentally damaged by bombing, and perhaps to a few civilian buildings also damaged by aerial warfare.

In due time he will return to the United States of America and take to the stump as the final expert on bombing damage in North Vietnam, and the futility of the war, reporting the exception as the fact. In doing so he will deliberately volunteer to be a public address system for the Communist North Vietnamese.

The objectives of the Communists are plain. They seek to bring the greatest possible political pressure to bear on the presidential election in the United States.

They also are preparing to convince the world that the flooding that will occur in the impeding monsoon season in North Vietnam—which also happens annually with intact dikes—is the fault of the United States. Finally, they are whipping up anti-American frenzy among their own people, who even now are tightening their belts because of the blockade of Haiphong, by blaming the rice shortage on destruction of rice fields.

At least one has to have a grudging admiration for the Communists for their tenacity.

TRIBUTE TO THE LATE FRANK A. PLESCIA

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. HELSTOSKI. Mr. Speaker, Frank A. Plescia, the founder of the Lodi, N.J., Boys' Club and one of the great humanitarian figures of our area, passed away recently. Frank Plescia's life exemplified the biblical command to love thy neighbor and many formerly underprivileged youngsters are better off today as a result of his guidance and his concern. I join with the citizens of Lodi in mourning the death of this great man, and include at this point in the RECORD a tribute to Frank Plescia recently published in the Lodi Messenger.

The tribute follows:

THE UNFORGETTABLE FRANK A. PLESCIA

(By Lawrence C. Toscano)

In my humble opinion, I sincerely feel that upon the death of the late beloved, Frank A. Plescia, founder and father of our Boys' Club, no greater man has ever graced our proud community. This devoted, faithful and truly dedicated man has well earned the everlasting gratitude and remembrance of the entire Boys' Club family and the people of Lodi. In his passing, Mr. Plescia's many sacrifices, unselfishness and unfailing loyalty for the welfare of a boy has left innumerable reflections upon the hearts and minds of the youth and people in all walks of life.

In my long association with this distinguished and lovable man, I feel duly qualified to re-affirm Plescia's great patience, faith, zeal and enthusiasm in the great cause of our young boys! Perhaps unknown to many people, it was long before his interest in our Boys' Club, when he befriended 'Yours Truly' and my young friends in all of our sports activities in early 1900. I remember well his gifts of baseballs and gloves for our baseball team. After each game Plescia woud always lecture us on good sportsmanship and good behavior.

It was during these early years when Plescia organized the popular Royal A.C. baseball team. I was one of the mascots who chased all over Westervelt Place recovering foul balls. I recall some of the players, Steve Nebesni, Charles Cutitto, Anthony Greco, Martin Bua, Johnny Goulen, Frank J. Terranella, Tony (Raymond) Sproviero, John Micklas, John Lascari and Louis De Rosa. How well I remember the bitter rivalry between the Royals and the Eagles A.C. in their playoff series. I don't think they ever finished a nine inning game. Those were the days when baseball dominated all local sports.

HARDSHIPS IN THE GHETTOS

Frank Plescai didn't develop his interest in boys—he was born with kindness and compassion for all underprivileged youngsters. He was blessed with a warm nature and just consideration for all humanity. His special interests for the well-being of the young boys was utmost in his mind after he acquired great experience when he resided in a tough Ghetto district in New York City.

As a young man, Plescia lived in New York City's tough Tompkins Square district. He had witnessed the daily rival gang wars that brought havoc and fear in the neighborhood, the hate and prejudices among ethnic groups and the endless crimes committed in the streets. In order to escape the everpresence of violence and danger, he and his two young brothers found a peaceful sanctuary in the Tompkins Square Boys' Club. It was here where Plescia learned the need to assume leadership for a youth organization when he came to our borough.

I am taking the privilege to repeat some early accounts of Mr. Plescia written several years ago. It was in the winter of 1943 during a local Civil Defense Council meeting when he accepted to assume the responsibility to help organize a Youth Activity Council (YAC). This request was made by letter from the U.S. Civil Defense. With a genuine fatherly interest and great patience, Plescia set out to recruit members for his newly found organization. Without any available funds, he turned his home basement into a clubhouse to give aid and shelter to his many new young members.

With the loyal assistance of his lovely wife Frances, Frank embarked upon a one man crusade to help find a permanent home for our long neglected young boys. After each meeting the youngsters enjoyed hot dogs and ice cream served by Mrs. Plescia. It was several months later in May 1943, when Frank A. Plescia changed the name of the organization from the Youth Activity Council and planted the seed of our present Boys' Club of Lodi! At this point I wish to remind the Boys' Club family that lest they forget; Mrs. Frances Plescia is truly the Mother of the Boys' Club of Lodi!

How can we ever forget this lovable man as he rode down our main streets in his familiar station wagon, packed with smiling and happy youngsters! Within the years, it has become well-known that to the young boy, Frank's face always radiated with kindness and understanding and he was blessed with warm tenderness. There always existed a strong bond of affection and friendship between them. Yes, many of us well remember too that despite his many bitter disappointments, idle promises, financial setbacks and roadblocks, his unshakeable spirit, inexhaustible virtues, faith and strong determination to help a boy, won for him great acclaim and the admiration and gratitude of the people of Lodi.

BOYS' CLUB BUILDING

It was about fifteen years after Plescia founded the Boys' Club organization that his long dream had come to pass with the building of the first part of the Boys' Club building in 1957. Upon completion of the building, an elaborate dedication program was held with John J. Lattanzio, acting as master of ceremonies. On this happy occasion, Plescia was joined by many dignitaries, club directors, happy youngsters and the general public. A borowide parade preceded the ceremonies.

Governor Robert Meyner was the principal speaker and he lauded Mr. Plescia for his many years of self-sacrifices, epic labors and unselfish devotion to help realize a boys club building for the youth of the borough. Yes, on this memorable day, this obedient, illustrious, modest and humble, Frank A. Plescia was the recipient of deserved praise and glory from a grateful people in Lodi!

In 1961, in recognition for his outstanding contribution and services rendered to our Boys' Club, Plescia received national honors when he was presented the Silver Keystone Award from the Boys' Clubs of America at a dinner in his honor at the Boys' Club. Several years later, he received several outstanding awards from local organizations and was named Boys' Club Director Emeritus by the Board of Directors. A little boy had no greater friend than Frank A. Plescia.

Frank's work on earth is done . . . but we will always cherish his loving memory. His name will always grace the pages of our borough's history. His greatest credentials on earth was his love, friendship and deep concern for the "little boy." May the good Lord always rest his soul in peace and invoke his divine grace and blessings upon his wonderful wife and family.

AN INTERVIEW WITH CHIEF JUSTICE WARREN E. BURGER

HON. WILLIAM J. KEATING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. KEATING. Mr. Speaker, the current issue of U.S. News & World Report, August 21, 1972, contains an excellent interview with Chief Justice Warren E. Burger, wherein he sets forth his views on many of the problems which now beset the Federal judiciary. The Chief Justice also explores many of the remedies which have been proposed to correct these problems, including what may be done to insure a more prompt disposition of criminal cases.

When I introduced the Speedy Trial Act of 1971 last November, I stated my firm conviction that bringing criminal defendants to trial within 60 days of their arrest would represent a giant stride forward in the reduction of crime in the United States. In my judgment, speedier trials would serve as a certain deterrence to the commission of other crimes.

Mr. Speaker, I include the following excerpts from the interview with the Chief Justice in the RECORD:

SWAMPED: "EVERY LEVEL OF JUDICIARY"

Q. Over all, are the courts themselves trying to do too much? Or are they required to do too much?

A. They are certainly being called on to do more than their resources permit. This is true from the bottom of the pyramid, in the minor-offense State and local courts, right straight up to the Supreme Court. With few exceptions, every level of the judiciary has more work than it can properly handle.

Q. How much has the Supreme Court's load grown in recent years?

A. In 10 years the docketed cases have doubled. More than 10 years ago, Chief Justice [Earl] Warren urged the American Law Institute to conduct a study on federal jurisdiction, and I think he would agree that he had less incentive than we have now for seeking relief. One measure of federal-court business generally is the Supreme Court's work. In 1959, the Supreme Court had 2,178 cases docketed, and it disposed of 1,822. In 1969, when I came on board, the load had increased to 4,202 cases docketed, with 3,500 dispositions.

Q. Has the study asked for by the former Chief Justice ever been made?

A. Yes, but it took the American Law Institute more than eight years to complete the study, partly because the institute has no substantial permanent staff and must depend on the volunteer work of lawyers, judges and law professors. The study has been in Congress since 1969.

Q. What would you propose as a solution to this problem?

A. I would do away with these three-judge district courts completely. For any case in which a constitutional issue on a State or a Federal statute requires urgent decision, the Supreme Court may take the case directly and without review by a court of appeals. For example, a reapportionment case involving an impending election, in which time is crucial, can reach the Supreme Court for an immediate decision.

Q. Would constitutional questions, then, be initially decided by a single district judge?

A. Yes. But there is nothing unsual about that. District judges in the federal system frequently decide important federal constitutional questions sitting alone. They're perfectly capable of doing so.

Q. What are the powers of the Congress to change or limit jurisdiction of federal courts?

A. The Constitution enumerates the areas of federal judicial power subject to "such exceptions and under such regulations as the Congress shall make."

Q. Can Congress limit jurisdiction on a specific case?

A. It can do so on specific categories under the clause I just mentioned.

Q. Getting back to the glut of federal court cases, whatever happened to the Institute of Court Management that was set up in Denver some years ago?

A. It has prospered. It is functioning today.

Q. What does it do?

A. It has given 87 men and women an intensive, full-time training course for six months. Of these graduates, 94 per cent are now working in fields related to court management. An additional 48 are currently enrolled in the fourth 6-month program. About 150 others, such as clerks of courts, have received shorter-term training.

Q. Are most of its students lawyers?

A. The ratio of lawyers has dropped from almost one half to one third, as more nonlawyer court personnel have enrolled.

Q. Are judges willing to relinquish some of their administrative functions to these aides?

A. When judges become thoroughly familiar with the potential of court executives, they'll not only be willing but anxious to have the assistance that these people can give them.

Q. Do these graduates function more or less as efficiency experts in the courts?

A. No, not at all. They function primarily in a managerial capacity as an assistant or executive officer to the chief judge or the administering judge—State or federal—doing many things that now take him away from his judicial work.

Let me give an illustration of what has happened in the federal system:

At the same time that we proposed the creation of the Institute for Court Management, we proposed that Congress create a position of court executive for each of the 11 circuits and for every district court—that is, the trial court—having six or more judges. That would have been a total of 29 executives. Congress was somewhat skeptical and created the position of court executive only for each of the 11 circuits, excluding the district-court executives.

The bill created a blue-ribbon certification board. This board interviewed 129 people considered to be well-qualified out of some 700 applicants. The board certified 52, of whom 28 were not lawyers but had managerial skills from private industry, military service, or public administration.

Eight court executives have been appointed by U. S. courts of appeals. So here we have made a start. However, the metropolitan district courts also need executives.

Q. Can you tell about some other ideas you've been working on?

A. We now have an intensive two-week seminar for new judges at the Federal Judicial Center. Whenever we get 25 or 30 new federal judges onboard, we bring them into Washington for two weeks.

The assumption has been for several hundred years that every lawyer was automatically qualified to be a judge. If that was ever true, it is not so any longer. He is—one would hope—qualified to become a judge, but not every person appointed is immediately qualified to step right in and perform the function. I think it is now widely recognized that even very experienced lawyers need some special training to adapt prior legal experience and skills to the bench. The State courts have been far ahead of the federal system in this respect, with their voluntary association, the National College of Trial Judges at Reno, Nev., which was established eight or nine years ago.

Another example of the leadership of State courts is found in the matter of using court executives. This conception had already been tested in the States and had been used for years in States, notably New Jersey, New York and California. I might say, too, that most of the graduates of the Institute of Court Management have gone into the State systems. They have been snatched up immediately.

LEARNING FROM "BEST-RUN COURTS"

Q. What else can be done to eliminate or reduce delays that drag out trials interminably?

A. Starting from the premise that the function of the courts is to deliver the best quality of justice at the least cost and in the shortest time, we have been conducting studies to identify what are the significant characteristics of the best-run courts—where they get their cases tried promptly, their appeals reviewed promptly, and where the disposition rate is high. This has been done by federal judges themselves.

The effort is to try to get all the courts in the federal system to begin adopting these characteristics. One, for example, is the "individual calendar" system, so that, instead of having one great pool from which cases are parceled individually to judges as they finish the prior case, a court with 10 judges and 2,000 cases will assign 200 cases by name and number to each judge. These cases then become his responsibility, and everything relating to a case must go to him.

I can illustrate the significance of this by recalling that when I sat on the Court of Appeals [for the District of Columbia], it was a common thing to review a file two inches thick and find that 6 to 14 judges had signed various orders, and reading the transcript you would see that each judge had to familiarize himself with the case before he could act on motions unless they were simply postponements.

The individual calendar requires that all matters on a case be handled by a single judge. It focuses the responsibility on that one man. If he has the misfortune of getting an antitrust case which takes two months to try, sometime before the end of the year there has to be a reshuffling of his assignments, and some untried cases are given to other judges.

Another way to help speed trial and appellate procedures is a pooling of all the court reporters, making them available for courtroom work when they do not have transcripts to prepare for appeals, but relieving them from trials when it is necessary to do so in order not to delay appeals for want of the record. District judges have made great improvements in this respect.

Q. We have read of something called the "omnibus hearing." What is that?

A. That is also called the single-hearing procedure. A number of innovative district judges have evolved a procedure by which the judge, particularly in a criminal case, directs that all pretrial motions must be made by a fixed date, after which the court will entertain no additional motions except for some new, unexpected development.

Q. Such as newly discovered evidence?

A. Yes, that could be one development. Otherwise, however, all motions for disclosure of evidence, for suppression of evidence, are waived. This precludes delaying trial by a series of dilatory motions and hearings.

Q. How much can measures such as these speed up courtroom justice?

A. In one of the State courts in New York City, studies show they have cut the backlog 58 per cent by steps of the kinds I'm talking about here, plus some others.

PAROLE SITUATION: "DESPERATE"

Q. Are you as concerned as you have been in the past by the state of correctional institutions in this country?

A. Yes. As you may know, one of my first steps as Chief Justice was to urge the American Bar Association to create a Commission on Corrections to look at the whole operation of the prison systems of the country.

The association promptly created a Commission on Correctional Facilities and Services which is doing some very important work. For example, one project is developing a system of part-time auxiliary probation officers to assist the State and federal probation system. There is, as you know, a desperate shortage of probation and parole officers.

Q. You use the term "desperate." Can you enlarge on that?

A. We probably have no more than one third of what we need in the federal system, and this is very crucial in the whole spectrum of criminal justice. You have read time and again that men on probation and on parole are committing additional crimes. There have been situations where a man, by the time he came to trial, had three or four other indictments waiting for him—each of the charged crimes allegedly committed while he was on probation or on parole, and before parole was revoked.

Now, there is no guarantee that the presence of a parole officer would stop this, but the grim fact is that probation and parole officers are so overburdened that they aren't able to perform the function of counseling, helping these fellows get jobs, keeping them away from the negative environments that get them back into trouble. A probation officer with 150 parolees and probationers to supervise is really not supervising any of them—or only a few—effectively, and the whole function of parole and probation becomes undermined.

Many federal district judges have told me they are sending convicted offenders to institutions instead of placing them on probation because the judge has before him the figures of how many cases each probation officer in his district is charged with. That figure is so high the judge decides that there will not be any realistic supervision. I have no first-hand information about what goes on in the minds of parole-board members, as I do of what goes on in the minds of some federal judges, but I would not be surprised if parole boards are influenced by knowledge that parole supervision also is totally inadequate. It is entirely possible—even likely—that parole boards deny parole in marginal cases because of the lack of adequate supervision of parolees.

Q. Where it is adequate, do you have confidence in the parole system as a means of rehabilitating released criminals?

A. The truth is that we do not really know, but I do know that without supervision there is no chance of really restoring most of these people. With supervision and careful selection of people for probation and parole, there is some chance. What are the alternatives? Put every offender in jail, and throw the key away? We know this has been a total failure. We are beginning to see that the processes for deciding who is to be confined and who is to be on probation and parole are very faulty and inadequate.

BACK OF THE PRISON RIOTS

Q. We're now having a rash of prison riots and a lot of disorder in the penal system. Why?

A. Well, there are probably many causes, and I'm not professionally qualified to understand what they are, even though I have visited many penal institutions of various kinds in this country and in Europe for the last 17 years on a fairly regular basis, and I've kept in very close touch with experts in correction.

One of the major problems of unrest and disorder within the institutions is the failure to have constructive programs not only to keep the inmates occupied, as people are in normal working life, but to at least give them some hope that they are learning something they can market on the outside when they're released.

Q. Do you mean vocational training?

A. Yes—vocational training and educational training of every kind. That's missing in the vast majority of penal systems.

The second thing that brings on trouble is the environment of the prison itself. I know of one prison that was built in 1829 to house 700 or 800 prisoners, with cells that are approximately 5½ feet wide by 8 feet in depth. When I last visited it, it had 1,600 or 1,700 prisoners, two men in the cell built more than 150 years ago for one man—with one bunk on top of the other. This situation can't have anything but a destructive effect on people. When you bear in mind that most of the inmates are younger men—an enormous number of them are between 18 and 25—not to provide recreational facilities so they can burn off their excess energy is asking for trouble.

A third factor that I'm far less able to evaluate is that with television sets in all of these institutions, it is not surprising that a prison riot in one State or one city triggers a prison riot in another place within the reach of television. I don't suggest that TV sets be removed but that the conditions be changed—and swiftly.

Q. In a lot of these cases, inmates now demand the right to negotiate their grievances with the authorities. Does a felon have civil rights?

A. I would not be willing to say that a felon loses all rights, but I don't think that is the issue. For me, common sense dictates that whether we call it negotiating or "providing avenues for articulating grievances and complaints," that is what must come.

There is a parallel in the history of employer-employee relations. More than a hundred years ago in Europe, beginning largely in Germany, they developed grievance procedures within factories, so that before there was a blowup people had an opportunity to be heard. This is a keystone in all mass human relations. We all want to be heard.

I think correctional institutions should have an established grievance procedure. I wouldn't put that on the level of negotiating. I do not think society negotiates with prisoners in that sense, but society should provide a mechanism where the complaints, real or fancied, of prisoners can be heard. And in the process of being heard, most of the complaints will "wash out." If they don't, they should be closely examined by prison administrations.

Q. How important are prisons as a deterrent to crime?

A. It is possible that the idea of imprisonment as a punishment and significant deterrence to crime has been overrated. At least it has been placed in the wrong order in relation to the deterrent effect of the prospect of being caught in the first place, and being properly tried and convicted in the second stage.

When you look at the figures, it is a dismal statistical fact, widely accepted both by professional experts and in the criminal community, that there is probably only about 1 chance out of 5 that an offender will get caught in the first place. Some of the figures would indicate even less risk. Of those who are caught, there is in turn less than 1 chance in 5 that they will be convicted and punished. Even where that happens, the process is so drawn out that the deterrent impact of the conviction is dissipated or lost.

Q. Have the new and relaxed bail provisions affected this?

A. I think we must concede that releasing virtually all defendants pending trial and providing free counsel for everyone tends to keep trials from occurring promptly. This is why delay in criminal trials is so damaging. If we could see to it that every person arrested would be brought to trial within six weeks or 60 days, you would see a downturn in crime, if for no other reason than you'd have these people off the street that much sooner and the swiftness of society's response would itself have a deterrent impact.

Q. Haven't you recently suggested a federal authority to improve justice?

A. At the American Law Institute this year in the traditional welcoming speech from the Chief Justice, I urged that we take action on an idea long discussed in professional circles. The idea is that we create a National Institute of Justice to parallel in some respects the National Institutes of Health which, as you know, has a budget of 2.5 billion dollars a year. There has never been any comparable federal program for the system of justice in the country, State and federal.

Q. Don't Justice Department grants to States and communities for law enforcement carry out this function?

A. Yes, but in a very limited although an important way. The Justice Department's Law Enforcement Assistance Administration (LEAA) has made grants to police departments for the training of policemen, for two-way radios and more automobiles, better training, and that sort of thing. It has also made some grants to State courts. But this is a very, very small step in relation to the problem.

The 50 States have no mechanism, except the recently created National Center for State Courts, to function in meeting what is a problem common to all of them. What they need is more resources—money and central facilities. The new center provides something comparable to the Council of State Governments and the Conference of Governors, but they need funds that the States seem unable to provide.

What we genuinely need is some central or national facility to deal with the needs of the judicial systems on a long-range and comprehensive basis, rather than piecemeal and short term.

EXPERIMENTAL EDUCATION AT HOLY CROSS

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. DRINAN. Mr. Speaker, during the past 18 months several outstanding students at Holy Cross College in Worcester, Mass., have spent a semester working as interns in my congressional offices.

My staff and I have benefited much from the conscientious efforts of these young men, and I am very pleased that another Holy Cross student will be with us this fall.

I insert at this point in the Record an article which appeared in the Holy Cross Quarterly for spring 1972, by the director of the Center of Experimental Studies at Holy Cross, Dr. Phyllis Keller. I congratulate Dr. Keller and her associates on this excellent program.

The article follows:

Experimental Education at Holy Cross

(By Phyllis Keller)

The so-called "crisis of higher education in America" is fundamentally demographic. In the aftermath of World War II American colleges and universities were transformed by the ever broadening base of population that they were called upon to serve. In the first round of democratization, the issue was equality of opportunity to secure a college education. New groups in the population were invited to compete—against a rigid and inflexible set of standards—for the social, intellectual and economic rewards that their talents might earn. From the one extreme of emphasis upon achievement, higher education has moved, in the last decade, to the other extreme of emphasis upon ascription: the issue is now whether a college degree is a constitutional right. In response to powerful pressures, the definitions and standards of academic work have inevitably yielded to the variety of interests and abilities that characterize a vastly expanded population of eligible youth. In 1971 about 45% of the appropriate age group attended institutions of higher learning; projections indicate that the number will reach 70% in 1980.

Two distinguished American scholars (Oscar and Mary Handlin, *Facing Life*, Atlantic-Little Brown, 1971) argue persuasively that American universities have always been the product of a bargain struck between scholars and society: for the scholars, freedom to pursue ideas for their own sake; for society, a set of institutions that will responsibly exercise authority over the intellectual and moral development of the young. Our current crisis is perhaps nothing less or more than an agonizing and uncertain struggle to find the right terms for a new bargain among a fresh and significantly altered set of negotiators.

There can be no mistaking the national problem before us: huge numbers of a heterogeneous population of young people—heterogeneous in values, attitudes and abilities—are going and will continue to go to college and no degree of resolution will make the older academic structures serve them all. The "new movement" in education, like its experimental forebears dating back to the nineteenth century, articulates an urgent social demand that the forms and content of higher education demonstrate utility (i.e., relevance) for the lives of an extraordinarily diverse group of young people.

Catholic schools such as Holy Cross are doubly buffeted by the winds of change, for they must meet the challenge of heterogeneity both in their religious and their academic aspects. In the early 1960's, Holy Cross maintained a relatively inflexible curriculum rooted in the traditions of Jesuit education. Priests presided in dormitory corridors as counsellors and as enforcers of a set of moral standards which the community (however much it may have chafed) endorsed in the deepest recesses of its conscience. In the classroom, men of learning and wisdom taught young American Catholics to appreciate the richness of their cultural heritage. Now, a decade later, the college would be unrecognizable to the men who lived here a short time ago. The youths in the dormitories govern themselves—often badly. In the classrooms students and faculty struggle to find a common language with which to address the task of appreciation and understanding.

Within the last two or three years Holy Cross has moved dramatically—not to abandon or diverge from its essential values and perspectives—but to modify and adapt its heritage to new conditions. Symbolic of these adaptations is the Office of Special Studies which combines a traditional Honors Program (representing commitment to the older academic models of education for the gifted) with the new Center for Experimental Studies, now in its first year and committed to finding alternative models and flexible procedures that will encourage the intellectual growth of all students. Established in the spring of 1971 and funded in part by a gift from that year's senior class, the Center is Holy Cross' newest program and one that provides a good perspective of the problems and possibilities of the college's present situation.

The Center for Experimental Studies has four dimensions. First, it provides opportunities for students to study for a semester or a year at selected institutions in Canada and the United States where some special educational advantage or cultural enrichment can be gained. Exchange arrangements with a small number of schools may permit a Holy Cross student to study in Montreal, Toronto, Vancouver, Los Angeles, Chicago or New York, while a student from a sister institution in one of those cities may come to Holy Cross to take his place.

Second, the Center is authorized to plan and to implement individually designed programs of study, primarily for students with cross-disciplinary interests. Currently, a dozen students have developed "majors" in urban affairs, American studies, theater arts and dramatic literature, and educational psychology.

The third charge of the Center is the development of innovative or experimental courses. Primarily seminar-discussion groups, these "courses" are open to upperclassmen and limited in enrollment to approximately fifteen students. In the fall of 1971, the Center offered a course, "War and the Christian Conscience," which featured weekly visits by outside lecturers skilled in the history, theology or politics of peacemaking from a distinctively Christian perspective. Each speaker addressed an open public meeting and later met privately with students registered in the course. Six faculty members from different departments volunteered to organize a second seminar to examine the ecology crisis from the perspective of various disciplines. A third offering brought a member of the Modern Language Department together with a member of the English department to discuss the novel in eighteenth century France and England. In the spring term, a seminar on legal reasoning taught by a Professor from the Harvard Law School and designed primarily for students planning careers in fields other than the law, attracted a huge number of applicants; a seminar on "The Urban Dilemma," directed by the Dean of Holy Cross, Rev. Joseph Fahey, S.J., invites faculty specialists to work together with advanced students in a problem-centered format.

The fourth, and at the moment the largest, division of the Center for Experimental Studies is that dealing with fieldwork programs. Free of prescribed form or content and providing opportunities for off-campus involvement, the work-study program represents our most broad-gauged innovation. From the outset, it occupied the front stage of the Center because of overwhelming student interest and the great challenge it posed to administrative and faculty resources. Over fifty placements were made during the first term in field agencies dealing with local and regional planning for health, education and economic development; the care of retarded and disturbed children; delinquent youth rehabilitation; national, state and local government; scientific research; civic cultural enrichment.

Work-study projects begin with individual students' interest in field research or work in a particular type of agency. The time allotted to each project varies from the equivalent of one to the equivalent of four courses. Students may initiate their own agency affiliation or select from a substantial list provided by the Center staff. Once the student has chosen his project, he is asked to confer with a faculty sponsor to plan the academic framework of his field experience. The "contract" arrived at by faculty sponsor and student provides for coordinated readings, regular discussion meetings, and the critical evaluation of research papers or other written reports.

Certain obvious benefits of this combination of independent work experience and guided study have clearly emerged from the first semester. The plan is founded upon student interests and in most cases the motivation to succeed at self-chosen tasks has been high. One junior, interested in the problems of community health care, was assigned to work with a Boston physician who was also a Holy Cross alumnus. Under this aegis, the student attended a special seminar for Harvard medical students. His project culminated in an extensive and thoughtful research paper analyzing and evaluating the operations of a health care unit newly placed in a low income community in Boston.

Another student worked as a junior economist for the Boston Economic Development and Industrial Commission. There he undertook a variety of tasks including a study of the feasibility of constructing an urban industrial park on a certain site in Boston, the prospects of generating new jobs for underprivileged workers through granting various tax credits to local enterprises, and other matters pertaining to the industrial development of South Boston. His apprenticeship ended with a full-time job offer—which he turned down in order to go to law school.

A senior planning to make his career in religious education worked with children and parents at Our Lady of the Rosary in Worcester, coordinating the parish's CCD program. Several students, working in congressional offices in Washington or Massachusetts, wrote speeches, articles, position papers; acted as detail men and reporters for their employers; touched and tasted the heady working world of government and politics.

At the end of the term, a number of students reported with satisfaction that "these projects eliminate learning that takes place from the 'neck up' and place much emphasis on involving the whole person." No one who has worked closely with students at the Center will claim that fieldwork always effects a greater acquisition of knowledge than more traditional academic structures. But it *does* for some students, and for all students there are the fringe benefits of an opportunity to explore a greater variety of personal assets, to expand the range of professional role models, to develop special skills and realistic self-images. Still, the great educational rewards of a fieldwork approach come when a student is so captivated by casework or other concrete tasks that academic mastery assumes a new urgency and utility.

The benefits of this program do not accrue to students exclusively. Here, as well as through the interdisciplinary course offerings, faculty members can develop their own interests and direct field research that the demands of full-time teaching does not allow them to do directly. Agency supervisors have been virtually unanimous in applauding the program; many public and private agencies are minimally staffed and wholly caught up in dealing with their everyday concerns. Students bring a valuable outside perspective of the operations of their offices and provide the manpower to follow up on actions and decisions that otherwise might never be evaluated. Public agency personnel, in particular, welcome the opportunity to expose students to the complexities of the working world; to demonstrate the insufficiency of good intentions in dealing with the intractable problems of social organization and the inherent ambiguities of human behavior.

Of course, not all of the students nor all of the projects succeeded. Some students, assigned relatively routine tasks, completed them mechanically and waited to be told what to do next. One or two were charged with solving problems that were over their heads—ironically, these were students who performed very well in the classroom. As with every new program, there were "first try" administrative mistakes in the selection of students and agencies; but these were, fortunately, minimal. There were some serious misconceptions about the significance of the academic component of projects; these have been corrected after a mid-semester period of evaluation, discussion and planning for revisions. Student participation in projects for the second term has increased by 30%, faculty by 17% and agency by 40%.

Where do we go from here? The various programs of the Center have excited considerable interest and enthusiasm on the campus and in the community. Surely more than novelty is responsible, but we cannot tell how much more until we have played out the possibilities of this flexible instrument and evaluated the results over a two year period. What has been demonstrated, at the very least, is that the college can find new ways to stimulate and respond to the interests of a new generation of young people, and to the changing needs of society, by drawing upon its special resources and adapting its unique traditions with care, with caution and with conviction.

In addition to making constant revision of procedures in the light of experience, the staff of the Center for Experimental Studies regularly conducts its own internal planning seminars, in consultation with interested faculty members and students. One new plan is to organize workshop seminars for those students working in seminars for those students working in similar areas. Those employed by various health and education planning agencies may benefit from learning about the operations of offices other than their own. We are beginning to send substantial numbers of students to work in community organizations and want to reinforce this potentially fruitful association by bringing professional agency personnel and community leaders onto the campus.

The possibilities of flexible curriculum planning are almost limitless. There is no reason derived from sacred scripture, for example, why a student must be involved in four separate courses each semester: perhaps he should be involved in two courses, twice as difficult. It is hoped that occasionally an experimental course may prove sufficiently valuable to be subsequently included among the regular departmental offerings. Perhaps some of them may serve as a breeding ground for new programs within departments as participant faculty carry back new interests arising from interdisciplinary exchanges. Some venturesome students (with faculty counsel) have already succeeded in developing model plans of study in fields such as Urban Affairs which might be followed by others. This particular program requires no large injection of new energies or funds, but builds upon existing resources in an imaginative way.

Several of the programs developed by the Center offer opportunities for participation to Holy Cross alumni. Many alumni could provide interesting work opportunities to undergraduates while tapping themselves some of the idealism, energy, intelligence and extraordinary abilities of the younger generation. Sometime in the future we should like to make provision for a few alumni, on leave of absence from their jobs, to come back to Holy Cross and work here with us, studying with our faculty, helping to supervise students in work-study projects, joining in seminars that may benefit from their professional expertise.

It is often a matter of complaint for older men who return to their college that things have changed and they neither understand nor admire the direction of the change. The Center for Experimental Studies is a potential link between the past generations and the present for it offers all parties a special opportunity to take the initiative in joining together in the common and serious enterprises of work and study.

THE LATE SENATOR RALPH TYLER SMITH

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 14, 1972

Mr. McCLORY. Mr. Speaker, the recent passing of my longtime friend and former U.S. Senator, Ralph Tyler Smith, recalls to the minds of many of us the distinguished public service rendered by this son of Illinois.

Mr. Speaker, it was my privilege to serve with our former colleague, Senator Smith, in the Illinois House of Representatives during the entire period from 1954 until 1962 when I was first elected to this body.

As majority leader of the Illinois House of Representatives and as speaker of the Illinois House during the 4 years prior to his appointment to the U.S. Senate, Ralph Smith demonstrated his special talents of responsible public leadership. Following the death of Senator Everett McKinley Dirksen, our Illinois Governor, Richard Ogilvie, named Ralph Smith to the U.S. Senate where he served from September 1969 until January 1971. Although losing his bid for election, Senator Smith demonstrated that he was a tireless campaigner and an articulate spokesman on the great public issues facing the Nation.

Mr. Speaker, in the passing of Senator Smith, I feel the loss of a longtime friend and colleague—and one who gave a full measure of his time, energy, and uncommon talents in behalf of the State of Illinois and of the Nation.

In noting with a sense of personal sorrow his sudden passing, I wish also to convey to his widow, Mary Elizabeth, and his daughter, Sharon Lynne, my respect and deep sympathy.

NEW PROGRAM ANNOUNCED: THE ASME CONGRESSIONAL FELLOW

HON. MIKE McCORMACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. McCORMACK. Mr. Speaker, I am pleased to announce the opening of the Washington, D.C., offices of the American Society of Mechanical Engineers and the Institute of Electrical and Electronic Engineers. This is the beginning of a major communications link between the technical community and the Congress. Mr. Bill Miller of the ASME and Mr. Ralph Clark of the IEEE have assured me that they will cooperate with Congress in obtaining information, reports, and technical witnesses on any subject within their respective fields.

In addition, the ASME is taking what I believe to be an important and encouraging step by advertising in their Journal for applicants for the position of ASME congressional fellow. I cannot think of a better method of encouraging men of science to become involved in the governmental process, while giving the Congress the benefit of their expertise. I would hope that other technical societies will follow their lead.

The advertisement follows:

NEW PROGRAM ANNOUNCED: THE ASME CONGRESSIONAL FELLOW

A program to sponsor ASME Congressional Fellows has recently been authorized by the Executive Committee of the Council. The program calls for ASME to send engineers for a year at the Nation's capitol in Washington and for each to be associated with a congressman or a congressional committee as a resource person. This sponsorship would be shared with the engineer's employer, who would treat the time away from his regular job in the nature of a sabbatical leave. While the prime purpose of the program would be to assist the legislative process by making technical expertise available, both the individual Fellows and their employers would benefit from the experience. In the long run, the program is seen as a step toward better technical input in the setting of public policy.

The program, patterned on the highly successful experience of the American Political Science Association, has developed from a suggestion which came out during a joint meeting of ASME members with congressional leaders last December. It is a direct response to a number of the ASME GOALS, particularly the Overriding Goal: "To move vigorously from what is now a society with essentially technical concerns to a society that, while serving the technical interests of its members ever better, is increasingly professional in its outlook, sensitive to the engineer's responsibility to the public interest, and dedicated to a leadership role in making technology a true servant of man."

The Congressional Fellow would be closely associated with a congressman or committee concerned with legislation on subjects for which an understanding of mechanical engineering is important. He would have available to him the facilities of the office of William P. Miller, ASME's Washington representative, in calling on the resources of the Society.

For the first year ASME will provide up to half of the cost for one man with the understanding that his employer would provide the other half. Facilities of the Congress will make office space and secretarial support available. In taking this action, the Executive Committee of the Council views this one-time cost as seed money, for which reserve funds are available. The action also called for the exploration of other sources for funding in future years.

MEMBERS MAY APPLY

The first step for a member of ASME interested in applying for the followship available in 1973 would be to establish with his employer the basis under which he could be made available. Applications will be held in confidence and should be directed to Dr. Rogers B. Finch, Executive Director and Secretary, ASME, 345 East 47th Street, New York, N.Y. 10017.

Each application should include:

1, A résumé covering education, engineering, experience, and pertinent personal factors.

2. A statement describing the terms of the applicant's leave from his employer. This should state his current salary and the total amount of financial support which the employer would provide.

3. A letter describing the way the applicant views this position and how his experience and abilities qualify him for the post.

Applcations will be received up until Nov. 1, 1972, and should cover a period of one year beginning no earlier than Jan. 1, 1973. nor later than Mar. 1, 1973.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,757 American prisoners of war and their families.

How long?

VICTOR CLARK OF WICHITA, ELECTED PRESIDENT OF NATIONAL RETAIL HARDWARE ASSOCIATION

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. SHRIVER. Mr. Speaker, we in the Kansas Fourth District are especially proud that Victor Clark, of Wichita, has been elected president of the National Retail Hardware Association, the largest retail trade association in the United States. Mr. Clark, a constituent of mine, exemplifies the small businessman in our Nation who has achieved success by providing good service and following a policy of honesty, integrity, and hard work. He has devoted 45 years to his hardware business in Wichita. He will be an effective spokesman for the small businessmen of this Nation and the members of the National Retail Hardware Association. It is a pleasure to congratulate him on this high honor which has been given him.

Bruce Sankey, business writer for the Wichita, Kans., Eagle, recently wrote an interesting feature article concerning Victor Clark which I include under the leave to extend my remarks in the RECORD:

SMALL WICHITA BUSINESSMAN ELECTED HEAD OF 20,000 HARDWARE RETAILERS

(By Bruce Sankey)

For 35 years Victor Clark has operated the same small hardware store at the same location in west Wichita. By some standards he might be considered just another small businessman in a city that has hundreds of them.

But Vic Clark has set himself apart. Yet, at the same time, he typifies the small retailer who is alert and responsive to change in his own field.

Last week Victor Clark achieved the pinnacle in his field when he was elected president of the National Retail Hardware Association (NRHA), the largest retail trade association in the United States.

"It's quite an honor to represent 20,000 hardware retailers," he said after his return from the 73rd annual NRHA Congress at Atlanta, Ga.

Hardwaremen operating independent stores in more than 10,000 cities in the U.S. and Canada are members of the 26 state, regional and Canadian hardware associations comprising the organization Clark now heads.

The Wichitan's election caps a hardware career that spans 45 of his 55 years.

At the age of 10 he began working in his grandfather's hardware store. Ten years later. in 1937, he purchased a bankrupt hardware store at 1718 W. Douglas, assuming $1,500 in debt on a $500 stock.

Over the years that "one-horse store" of 1937 with an inventory of less than 4,000 items has grown to more than 15,000 different pieces of merchandise today.

Not only has the size of the inventory changed but so has its makeup.

"Fifty per cent of the merchandise in a hardware store today wasn't there in 1946," Clark said.

Latex paints, teflon, transistors, epoxy glues—none of them were around 25 years ago, he said.

"Last week I talked with the president of a company that did $80 million worth of business last year. Everything they make was nonexistent 15 years ago. That's an indication how fast we're living today," Clark added.

Just as the merchandise they sell has changed, so has the hardware business itself, Clark continued.

"Many have gone out of business but the hardware business is a long way from being dead. The hardware business is basically a traditional service-type business. No one yet has been able to duplicate good service. The big home centers and discount stores don't have the personnel, knowledge or know-how. The guy nationwide who wants service still goes to a hardware store," Clark maintained.

"The type of competition has changed remarkably too," he went on.

Clark sees the large merchandisers—K-Mart, David's, Wickes Lumber, Star Lumber & Supply, Sears and Montgomery Ward—as competition.

To meet them he concentrates on service, full inventories, effective advertising and sound business practices.

"Still, while things are changing, honesty, integrity and hard work are the best policies," Clark said. "You've got to stay flexible and move with the times."

He is a firm believer in advertising, even for the small businessman.

"The guy who doesn't advertise is helping his competition out," he said. "We can't compete with Wards and Sears in advertising. But we set a budget and live with it. We keep our name before the public."

He splits his advertising 50-50 between the institutional and pricing. The National Retail Hardware Association also advertises in national publications for its members.

His 4,000-square-foot store is well lighted, displays are attractive and shelves are full.

Although Clark's business is small in comparison to some of the large hardware outlets and home centers in operation today, he is in every sense of the word a successful merchandise retailer.

"The key to merchandising is moving merchandise," Clark said. "The day is gone when you can buy something and let it set out and hope that someone will buy it. We can't move merchandise as fast as K-Mart, but we turn it over."

While Clark has preferred to remain a small dealer, he has actively and enthusiastically supported NRHA programs geared toward large-volume stores such as the formation of the Home Center Institute to support superstores dealing in lumber-building materials as well as hardware.

His dedication to the hardware industry is reflected in his election in 1956 to the board of the Western Retail Implement and Hardware Association and to its presidency in 1962. He also has represented the Western Association as a member of the NRHA's board of governors.

During the next year he will make more than 20 trips around the country representing the NRHA, culminating in June with a trip to Cannes, France.

Clark said he got into the hardware business because he wanted to be in a service-type industry.

"It's been good to me," he said. "I've lived within my means, paid my bills and made a comfortable living."

FIFTIETH ANNIVERSARY OF UNICO NATIONAL

HON. ELLA T. GRASSO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mrs. GRASSO. Mr. Speaker, it is a special pleasure for me to join in honoring the 50th anniversary of UNICO National.

On August 19, at the UNICO golden anniversary convention in Miami Beach, Dr. John X. R. Basile of Hartford, Conn., will be installed as national president to guide the beginning of UNICO's second 50 years. Dr. Basile has given years of dedicated service and leadership to the Connecticut chapter and to UNICO national. He initiated the Italian heritage and cultural program, founded the UNICO Foundation Century Club, edited the cultural supplement to the national magazine, and most recently, served as national executive vice president of the organization. Dr. Basile's election as national president is a well-deserved tribute to his untiring work for UNICO. All of us who live in Connecticut are proud that Dr. Basile is the first UNICO national president from New England.

UNICO's work is recognized throughout the Nation. Since Dr. Anthony P. Vastola founded the UNICO clubs in Waterbury, Conn. in 1922, and was honorary president, this admirable organization has consistently fulfilled its noble purpose: to take an active and constructive role in community life, and by so doing to represent the contributions made to America by the spirit and energy of our Italian-American citizens. During the 25 years from the founding of the UNICO clubs until 1947, Dr. Vastola and his associates vigorously promoted their organization. The UNICO clubs united men of Italian heritage to further the interests of the entire community. With success came expansion of the organization in 1947 when the UNICO clubs merged with the National Civic League, a midwestern Italian-American organization well-known for outstanding accomplishments in scholarship awards and youth work. The result was the creation of UNICO national. The years since that merger have brought Unicans national recognition as members of one of the most productive community service organizations in history.

The UNICO motto, "Service Above Self," is a philosophy of life epitomized in the activities by which Unicans throughout the country carry out their worthy objectives. Membership in a UNICO chapter encourages one to become service oriented, requires high ethical standards in one's occupation, and demands an interest in community welfare. UNICO, the Italian word for "unique," symbolizes unity, neighborliness, integrity, charity, and opportunity, the ideals fostered by the organization's dedicated business and professional men. UNICO has perpetuated these ideals through a growing scholarship program which provides an education for hundreds of the best Italian-American students.

UNICO National has demonstrated its deep concern for humanitarian programs and for improving the health and welfare of our communities through such projects as UNICO National Mental Health Research Center. I am especially grateful for strong support of the Unicans for H.R. 15474, the National Cooley's Anemia Control Act, which I sponsored and which has now passed both Houses of Congress. Calling on the country to again assume the lead in health research, Dr. Basile stated on behalf of UNICO:

> We strongly endorse the House of Representatives to take a step forward in the fight for the prevention of Cooley's Anemia.

The concern shown by such civic organizations as UNICO has helped push this vital legislation through both the House and Senate. UNICO's support for this important bill deserves the commendation and appreciation of all who suffer from Cooley's anemia.

Mr. Speaker, UNICO national has demonstrated its deep concern for humanitarian programs through its overseas relief work, and its efforts on behalf of young people, the handicapped and the needy in this country. I extend my best wishes to UNICO national and especially to Dr. Basile, as UNICO celebrates its 50th anniversary. I know this admirable service organization will continue its outstanding contributions to the civic life of America.

WILL THE REAL GEORGE McGOVERN STAND UP?

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. WYMAN. Mr. Speaker, the extent of GEORGE McGOVERN's radicalism is a matter of public record in his bills, his speeches and his writings.

Beyond his commitment to increasing sharply the tax burden on middle-level Americans to give money to those with lesser incomes, and his announced commitment to deeply reduce U.S. defense capabilities, and his support of forced busing of children to achieve racial balance in the schools, are his statements of disaffection and even hatred toward such as J. Edgar Hoover, Senators GOLDWATER and MUNDT, and President Richard M. Nixon.

He has even compared Nixon's effort to render ineffective North Vietnam's invasion of South Vietnam with Hitler's effort to exterminate Jews in Germany.

The real GEORGE McGOVERN is a radical extremist whose policies and program would be a disaster for the United States.

In this connection I commend the reading of William Buckley's column in yesterday's Washington Star-News.

The article follows:

McGOVERN'S DECENCY LIES OUTSIDE HIS RHETORIC

(By William F. Buckley, Jr.)

It has been frequently quoted about George McGovern that he is "the only decent man in the Senate." Now that quote is the late Robert Kennedy's, and it does, I truly believe, an injustice to the Senate. I am sure that there are other decent men there, not even counting the sainted junior senator from New York, successor to Robert Kennedy in the affections of New York's constituents. And it is not the purpose of this essay to suggest that Sen. McGovern is other than a decent man. It is rather the purpose to suggest that that which is decent about him is expressed other than in his political rhetoric.

But I fear that he has another image of himself than that which collectors of his remarks come up with, and before the campaign heats up, he should be reminded of it. Particularly before he sets his course to the deploring of the rhetorical excesses of Spiro Agnew.

Here is Nick Kotz of the Washington Post (May 17, 1972) commenting on Sen. McGovern whom he had just interviewed. "As he talked in his office, McGovern returned repeatedly to the theme that he had tried to calm rather than incite the public to anger. 'I have sought not to appeal to humanity and reason,' he said. 'There's plenty of anger and tension without our leaders adding to it. I think a conciliatory approach is needed . . ."

A conciliatory approach is not going to be tempered on McGovern rhetoric, and the gentleman's habits of harsh and uncharitable overstatement are not purely the accretions of a presidential campaign. Back in 1964 (CONGRESSIONAL RECORD, vol. 110, pt. 16, p. 21690), he was saying about another decent man in the Senate of the United States: "I regard Mr. Goldwater as the most unstable, radical and extremist ever to run for the presidency in either political party."

And about yet another decent colleague—from the same state—Karl Mundt of South Dakota: "I don't know how he (Mundt) felt about me . . . but I know I hated his guts . . . I hated him so much I lost my sense of balance." (Robert Sam Anson, "McGovern: A Biography," p. 93).

And one more time on a colleague: "But (Sen. Henry) Jackson destroyed whatever chance he had of becoming the Democratic nominee by embracing racism in the anti-busing campaign, Sen. McGovern said." (Chris Lydon, N.Y. Times, March 19, 1972).

And after J. Edgar Hoover died, McGovern gave an interview. (Life Magazine, July 7, 1972). "Hoover had lived beyond the normal years, so I couldn't feel the pathos I would for a young man. I could feel nothing but relief that he was no longer a public servant."

On the Indochinese war, it is hard to think of Sen. McGovern as stable. "I think the reelection of Richard Nixon in 1972 would be an open hunting right for this man to give in to all his impulses for a major war against the people of Indochina." (Speech, Catholic University, April 20, 1972). And, "I've said many times that the Nixon bombing policy on Indochina is the most barbaric action that any country has committed since Hitler's effort to exterminate Jews in Germany in the 1930s." (Interview with Gregg Herrington, AP June 29, 1972.) To liken Richard Nixon (and Lyndon Johnson) not only to Hitler but to the worst that Hitler ever did is, well, among other things, perverse.

But that is characteristic when touching on the subject of Vietnam. President Nixon "has descended to a new level of barbarism and foolhardiness for no other reason than to save his own face and to prop up the corrupt regime of Thieu." (AP, April 16, 1972). And speaking of Thieu, he is a "corrupt dictator who jails opponents, a despicable creature who doesn't merit the life of a single American soldier or for that matter a single Vietnamese." (UPI, April 7, 1972.) And "I want to be blunt about it," says Sen. McGovern. "(Nixon's) playing politics with the lives of American soldiers and with American prisoners rotting in their cells in Hanoi. He's putting his own political selfish interests ahead of the welfare of these young Americans and ahead of the taxpayers of this country who are bearing the burden."

I want to be blunt about it. Sen. McGovern's animadversions on his fellow human beings are—indecent.

MICHIGAN SOLDIER RECEIVES BRONZE STAR MEDAL

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. DINGELL. Mr. Speaker, Sp4c. Rex A. Johnson, the son of Mr. and Mrs. George Gross of River Rouge, Mich., was awarded the Bronze Star Medal for his valor while serving in the Republic of Vietnam. This young man is most deserving of this recognition and honor. Therefore, I insert the text of his Bronze Star Medal Award from the Department of the Army at this point in the CONGRESSIONAL RECORD:

(General Orders, Number 555)

AWARD OF THE BRONZE STAR MEDAL

DEPARTMENT OF THE ARMY,
HEADQUARTERS, U.S. ARMY
SUPPORT COMMAND, SAIGON,
APO San Francisco, May 30, 1972.

TC 439. The following award is announced: Johnson, Rex A. [redacted] Specialist Four USA 228th Supply and Services Company (DS).

Awarded: Bronze Star Medal with "V" Device.

Date of Service: 16 April 1972.

Theater: Republic of Vietnam.

Authority: By direction of the President of the United States under the provisions of Executive Order 11046, 24 August 1962, AR 672–5–1 and USARV Supplement 1 to AR 672–5–1.

Reason: For valor, not involved in aerial flight, in connection with military operations against a hostile force in the Republic of Vietnam during the morning of 16 April 1972 and throughout the following day. SP4 Rex A. Johnson distinguished himself by exceptionally valorous performance of his duties during a rocket, mortar and small arms penetration attempt. At the onset of the attack, he was in the crucial sector designated as the most likely avenue of approach. It was at this point that this sector received small arms fire, almost simultaneously with the direct hit on the ammunition dump. Amid the onslaught of a heavy and continuous rain of shrapnel, the "Brighteyes" crew held firm in their position. Power was shortly knocked out and the "Brighteyes" crew put their high intensity light into action and immediately drew small arms fire. Together with the surrounding positions, the small arms fire was suppressed. Emergency lighting was obtained some time later, but only after the supply of flares and ammunition had been reduced to a dangerously low level. Unhesitatingly, the crew immediately volunteered to make a dash through the hail of exploding shrapnel to obtain the necessary resupply of flares and ammunition. Specialist Johnson's professionalism as a soldier and his willingness to face extreme danger, saved the sector from possible penetration. His initiative, zeal, tenacity, sound judgment and devotion to duty have been in the highest traditions of the military service and reflect great credit upon himself, his unit and the United States Army.

For the Commander:

JOHN W. MCCARTHY,
LTC, GS, Acting Chief of Staff.

OFFICIAL:

HOWARD B. SMITH,
2LT, SC, Acting Asst AG.

CITIZEN INTEREST HIGH AS CONSTITUENTS RESPOND TO COUGHLIN QUESTIONNAIRE

HON. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. COUGHLIN. Mr. Speaker, the reresults are now available for my fourth annual poll of citizens of Pennsylvania's 13th Congressional District. I am happy to report the results to my colleagues since the questions and answers are pertinent to many key issues that face the Nation.

I am also sending a copy of the results to President Nixon whose initiatives in both the foreign and domestic fields formed the basis for many of the questions.

In submitting the tabulation to my colleagues, I want to point out that the 13th Congressional District represents a cross-section of population. Represented are heavily urbanized areas, less densely populated suburban sections, and rural communities.

Many constituents, as they do daily throughout the year, took the time to write to me. In keeping with their informed and concerned view of our country, they amplified on the questionnaire and displayed a keen knowledge of the problems that confront us. While perturbed over issues, constituents overwhelmingly adopted a realistic view of difficulties and the means with which we must resolve them.

To get an idea of their overall opinion of the United States, I asked a broad question of the state of the Nation. Seven out of 10 respondents felt we are in a fair state with lots to improve. They indicated in their written comments, the traditional American urge to make things better.

A clear majority wanted our involvement in South Vietnam ended with 57 percent feeling that our commitment has been fulfilled and we should terminate all our military operations at the earliest possible date.

In other important areas, the majority of citizens were not generally satisfied with the way economic and wage-price controls are working, and favored more strict controls in every category. Opinions were diverse on spending of Federal tax dollars in specific fields.

The response was overwhelmingly against busing both for the purpose of racial balance and where boundaries result from official policies. Constituents also favored stronger consumer measures even if cost of goods are higher, supported legislation I sponsored to increase social security benefits by 20 percent—already enacted into law—and approved of national legislation to establish no-fault auto insurance.

These and other questions and answers are included in this insertion in the CONGRESSIONAL RECORD.

The questionnaires were printed—not at Government expense—and sent to all households and boxholders in the district. There were 18,236 individual responses by the July 24, 1972, deadline. Answers were tabulated carefully under statistical procedures to guarantee that errors were at a minimum.

QUESTIONNAIRE RESULT

1. Assuming any alternative must provide for the safe return of our men and release of our prisoners, which best expresses your viewpoint on iVetnam? (one only)

[All figures indicate percent]

Any commitment to South Vietnam has been fulfilled and we should terminate all our military operations at the earliest possible date	57
We have a commitment to South Vietnam and should continue combat operations to support the Saigon government	10
We should employ stronger military means to defeat the North Vietnamese and Viet Cong	17
We should accommodate Hanoi's insistence on a coalition government in South Vietnam if necessary to achieve peace	9
None of above (specify)	7

2. Are you generally satisfied with the way economic and wage price controls are working?

Yes	18
No	73
Undecided	9

If no, would you support more or less strict controls on:

Wages: More, 79; less, 21.
Prices generally: More, 92; less, 8.
Corporate profits: More, 83; less, 17.
Rents: More, 87; less, 13.
Food prices: More, 92; less 8.
Other (specify): More, 93; less, 6.
(Does not total 100 percent).

3. Federal spending involves your tax dollars. Should we spend more, less or the same Federal tax effort as presently on the following:

Education:
More, 49; less, 18; same, 33.
Aid to elderly:
More, 65; less, 5; same, 30.
Environmental protection:
More, 62; less, 10; same, 28.
Defense (other than Vietnam):
More, 13; less, 52; same, 35.
Public transportation:
More, 54; less, 16; same, 30.
Aid to poor:
More, 29; less, 32; same, 39.
Health care:
More, 51; less, 14; same, 35.
Foreign aid:
More, 2; less, 82; same, 16.

4. Which best expresses your feelings about the State of our Nation? (one only)

Good: little to improve	10
Fair: lots to improve	70
Poor: needs complete overhaul	17
Other (specify)	3

5. Court-ordered decisions on busing of school children are affecting many more school districts throughout the country.

A. Do you favor busing of school children to achieve racial balance?

Yes	9
No	85
Undecided	6

B. Do you favor busing to promote integration where Courts have found officially-sanctioned segregation or artificially-contrived school boundaries?

Yes	25
No	67
Undecided	8

6. Do you favor amnesty for those who left the country because of objections to serving in Vietnam? (one only)

Now	13
After alternate service	30
After the fighting stops and alternate service	22
Never	35

7. Do you approve the President's efforts to change the emphasis of our foreign policy from cold war confrontation to new era negotiation with Communist powers?

Yes	86
No	6
Undecided	8

8. If industry and governmental bodies are made to conform to strict anti-pollution standards, would you be willing to pay more taxes to help clean up and protect our environment?

Yes	55
No	33
Undecided	12

9. Would you favor a value-added (national sales) tax as a method to reduce local property taxes?

Yes	29
No	52
Undecided	19

10. Do you favor President Nixon's policy of continuing to supply jet aircraft to Israel for defense?

Yes	54
No	32
Undecided	14

11. Federal Courts have struck down state laws to aid non-public schools. If a Constitutional means could be found to aid non-public schools, would you favor such action?

Yes	49
No	44
Undecided	7

12. Do you feel conditions warrant increasing basic Social Security benefits by 20% as proposed in legislation I have sponsored?

Yes	67
No	24
Undecided	9

13. Do you favor national legislation to establish no-fault automobile insurance?

Yes	70
No	15
Undecided	15

14. Would you approve of stronger consumer protection measures even if they result in higher costs of goods?

Yes	53
No	33
Undecided	14

Party preference of those responding

Republican	64
Democrat	20
Non-partisan	15
Other (specify)	1

Ages of those responding

18 to 21	2
21 to 35	24
35 to 50	30
50 to 65	30
65 and over	14

SPREADING THE BIG LIE

HON. FLOYD SPENCE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. SPENCE. Mr. Speaker, in recent weeks the American people, along with the rest of the world, have been bombarded with wild propaganda concerning the bombing of dikes in North Vietnam. This particular propaganda effort is notable only because so many individuals have been taken in by it. The Communists must sit back and chuckle when even their most outrageous claims are given credence by gullible leaders throughout the world, especially in our own country. No doubt this "dike campaign" has been successful beyond their wildest imagination.

Faced, as we are, with daily harangues about "criminal" and "murderous" acts perpetrated by our country, it is refreshing to run across an article which gives us something to think about from the other side of the coin. I include the article entitled "Spreading the Big Lie" from Aviation Week magazine, August 7, 1972, at this point in the RECORD:

[From Aviation Week magazine, Aug. 7, 1972]

SPREADING THE BIG LIE

(By Robert Hotz)

Fabricating and spreading a big lie to shift the blame for a critical domestic problem to a foreign foe has long been a standard practice of Communist nations. Most Americans have now forgotten the elaborate hoax the Chinese and North Koreans perpetrated during the Korean war to convince their own people and the rest of the world that the U.S. was waging germ warfare in Korea. But members of this magazine's staff who covered that war remember it well. There is still a residue of belief in Asia and Europe that the U.S. really sprinkled virulent bacteria from its aircraft onto North Korea when in fact it did not.

The combination of Oriental sanitation standards and the ravages of war created epidemics of serious proportions of diseases such as typhus, influenza and typhoid in North Korea and the bordering areas of China. To divert their people from the real causes of the epidemics and try to turn world opinion against the U.S., the Communists decided to invent the big lie of germ warfare. It was a cleaverly constructed campaign based on easily provable facts laced together by blatant lies. For example, the Communists said the viruses were spread by infected goose and duck feathers scattered from inside U.S. fighter fuel drop tanks.

The Communists provided traveling exhibits of U.S. bomb casings and duck feathers to which were affixed visible black bugs. Since loose duck feathers are a standard part of Oriental debris and fuel drop tanks were spattered all over Korea, this made a credible pattern. The fact that the diseases running rampant were caused by invisible bacteria and not the cockroach size bugs on display was an irrelevant detail.

The whole fabrication was tied together and given credibility by the false confessions tortured from U.S. Air Force and Marine pilots who were prisoners of war. These false confessions were so elaborately laced with air base locations, commanders names, types of bombs and operational procedures that even seasoned U.S. war correspondents, well steeped in military censorship and evasion, wondered about the truth of these charges. The Communist line on germ warfare was trumpeted to the English language press of the world by the two British Communists, Wilfred Burchett and Alan Winnington who covered the war from North Korea in much the same manner some Americans are now viewing the Vietnam war from Hanoi.

When the Korean war was over and censorship ended, there was not a single shred of valid evidence to support the Communist thesis that the U.S. had conducted germ warfare in Korea. Even the Communists quickly dropped their campaign.

Now in Vietnam they are perpetrating a similar hoax by trying to explain away the massive flooding that will occur in the Red River delta this month with the flat lie that U.S. planes are systematically bombing the dikes and flood control system of that area. In spreading this enormous lie the North Vietnamese Communists are being aided by U.S. and neutral observers who are being deliberately shown part of the facts that lead to a totally erroneous conclusion.

Here is what is really happening. Last August, the Red River delta was hit by massive flooding that caused enormous loss of life and economic damage. Pictures of this massive flooding taken by U.S. reconnaissance planes in August, 1971, when there had been absolutely no bombing in this area for three years, are shown on page 17 of this issue. These floods created severe damage to the dike and flood control system, much of which has not been repaired.

The reason very few repairs were made in the last 12 months was because most of the large labor force that would normally do this work was diverted to building supply roads and depots in the south to prepare for the massive offensive launched by North Vietnam last Easter.

Now the Hanoi government is facing another flood season with a badly damaged system of dikes. The easiest explanation, both for the population that will die and suffer in the ensuing floods and that part of the world that is always ready to believe the worst of the U.S., is that this damage is caused by U.S. bombing attacks. This is another enormous lie. It is true that some U.S. bombs have hit a few dikes where they carry a main rail or highway supply line, are near oil storage depots and protect SAM missile or anti-aircraft batteries. But the masssive damage to the flood control system in the Red River delta was caused a year ago and has been photographed in deail by U.S. reconnaissance planes for the past 11 months.

We think the Nixon Administration is being stupid in not releasing a thorough documentation of this 11-month-old flood damage along with the many pictures that show flak guns and SAM batteries emplaced on these dikes firing at U.S. aircraft.

It took a full-scale briefing with greatly magnified photo-recon pictures to convince both U.S. citizens and foreign diplomats that there really were Russian offensive ballistic missiles in Cuba in the fall of 1962. A similar exercise to expose the big lie of dike bombing in Vietnam would be equally salutary.

The testimony of Western "eyewitnesses" on bomb damage in North Vietnam is no more reliable than were the reports of Burchett and Winnington on germ warfare from North Korea. These current eyewitnesses are expertly led around by Hanoi officials who permit them to see just enough of what has transpired to let them jump to an erroneous conclusion.

Much of the alleged U.S. bomb damage they are shown has in fact been created by Russian built SAM anti-aircraft missiles fired futilely at U.S. planes. The SA-2 carries a 420-lb. high-explosive warhead encased in double metal wrapping. This is roughly the same volume of explosive carried in a standard U.S. 750-lb bomb. When a SAM misses its aerial target, it falls to earth and blows up, making a crater about the same size as a U.S. bomb and showering metal shrapnel over a 600-ft. lethal radius. Over 2,000 SA-2s have been fired in North Vietnam since April. Only a handful have exploded near U.S. planes. The surface damage in the vicinity of Hanoi and Haiphong from these spent SAMs must be enormous. How can a passing "eyewitness" tell the difference in craters or damage between a U.S. bomb and a spent SAM?

There are two salient facts in the current big lies being spread from Hanoi. First, the U.S. is not deliberately or systematically targeting or bombing the Red River delta dike system. The occasional bomb strikes have created only a tiny fraction of the massive damage still left from the 1971 flood season. Second, much of the alleged U.S. bomb damage shown to foreigners in Hanoi and Haiphong is in fact damage created by SA-2 missiles smashing back to earth. It is time the Nixon Administration abandoned its defensive posture and made clear to the American people and the rest of the world the big lies being spread on U.S. bomb damage by Hanoi.

DESTRUCTION OF REAL ESTATE SETTLEMENT REFORM

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mrs. SULLIVAN. Mr. Speaker, every American family which purchases a home is confronted by, and usually horrified by, the closing costs it must pay at the time of settlement. Most of these costs are necessary and legitimate—such things as real estate taxes, some legal fees, title search, title insurance, and so forth. But a pattern has grown up in the real estate industry of inflating the legitimate charges with all kinds of legal extortion—including kickbacks to developers, payments to lawyers who perform no services, fees to lawyers who provide service for the lender but whose fees are paid by the borrower, excessive charges for duplicated title searches, and so on.

In title IX of the housing bill pending before the Committee on Banking and Currency, we are trying to protect the homebuyer from these excessive and unconscionable charges. It is the most controversial title of the bill because it steps on, and regulates, practices which have been built into the real estate industry over many years to increase the incomes of certain firms and individuals to an indefensible degree, at the homebuyer's expense.

The Members of the House have received this week a proposed substitute for title IX which will be offered in committee and, presumably, on the House floor if not agreed to in committee.

As the sponsor of title IX, I want the Members to be forewarned of what this proposed substitute would do in destroying the main purposes of title IX. The proposed substitute is described as, in some way, strengthening consumer protections compared to existing law. That is an oversimplification. Actually, as it relates to FHA-insured or VA-guaranteed loans, the substitute for title IX takes away significant consumer protections.

Mr. Speaker, what this proposal really does is destroy the effectiveness of most of title IX as it now exists.

The substitute would eliminate section 902, the heart of title IX, which authorizes and directs the Secretary of Housing and Urban Development to establish maximum settlement charges for most conventional, as well as all federally insured and guaranteed, residential mortgages.

Moreover, the substitute to be offered would repeal section 701 of the Emergency Home Finance Act of 1970, which empowers the Secretary of Housing and Urban Development to determine whether maximum settlement charges should be established for federally insured and guaranteed mortgages and to set such maximums. In the 2 years since enactment of this legislation HUD has conducted an exhaustive study of settlement transactions in various regions throughout the country. The findings of this study strongly indicate the need for establishment of maximum settlement charges. Accordingly, the Secretary of Housing and Urban Development issued a notice of proposed rulemaking on maximum charges, fees, or discounts for federally insured and guaranteed mortgages and insured home improvement loans in late June. It is expected that the maximum settlement charges promulgated by HUD would become effective some time this fall.

Adoption of the substitute for title IX would prevent HUD from implementing regulations which will save federally insured and guaranteed residential mortgage borrowers 50 to 75 percent of the settlement costs they would otherwise have to pay in some sections of the Nation. A vote for the substitute represents a vote for inflated and unjustified settlement charges.

The substitute would offer a new section 902 which simply directs the Secretary of Housing and Urban Development to determine within 1 year if it is necessary to establish maximum settlement charges and whether such maximum charges can be effectively imposed through State or local regulation which meets federally established minimum standards. This contrasts with the present proposals in title IX which would be enforced by the Federal Housing Administration, the Federal Deposit Insurance Corporation and the Federal Savings and Loan Insurance Corporation, agencies which have the experience and capacity to do so.

The effect of the substitute proposal is to send HUD back over the same ground it has already covered. State and local governments are not effectively regulating real estate settlement transactions and in recent years the Federal Government has assumed major responsibilities in the area of residential housing.

Mr. Speaker, the substitute for title IX is nothing more than a thinly disguised effort to cripple the residential real estate settlement reform proposals now in the housing bill being considered by the Banking and Currency Committee. Any regulation of settlement charges under the substitute proposal would be dead for the foreseeable future. If the substitute is approved this Congress will have utterly failed to respond to the settlement scandals that have bilked homeowners throughout the Nation of millions of dollars. By the same token, the way will have been left clear for continuation of these abusive practices on the part of those mortgage lenders, developers, attorneys, appraisers, title companies and others involved in real estate settlement transactions which have victimized home buyers by excessive charges.

Mr. Speaker, the substitute also cripples other important provisions of title IX.

Section 903 directs the Secretary of Housing and Urban Development to develop a standard form for the statement of settlement charges and section 905 requires residential mortgage lenders to provide home buyers with a statement of these charges at least 10 days prior to settlement, so that borrowers will have an opportunity to examine individual items and take whatever action is necessary to protect their interests.

The substitute amendment provides that the 10 days notification requirement may be waived. There is little doubt in my mind that some, or many, lenders and settlement attorneys will not hesitate to pressure home buyers into waiving the 10-day notification requirement. This will result in the settlement charges not being presented to the buyer until the closing, when there is little opportunity to determine their validity or fairness. In effect the substitute proposal will permit continuation of the present indefensible practice of presenting the home buyer at settlement with a confusing welter of documents and charges which cannot be questioned.

Section 904 of title IX directs the Secretary of Housing and Urban Development to prepare and distribute special booklets designed to help home buyers understand the nature and the cost of settlement. An itemized list indicating the maximum amounts which the homebuyer should reasonably be prepared to pay is required to be included in the booklet. The substitute proposal would eliminate the listing of reasonable maximum charges from the booklet, this preventing the home buyer from having any guideline by which to make a judgment about the fairness of such charges.

Section 912 provides that title companies which are qualified to issue title insurance are authorized to perform all settlement services. The section reflects the recognition that title insurance companies which issue title insurance can provide full settlement services at substantial savings to the home buyer, but in some States are prevented from doing so by laws or regulations which reserve this right to attorneys. One example is the District of Columbia where title companies can and do provide full title services at savings of hundreds of dollars at settlement as compared to the cost of settlement services provided by attorneys in Maryland and Virginia.

In this connection, Mr. Speaker, I am fully aware of the concern voiced by attorneys about the possibility of unqualified employees of title companies performing legal services. To remedy the situation, I intend to offer an amendment to section 912 which requires that title companies employ qualified attorneys to perform legal services in connection with settlement transactions.

Finally, the substitute provides that any legal action to recover damages in connection with violations of title IX provisions must be brought within 1 year from the date of the occurrence of the violation. In essence, this says that the home buyer is out of luck if he fails to determine within a year following the transaction that he has been cheated. A 3-year statute of limitations, at least, should apply to violations of the title.

Mr. Speaker, adoption of the substitute for title IX eliminates the most important provisions of the settlement reform proposals now in the housing bill. It leaves the home buyer of the Nation unprotected against continued victimization in terms of inflated and erroneous settlement charges. It says there is no meaningful response to the residential real estate settlement and housing speculation scandals that have been well documented in the press throughout the Nation for more than a year.

I for one cannot accept this sorry conclusion to all the effort that has gone into the task of trying to protect the home buyers of the Nation from extortionate or fraudulent abuses. Any housing act which does not contain the protections afforded the consumer in title IX as presently written constitutes nothing less than a monumental disservice to the home buyers of the Nation.

THE PLIGHT OF SOVIET JEWS

HON. ALPHONZO BELL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. BELL. Mr. Speaker, in May of this year I submitted to the RECORD the transcript of a recorded conversation between Stuart Lotwin of Los Angeles and Lev Lerner of the Soviet Union.

At this time, I would like to enter another revealing exchange between these two men, which further underlines the difficulties and harassment individuals who desire to emigrate from U.S.S.R. to Israel are experiencing. The text of the conversations follows:

TELEPHONE CONVERSATION, JUNE 11, 1972, BETWEEN LEV LERNER, LENINGRAD, U.S.S.R. AND S. J. LOTWIN, LOS ANGELES, CALIF.

S.L. Hello.

L.L. Hello. Mr. Lotwin, sometime ago two American Senators wrote the Leningrad OVIR with the request to give us the permission for going to Israel. Their names—Jim Bergland and John Brademas—and some days ago we got the negative answer on this application.

S.L. You received a negative answer! What reason did they give?

L.L. They say the same as before—we were refused the permission for going to Israel.

S.L. Did they tell you why?

L.L. No, very difficult to ask why. The reason is as before.

S.L. The reason as before—still 1974?

L.L. Yes, yes.

S.L. Lev,

L. L. And we want to send with you our gratitude to these Senators.

S.L. I see. We and people in the United States Government are trying to get the visa for you.

L.S. Thank you very much.

L.L. Yes.

S.L. Could you do this, Lev?

S.L. Could you politely and formally ask OVIR why they have given the negative answer.

L.L. Yes, I can tell you now. I was told that it was connected with and if I was connected with the secret work in my work last.

S.L. Is that why?

L.L. If I was connected with the secret work.

S.L. Oh, you were connected with the secret work?

L.L. No, I was never connected with the secret work.

S.L. You were not! No, no; I know that. You told me that before, so could you ask them why they have given a negative answer?

L.L. On this application?

S.L. Yes.

L.L. Yes, we shall ask the Leningrad OVIR about this.

S.L. Good! Lev, what we are going to do is . . .

L.L. We shall apply once more.

S.L. Yes, please do; apply again, apply again.

L.L. Yes, and we shall apply everytime after the negative answer too. After one negative answer we shall apply once more.

S.L. Excellent, good! Now, Lev, listen carefully. At about 8:30 at night, your time in Leningrad, on either Monday June 19, June 26, or July 3; or Friday, June 23, June 30 or July 7, I am going to call you again.

L.L. Yes, it would be night?

S.L. Right, your night, not mine. I will call with some important people including Congressman Bell who is trying to help you.

L.L. Thank you very much.

S.L. Congressman Bell and other people in my government, the American Government, are publishing for the other members of the American Government transcripts of our telephone conversations and your letters to me. They are doing everything they can within our government to have OVIR say yes soon. So they are trying to help you.

L.L. Yes, thank you very much. This is our hope.

S.L. Yes, and that is their hope as well.

L.L. Yes, thank you very much.

S.L. Now, Lev, we were unable to call you on the telephone on May 22 through May 30. Were you home or were you called in the Army?

L.L. No, I was not called to Army.

S.L. No.

L.L. Yes, because I have the medical.

S.L. I see. Were you home with your family at that time?

L.L. Yes, I was at home with my family.

S.L. I see; well we could not get through to talk to you. We were trying but we could not get through.

L.L. Yes, I can say that only one day—the day when Nixon was in Leningrad—I was arrested.

S.L. You were arrested on the day he was in Leningrad, but for one day only.

L.L. Yes, this was for seven hours. This was during the visit of Mr. Nixon.

S.L. I see, I understand. I will forward that to people who are interested in that because we tried to call you for over a week and were told there was no answer on your telephone.

L.L. This isn't the truth because in the evening I am at home.

S.L. Yes, I thought so. I am glad that you are well and that you are safe; that was my primary concern about you. Are you working?

L.L. Yes, I am working.

S.L. Good. No change in your job.

L.L. My new job?

S.L. Your new job?

L.L. Yes, I got the new job after I was forced to dismiss from my last job.

S.L. What kind of work is your new job?

L.L. I am an engineer, not in my profession.

S.L. Not in your profession.

L.L. No, not in my profession.

S.L. I see, what type of work now?

L.L. Now I am an engineer of textile machinery.

S.L. What about Zina, is she working?

L.L. Yes, she is working too, but the situation on her work is very, very hard.

S.L. Is she going to be dismissed?

L.L. No, no. She is on (unintelligible).

S.L. She's on what work? What kind of work?

L.L. She is an engineer of communications.

S.L. And she is still working in communications?

L.L. Yes, in the field of communications.

S.L. How is your family; your mother and father? Are they well?

L.L. No, they have not been very well, but they wait for permission for going to Israel. The waiting for them is very hard.

S.L. Yes. I know. Your mother-in-law Zina's mother, how is she?

L.L. She is at home too, and she waits for permission too.

S.L. And she's well?

L.L. Yes, she is O.K.

S.L. Good. I understand that Zina has relatives in Cleveland, Ohio. Is that true?

L.L. Yes, this is true.

S.L. Good. What is their name?

L.L. Of relatives?

S.L. Yes.

L.L. His name is Abraham Wachter. I give to you the address.

S.L. I can get it here. Don't bother, I will get it here.

L.L. Yes, yes. Abraham Wachter is the brother of my mother-in-law, and Jerry Wachter is his son.

S.L. O.K. I will get in touch with him. Who were you talking to in Israel?

L.L. One hour ago we were talking with Israel.

S.L. Yes, with whom? Were these former Soviet's or friends in Israel?

L.L. With whom we were talking?

S.L. Yes.

L.L. Yes, now we were talking to this Mrs. Kominsky. She is the wife of Kominsky who now is in prison.

S.L. I see. I know the name. How is she, is she O.K.?

L.L. She is O.K., but she wants to be with husband.

S.L. The other thing is we received your letter and the pictures.

L.L. And my pictures?

S.L. You have a very handsome family.

L.L. We are three in this picture? Taken with my wife?

S.L. Yes, that's the picture and then I got another picture, just of you.

L.L. Yes, from my friend?

S.L. Yes, from your friend. Did you receive a letter from me?

L.L. I received from you only one letter.

S.L. Well, I wrote a second letter. I am going to mail to you copies of what is called in the United States the Congressional Record. This is where the Senators and Congressmen have been publishing our telephone conversations. So, I will mail you a copy so you can read the conversations.

L.L. Yes, thank you very much. And, a copy of your second letter?

S.L. Good. I am glad you are working, you will apply again for a visas, and you will ask for the reason for not letting you go now.

L.L. Yes, thank you I shall ask.

S.L. O.K., we will speak to you again, soon.

L.L. Yes.

S.L. In the meantime, you take care of yourself, keep your strength and courage going——

L.L. Yes.

S.L. And, with the help of all the people who are concerned with you, I am sure we are going to meet in Israel soon.

L.L. Yes, thank you.

S.L. So please give our best to your wife, to your daughter and to your family.

L.L. Yes, thank you. And send our best greetings to your family and to our friends, too.

S.L. Absolutely. I will speak to you soon. Please write to me again, will you?

L.L. Yes, yes, of course.

S.L. Good. Alright.

L.L. Yes.

S.L. Shalom and goodbye.

L.L. Goodbye, Shalom.

RESOLUTIONS ADOPTED BY THE NATIONAL FEDERATION OF SETTLEMENTS AND NEIGHBORHOOD CENTERS

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. RANGEL. Mr. Speaker, the National Federation of Settlements and Neighborhood Centers adopted a series of resolutions at its annual meeting in May.

These resolutions deal with such critical issues as education, health, child care, housing, and economic development, and I am pleased to share them with my colleagues at this time.

The resolutions follow:

ANNUAL MEETING ADOPTS RESOLUTIONS ON MAJOR ISSUES

The Annual Meeting of the National Federation of Settlements and Neighborhood Centers, which met in Chicago on May 26, during the 47th Biennial Conference, adopted the following important resolutions.

SOCIAL POLICY PLATFORM

The National Federation of Settlements and Neighborhood Centers (NFS) reaffirms and readopts the Social Policy Platform adopted by its Annual Meeting, May 30, 1970 in Cincinnati, Ohio. In addition, it singles out the following areas of high priority concerns for immediate attention and action by NFS and its affiliates.

HOUSING

The Congress of the United States, in the Housing Act of 1949, stated that our national objective was to provide "housing which is decent, safe and sanitary for all Americans at prices and rents they can afford to pay." This promise is far from realization. Large areas of our inner cities are being virtually abandoned because of abuse or seriously flawed federal housing programs, a decline in public safety and public services, and because of racial and economic polarization.

NFS calls upon Congress and the President of the United States to declare a state of emergency and enact such new laws or amend existing laws as is necessary to prevent exploitation by speculators, prevent further abandonment and provide an adequate supply of new and renewed housing, available and accessible to those excluded from the total housing market.

NFS, to achieve the foregoing goals, will convene a national convocation, "To Save our Cities." It will bring together representatives of the poor, racial minorities and national organizations to call further attention to this national crisis in housing and to find new, appropriate approaches to the solution of this critical problem.

ECONOMIC DEVELOPMENT

NFS is committed to healthy, over-all economic development but is particularly concerned about the need for economic development in inner city ghettos and barrios. NFS endorses policies and programs, public and private, which are essential to assure high levels of employment and production, the raising of living standards and the improvement of conditions of work.

NFS endorses public works programs which are beneficial to the community and the economy as a whole. It calls on government—federal, state and local—to provide opportunities for public service employment. It also endorses programs of training, supportive services and placement in the private sector, and wages adequate to meet the soaring cost of living.

NFS sees a need for redress of major past inequities through the development of minority-owned businesses, industries and services, and calls for appropriate federal legislation and private measures to make such economic development feasible. Such programs should include low-cost loans, availability of bonding, training in management and production skills and compensatory practices in the issuance of grants, contracts and work orders.

ASSURED INCOME

NFS calls for an adequate program of assured annual income. It opposes Title IV of the Social Security Amendments of 1971 (HR 1) as approved by the House of Representatives, as completely inadequate with respect to income guarantees and punitive in its work provisions. NFS similarly, opposes the General Employment (Long) measure as reported to the Senate by the Senate Finance Committee since it does not provide an assured income and is punitive and regressive.

NFS calls for the adoption by Congress of more equitable measures which assure adequate annual income based on the Bureau of Labor Statistics' findings. It asks that Congress adopt such related measures as tax reform, improved Social Security benefits, increased minimum wages and the inclusion under their coverage of new categories of workers including household employees and farm workers.

EDUCATION

NFS believes that overcrowded schools, poor teaching, inadequate facilities and discrimination are a detriment not only to the resultant under-educated individual but also to society as a whole. We urge efforts to ensure that every person has equal and full opportunity to realize his ultimate potential for intellectual growth, including the provision of programs designed to overcome the limiting handicaps imposed by social, racial and economic discrimination.

We call for federal programs and fiscal grants to eliminate the inequities and the wide range of differences in the funding of education, state-by-state, and within the political subdivisions of the state. We ask that funding be based on educational need, fiscal capacity and equalization of opportunity for all on a non-segregated basis.

We view busing of children as one device for helping to achieve this end and are opposed to legislation which would prevent its continuance. We believe, along with the U.S. Commission on Civil Rights that, "What has divided the nation on school busing is not so much sharp disagreement on the merits but confusion as to what the issues really are. The complex matters of overcoming in a few years the inequities of the long past through the medium of desegregated schools has been reduced to the question of whether one is for busing."

NFS continues its support for achieving desegregation and the elimination of inferior schools through the use not only of busing but also such additional techniques as redrawing school attendance lines, pairing schools and establishing central schools and school parks.

HEALTH INSURANCE

NFS calls for the enactment of a federal health measure which (1) recognizes health care as a right of every citizen and (2) provides one excellent quality of health care for all regardless of differences in age, income, racial origin, etc.

NFS further calls for the provision of a high quality of preventive health services and medical services available at the neighborhood level to all individuals and families and with full participation by consumers in all policymaking settings.

NFS believes that this quality of health care cannot be made universally available through enactment of the Nixon Administration's Health Care Bill. It would provide two qualities of program—one for employed persons under private health insurance policies and another for the unemployed and the poor, similar to Medicaid, with the regulation of the private insurers left to the states.

NFS calls for the elimination from the environment of elements dangerous to health such as the use of lead in the household paints.

NFS calls for effective federal programs directed at eliminating hunger and malnutrition and racially-related diseases such as Sickle Cell Anemia.

DRUG USE

NFS urges the immediate elimination of the penalty for the possession and use of marijuana by an individual, but endorses penalties for the amassing and sale of it.

NFS calls for effective education in the dangers of drug abuse, including not only heroin and other hard drugs but also barbiturates, amphetamines, and similar drugs, and will endorse legislation which: (1) provides effective preventive and treatment programs for drug addicts and, (2) seeks to stop the flow of illegal, addictive drugs from overseas through negotiation. Where this fails to halt the flow, NFS urges the cessation of foreign aid to such country and the cut-off of all foreign trade with it.

Further, NFS calls for intensive local programs directed at stopping the corruption of law enforcement personnel by the pushers of illegal drugs and their criminal organizations.

LEGISLATIVE COMMUNICATION

In 1962, Congress extended to business the ability to conduct legislative efforts with tax-deductible funds, so that legislators could benefit from businessmen's knowledge in considering legislation. This reasoning applies with equal force to voluntary agencies supported by tax-deductible gifts.

NFS, therefore, calls upon the Congress of the United States to amend the Internal Revenue Code of 1954 so as to permit voluntarily funded organizations such as NFS and its affiliates to engage in communications with legislative bodies and committees and members thereof, and with their members or contributors with respect to legislation or proposed legislation of direct interest to the organization.

CHILD CARE AND DEVELOPMENT

NFS urges enactment of a comprehensive child care bill which incorporates the following: funding at the highest feasible level, with continuation of existing Headstart programs, local prime sponsorship of programs, parent participation in policy-making and operation of programs, multiple services to families, and delivery of services by the Department of Health, Education and Welfare.

NFS urges that adequate, licensed child care facilities for pre-school and after-school programs be made available for all children of working mothers or single parents and funded by the federal government.

Further, that no mother be required to accept child care by untrained or uncertified persons or organizations, either in child care centers, family homes or in their own homes; that federal funds be provided for appropriate training of any persons authorized to undertake child care, and that the open-ended provisions of the 1967 amendments to the Social Security Act which enable child care to be provided on the basis of 75% federal and 25% local funds for child care for the children of former, current, or potential recipients of public assistance be retained.

REORDERING PRIORITIES

NFS proposes, in order to help achieve these goals, a complete and continual reordering of national priorities, the reduction of defense expenditures and the re-allocation of such monies for domestic programs aimed at the elimination of poverty and racism.

NFS supports all efforts to replace war as an instrument of international relations by negotiation, mediation, and conciliation. To this end, we urge a cessation of hostilities in Indochina and the strengthening of the ability of the United Nations to settle disputes and maintain peace.

THE WHITE HOUSE FELLOWS PROGRAM AND NATIONAL LEADERSHIP

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. FRASER. Mr. Speaker, it is time we take a closer look at the leadership programs which are managed by the Federal Government and for which Congress appropriates funds. My office has been looking into the participation of women and minority groups in a number of programs conducted by the Federal Government: Smithsonian Institution fellows, Woodrow Wilson Center for International Scholars, National Foundation for the Arts, National Foundation for the Humanities, Atomic Energy Commission Fellowships.

Today I would like to focus some attention on the White House Fellows program. One of the most alarming aspects of this program is the steady increase over the past 3 years of the number of military participants. Since we fund the War College, and a number of other higher level training institutions for the military, it is difficult to justify their intrusion into what was intended to be a totally civilian endeavor. When the White House fellows program was created in 1964—Executive Order No. 11183—it specified that only "non-Federal" applicants were eligible. This effectively excluded any members of the armed services and the Federal Government. In the past 3 years members of the active Armed Forces have composed over 25 percent of each class. The original Executive order was not amended until this year, February 16, 1972.

In a program that purports to trace back to the spirit of leadership and national pride of Franklin, Jefferson, and Washington—the intensity of military participation is somewhat questionable. In addition I question the real contribution to the leadership of the Nation by the reinforcement of the idea that there is a military input to all our national problems.

I am inserting into the Record a chart of the participants of the past 3 years in hopes of raising a discussion of whether or not this is the kind of program we want to continue to support with taxpayers funds. Clearly the Nixon administration has given a very different emphasis to the nature of the participants and the goals of the program.

Women's groups are rightly criticizing the program on the basis of the negligible number of women in the program and the apparent lack of perception of women in leadership positions.

Finally, there is some question as to whether or not the program is fulfilling its stated goal—that of sending young people back to their local States and communities with an increased commitment to making Government work at the local level. We badly need leadership at the State and community level but the White House Fellows have by and large remained in Washington lining up better jobs for themselves. Mike Causey in the Federal Register column in the Washington Post reports his discussions with numbers of high Government officials and their reactions to the White House Fellows program.

The material follows:

WHITE HOUSE FELLOWS DRAWS PROTEST

(By Mike Causey)

In this day of semantic sensitivity, nobody quarrels with the sexist title of the elite White House Fellows program. When they say fellows, in this case, they mean associates.

Launched during the Johnson administration, the WHF system was and is aimed at injecting bright, young (under 35) people into the government for one-year tours.

The idea was to give the WHF—future leaders in industry, education and the military—a sample of how the federal machine works from the top. As a bit of fallout, it is hoped the fellows return to their chosen careers with a sympathetic attitude toward the bureaucracy and help convince young people that Uncle Sam really wants their input.

Critics of the program, however, say it has two basic faults. First, that only 10 of the 119 fellows have been women, and secondly, that it has proved so rewarding that many of the fellows don't want to go home.

A battle-scarred bureaucrat, who has seen every WHF "class" since 1964, says, "It's a lot like that old song 'How You Going To Keep Them Down On The Farm After They've Seen Paree.'" A lot of the fellows, he estimated 20 per cent, get incurable cases of Potomac Fever and remain in government, defeating the cross-fertilization aspects of the program.

A group called Women's Equity Action League (WEAL) says the program is male-dominated, and that the recent trend of including more midcareer military officers in WHF classes makes it even tougher for women to make the grade.

The White House announced yesterday the 17 fellows (one a woman) for the 1972–73 year that begins in September. They are:

Douglas C. Bauer, 34, Pittsburgh; Air Force Maj. Robert H. Baxter, Las Vegas; James E. Bostic, Asheville, N.C.; Joseph P. Carroll, 29, Paris, France; AF Maj. John C. Fryer, 31; James H. Gross, 30, Columbus, Ohio; Stephen G. McConahey, 28, Alexandria; William E. McGlashan, 30, Los Altos, Calif.; John B. Mumford, 32, Orlando; Luis G. Nogales, 28, Stanford; Maj. Lee R. Nunn, Jr., Air Force Academy; Lt. Col. Colin L. Powell, 35, Woodbridge; Ann S. Ramsey, 29, New Seabury, Mass.; David W. Schrempf, 30, Oberlin, Ohio; AF Maj. Donald J. Stukel, 34, Fairborn, Ohio; George B. Weathersby, 27, Berkeley, and John B. Yasinksy, 32, Pittsburgh.

The Women's Equity Action League has already challenged more than 300 universities and colleges, claiming they discriminate against women in faculty assignments and pay in violation of federal equal-rights rules for contractors.

Now, WEAL is protesting the White House Fellows program, saying that women candidates have been subjected to "discrimatory" questioning about their marital and family status; that almost no women are on selection boards and that only one married woman has been appointed a WHF.

WEAL President Arvonne Fraser, in a letter to President Nixon, said 50 per cent of the future selectees should be women. A total of 68 candidates were approved by regional boards this year, six of them women.

Federal agencies who take WHF for the one-year terms (usually about 15 are selected) have other complaints about the program. They range from jealousy of older staff members at the salaries and red carpet treatment given the WHF, to the fact that many of them don't want to live up to the "gentleman's agreement" and leave government at the end of a year.

Salaries for WHF are negotiated by the agencies, based on what the candidate was getting in his or her job in industry. Some, however, do manage to bargain for more, with Grade 15—a salary of $25,583 to $33,260—the ceiling.

"A couple of years back, we got a candidate who was about 28 years old and said he was making nearly $30,000 with a food chain on the West Coast," a federal official said. "We checked and found out he was, so we paid him that," even though it was much higher than most senior career officials made at the time.

Some Cabinet members have been reluctant to take on WHF assigned to them, either because they want "their own men" in the sensitive posts or because they don't trust "short-timers" who are likely to write books about what happens "or pull a Wally Hickel." The famous Hickel letter to the President, which resulted in his being fired as Secretary of the Interior, was inspired, if not drafted, by a young staff member.

"I think the program has been a success, except in its primary aim of getting the WHF to go back to their jobs," one top career man said. "They get the social rush from embassies here, parties and what not, and they enjoy the power or association with power that comes from working directly with a Cabinet officer. They get Potomac Fever pretty fast, and a lot of them spend most of their tour here trying to line up a comparable job in government."

One former Cabinet officer refused to take a WHF last year. He gave as his reason the fact that he would be leaving government soon and didn't want his successor to be saddled with someone he might not like. In private, however the Cabinet man said the WHF-types "got under his skin, were always underfoot," and he thought, spent too much time trying to build a constituency with young people in the agency, and not enough doing routine work. His successor, however, did pick a WHF who now serves as an executive assistant.

WHITE HOUSE FELLOWS PROGRAM—1969-73

Year	Military	University	Business	Minorities	Other
1969-70 total 18	From 1964 to 1970—No military participants.	7 (Professors, consultants etc., 2 Black, 1 assistant to president of Johns Hopkins). 7	2 (Black). 1 (Richard Ramsden). 1 General Foods. 1 IBM. 5	1 Woman (lawyer). 1 Woman (Puerto Rican). 1 Indian. 3	2 Lawyers (Harvard). 1 Journalist. 3
1970-71 total 17.	1 Captain, Air Force. 1 Lieutenant commander, Navy. 1 Captain, Air Force. 1 Lieutenant colonel, Army. 1 Lieutenant colonel, Army. 5	1 (Dean scl. of business administration, University of Texas). 1 (Assistant to president, University of Hawaii). 2	1 MBA (McKinsey). 1 3M of Minnesota. 1 Burlington Industry. 1 Westinghouse (Bettis Atom. MELISSA BELOTE, SPRINGFIELD, VA., SETS WORLD SWIMMING RECORD AT OLYMPIC TRIALS IN CHICAGO

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 17, 1972

Mr. HARRY F. BYRD, Jr. Mr. President, Miss Melissa Belote of Springfield, Va., this month set a world swimming record at the Olympic trials in Chicago.

I am sure that all Virginians share pride in the accomplishments of this young woman, who is a sophomore at Robert E. Lee High School. On the day when she broke the record for the 200-meter backstroke, she won both a preliminary and a final race in this event. At the age of 15, she obviously is one of the Nation's outstanding swimmers.

The Washington Post of August 6 contains an article describing Miss Belote's victory and her reactions after the races.

I ask unanimous consent that the article, entitled "Record-Setting Miss Belote Double Winner in Trials," be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RECORD-SETTING MISS BELOTE DOUBLE WINNER IN TRIALS

(By George Solomon)

CHICAGO, August 5.—Melissa Belote grew up tonight. The 15-year-old wondergirl forgot her lucky toy fish back at the motel and still won the 200-meter backstroke before 5,000 people in the Olympic trials at the Portage Park pool.

Earlier in the day Miss Belote, a sophomore at Robert E. Lee High School in Springfield, Va., set a world record in the 200, whipping through the water in 2:20.64 in a preliminary heat.

The previous world record was 2:21.5, held by Susie Atwood of Lakewood Calif.

Tonight Miss Belote's time was 2:21.771, more than a second slower than her brilliant effort this afternoon but still far enough to leave the bewildered Miss Atwood in her wake. Miss Atwood was clocked in 2:24.359, finishing a distant second.

"Coach Solotar (Ed) told me not to worry about the record tonight," Miss Belote said afterward. "I didn't think my stroke was as smooth tonight. I didn't have enough left to bring it back."

Miss Belote, who had enough confidence to pack her suitcase for a week of training with the Olympic team in Knoxville, Tenn., is the only woman to have won two events at the trials so far. The meet ends Sunday.

Misses Belote and Atwood previously finished one-two in the 100-meter backstroke.

While Miss Belote headed back to the motel with a second bouquet of roses under her arm, Mark Spitz climbed the victory stand for the fourth time in as many nights, the most dominant figure in world swimming.

Spitz, a handsome 22-year old and one of the few swimmers sporting a mustache, captured the 100-meter freestyle in 51.919. Earlier in the day he established his fifth world record of the meet, churning the 100 in 51.47 in a preliminary heat.

"I hope I can keep this up at Munich," said Spitz, who four years ago in Mexico City was favored to win four individual gold medals but wound up being shut out.

"I know I'm the best in the world tonight," Spitz said. "But it won't matter unless I win at Munich. Four years ago I had done well prior to Mexico City. Then I folded. I'm trying to see that I don't fold again."

Spitz finished ahead of Jerry Heidenreich of Dallas, John Murphy of Hinsdale, Ill., and Dave Edgar of Fort Lauderdale, Fla., all of whom made the team.

Frank Heckl, an outstanding swimmer at Southern California and prime contender to make the team, was again blanked, finishing a disappointing eighth in a field of eight.

There was no world records tonight, though Miss Belote, Spitz, Mitch Ivey (200 backstroke, 2.04.827), Brian Job (200 breaststroke), 2:23.36) and John Hencken (200 breaststroke, 2:22.79) bettered the world standards in preliminary heats.

SOUTH CAROLINA VOLUNTEER READING PROGRAM

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 17, 1972

Mr. THURMOND. Mr. President, as we deal daily in this Chamber with the increasing challenges of modern society, I remind Senators that 21 million of our fellow Americans are functionally illiterate in this Nation.

They cannot read, Mr. President. They cannot participate in the democratic process. They cannot understand a job application, make out a driver's license application, or fill in a loan form at a bank.

These stark facts are revealed in a Louis R. Harris survey conducted for the National Reading Center of Washington, D.C.

I am pleased to report that the citizens of South Carolina are aware of this problem, and are taking volunteer action to help the children of our state to get a firm foundation in reading ability.

Recently, in the city of Columbia, 100 South Carolina volunteers attended a reading tutor-trainer workshop, sponsored by our State department of education and conducted by the National Reading Center at no cost to the volunteers.

Other sponsors included: South Carolina Education Association, League of Women Voters of South Carolina, Midlands Community Action Agency, and the South Carolina Congress of Parents and Teachers.

The 100 volunteer trainers and coordinators came from 28 of our School districts, and among them were representatives from the University of South Carolina, Columbia College, and Winthrop

College. Other counties will be sharing the training received by the 100 participants who attended the state-level workshop.

These volunteer trainers have now returned to their home communities. They are recruiting and training many more volunteers to go into their neighborhood primary schools and tutor children in learning to read.

Mr. President, there are 8 million youngsters in our Nation's elementary schools who need special help in reading instruction.

These children need individual attention. There is not enough money, there are not enough teachers, and the teachers do not have the time to provide such individual help.

Only through the dedicated volunteer efforts of citizens, who work under direction of the classroom teacher, can our national reading problem be solved.

I am proud that my fellow—citizens of South Carolina are responding to the needs of children in our state.

Particularly, I commend our State department of education and the National Reading Center for bringing this national tutor-training program to South Carolina, as one of the first 20 States in the Union to lead in this volunteer effort to help America's children become good readers.

Mr. President, I ask unanimous consent that the article from the Columbia Record newspaper entitled "S.C. Volunteer Tutor Program Opens To Aid School Pupils," be printed in the Extensions of Remarks of the CONGRESSIONAL RECORD at the conclusion of my comments.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

S.C. VOLUNTEER TUTOR PROGRAM OPENS TO AID SCHOOL PUPILS

South Carolina's part in a nationwide effort to improve the reading of elementary pupils by using volunteer tutors will be inaugurated today in Columbia.

Representatives of service organizations and the 93 school districts of the state were invited to the conference in the auditorium of the J. Marion Sims Building of the State Board of Health.

The tutoring program is a project of the National Reading Center, Washington, D. C. Its goal is to train 200,000 volunteer reading tutors in the nation to help children in grades one through three improve their reading ability.

Reading deficiencies are a main cause of failure in early grades, according to Mrs. Mary L. Beach, reading consultant for the South Carolina Department of Education. She is coordinating the South Carolina Volunteer Reading Program.

The program is sponsored by the State Department of Education, South Carolina Education Association, League of Women Voters of South Carolina, Midlands Community Action Agency, and South Carolina Congress of Parents and Teachers.

During the conference participants heard an explanation of the national Right to Read program established in 1970, and information concerning the South Carolina Volunteer Reading Program.

South Carolina is one of 21 states holding tutor-trainer workshops this spring. Following a two-day workshop June 5-6, tutor-trainers return to their communities to train locally recruited volunteers who will receive 16-20 hours of instruction, including six to eight hours of practical experience working with children.

Reading tutors will work in grades one, two and three under supervision of the regular classroom teacher.

Educators estimate that about 43 per cent of elementary school children are in urgent need of help in reading, and that 15-20 per cent cannot keep up with their classmates without special reading assistance.

THE DIKES OF NORTH VIETNAM

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 17, 1972

Mr. SCOTT. Mr. President, with all the charges and countercharges that have arisen over the dikes of North Vietnam, I am pleased to see an article that moves toward laying the blame for this furor squarely where it belongs—on the North Vietnamese.

I ask unanimous consent that an article, entitled "Behind the Furor Over Bombs on Red River Dikes," published in U.S. News & World Report of August 14, be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From U.S. News & World Report, Aug. 14, 1972]

BEHIND THE FUROR OVER BOMBS ON RED RIVER DIKES

The approach of a potentially devastating flood season in North Vietnam means that the furor over U.S. bombing of Communist dikes is likely to reach new heights in days ahead.

Hanoi is pulling out all stops in a determined propaganda campaign to convince the world that American warplanes are deliberately destroying North Vietnam's dikes and threatening hundreds of thousands of persons with drowning or starvation.

The U.S.—with President Nixon leading the way—is denying just as strenuously that there is any calculated plan to wreck North Vietnam's elaborate system of flood control.

Said the President in a White House news conference on July 27: "If it were the policy of the United States to bomb the dikes, we could take them out—the significant part of them out—in a week."

Next day, the State Department, in an unusual move, released a report on aerial-reconnaissance photos of North Vietnam that showed only a dozen bomb craters on dikes. Even the largest crater, it said, could be repaired in a day with "a crew of less than 50 men with wheelbarrows and hand tools." Highlights of the State Department report are on page 20.

The truth is, American officials contend, that Hanoi—looking ahead to heavy rains in August and September—is seeking to cover up its own failure to repair dikes badly damaged in last summer's destructive floods.

Says one ranking military observer: "Rather than divert the men necessary to make the repairs, Hanoi apparently decided to let the floods come and to blame the U.S.—in advance—for any disaster that might occur."

DELTA'S HISTORY

For a full understanding of the exchange of charges and countercharges between Hanoi and Washington, a detailed picture of North Vietnam's dike system is necessary.

North Vietnam is a country of dikes. A network of between 2,700 and 3,000 miles of them protects the nation from the ever-dangerous Red River and insures the country's food supply by regulating the flow of water to the rice fields.

Dikes play a vital role in the Red River Delta, an ancient rice-producing center. Great quantities of water are channeled by the dikes and spread on the paddies through a system of sluices. Rice seedlings then are planted by hand. When the rice matures, the sluices are opened to drain the fields. The water is channeled back to the river, and the grain is harvested.

Since centuries before Christ, the North Vietnamese have been at battle with the Red River. Every year, the river rises to flood proportions in August and September, threatening the surrounding countryside where the great majority of the people live and work.

Every year new dikes are added and damaged dikes are repaired in a never-ending process that over the centuries has resulted in a system so complex that no single dike is responsible for holding back flood waters.

Primary dikes—up to 50 feet high, 150 feet thick at the base and 80 feet wide at the top, channel the Red River through Hanoi and the Delta to the ocean. Other primary dikes on the coast prevent salt water from damaging valuable riceland.

Secondary dikes up to 50 feet thick back up the primary system, so that no one break will overwhelm flood defenses. The smallest dikes—the tertiary system—distribute water to individual fields.

DEFENSELESS?

At first glance, North Vietnam's system appears to be defenseless against air attack. And if actually breached in flood stage, the dikes would unleash billions of gallons of water on Hanoi and the surrounding countryside, flooding up to 6,000 square miles.

However, U.S. experts liken the Red River Delta to a warship in which watertight compartments virtually insure against destruction by a hit from a single torpedo.

Despite President Nixon's assertion that major dikes could be destroyed in a week, some military strategists figure that all U.S. fighter-bombers in Southeast Asia would have to fly daily strikes for up to two months to effectively knock out the system.

Lang Chi Dam and a half dozen smaller dams upstream from Hanoi could be destroyed in a day with guided "smart bombs," they say. But it would take repeated hits with 2,000-pound guided bombs to uproot the massive dikes themselves, 15 feet at a time.

Such an operation, U.S. commanders warn, would expose American pilots repeatedly to withering enemy fire, and would divert them from more productive military targets.

"It's just not worth it," explains one general.

ASSIGNED TARGETS

U.S. officials concede that some dikes are being hit during attacks on military targets either on or near the dikes. North Vietnam is so riddled with dikes that it is impossible to do otherwise, they say, even though pilots are told to bomb only assigned targets and to do as little collateral damage as possible.

According to one military man:

"Dikes are an integral part of the country. To put an absolute quarantine on hitting dikes is like telling your kids to stay off the sand at the beach."

Aerial photographs confirm that the tops of dikes are used by the Communists for anti-aircraft guns and missile emplacements, pumping stations for oil pipelines, and storage areas for surface-to-air missiles. Many dikes also are topped by roads which are used by trucks and other military traffic—natural targets for U.S. bombers.

GUIDED TOURS

Western visitors to North Vietnam routinely are taken on guided tours of damaged dikes, and journalists in Hanoi report what appears to them to be deliberate U.S. bombing of the system.

Yet American analysts insist that most of the damage to North Vietnam's dikes has been caused by last year's floods, which were among the most severe in the country's history.

American experts report that four major breaches in primary dikes along the Red River flooded an estimated 1.1 million acres of riceland. Much of the primary and secondary systems were silted or undermined, and great stretches of the tertiary were broken.

Radio Hanoi, although it gave no casualty figures, said at the time that the disaster surpassed even the flood and famine of 1945, which killed huge numbers of people.

The North Vietnamese recognize the problem—at home, if not in their international propaganda. Mayor Tran Duy Hung of Hanoi wrote in the publication "New Hanoi" on June 30:

"In some places the repair of the dike portions that were damaged by torrential rains in 1971 has not yet met technical requirements. A number of thin and weakened dikes which are probably full of termite colonies and holes have not yet been detected for repair."

Despite the obvious dangers, the Hanoi leadership has not diverted the 300,000 or more men, women and children needed to repair the damage. Instead, the labor force has been kept at tasks essential to the North Vietnamese invasion of South Vietnam.

U.S. flood-control authorities say this means that even the normal August-September rise in the Red River will cause some overflow in the Delta region. A heavy rainfall could bring severe floods and widespread damage to Hanoi.

THE STAGE IS SET

Most American officials are convinced that the U.S. will be blamed for any flooding. Says one Defense Department expert:

"The stage is set. When the floods come, there is nothing we can do to counter the propaganda that we are responsible."

Another military man explains Hanoi's campaign this way:

"The North Vietnamese have lived in the shadow of dikes all their lives. They see bombs cratering a dike, and they know what could happen if there were a concentrated campaign against the dikes. So they are doing some 'preventive propaganda.' They are hollering as loud as they can now in an effort to forestall such a bombing campaign in the future—even before the U.S. thinks seriously about it."

HEADS I WIN, TAILS YOU LOSE

Some military commanders worry that the Nixon Administration, in an effort to counter North Vietnam's propaganda, will so restrict the U.S. bombing campaign that it would be made useless or needlessly endanger the lives of American pilots. Says one officer:

"Hanoi can blame the U.S. for any break in the dike system. At the same time, the enemy would profit from any change in American bombing strategy. It's a kind of 'heads I win, tails you lose' proposition."

NO MAJOR DIKE HAS BEEN BREACHED

(The U.S. State Department on July 28 issued a formal statement refuting charges of intentional bombings of dikes in North Vietnam. From the official text:)

In recent weeks Hanoi has tried to convince the world that its elaborate dike system is a direct and deliberate target of U.S. attacks.

This is not ture. Photographic evidence shows conclusively that there has been no intentional bombing of the dikes. A few dikes have been hit by stray bombs directed at military-associated targets nearby. The damage is minor and no major dike has been breached. The damage can be easily repaired—in a matter of a few days—and has not been sufficient to cause any flooding. No damage has been observed in the Hanoi area or against the primary dike system protecting that city.

Hanoi no doubt is genuinely concerned about the dike system. North Vietnam's rainy season will soon reach its peak, and damage in the dikes caused by last year's very extensive flooding has not yet been fully repaired. . . .

Dikes are particularly resistant to bomb damage. Those in the primary system could be breached only by a series of overlapping craters across the entire top of a dike, and the lips of the craters would have to be sufficiently lower than the river surface to initiate the flow and subsequent scouring action of water rushing through the breach. . . .

North Vietnam's official press agencies and radio service have repeatedly described alleged U.S. bombing attacks on the dike system. In April and May, the North Vietnamese made more than 40 specific allegations, and on 30 June the official press quoted the Deputy Minister of Hydraulics as saying that 20 bombing attacks had been made on dikes during that month. Foreign diplomats, newsmen, and, most recently, actress Jane Fonda have ben escorted to dikes to view damage—most of it around Haiduong, southeast of Hanoi.

A detailed examination has been made of photography of mid-July of the North Vietnamese Red River Delta and bomb craters were detected at 12 locations. None of the damage has been in the Hanoi area, where destruction of the dikes would result in the greatest damage to North Vietnam's economy and logistics effort. Nearly all the damage has been scattered downstream from Hanoi, as well as downstream from the areas of major breaks resulting from the 1971 floods. . . .

All identified points of dike damage are located within close range of specific targets of military value. Of the 12 locations where damage has occurred, 10 are close to identified individual targets such as petroleum-storage facilities, and the other two are adjacent to road and river-transport lines. Because a large number of North Vietnamese dikes serve as bases for roadways, the maze they create throughout the delta makes it almost inevitable that air attacks directed against transportation targets cause scattered damage to dikes.

The bomb craters verified by photography can be repaired easily with a minimum of local labor and equipment. . . .

Repairs to all the dikes could be completed within a week, as the necessary equipment is available throughout the delta.

Local labor historically mobilizes to strengthen and repair dikes to avoid serious flooding. An occasional bomb falling on a dike does not add significantly to the burden of annual repair work normally required. North Vietnam must, however, complete the repair of damage caused by the 1971 floods before next month when this year's rainy season will reach its peak.

ACHIEVEMENTS OF THE BARTER THEATRE, ABINGDON, VA.

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 17, 1972

Mr. HARRY F. BYRD, JR. Mr. President, the Washington Evening Star and the News of August 12 contains an excellent editorial about the achievements of the Barter Theatre in Abingdon, Va., and its founder and former director, Robert H. Porterfield, who died last October.

A product of the Great Depression, the theater was established to provide work for unemployed actors and actresses. But it survived the depression era and earned an enviable reputation for excellence for production through the years. Today the people of Abingdon are launching a Robert H. Porterfield Memorial Fund to maintain the quality of the offerings at the Barter Theatre.

I ask unanimous consent that the editorial, entitled "Small-Town Drama," be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SMALL-TOWN DRAMA

Very few travelers have been more surprised in years past than those who drifted unawares into Abingdon, Virginia, at day's end and found that Shakespeare was playing on Main Street. Or that, instead of a wild-west movie, the local theater was offering a stage play straight off Broadway. That improbable small-town playhouse would have been the Barter Theatre, founded by Robert H. Porterfield during the Great Depression as a haven for out-of-work actors. They literally bartered their talents, collecting hams, and other farm produce in return for Hamlet, and thereby avoiding the soup lines.

Somehow, to the surprise of many, the theater caught hold there in the sparsely populated hills. When times got better, a good many people were willing to pay cash at the box office, and youths in that area developed a zest for drama seldom found in rural places. Even the General Assembly got captivated by the experiment, providing some modest state subsidies to keep the theater from folding. (Hence its somewhat grandiose designation as "The State Theatre of Virginia.") But in recent years the Barter has been a success in its own right, drawing people from all over the country to its performances, growing in fame as the only one of its kind.

There was apprehension, however, when Porterfield died last October. His strong, warm personality had been the guiding force since the curtain first went up 40 years ago, and it was hard to imagine the Barter without him. But his successors pledged that what he started would be carried on, and thus far this season the promise has been admirably kept. Good plays and bright talent are booked through the summer and the crowds these evenings are encouraging. Special children's plays now are presented in a separate building, and young people are given a chance to develop as actors. And apart from its regular productions, Barter is acquainting 15,000 Virginia school children with Shakespeare and the modern stage classics.

All this is remarkable, if not amazing, in a little town, and of course it's getting more costly all along. To keep up the momentum, Abingdon people are starting a $500,000 Robert Porterfield Memorial Fund as a three-year project. They're seeking contributions, and we hope they succeed.

TRIBUTE TO CAPT. JOSEPH L. RUZICKA, JR.

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 17, 1972

Mr. THURMOND. Mr. President, the tragic death of Capt. Joseph L. Ruzicka, Jr., 26, of North Augusta, S.C., was felt very strongly by the many people who loved and admired this young Air Force officer.

This young man's talents and accomplishments marked him as outstanding. Joe's ability for leadership and his enthusiasm for involvement are evidenced by the diverse activities in which he participated.

During high school, Joe was voted the senior with the most school spirit and was a merit scholarship semifinalist. He reported the news for the high school to the local newspaper, and he also found time to be active in school sports, as well as presiding as president of the Beta Club.

From high school, Joe entered Clemson University at Clemson, S.C., and joined the U.S. Air Force.

Many friends have mourned the passing of this outstanding and versatile young man, and our deepest sympathies are extended to his family in this time of sorrow.

Mr. President, several articles have paid tribute to Captain Ruzicka, and I ask unanimous consent that the articles which appeared in the August 10 issue of the North Augusta Star, North Augusta, S.C., be included in the Extensions of Remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

JOSEPH L. RUZICKA, JR.

Captain Joseph L. Ruzicka, 26, a North Augusta favorite son, lost his life when the B–52 in which he was navigator crashed in a thunderstorm on a bombing mission in Indochina. Based in Thailand, Ruzicka had just reported to Thailand July 21 after being on Guam.

The son of Mrs. Lucie Ruzicka and the late Joseph L. Ruzicka, Sr., his sister, Susan, now resides in Charlotte and his grandmother, Mrs. Helen Cook, is a North Augustan. His wife, Calista, and 5½ month old daughter, Jennifer, are California residents.

Described in his North Augusta High School yearbook as animated, enthusiastic and dynamic, Joe was voted as the senior with the most school spirit in 1963. His accomplishments in high school ran the gamut from Merit Scholarship Semi-Finalist to a member of the track and tennis teams; from president of Beta Club to master of ceremonies at the Junior-Senior; from photographer to class historian.

Community interests were also paramount in his life. He wrote the school news for the Star for two years, he was the acolyte at St. Bartholomew's Church when the church was built, he was prominent in scouting, he was as his classmates described him, "an unorganized organizer."

Joe's leadership and scholastic ability extended into all phases of college life at Clemson University where his musical aptitude found him a place in the Tiger Band as well as the Air Force ROTC. He entered the service following his graduation in 1967.

A keen wit, a brilliant, inquisitive mind, an affectionate and loyal friend—many hearts are saddened by Joe's tragic death.

A memorial service was held last week at Beale Air Force Base, California for the five casualties of this accident. Interment will be in California.

A memorial service will be held locally at St. Bartholomew's Episcopal Church, the time and date to be announced. A memorial fund has been established at this church for any who wish to honor Capt. Ruzicka's memory.

SIDE GLANCES WITH SAM

Several years ago, Mim and I had a party one Christmas night for several of our younger friends. Of course, at the time, we were much younger ourselves, so the difference in age didn't appear as great as it might to some now.

Over the years, we have continued the practice. Mainly, I think, due to the fact that on that particular night many of the differences of age and social status tend to be negated by the spirit of the season. Also, we discovered that since Christmas EVE parties are more popular, attendance seems greater on Christmas night.

One of the rules is that once you were invited, the invitation lasted forever. That rule hasn't changed. One rule that we found necessary of revision, however, was that no one could come who had accrued more age than the host and hostess. When one of our younger friends married outside of that classification, we simply revised the rule to conform to the times . . . , something like the Supreme Court changes things every now and then.

I began thinking about this at this particularly un-Christmas time of year when I heard of the death of Captain Joe Ruzicka last week at some distant outpost of civilization.

My recollection of Joe, Jr., as we knew him then, dates back to one of those long time ago Christmas parties. I remember sitting in the den, everyone in stocking feet, consuming vast amounts of good things. Reb, at the time still a pup, embarked on the project of removing my socks by chewing the ends and pulling. The task seemed monumental as I guess indeed it was. But for the better part of two hours, this simple undertaking was the major source of entertainment.

I remember Joe in this particular instance since he took over cheerleading duties for the dog, pleading and cajoling with him to succeed in the vast undertaking. Joe always had a weak spot for the underdog.

And then, when the time came for high school graduation, Joe was to be one of the student speakers. Always a rebel of sorts, we talked at length on the wisdom of preparing two speeches, one to be approved by school authorities and given in rehearsal; the other to be the "real thing" which would be sprung on everyone when he stood up to speak. Fortunately, perhaps, this latter project was rejected, a concession to the establishment.

Joe never did forget those Christmas night parties. With the onset of the exposure to a college education, his appearances became later and later. He was responsible for the emergence of the 'second shift' at the parties—the late arrivals who wouldn't even appear until around 2 AM. (We found out later that he would drive past earlier in the evening just to keep a watch on when the crowd would start to thin.) And then, with others of this newly-nighted breed, the conversations would become deeper and deeper as the hour became earlier and earlier. But these early morning conversations would always leave me feeling a little bit better about the future of the human race.

Last week's events in far off Asia, however, tend to raise a question about that future.

Maybe this year's 'second shift' will have some of the answers. And Joe's absence may make some of the problems clearer.

ORDER OF AHEPA CELEBRATES ITS GOLDEN ANNIVERSARY

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. VANDER JAGT. Mr. Speaker, I would like to take this opportunity to congratulate the Order of Ahepa which is celebrating its golden anniversary this year.

The organization can be justly proud of past and present achievements. The Order of Ahepa is a leader in the educational field, it has helped in giving the national minorities of our country new self-respect, and the organization has helped victims of disasters in both foreign and domestic lands.

Through these and innumerable other achievements, the Order of Ahepa represents the highest ideals of American life.

COSTLY AND CONTROVERSIAL F–111 IS FULLY ACCEPTED BY AIR FORCE

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. BOB WILSON of California. Mr. Speaker, much has been written and spoken—some good, some bad—about the F–111 aircraft. Those of us who continued to support the F–111 program in the face of controversy and criticisms feel that our efforts have not been in vain. Air Force pilots who have lived with the development of this plane feel it is one of the best aircraft in the U.S. inventory. This is further substantiated in a New York Times report by a very credible writer, Drew Middleton, whose article I insert in the RECORD for our colleagues to read.

The article follows:

COSTLY AND CONTROVERSIAL F–111 IS FULLY ACCEPTED BY AIR FORCE

(By Drew Middleton)

WASHINGTON.—"Any time there's anything wrong with an F–111 it's all over the newspapers," said Lieut. Col. Robert Morrison, "but believe me, I've put in plenty of hours on it and the F–111 can do more things, things the Air Force needs, than any other aircraft—and it's stable and safe, too."

Born in controversy and reared in criticism, the F–111 has been plagued by the "bugs" common to all aircraft that embody technological breakthroughs. But the F–111 and the fighter bomber version, the FB–111, are fully accepted by the Air Force.

Col. Louis Gagnon, who has been with the aircraft from the start, and Colonel Morrison said that it had "one of the better records" among combat aircraft after 150,000 hours operational flying.

The Air Force lists 30 major accidents for F–111's between January, 1967, and June 18 of this year. The accidents include the loss of three aircraft in Southeast Asia. The two-man crews of two of the latter are listed as missing in action. The other 27 accidents have claimed the lives of 19 crewmen.

MODULE SAVED CREWS

The official accident summary notes eight instances in which the lives of crews were saved by the F–111's unusual crew module. This is a self-supporting unit allowing the crew to eject from the aircraft at any moment.

An exploding wire severs the module from the fuselage and a single large rocket motor propels the module clear of the aircraft before the parachutes open.

Political doubts about the plane's capacity and its high cost—about $10-million a copy—have magnified every accident in the public mind, Air Force officers argue.

They point out that criticism of the plane flourished during its first 80,000 hours even though the F–111's record of 21 accidents in that period compared favorably with 39 for the F–4 and 33 for the F–106 in the same time frame.

WARTIME MISSION

Experienced F–111 pilots here and with the Third Air Force in Britain called the plane the best aircraft for nighttime and bad weather strikes deep inside enemy territory. In wartime, the F–111 would be assigned to interdict enemy airfields. This was the decisive mission of the Israeli Air Force in the Six Day War of 1967.

F–111 pilots believe that, if the Israelis had F–111's at that time, they would have completed their mission at night with less aircraft and greater destruction of the Egyptian Air Force.

The aircraft's advanced design enables it to perform at least three roles—tactical fighter, tactical reconnaissance and strategic bomber.

The advent of new Soviet fighters has prompted discussion of the F–111's chances with the Soviet MIG–23 or Foxbat. Intelligence sources say the MIG–23 has a ceiling of 90,000 feet and a speed of Mach 2 plus, with a 4,000-pound payload.

EFFECTIVE ALTITUDE

Aerial combat is unlikely in upper altitudes. Most such fighting takes place around 20,000 feet. There, American pilots argue, the F–111 is superior. Air Force experience in Vietnam is that the MIG–21J, the basic Soviet interceptor, was not effective against F–105's at that and lower altitudes and note that the F–111 is much faster at low altitudes than the F–105.

The MIG–23 has what airmen call a "look down, shoot down" capability, enabling it to fire missiles on fighters belows. The Air Force contends that the tail radar in the F–111 will give sufficient warning of such attacks.

The ultimate answer is that the F–111 is built to operate at night, at low altitudes and in bad weather. These are conditions that do not favor the MIG–23, according to intelligence officers. Aerial combat is not the F–111's job, they add. Its job is "destroying the other fellow's planes and bases on the ground."

TWO MAJOR ADVANCES

The F–111 incorporates two major advances in military aviation.

One is its swing or variable sweep wing. The F–111, with wings extended, takes off in less than 3,000 feet. In flight, the wing can be folded back to a delta wing configuration for high speed.

The aircraft's most remarkable attribute is its capacity to fly automatically at low level under the "eyes" of enemy radar.

It is this capacity to penetrate radar defenses that is believed to be behind the Soviet delegation's suggestion at the recent talks on the limitation of strategic arms that the F–111's be included in the discussion. It was the only aircraft mentioned by the Russians during the talks.

The F–111's Terrain-Following Radar, or TFR, can be set to fly the plane at a selected low level.

TRF guides the plane over the contours of the earth, swooping into valley and clearing mountains at a fixed altitude day or night, regardless of weather. Should any of the TFR circuits fail, the system puts the plane automatically into a climb to a higher altitude.

EVADES ENEMY RADAR

The F–111 has a speed of Mach-1 plus at sea level. Moving at that speed "on the deck," no eye, human or radar, can pick it up in time for effective action. During a short operational tour in Vietnam, the F–111 was engaged by enemy fire on only 42 per cent of its missions.

At high altitude the F–111 has a speed of Mach 2 to 2.5 times the speed of sound. (At sea level and at 32 degrees Fahrenheit, sound travels at a speed of 1,088 feet a second.)

Along with its other attributes, the F–111, a two-man aircraft, is a comfortable "fly."

"Moving from the ordinary fighter to the F–111 is like moving from a Jeep to a Cadillac," said Maj. Cornelius Kelly.

However, the aircraft has been controversial from its birth.

Early in the Kennedy Administration, Secretary of Defense Robert S. McNamara began thinking about a multimission aircraft. He wanted a plane that could do a variety of jobs at greater cost effectiveness rather than single-mission planes.

UNPOPULAR CONCEPT

This was not a popular concept with the Air Force and the Navy. But, under pressure, they agreed and listed their individual requirements.

The Air Force wanted a long-range fighter bomber capable of flying at high speeds and low altitudes, carrying conventional or nuclear bombs. The Navy asked for a carrier-borne interceptor of medium range for fleet defense.

In January, 1968, six years after the Defense Department awarded the F–111 contract to the General Dynamics Corporation, the British, who had agreed to purchase 40 F–111's, pulled out of the program. In July, 1968, the Navy followed suit.

The effect was to increase public doubts about the plane's effectiveness.

Since then the British, in cooperation with the West Germans and Italians, have embarked on the MRCA, or Multiple Role Combat Aircraft, program to build a fighter with many of the F–111's characteristics.

RESULTS IN VIETNAM

The aircraft's history in Vietnam was not happy. A six-plane force flew 55 combat missions and then, Colonel Morrison said, "ran out of missions." It began to fly early in March, 1968, and at the end of that month the Johnson Administration stopped its bombing of North Vietnam.

Officers say the F–111 did its job. The results, as estimated from reconnaissance photographs, showed that the plane could hit its targets at night and in bad weather as effectively as other fighter bombers could do in daylight.

The F–111's cost has been another source of criticism.

The fighter version's "flyaway cost," that is, airframe and two Pratt and Whitney TF–30–P–3 turbofan engines, is about $9.5-million for the fighter and just under $10-million for the fighter bomber. When support and spares are added, the prices rise to $11.8-million and $13.9-million.

$8.8-BILLION PROGRAM

The total program cost is estimated at $6.6-billion for the fighters and $1.2-billion for the bombers. There are two wings of bombers in the United States, one at Plattsburg Air Force Base in New York and the other at Pease Air Force Base in New Hampshire. One wing of fighters, 72 aircraft, is deployed at Upper Heyford in England.

Air Force officers are generally convinced that the F–111 is worth the money in either version. This is not only because it can do things no other aircraft can do, they argue, but because it incorporates technology—the variable wing, TFR, the crew module, the main strut landing gear—that represent the future in combat aircraft.

"There is no comparable aircraft," Colonel Gagnon said.

COMMON CAUSE

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. HUNGATE. Mr. Speaker, I would like to bring to my colleagues attention the conclusion of three parts of an article on Common Cause.

The article follows:

COMMON CAUSE

Gardner's lobby helped in the fight to change the Congressional seniority system, but as Richard Conlon, staff director of the House's Democratic Study Group, correctly recalled, "There was all kind of press to change the seniority system all year long—long before Common Cause got involved. They were not the prime movers. I think [the modest reform rules] would have gone through anyway, whether or not Common Cause had helped."

Common Cause lobbied against appropriations for the continued development of the supersonic transport (SST), and Senator William Proxmire, the ringleader of the opposition, has publicly given polite thanks. But staff members in Proxmire's office, to keep the credit in balance, point out that the critical vote to kill the SST occurred in December of 1970, at which time Common Cause wasn't even lobbying the issue. Gardner's crowd did recruit help for the vote in March 1971, which delivered the *coup de grâce* to the SST, but the momentum to that end had been building for a year—thanks to the lobbying drive of 15 public-interest organizations, coordinated at the end by Friends of the Earth. They, along with Proxmire, were the real heroes.

Unquestionably Common Cause was the most vigorous peace lobby in Washington throughout 1971, and although it failed (the vote was 254 to 158) to pass an amendment in the House to cut off funds for the Vietnam war by the end of the year, Gardner's lobbyists did win a number of unlikely converts among the ethnic hawks and established a more tangible antiwar mood than had ever before been created in the House.

Common Cause lawyers have been busy. In California they sued the state and forced it to let unmarried students vote where they were attending school rather than being required to vote at the home of their parents—a victory that helped one fifth of the nation's 18-to-21-year-old voters. And in the District of Columbia, Gardner's lawyers embarrassed both national parties by suing them to obey the campaign money laws.

A full and accurate appraisal of Common Cause's work to date, however, is impossible to make. For one thing, the lobby's bookkeeping is helter-skelter. It is a bit ironic. Gardner's standard theme is that "the two great weapons against the public interest are money and secrecy." He is constantly denouncing special interests for not telling the whole story about their lobbying activities. Yet the lobbying reports Common Cause files with the clerk of the House of Representatives, as required by law, leave much untold.

These reports show that Common Cause received $4,217,668.22 in dues and gifts in 1971 and spent $847,856.29. Does this mean the lobby came through the year with a surplus of more than $3,000,000? No, it only means this was all Common Cause spent to actually lobby on *Federal* legislation. Like all its public accounting, Common Cause's record of specific lobbying expenditures is spotty. Guessing from other known Common Cause executive salaries, David Cohen, the lobby's national field director—the fellow who pulls together any letter-writing campaign from the membership—must be earning at least $24,000, but the lobbying report shows that for the last three months of 1971 he was paid a total of only $1246 for his efforts to influence legislation at the Federal level.

A number of other key salaries either are also reported only in part or are ignored altogether. Common Cause president Conway's $45,000 salary is not listed. No salary is listed for Gardner and his aides say he doesn't receive one, surviving instead on income from lecturing and from stock-market profits. Andrew J. Glass, a reporter for the *National Journal,* reminded Gardner that his refusal to disclose the specific sources of his income "appeared inconsistent with his stand against financial secrecy in lobbying operations and exposed him to conflict-of-interest suspicions"; but Gardner still refused to open up.

Efforts to put together an accurate picture of the financial outlay through direct inquiries at Common Cause headquarters are equally frustrating. The young woman who—by her and her boss's estimate—researched all and wrote 90 percent of a leaflet on delegate selection to national party conventions told me that the editorial cost had been "less than $3000." But other officials at Common Cause, insisting that the cost of secretaries and proofreaders and rewrite editors should also be counted, put the cost at $15,000. The state director of another project testified before a Congressional committee that "the total cost to us in making this effort may be estimated to have been between $10,000 and $15,000." But higher officials at national headquarters told me that the director was wrong and that the actual cost was in the neighborhood of $75,000.

If there's confusion about how the citizens' lobby spends its money, there's even more confusion about where the lobby is going and what it hopes to achieve next—confusion that was generated at the end of 1971 when, just as it seemed Gardner and his top honchos had settled on a plan of operation, there was, without warning, an upheaval and a regrouping. Some of the more successful operations were killed and a few of the C.C. executives with the best reputations were let go. The Capitol Hill lobbying staff was cut in half. Even though they'd just begun to learn how to concentrate pressure at the Federal level, suddenly there was the announcement that "from now on we intend to put more emphasis on state issues and state legislatures." A Common Cause lawyer had been cooking up a suit to force Nixon to roll back milk prices on the grounds that the G.O.P. had been bought off by the milk lobby—just the sort of lawsuit it seemed Gardner should have loved—but at the critical moment the lawyer was cut from the payroll. (So Ralph Nader stepped in and hired him, filed the lawsuit and reaped front-page publicity in *The New York Times, The Washington Post* and papers all around the country—publicity from which Common Cause could have dearly profited.)

Why the nervous reorganization? It was widely believed around town that Gardner had panicked. If there is any one thing that has been his specialty in the world of real people, it has been raising money—and suddenly, alramingly, it seemed that he was losing his touch. Common Cause had launched itself, as one of Nader's aides put it, "on nothing but a good idea and John Gardner's good name." As 1971 slumped to an end, it seemed that these were still its main, or only, assets in the public's mind. The organization's activist role in Washington had been admirable but not impressive. And the public seemed to be losing interest.

The return on the lobby's direct-mail recruiting had fallen from a high of two and a half percent—far better than the average return for direct-mail solicitation—to one percent, which is barely acceptable. For a comparison, Nader's direct-mail solicitation has sometimes had as high as a three-and-a-half-percent return and has never had less than two and a half percent.) In the fall of 1970, full-page ads in *The New York Times* had a fantastic response, pulling more than 7000 members into Common Cause. But a $10,000 full-page ad in the *Times* in November 1971 brought in only 300 members. Gardner and his advisors decided the ad route was washed out.

This is not to suggest that Common Cause is dying or that its executives feel defeated. Conway predicts the outfit will continue to grow at the rate of 15 percent a year. But it is to suggest that by spending about $1,500,000 a year in membership drives—over one third its income—the C. C. hierarchy is forced to be too concerned with what that money returns. Thus, if Federal lobbying seems to lose its sales appeal, pump more into the state level and see if that catches on better.

This is a danger Common Cause leaders seem to realize. They say they will spend much less to recruit in 1972. The experiences of 1971 had a dampening effect on some workers. At the first meeting of the Illinois state steering committee after Gardner's decision to change C. C.'s focus, one who was there recalls, "The feeling was that the Washington offices were so screwed up that no one quite knew how to approach the whole thing, that it was a mistake to switch the focus to local and state issues, since we already have the IVI [Independent Voters of Illinois], BGA [Better Government Association], etc., for that type of lobbying, and that Common Cause ought to be a national—that is, Federal Government—lobby. There was also the feeling that Common Cause was concentrating so much on membership drives and fund raising that it might possibly become simply a self-perpetuating organization, losing sight of its original goals."

Whether or not the refocusing on the states was wise, it was understandable, in a way. Aside from a couple of lawsuits, Common Cause had only one socko trophy to point to at the end of 1971: the Colorado Project. This project was so well conceived and executed—on so little money—that it was normal for Gardner to hold it in awe and to dream of duplicating it elsewhere, even if the effort ripped apart the original concept of Common Cause.

The pillars of the Colorado Project/Common Cause are a couple of exciting public-interest adventurers named David Mixner and Craig S. Barnes. Mixner, who grew up in the Seven Mountains area of Appalachia in a coal-mining family "that had been ripped off for years by the Rockefellers," as he put it, dropped out of college to join the peace movement, drifted West and in 1970 went to work trying to elect Barnes to Congress.

Barnes' background is posher. Son of a Denver civil engineer, he graduated from Stanford University in 1958 and from its law school in 1962. He joined a large Denver law firm. Part of his duties included lobbying for industry's position on pollution matters. But, says, he, "I decided I didn't want to do that for the rest of my life," and his rebellion quickly evolved to the point that he became the lawyer in a celebrated Denver school-integration case. Having cut the ties in this way, he took the next step by running as a peace candidate against the 20-year incumbent, Congressman Byron Rogers. Barnes defeated Rogers by 30 votes in the primary, but lost in the general election for two reasons: He was considered too pro-integration and he made a public statement, which he never withdrew, that he would go to jail rather than serve in Vietnam.

Thus free to do better things than serve in Congress, Barnes and Mixner looked around to see what they could do for Colorado. "We started out to discover why the average Coloradan feels that his government is corrupt," says Barnes. "Here's a progressive state with progressive leadership on both sides of the aisle, good men in the legislature, a legislature that has sporadically kicked up progressive legislation on abortion law and a children's code and things like that. Nevertheless, the typical citizen in the state thanks that all politics is corrupt, that the government somehow doesn't reflect his interest and that he's tuned out. We felt if we could find out what was wrong and what to do about it in a microcosm like Colorado, then we'd know the answer to the whole national malaise."

When the Public Service Company of Colorado—the biggest utility (gas and electricity) in the state—asked for an annual $11,300,000 rate increase, Barnes and Mixner decided that this was the test case they had been waiting for. First they pulled together data showing P.S.C.'s paralyzing hold on the state: interlocking officials in half of Denver's biggest banks, on 28 Colorado government commissions, in 19 chambers of commerce, 19 civic organizations (such as Red Cross), 32 business and professional organizations, six country clubs and eight universities and colleges.

"We sent out fact sheets to thousands of Common Cause members," says Barnes, "to tell them what was at stake here: the country clubs we were financing through our electric bills, the political movies we were financing through our electric bills, the inflationary salary increases we were financing; the failure of the company to do anything about pollution control at the same time it spent nearly $3,000,000 a year on advertising for a monopoly it didn't need to advertise. We sent all that information out to the public, and wow, they weren't apathetic at all. They came streaming in."

Indeed they did. It was the largest public participation in a rate hearing in the state's history. Barnes and Mixner had welded together a coalition that would have made the ghosts of the old Populists give a cheer. Every Steelworkers local in Colorado joined. The women's auxiliaries of the Steelworkers joined. The National Farmers Union came in. So did the environmentalists and the peace people. Mixner calls it "a 'coalition' of the exploited,' to use Senator Fred Harris' phrase. These are the people who are getting together, who have been divided by the wealthy in this country. The people in our coalition, why, they weren't even *talking* to each other a year ago."

The public showing in the rate hearing was so overwhelming that the utilities commission, notoriously in the pocket of the industry, decided that the safest thing to do was whack $3,900,000 off the $11,300,000 rate-increase request. And in their appeal from this ruling the Public Service Company lawyers were reduced to complaining that—and these are their very words—the Colorado Project leaders had injected an "emotional element" into the hearing and that this was "improper." Nobody can whine like a corporation lawyer when he's been trounced.

Moving from Gardner to Barnes/Mixner, one moves to an entirely different altitude. Here the air is crisp and biting. No sludgy *Reader's Digest* wishfulness. No tips of the hat to Rockefeller, Whitney, Ford and company. "We are gearing up to the day when we can force the states to require different criteria for chartering corporations so that corporations will have their public responsibilities as well as profit motives," says Barnes. "Isn't it Saul Alinsky who says what we need is an American form of communism? That we need a fairer way to restrain corporate power and the profit ethic, but something that just isn't as unethical as Marxist communism? I would agree with that. I think this is a political movement. I think the climate is right to have another progressive revolution. The facts are right. The 30-year period of consolidation of corporate power is almost complete, so that the President can deal with 500 corporations and feel that he's got the problem under control. Mintz and Cohen say (in *America, Inc.*) there are only 200 corporations that you have to worry about, standing astride the economy of the country. Well, the time has come, and those of us who are involved are at the genesis of a movement to do something about the subversion of the democratic process by corporate power."

The point in quoting so extensively from these two Colorado chaps is to show one potential of Common Cause. Both in the Federal capital and out in the states it has surfaced a number of tough do-gooders like Barnes and Mixner, and occasionally the money raised by Gardner trickles down to them and they do marvelous things with it. Maybe the trickling will increase.

Meanwhile, what more could you ask from $15 than the surprise of finding yourself lobbying hand in hand with Jack Valenti and Arlene Francis?

A PROFILE OF THE HONORABLE F. EDWARD HÉBERT

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Mr. BOB WILSON of California. Mr. Speaker, those of us who serve with Armed Services Committee Chairman, F. EDWARD HÉBERT, have great respect for him and his earnest desire for fairness in the operations of our committee. Recently a profile of Chairman HÉBERT was published in the Washington Star and Daily News which captures the colorful character of this unusual man. I insert this article by Orr Kelly to be printed in the RECORD.

The article follows:

SOME CHANGES SINCE RIVERS—ARMS AND MR. HEBERT

(By Orr Kelly)

In the glacial movement of congressional seniority, it took Eddie Hebert 30 years from the time he entered Congress to become chairman of the House Armed Services Committee and thus one of the half dozen or so most powerful men in Washington.

"There's no kidding. The chairman's got power!" Hebert says.

"An admiral was in here the other day. There was a little 'dilution' going to take place in the Eighth Naval District. The admiral was sitting down where you are sitting.

"And I looked at him and said, 'Admiral, I don't know whether you heard it or not but Mendel Rivers died a year and a half ago. Have you heard? He's dead!'

"Well, he got the message."

Rep. F. Edward Hebert, D-La., has a particular concern for the welfare of the congressman from Louisiana's First Congressional District.

"The only election I take in is every two years in the First Congressional District of Louisiana when I support the incumbent with vigor," he says.

If you live in Hebert's New Orleans district, you have to be 53 years old to have voted for anyone else who was elected to Congress. He confidently expects to be elected for the 17th time this November—more times than anyone has been elected to public office in the history of Louisiana.

STAYING POWER

It is this remarkable staying power that made it possible for Hebert to be there when the chairmanship of the committee opened up with the death of Rivers in 1970. A Louisiana friend has a theory of how Hebert got the chairmanship, and thus his present position of power.

Hebert, a Jesuit-educated Roman Catholic, tells the story this way:

"He says, that Fella upstairs wanted Hebert. He wanted one of His boys to be chairman instead of that Baptist, Mendel Rivers. So what does He do? (Rep. Philip J.) Philbin's in the way. He's blockin'. So He goes over there to Boston, gets that Jesuit (the Rev. Robert F.) Drinan—another one of the boys—to beat Philbin. So that clears the way for Hebert. Then He grabs Rivers and takes him off."

Whether he got there by accident of age or politics or by divine intervention, the way the former newspaperman from New Orleans has chosen to use his immense power in the last year and a half has been interesting and not entirely predictable.

When Hebert came to Congress in 1941 as part of a political deal, he was 38 years old and had behind him a career as a newspaperman in which he had broken a major scandal in Louisiana.

In 1952, as head of the House investigating subcommittee, he conducted a series of widely publicized hearings on Pentagon waste and procurement mistakes.

"I'm supposed to be the patsy of the Pentagon," he says. "I know that's what people think. But way before Proxmire ever could spell 'waste,' let alone get it in print, I had a chamber of horrors. That was one of the most devastating investigations of the Pentagon that was ever conducted."

In another investigation, he uncovered a scandal in the airframe industry and saw a corrupt labor leader hustled off to jail.

But now that he is chairman, Hebert's investigative zeal seems to have cooled. Instead, he has concentrated on reforms within the committee—a committee on which the chairman has traditionally been a stern autocrat.

Asked in a recent interview what image he would like to create, Hebert replied:

"The image I'd like to have is that I'm fair, that I'm not swayed by partisanship and that I believe in giving every man his day in court. That I'm trustworthy and that when I say something I mean it. I think that's the image I'd want most."

Thus, under Hebert's chairmanship, each member of the committee is allowed just five minutes to question witnesses and then wait his turn again. Each is called in the order of seniority among those present when the session begins. This contrasts with hearings under Rivers, when the chairman did most of the questioning and his friends—including Hebert—did the rest, or with the days of Carl Vinson, who didn't even know the names of the junior members on his committee.

Even with those members of the committee with whom he has the greatest political, ideological and generational differences, Hebert has generally managed to maintain a friendly personal relationship, and he has given some of them important assignments they would not have received under Rivers.

Rep. Lucien N. Nedzi, D-Mich., for example, has been made chairman of the special subcommittee on the Central Intelligence Agency with the mandate to take a close look at the government's whole intelligence operation.

Hebert's relations even seem to be reasonably good with Rep. Michael Harrington, D-Mass., who is just half as old as Hebert and who has gotten into a couple of rather nasty little exchanges with him in committee sessions.

"I think he would say mine is the minority of the minority point of view," Harrington said.

He agreed that Hebert has made an effort at fairness in running the committee—partly because Hebert has the votes, both in the commitee and in Congress.

"But I think there is much more the form of fairness than the substance of fairness," Harrington said. "They can play a pretty rough sub-surface game."

Harrington's complaint is that some staff members and the more senior—and generally more conservative—members of the committee play things close to the vest.

"I have a feeling that there is a reluctance to share information," he said.

As committee chairman, Hebert dispenses what he calls the "goodies"—generally airplane rides to interesting places. He encourages the committee members to travel because "the best way that a man knows what he's doing is to absolutely touch the thing and see it."

Thus, when Harrington, a brand new member of the committee, wanted to go to Southeast Asia, Hebert told him he was welcome to go to South Vietnam—but not to Laos or Cambodia.

"He couldn't understand that," Hebert said. "I said, well, I got enough trouble . . ."

"We fenced for a year on Laos and Cambodia," Harrington said. "Finally, I said I surrendered and would agree to his ground rules.

Even Hebert's critics don't accuse him of using his power to influence the location of military bases or the awarding of military contracts for political purposes—aside from his acknowledged protection of installations already in the New Orleans area.

But the fact that military installations and defense contracts are economically important in many parts of the country has made it difficult—virtually impossible, in any meaningful sense—for the would-be rebels on Hebert's committee to get together in a concerted effort to make major changes in the defense budgets in committee.

And yet, it is only in committee that there is a realistic chance to make changes. This year, for example, the committee cut the administration's $23 billion military procurement and research bill by $1.5 billion—but Hebert proudly notes that there was not a single change made in the bill on the House floor.

LIKES LAIRD

The committee handles two major chunks of the defense budget each year—the procurement and research budget of about $22 billion and the military construction budget of about $2 billion. But it also has a strong influence on the operations and maintenance account, and it sets the pay scales. In effect, it thus has direct or indirect control over the entire defense budget of about $85 billion.

Hebert's concentration on reform within the committee is probably based to some extent on his general feeling that things are going pretty well at the Pentagon under Defense Secretary Melvin Laird.

"I think Laird's a great man," Hebert said. "I put Laird in the class with Forrestal. Forrestal is my favorite." The late James Forrestal was the first secretary of defense.

But Hebert, who talks with an accent peculiar to certain parts of New Orleans—an accent more like that of Brooklyn than the South—would probably run the committee quite different if Robert S. McNamara were still secretary.

"I used to get a kick out of that man," he said. "I had fun with him. I'd tell him things deliberately, you know, just to annoy him. He didn't talk my language at all.

"Oh, I used to tell him the goddamndest, most outrageous things. One day he was sitting right over there, and I told him, 'Robert, you know, you just a transient here. . . . I said I've seen 'em come and I've seen 'em go and I'll be here when you're gone.'

"I am. . . . And I am!"

Hebert has an irrepressible and ribald sense of humor and a lasting appreciation for the finer things in life.

He rides around in a Cadillac and owns three homes. In each home is a complete expensive wardrobe, so he never has to pack a bag. Since he first came to town, some of the nicest looking girls in Washington have graced his offices.

When the Rayburn House Office Building was under construction, he prowled around and found a place where the design would provide one office of extraordinary size. It is now the fanciest office on the Hill, complete with a foyer with fountain.

Off his private office are two other rooms. One he calls the "Adult Room." It is a little bar decorated with seductive pictures of naked ladies and a street sign from Bourbon Street, which used to be in Hebert's district and was part of his beat as a reporter.

The other is furnished with a television set, chairs and a couch.

"That's the 'Adultery Room,'" Hebert chuckles.

It took Hebert 30 years to get where he is now—and he likes his job.

"I know I'm in the twilight stages," he acknowledges. "I'll be 71 on Oct. 12. Times are changing. You feel like. . . . Take those kids, imagine those kids 18, 19, 20. Me, I'm just a name to them."

But now that he's chairman, he shows no signs of wanting to move on.

"TESTING FOR VIRUSES AT DALECARLIA"

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. GUDE. Mr. Speaker, Washington, D.C. and its suburbs, without appropriate planning, can face a water shortage sometime in the next decade—the projected flow of the Potomac River will simply not be sufficient to meet the growing demand indefinitely. Washington's water problem is, however, symptomatic of the water situation in many other municipalities throughout the United States. It is no news that the time is long overdue to begin exploring and developing the potential of recycled wastewater and polluted surface waters as supplements to our existing sources of potable and recreational waters. As a matter of fact, reuse of water in America is hardly a revolutionary or novel concept. An exhaustive study of one-third of our American cities in 1961 demonstrated that these municipalities included from 0 to 18 percent municipal waste water from upstream in their drinking water with the average city having 3.5 percent recycled waste water in its supply.

One of the major concerns to use of polluted and recycled waste waters is viral contamination. Enteric viruses, which cause such diseases as infectious hepatitis, polio, and a variety of gastrointestinal disorders, are commonly found in raw sewage and polluted waters. However, before the means to remove or inactivate viruses can be fully developed, the extent of their presence must be determined.

Last week I visited the Dalecarlia Water Treatment Plant to observe the Army Corps of Engineers' virus testing operations. The Corps of Engineers, responsible for Washington's water supply, has recently awarded the Woodard Research Corp. a contract to test regularly both the raw and treated water at Dalecarlia for viruses. The data provided by this study will go a long way toward answering questions on the effectiveness of current water treatment processes, from the standpoint of viral contamination. And too, this study will contribute to the refinement of techniques for detecting small quantities of virus in large quantities of water, techniques that are now prohibitive because of the complexity, expense, and time involved. Just as water is now monitored for bacterial contaminants—that once constituted major public health hazards—we can soon expect viral monitoring to become the rule rather than the exception in municipal water and sewage treatment plants.

It is to the great credit of the Corps' skilled professional and technical personnel that despite raw sewage contamination received at the intake, Washington area residents are guaranteed wholesome, potable water. The Dalecarlia intake receives upstream water with an estimated one-half to two-thirds million gallons of sewage overflow from the Cabin John watershed; this contamination is of a higher degree than would be found in water from the upper estuary.

For all these reasons the Army Corps of Engineers is doing research on the effects of chlorination on enteric viruses and is studying the potential of the Potomac Estuary as a supplemental water source for Washington. These three projects will provide much needed information for all concerned to avert a water crisis in Washington, and ultimately the Nation. The Army Corps of Engineers is to be commended for their foresight and leadership in the field of water supply; and I sincerely hope that others will follow their example and direct their efforts toward developing new sources of "cool, clean water."

A POSITIVE APPROACH TO CONSUMERISM

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. DORN. Mr. Speaker, the Hon. H. W. Close delivered a very timely and superb address recently to the South Carolina Textile Manufacturers Association at Sea Island, Ga. Mr. Close is providing outstanding leadership as president of the American Textile Manufacturers Institute and as chairman of the board of directors of the fabulous Springs Mills. I commend this great address to the attention of the Congress and to the American people:

A Positive Approach to Consumerism

(By H. W. Close)

The greatest challenge to business survival is the array of demands, desires, decrees and doubts we call consumerism.

Consumerism is a fact of business life.

It's not just a noisy phase that will pass if we ignore it. It's here to stay. And it's changing the way we run our businesses.

Look at the time, energy and money all of us have invested in recent months to meet the immediate requirements of the new consumerism—regulations on flammability, labeling, packaging, and so on. Often we are working in the face of arbitrary deadlines and impractical standards.

That's more than just a noisy phase. Every time you look at your cost statement it gets more real.

But the noise—the overkill, the exaggeration, the emotion, the overreaction—has tended to make a positive response to the consumer movement difficult.

One reason is that consumerism is assessed differently by different people.

Some businessmen, for example, might think it's a costly, bloody nuisance.

The reform-hungry zealots see consumerism as a way to inflict vengeance—they call it "justice"—on a business community which has exploited the consumer.

Some politicians think it's a great vehicle for vote-getting.

Some bureaucrats think it's a great vehicle for empire-building.

Many of the leading consumer advocates, I'm sure, see the movement as a means of giving voice to millions of silent but aggrieved consumers.

But I'm not sure whether the real consumer—the Lady with the Pocketbook at the retail counter—cares about the movement, or realizes what is being promoted in her behalf.

The consumer, of course, is the very reason for the businessman's existence. If there is anything we value more than a customer, it is a satisfied customer who comes back . . . and brings a friend.

That's called good will. Good will is earned by performance. And you are never better than your last performance.

OMINOUS IMPLICATIONS

So we have reason to be concerned, not only about the immediate pressures of consumerism, but about some of the long-range implications of the movement. They are ominous.

They are aimed at destroying the credibility of business with its customers, and they threaten the free enterprise system that has done more for consumers than any other system in the history of the world.

Our credibility is already eroding when a Gallup Poll shows Americans think business makes 28 per cent net profit on sales. . . . Somebody said they just misplaced the decimal point.

Our credibility is undermined when a United States Senator is quoted widely as saying $30 of every $100 spent by the average consumer is lost due to overpricing, underquality, unnecessary surcharges, or plain fraud.

Our credibility is suspect when nearly two-thirds of the public, according to a survey made by Opinion Research Corporation, feel that the issue of "advertisers making false claims" is a serious moral problem. The FTC compounds the suspicion with its movement toward "full disclosure" product advertising.

Our credibility is jeopardized in an extremely ironic way when an outfit in Boston starts selling, by mail order, something called the Telagripe Complaint Kit, complete with sample letters to company presidents. Only one dollar.

You and I can fume in outrage.

But while we're steaming, our opposition is making points with our customers and putting new rules in the lawbooks.

It makes it tough to take a positive approach to consumerism.

TIME FOR OBJECTIVITY

But a positive approach is necessary. Because a punitive philosophy which makes business the whipping boy will hurt the consumer as much as business in the long run.

How, then, do we put consumerism in perspective?

For one thing, it is time that informed, respected, objective, credible voices made themselves heard in the consumer clamor.

We recently held the first meeting of Springs Mills' Consumer Advisory Panel. This group is composed of six women college professors from across the nation, all professional home economists. They represent an organization of 2,200 professors of textiles and clothing at 400 universities and colleges throughout this country, Canada and Puerto Rico.

We thought of them as moderate, informed consumer advocates.

That perception didn't really prepare us for their first session with our marketing executives.

Much of what these consumer advocates had to say was at odds with what the better publicized leaders of the movement constantly offer.

One of them said: "Some of the current trends in consumerism are going to result in eliminating the freedom of choice the consumer should have when she makes a purchase."

Another one said: "I don't think consumers are aware of what is being done for them by industry, because industry isn't telling its story. Maybe education isn't helping tell the story either."

Other comments from this group of women—they're consumers, too, as well as experts in the field of textile consumer research—tended to support the contention that increased regulation would limit consumer freedom, and increase costs.

We are hopeful that this influential group, with knowledge of industry as well as consumers, will begin to make its voice heard in consumerist and government circles as a result of our effort to open communications with them.

One panel member went so far as to say we're putting too much quality into our fashion products. She contended that extra durability meant extra cost that was unnecessary in a product with a brief fashion life. For example, she complained she'd had the same bedspread for 20 years, and was sick of it.

Now I'll have to admit that this is a new one on me.

But maybe it's also a new one on the professional consumer movers who're advocating that we build every product to last a lifetime, and limit the choices the customer faces at the retail counter.

Those are two extremes. And maybe the real answer lies somewhere in between, neither too much nor too little.

To get an answer, of course, you have to ask a question.

ASK THE CONSUMER WHAT SHE WANTS

We have to break out of our comfortable shells of preconception and ask the emerging American consumer direct questions: What does she really want, what is she really willing to pay for, where does she want to go to get it? That's called market research.

Then we must answer our own questions: Can we make it, how much will it cost, how soon can we get it to her? That's called product research.

If we do that, I think we are getting to the eye of the hurricane: True consumerism is giving the consumer what she wants and will pay for, not what anybody else says she wants.

In England a few years ago, government flammability standards were made very stiff. So stiff, in fact, that the only goods available on the counters didn't have the feel or look customers wanted. They wouldn't sell.

Mothers started sewing pajamas and nightgowns for their children. Or they let the children sleep in their underwear in place of the sleepwear they couldn't find in the store.

That's consumerism gone berserk—protection so thorough and so sound it protects no one and limits the consumer's selection in the process.

It is the consumer—not government, nor business, nor self-appointed guardians—who must determine freely what goods and services will survive in the marketplace.

The new American consumer is not a wild, loud radical (although some who say they represent her might be).

She is a fashion-conscious, independent, better-educated, more affluent person who looks for value in products, and integrity in companies which make products.

If we in business take no initiative to serve her interests in a positive way, it is obvious she will look to someone else for attention—and we will have to live (or die) with the consequences.

How can business take a positive approach to consumerism?

There are several ways:

1. Short-term, of course, we must comply with the new regulations if we wish to continue marketing products.

2. But we can also begin an aggressive policy of informing the consumer about the free enterprise system, and the benefits she can and has derived from it.

One of our college teacher panel members talked about a model curriculum now being introduced in some public schools as far down as kindergarten. It is aimed at providing a base for understanding product value—we economists would call it the cost/benefit relationship.

Opening the doors of communication at this and countless other levels is a long-range antidote to anti-business attitudes. Someone has called this form of economics ignorance "attitude pollution."

The result of "attitude pollution" is a wealth of doubt and criticism about business, and very few practical solutions.

3. We can provide our customers with clear, concise and practical information about our products—whether it's through schools, retail clerks, advertising or labels.

4. We can take a closer look at our own companies to make sure channels of communication between us and the customers are open. Let's think of consumers as human beings, not some homogeneous entity out there somewhere.

If the lady's sheet doesn't fit her bed, we ought to want to know about it. The lady, in turn, doesn't want a short course in sheetmaking technology, or form-letter bafflegab from a remote computer. She simply wants a sheet that fits her bed. And quickly.

5. We can coordinate our product lines and our product development work more closely with our market research.

If we are to improve our profitability at the same time we improve our response to the consumer, we are going to have to become more selective about the products we offer. We are going to have to be sure they are meeting a distinct consumer demand.

6. Finally, we can improve our liaison with government at all levels, in an effort to make reason and practicality important elements in regulatory guidelines—more important than crusading zeal, presumptuous advocacy or misguided enthusiasm.

But let's put the lady first, not the textile industry, not Betty Furness, not the FTC.

If she wants to buy a red dress for a special occasion, or a flowered bed spread that she'll tire of soon, or a printed shift to wear around the house for two years, then she has a perfect right to indulge herself. That's pure consumerism, and we can live with it.

The consumerism movement, however, can be disastrous to us if we sit back and let it, ignoring its enormous implications.

But if we approach it positively and flexibly, we can minimize the dangers. We can make consumerism what it ought to be—a mechanism that listens to and responds to the consumer.

They said it a long time ago, and it's still true: The customer is always right. That response, for business in a time of change, should never change.

THE GUARANTEED STUDENT LOAN PROGRAM

HON. WILLIAM R. ROY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. ROY. Mr. Speaker, today this body is focusing its attention on our system of elementary and secondary education. While I think that this discussion is a necessary one, I think that we should also be aware of some recent occurrences that may have an adverse effect on our system of higher education. Mr. Speaker, I am referring to the situation now being encountered by thousands of students under the recent changes in the guaranteed student loan program.

The Congress completed its action on the Education Amendments of 1972 in late June. In its deliberations, it was made clear that the Congress sought to expand and enlarge the guaranteed student loan program, which has been so successful in the past. However, now that these amendments are public law, and are being implemented, the actual intent and the actual effect of the law are in conflict.

Because of some ambiguities in the language of the legislation, the guaranteed student loan program has come to a virtual stop. Students who had been eligible for and had received loans in the past are now finding that they can no longer receive this aid. With this comes the increasing possibility that many of the students who have benefited under this loan program in the past may not be able to obtain the necessary assistance they are counting on to return to school this fall.

Mr. Speaker, we must act immediately to correct this problem. The fall semester will begin in just a few weeks, and yet literally thousands of students are still left hanging in the balance. The students need to know whether or not they will be able to get the money to return to school. The passage of emergency legislation is most certainly in order. We must act before the close of business tomorrow, before we recess, if we are to have any effect at all.

I was glad to learn that, yesterday, the Senate passed Senate Joint Resolution 260 which delays the implementation of the guaranteed student loan program provisions of the Education Amendments of 1972 so that lenders may continue to provide student loans on the same basis as they did last year. This action on the part of the Senate is to be applauded. I now call on the House of Representatives to do the same. We cannot afford to do less.

FIRST UKRAINIAN-AMERICAN DAY

HON. HENRY P. SMITH III

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. SMITH of New York. Mr. Speaker, last Sunday I had the privilege of attending the first annual Ukrainian-American Day in western New York. This event celebrated the first settlers in western New York to come from the Ukraine 90 years ago. It was a day of pride in heritage and a day that made all of us proud for the many wonderful and strong strands that make up the warp and woof of the United States of America. The words of Wasyl Sharvan, president of the Ukrainian Congress Committee, Buffalo Chapter, delivered on this happy occasion, were as follows:

ADDRESS BY WASYL SHARVAN

Most Reverend Clergy, Honorable Edward Regan, Congressman Dulski, Congressman Kemp, Congressman Smith, Honorable Frank Sedita, Mayor of Buffalo, Mayors of our neighboring towns of Lackawana and Cheektowaga members of the honorary committee of this First Ukrainian-American Day, ladies and gentlemen, fellow citizens:

It gives me great pleasure to greet everyone of you participating at this First Ukrainian-American Day in our Erie County, honoring the 90th Anniversary of the first Ukrainian settlers in the Buffalo area. In planning this special and memorable day, we hope to initiate a similar annual gathering for all Ukrainian Americans and their friends; to give them ample opportunities of deepening and widening steadfast friendships. We gather here today, to reminisce with old friends and to meet new ones whose honorable opinions and ideas will be of great help in dealing with our community activities.

While celebrating this memorable occasion, it would be quite impossible to single out the pioneers whose endless struggles and hardships well preserved the Ukrainian identity in a new land—through innumerable contributions into the social life of the Ukrainian ethnic community. The period after the 2nd World War brought into this country and also into our community many fine families of Ukrainian emigrants who, immediately upon their arrival have included themselves entirely into this ethnic movement. Here are some of the many examples of the persistent work that today is being accented with the greatest possible appraisal: Ukrainian churches of the Eastern rite, traditionally decorated Ukrainian homes, fraternity organizations, auxiliary organizations and others.

This festive occasion makes it possible for us and equally for all others to admit—and we do it with a note of pride—that in spite of our small group, as far as other ethnic groups are concerned, we—as the Ukrainian American minority group, are being constantly praised for being well organized, disciplined, conscientious and well respected in this community of various nationalities.

I'm convinced that this celebration of the First Ukrainian-American Day will bring together all Americans of Ukrainian descent much closer in order to achieve our goals. Such we will do—through better understanding and more dedicated work in our community. Consequently, we will be able to better fulfill the demands of this wonderful country—the United States of America—where everyone of us can practice the rights of a free people, and also fulfill the demands of Ukraine—the fatherland of our ancestors—which now, unfortunately, enslaved by the Communist regime is deprived of all equality and human rights which we here freely enjoy. Thank you.

WE MUST STEP UP OUR FIGHT AGAINST CANCER

HON. PETER A. PEYSER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. PEYSER. Mr. Speaker, the thousands of Americans dying of cancer each year cry out for an accelerated drive against this terrible affliction. Over a year ago, the Congress took a significant step forward in the battle against cancer with the passage of the National Cancer Act. Already, in fiscal year 1971, almost $300 million were spent for pure research under the auspices of this act. However, the passage of this act and the expenditure of Federal moneys are no more than a beginning and we must not slacken our efforts to wipe out cancer.

It is a rare family which has not been touched by cancer in one way or another. I recently received an eloquent letter from a Bronxville, N.Y., mother and wife whose family has been tragically affected by this disease.

I commend it to the attention of my colleagues:

BRONXVILLE, N.Y.

DEAR CONGESSMAN PEYSER: I am so permeated with grief and fear that I pray you will read my letter, give it your serious consideration, and hopefully, take effective action.

Last June, after a thirteen year battle with Cystic Fibrosis, we lost our daughter, Lynn. The cure for which we had prayed so long did not come in time! When we lost Lynn, we lost a precious little gem!

Two weeks after Lynn died my husband was operated on for removal of a second intestinal polyp (malignant). The first polyp was removed, and a colostomy performed in December, 1970. I have been numb since hearing this.

Passage of the Cancer Act, along with an announcement from Dr. Judah Folkman of Children's Hospital in Boston, have provided a light at the end of a seemingly dark tunnel. I have enclosed a copy of the article which talks of a major breakthrough, of a possible vaccine for cancer. For the first time, a malignant tumor has been held in the dormant state! Dr. Folkman estimates a treatment method may be available within 2 to 5 years. This doctor has given hope and inspiration to millions. The enormous multitude of cancer victims has been thrown a life-line; but Congressman Peyser, how long can they hang on?? Dr. Folkman mentions having a 12 man team and that 6 other labs have excitedly joined in the search. To a drowning man, this seems like a "token" force!!

Certainly, with time such a precious commodity in this race against death, this area of such great promise should be stepped up to a round-the-clock basis! Time is of the utmost if the present cancer victims are to be saved. What a blessing that the Cancer Act has been passed, what a boon to mankind, and yet, what has been done?? On a recent WINS broadcast, Dr. Watson of the Cancer Board reported that they have this large appropriation of money for six months now, but nothing has been done! How can we explain this or justify political nonsense, government red tape, inefficiency, and blundering to cancer victims and their families? We cannot tolerate this floundering for a few years before we decide what's needed to have the program move forward and really play a tremendously significant role in benefitting mankind.

Would you Congressman Peyser, please push for a "crash program" in this vital area of *finding* a *control* or *vaccine?* Areas of research showing great promise such as Dr. Folkman's should take *"top priority."* In the words of Irving I. Rimer, Vice President for Public Information of the American Cancer Society, Inc., "Dr. Folkman's work holds great promise and the Society and the National Cancer Institute will support him fully. It looks like Congress will appropriate major increases for research. This is what the scientific community has been demanding and *needs* to get on with the job." If this is what's needed Congressman Peyser, please act *now!!!*

I feel so strongly that great numbers of men of expertise in the field of Immunology should be directed to join Dr. Folkman as a back-up team in his life-saving search. Certainly, *more labs* should join in this vital search and attack on this national menace—this dread disease.

Doesn't this crisis open our eyes enough to see that it is absolutely essential for the National Cancer Institute to secure Doctor Folkman's services on a *full time*!!! basis, so that this Chief of Surgery at Children's Hospital in Boston could devote his time *solely* to this urgent area of *accelerating* an intensive search for a vaccine to conquer this deadly peril!

We cry out against the loss of life in Vietnam and at the slaughter of innocent angels in abortion, and rightfully so! But what about the cancer battlefront that is constantly with us and its continually mounting death toll—its pain, suffering and heartbreak? Spiraling taxes, catastrophic medical expenses and the insidious threat ever hanging over us! I've lived in fear for 13 years only to bury a sweet little angel who loved life and all it had to offer, a beautiful little girl just going into her teens. We lost the battle with Cystic Fibrosis. Every three months my husband and I took Lynn to Children's Hospital in Boston to see Dr. Harry S. Livachman. Now, Dr. Folkman is in the same hospital.

Don't let a cure be so near and yet so far! Stop the growth and spread of the tumor with a vaccine or control, as Dr. Folkman is endeavoring to do, and save precious human lives as quickly as possible, *before these cancer victims have crossed the threshold of no return*!!! Then, we can fill in the remaining pieces of the puzzle—the cause and prevention. The *acute* cry for help is from the *present* cancer patients hoping to be saved. This is an "SOS" for salvation!

Congressman Peyser, I pray that you will put the vast resources of our nation to work for the public good in this most vital area and *demand* a national *crash priority program* in order to accelerate and make the headway necessary to end this war on cancer. People protest and introduce all kinds of legislation, but so much of it is "trivial" in comparison to a plea for human life! We deplore the loss of our natural resources, but what more precious resource than life itself?

We are abdicating our responsibility, as are the men in the key positions of the Cancer Program, if we allow blundering and laxity and government red tape to hinder an intense search. Unnecessary delays cannot be tolerated! The question, "What has been done?" should be answered. The people are entitled to that answer. We worry about helping people in other countries, and we do not hear the multitude crying at home.

If we were to think in terms of a war effort, as in the Manhattan Project and Space Programs, with research labs working "round-the-clock," this type of speed-up program would increase productivity, could bring the day of a cure closer to becoming a reality! Try to get a Doctor on a weekend. Hospitals operate on a skeleton force, and those research labs are *idle* and *closed*. This should never be when millions of people are fighting time—waiting for help—their lives hanging in the balance! Death and suffering take no holiday!

We must function at *full spead* in this disaster area, in this desperate battle for life, to eradicate this dread menace, this nightmare that now exists for hundreds of thousands of cancer patients and their families.

I pray that you will make a strong *demand* before Congress for a showdown *immediately* for the necessary appropriation needed for research in this vital area—a "crash program" in the area of a vaccine or cure! I hope you will get much exposure for this cause before the people. What more sane or humane cause—what cause more in the interests of the people? Hardly a family has not been touched by this dread disease. The government must cooperate and take effective action now before more citizens are claimed as victims. No feet should be dragging when time lost means lives lost! You men who are holding the reins should get the wheels in motion and keep them moving. Dr. Folkman's search must be accelerated in every possible way and our efforts concentrated in this area *first*, when time is running out. We must *act now* if we are to save the lives of all the cancer victims who have been given hope. These hopes must not be disappointed!

Again, Congressman Peyser, don't let a cure be so near and yet so far! I am fighting for the most precious person in all the world to me, my husband. I pray that Dr. Folkman and hundreds of other dedicated doctors will work *feverishly*. I pray that he will devote himself solely to the pursuit of his vaccine to stop the growth and spread of malignant tumors. I pray that his search will be intensified and greatly *accelerated* on a round-the-clock basis with every conceivable kind of sophisticated equipment at his disposal. I pray that his team will be greatly enlarged. Please, please shout this appeal, and I know you will be heard!

Please God, be with us. Bring this cure to us. We have been living on Death Row. Now, there is hope for a pardon! Help us to live. Help my husband and me to realize our hopes and dreams, to raise our other three children. My husband is my life. To ever face this world alone makes me tremble with fear to even think of it. I love him and need him so desperately!

Please Congressman Peyser, help make this vaccine attainable. What greater cause, what more precious gift to all mankind than life itself? I can think of no more worthy endeavor than the one I leave with you.

My eternal thanks for anything you can do to help.

Sincerely yours,

EILEEN LASKOSKI.

P.S. The key factor is the *time* factor. These cancer patients are fighting time! Fight for a speed-up for Dr. Folkman's search and *immediate* increase for research!

KANSANS IN THE OLYMPICS

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. SHRIVER. Mr. Speaker, it was most appropriate for the House of Representatives today to receive members of the United States Olympic Team prior to their departure for the 1972 Summer Olympics in Munich, Germany. It was an inspiring and meaningful tribute to America's finest athletes.

The Wichita, Kansas Eagle gave its editorial best wishes to four Kansans who are members of this outstanding team. The editorial follows :

KANSANS IN THE OLYMPICS

The best wishes of all of us Kansans who must stay home go with four Sunflower State athletes who will compete in the 20th Olympic Games beginning August 26 in Munich, Germany.

There, Kansas will be represented by Wichita's star miler Jim Ryun in the 1,500-meter events; former Clay Center high school and Kansas State University runner Ken Swenson in the 800-meter races; former Wichita State University assistant track coach Preston Carrington in the long-jump events; and self-taught archer Dennis McCormak in the first bow-and-arrow competition ever held in the Olympics.

This will be the third Olympics competition for Ryun, who in 1967 ran the world's fastest mile in 3:51:1 minutes. Now, on leave of absence from his California job, the Wichitan has been living recently in Lawrence, Kan., so that he might train under his former high school coach, Bob Timmons, now track coach at the University of Kansas.

Swenson, a 1970 graduate of Kansas State University, is in the U.S. Army and has been transferred to Ft. Riley in order to train with his college coach, DeLoss Dodds, at neighboring Manhattan. While at high schooler at Clay Center, he was the State half-mile champion.

Carrington is WSU's first Olympian since Harold Manning placed fifth in the steeplechase events in 1936. With a top jump of 26 feet 4 inches in the Olympic trials, he has been rated ninth best long jumper in the world by Track and Field Magazine.

Twenty-year-old McCormak was one of six Americans qualifying for the new Olympics archery event in national trials at Oxford, Ohio, recently. He got his first bow and arrow at the age of 14 and taught himself how to use it. The Columbus, Kan., resident, now a student at Kansas State College, Pittsburg, has never had formal archery training.

The hopes of these four, as they go into competition with the best of the world's athletes in Munich will be matched by the good wishes of their fellow Kansans. The young men should be proud that they were chosen to represent the United States in the international games, and Kansas is rightfully proud of them.

"NEWSMEN'S PRIVILEGE ACT"

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. HARRINGTON. Mr. Speaker, 18 months ago, 25 Members of Congress, including myself, introduced the Newsmen's Privilege Act. That bill was designed to protect the right of newsgatherers to maintain confidential sources, a right essential to full reporting of the news. As you know, the Supreme Court recently decided three cases in this area, ruling by a 5 to 4 vote that newsmen did not have such a constitutional right under the first amendment's free press guarantee. The decision poses a threat to our free press which Congress must act to avert.

In that opinion, the authority of Congress to create such a privilege was not denied. Several bills pending in the House Judiciary Committee which would grant such a right to newsmen have been held up for over 14 months awaiting a report from the Justice Department. I have urged Attorney General Kliendienst to hasten his completion of the report, but it has not yet been issued. Further delay by the Justice Department only worsens the situation for newsmen trying to obtain information from controversial sources. The result is that the public is deprived of a considerable degree of knowledge about events, because many are reluctant to disclose information to reporters whose pledge of confidence may now be circumvented by any grand jury. It is essential that we fill this gap in the first amendment before the concept of a free press itself becomes an empty promise.

An article in yesterday's Washington Post by William Raspberry advances some of the arguments for the passage of a Newsmans Privilege Act. I am inserting it in the RECORD. I am also inserting an article written by Earl Caldwell in the August 5, 1972 Saturday Review. Caldwell was one of the reporters involved in the Court decisions, and his article provides a dramatic first-hand account of how reporters operate, and how damaging the denial of newsman's privilege actually is to newsgathering in America.

I urge members to read these articles, so that with a full understanding of the problem we may act quickly to defend the first amendment's guarantee of a free press from the damaging effects of the recent Court decision.

The articles follow:

ON NEWSMAN'S PRIVILEGE

(By William Raspberry)

So soon after Jack Anderson's goof in the Eagleton affair may not be the best time to talk about newsman's privilege; public opinion may be too much the other way.

But it seems clear, to me and to most newsmen, that we should be able to offer some sort of assurance to our confidential sources that their confidences will not be betrayed. It also seems clear to many of us, in light of the June ruling of the U.S. Supreme Court in the Earl Caldwell case, that we cannot offer any such assurance now, except, perhaps, a vow that we'd go to jail before betraying a confidence.

That's too high a price for an individual to pay for what is, in effect, an act in the public interest.

The Caldwell case stemmed from that newsman's reports, in The New York Times, on the activities of the Black Panther Party—reports that he was able to write only after he gained the confidence of Black Panther members, and after promises that he would honor their restrictions on what was not to be published.

But after Caldwell wrote his series, he found himself summoned to testify before a grand jury investigating Black Panther activities.

His refusal, on First Amendment grounds, was fought all the way up to the Supreme Court, and he lost. The free-press guarantee of the First Amendment, the Court held, neither prevents the subpoenaing of reporters by grand juries nor protects them from punishment if they choose to remain silent.

Until that ruling, some newsmen had discouraged attempts to write into law any provision aimed at protecting reporters' sources. Their feeling was that it was better to have newsman's privilege accepted as a matter of common law—as with doctors and lawyers—than to have it enacted. Pass it as a piece of legislation, and a subsequent legislature could repeal it.

That argument is worthless in light of the Supreme Court ruling. What demands attention now is what kind of law can best serve the purpose. It must be strong enough to provide real protection for confidences, and yet not so strong as to risk turning newsmen into tyrants.

That's why the Anderson-Eagleton affair comes to mind. At the time Anderson made his claim about Eagleton's alleged drunk-driving record, he said he got his information from a former Missouri official—that is to say, a confidential source.

He later acknowledged that the information was false. But suppose he hadn't. Clearly no law ought to give Anderson the right to make an unfounded allegation against anyone else. If it came to that, I could write any scandalous thing about anyone I didn't like, claim I learned the scandal from a confidential source and get away clean.

I obviously can't do that. Nor does any legislative proposal I have seen propose to let me do that. The essential protection being sought is of sources, not of newsmen. The laws against libel would remain intact.

One proposal that seems to fit the bill has been drawn up by Cecelia Matthews for her legislative drafting class at George Washington University Law School.

Essentially, it would prevent mandatory disclosure of any communication between a news source and a newsman "whenever, and for as long as, the passage of the communication, the content of the communication, or the source of the communication is designated as confidential by the news source in order to provide for, or facilitate, the free flow of information to the public through the news media.

"A newsman may not be adjudged in contempt (of court, grand jury or Congress) for refusing or failing to disclose any matter (so) protected."

The protection could be waived *after a hearing* in the interest of national security, to prevent a miscarriage of justice or in a public emergency.

That seems fair enough.

"ASK ME. I KNOW. I WAS THE TEST CASE."

(By Earl Caldwell)

NEW YORK, N.Y.—At this point I am already so far past my deadline that my editor has given up listening to my excuses. She has parked outside my office and has informed me that she will not leave until the piece is finished. All this to pull loose my reaction to the Supreme Court's June 29 decision that the government has, if it chooses, a perfect right to subpoena me, or any other newsman, to testify before a grand jury—in my case, one investigating the Black Panther party.

The article should be easy to write. I've got so much to say that I feel about to burst. But I can't put anything on paper. I can't let anyone know. I have to keep it to myself. That's the rule of the game. Just this once, though, I'd like to say: The hell with it—the hell with what the Justice Department might do—the hell with what the *New York Times* thinks. I owe this one to myself. I know what I've been through these past two years. Let me get this off my chest.

The day the decision came down I stayed at home. A friend called to say that I had lost. Later that morning I phoned the *Times*, and Gene Roberts, the national editor, told me that the decision had been 5 to 4. Justice Rehnquist had made the difference. The deciding vote had been cast by a man who had been deeply involved in the subpoena issue when he was in the Justice Department.

I thought back to the day, February 2, 1970, when the first subpoena was served. It required me to appear in San Francisco before a federal grand jury that was probing the activities of Black Panthers. I had been counseled—not by my attorney, but by other legal experts and by people prominent in the newspaper industry—against being so anxious to go to court to fight the issue. They argued that I risked having a bad law made in an area where none had existed. In other words, I shouldn't go to court because I might lose. It would be better, they said, if we could work something out.

There was nothing to work out. I'm a journalist and, as quiet as it's kept, serious about my work. I grin a lot and try to give the impression that I'm always happy. That's the facade black folks must put up. So when I said that I wasn't going to appear before any grand jury investigating the Black Panther party, nobody believed that I was serious. Perhaps they didn't know now where I'd been for the past five or six years.

I was on the balcony with Martin Luther King in 1968, and I saw him die. I saw the blood come out of his neck and stack up around his head. I watched Ralph Abernathy cradle King's head in his arms. I was there, and I looked into King's eyes and watched him die.

Before that I had done my time in the streets. I wasn't just in Newark or Detroit. I was on Blue Hill Avenue in Boston. I was on the west side in Dayton. I was in Cincinnati and Watts and Sacramento and Chicago and a lot of other places where black folks showed their anger and rebelled during the summer of 1967.

I remember being in Newark and visiting a young kid in his home just after his mother had been fatally shot. There were twelve in that family, and their father was dead. Their mother had locked them inside the apartment when the rioting broke out, and she was lying on a couch. She got up—maybe to get a drink of water or may to see about the food on the stove. It makes no difference. The thing that's worth remembering is that when she got up a bullet came through a window and tore her neck apart. When I arrived, with my press card, there was only a pool of blood left and holes in the walls that were bigger than your fist. The next morning the stories in my paper were not about police and National Guardsmen firing weapons so powerful that they dug walls apart. The *Times* headlined stories about snipers—snipers who the governor of New Jersey said were operating in the black community and who were highly professional (in spite of the fact that they never killed anyone).

Out of that summer came Rap Brown. I went across the country with him, and I watched thousands of black folks who were fed up, who were so filled with rage that they, too, were about to explode. Out of all that came the Black Panther party.

When I linked up with the Panthers late in 1968 on the West Coast, they called me a cop. I had to be a cop, they reasoned: The *New York Times* was not about to send a black reporter 3,000 miles just to cover them.

I had friends who knew Kathleen Cleaver; she was my first contact with the party. But to make it, you had to be able to deal with the Panthers in the streets, the Panthers whose names you never asked, whose names you never read in the paper. They were the one who showed me what I needed to know. Late one night in San Francisco they yanked an old couch away from a wall in a cramped apartment, exposing stacks of guns of every sort. I could tell my readers then to take these people seriously, and I did.

I watched the Panthers' breakfast program before other reporters knew it existed. I wrote about it in the *Times*. If I've ever written a page-one story, that was it. The story was all there, but it was buried somewhere in the thickness of the Sunday edition. I told how painstakingly they went about their work, cooking big breakfasts—eggs, bacon, ham, grits, biscuits—they had it all. But they also added politics, in the songs they sang, in the literature they gave to the kids. Nobody tried to hide the political part from me—the reporter from the *New York Times*. Every now and then I'd get the third degree. "C'mon now, Caldwell; we know you're a cop," they'd say. But I kept coming back, and I kept telling them: "I'm a reporter. That's my job. That's the only reason—the only reason I'm here." Somewhere along the line they began to believe me.

On the morning before he went into hiding and eventually slipped out of the country I visited Eldridge Cleaver in his San Francisco home. I remember him sitting there at his typewriter with his shoes off and telling me that the time was coming when the Panthers would have to move against black journalists. Once, he explained, it hadn't made any difference what we wrote because nobody—nobody black, that is—read us. But with blacks beginning to read more, what was being written about them was becoming more important. "What good do you do, anyhow?" he asked me. I wrestled with the question then; it is even more difficult to answer now.

As I became more deeply involved with the Panthers, I began to keep all kinds of files on them. On Panther personalities. On off-the-record conversations. I kept tapes, too, and I would write my personal reactions to everything involving the Panthers that I covered. At this point they were under attack by police groups across the country. At a time when the party was shutting out reporters, I was closer to it than ever. I would sit nights at the national headquarters on Shattuck Avenue in Berkeley, talking with anyone who would talk. Often I would not leave until 3 or 4 in the morning. The party trusted me so much that, I did not have to ask for permission to bring along a tape recorder. Some writers hinted on occasion that I was a member of the party: I wrote that off as professional jealousy.

But I was never permitted to follow the story through to the end. The FBI saw to that. I had my first encounter with FBI agents when I wrote about the Panthers' guns, but that time they left me alone when I assured them that all the information was available in the newspaper. Then, late in 1969, they began to interfere with my work. They wanted to pick my brain. They wanted me to slip about behind my news sources, to act like the double agents I saw on old movie reruns on TV.

This is not my fantasy. The *Times* knew what was happening. They knew the FBI was calling me very day. Finally, Wallace Turner, chief of the *Times* bureau in San Francisco, arranged for an assistant in the bureau, Alma Brackett, to take all my calls. The FBI even had women call. It went on like that for months, until one day an agent told Mrs. Brackett that, if I didn't come in and talk to them, I'd be telling what I knew in court. That's when they subpoenaed me. They asked for all of my tape recordings, notebooks, and other doucments covering a period of more than fourteen months—and let me know that, if I did not come in with everything, I would go to jail. As it turned out, when I did refuse to appear before the grand jury, I was found in civil contempt and sentenced to jail until I complied with the court order. Fortunately, the court agreed to stay the execution of that order until I had a chance to appeal.

The rest is history. I met Tony Amsterdam, a good man and a brilliant lawyer, who understood why I could not appear before the grand jury. Tony was beautiful. He never asked about money. He never said that we shouldn't do this or we shouldn't do that because we might get a bad law written. He said that we were right and that we would go all the way to the Supreme Court if we had to. We did. And now the Court has ruled, and it makes me sick that the vote that beat us was cast by one of the very men who earlier sat in the Justice Department, where he could not have avoided being involved in this whole issue. So the records show that we lost—lost in a court that black folks has come to think of as their last resort for justice in the United States of America.

It's no longer important now what the government can get from me about the Panthers. I have nothing to say about them. They are not the same organization now that they were when I covered them. As for the notes and the tapes I spoke of earlier—well, they're all gone. I ripped up the notebooks. I erased the tapes and shredded almost every document that I had that dealt with the Panthers. Many of those items should have been saved, for history's sake, as much as for anything. But in America today a reporter cannot save his notes or his tapes or other documents.

That's not all. From now on no newspaper can hope to cover effectively an organization such as the Panthers. I don't care how black a reporter is, he won't get close. He won't, and he shouldn't try. He won't because he cannot be trusted as a reporter. When he goes out and cuts an interview, he may say that it's only for his paper. He may swear to it. But if he means it, the government can now put him in jail and keep him there. Ask me. I know. I was the test case. And because Justice Rehnquist did not disqualify himself, we lost.

Yes, this should be an easy piece to write. I have a lot to say. It's difficult, though, because I have a lot to think about. I am teaching this summer at Columbia University, but in another month I'll be heading back west to my job as a West Coast correspondent for the *Times*. I still have not figured out how I can go back into the black community—or any community, for that matter—and present myself as a journalist. Hell, even the Supreme Court has now said that there is nothing wrong with forcing a reporter to become a spy. But not all of the Court misunderstood.

In his dissenting opinion, Justice Douglas wrote: "A reporter is no better than his source of information. Unless he has a privilege to withhold the identity of his source, he will be the victim of governmental intrigue or aggression. If he can be summoned to testify in secret before a grand jury, his sources will dry up and the attempted exposure, the effort to enlighten the public, will be ended. If what the Court sanctions today becomes settled law, then the reporter's main function in American society will be to pass on to the public the press releases which the various departments of government issue."

"SYPHILIS AND GENOCIDE"

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. DIGGS. Mr. Speaker, the events surrounding the so-called "Tuskegee Study" to investigate the effects of untreated syphilis have shocked the entire black community. Those responsible for the "experiment" have repeatedly denied that race was a factor. However, many black Americans are discovering in these repeated "coincidences" a sick and invidious intent.

Mr. C. Sumner Stone, a highly respected journalist, raises some very important questions in his column of August 1, 1972. As he suggests, the use of the word "genocide" often brings charges of hyperbole from some quarters. But, Mr. Speaker, we would do well to remember that the Genocide Convention has yet to be ratified by the U.S. Senate.

Mr. Speaker, Mr. Stone's article entitled "Syphilis and Genocide" follows."

SYPHILIS AND GENOCIDE

(By Chuck Stone)

It either takes a tough constitution or a rancid morality to sit quietly by and watch 200 men die without doing anything about it.

I call it genocide. Have you got a better name for it?

The act of genocide was even officially sanctioned by the United States Public Health Service.

The experiment began 40 years ago with about 600 black men. Of those 600, about one-third were free of the disease; two-thirds showed evidence of syphilis. Of the syphilitic group, half were treated, but the other half—about 200—received no treatment. And they received no treatment even after penicillin was developed during World War II.

At first blush, the charge of genocide may be considered extravagant rhetoric. But, those 400 black men were "systematically and deliberately destroyed" as a racial group and that's exactly what genocide is.

Even my reaction is a delayed one because I was so revulsed by this official slaughter, I shied away from a comment. What do you say about a group of sadists who wear the snow-white uniforms of medical researchers which permit them to play God with the lives of human beings?

The 13-member Congressional Black Caucus shocked me back into reality with its demand yesterday that "everyone responsible for these hideous acts of crime be brought to justice."

The Caucus also called for reparations to be paid to the families and victims of this 40-year-long experiment.

In its demand for reparations, the Caucus resurrected an idea that enjoyed a wide currency in the black community a few years ago. Former SNCC Director James Forman demanded that America's churches pay reparations to black people for supporting American racism. The idea was contemptuously dismissed as far-fetched, but the Caucus's demand of yesterday gives it a renewed respectability.

"The overall effects of this immoral revelation," continued the Caucus's statement, "extend far beyond the life-long sufferings of myriad black families and their unborn offspring. It poignantly reflects the deflated value that white people have historically placed upon black lives."

That's an extremely harsh indictment for a group of distinguished elected officials to level against the citizens of their own country.

But its harshness in no way compares to the devaluation of human life that the United States government placed upon the lives of a group of its own citizens.

Sure, in the name of scientific advance, there have been medical experiments in which the victims were injected with a disease or a virus to test the effectiveness of a newly discovered cure. They knew the possibility of death, but they also knew that the medical researchers were hanging in there all the time trying to save their lives.

Not the U.S. Public Health Service this time.

And I think that's an essential difference—that doctors or researchers who usually dedicate themselves to trying to save human beings this time sat casually by for 40 years and watched them slowly die without making any effort to help them to hold on to life.

During the last few years, there has been a rising tide of opinion in the black community that there is a "secret" or "unofficial" plot to wipe out black people.

The continued existence of "detention centers" around the country and some of the cattle round-up methods used by some officials have in dealing with dissent have not diluted that charge.

Family planning or planned parenthood has been widely viewed by many responsible black professionals and leaders as a subtle, but effective effort to destroy the black family and limit its growth.

The high rate of black veterans' deaths in Vietnam (12.5%) compared to their percentage in the armed services (9.8%) worries a black community who sees its manhood being systematically wiped out.

And now comes along a U.S.-government-stamped genocide program that takes on some of the coloration of Hitler's systematic destruction of 6 million Jews.

Sure, dismiss the analogy as ridulous and tut-tut me with the admonition that I'm really being paranoid.

But when you live in a country that deliberately facilitates the deaths of 200 of its citizens of an ethnic group of which you are a part, that's not paranoia.

That's "real-a-noia" and a lot of black people, like the Congressional Black Caucus, are wondering just how much their American citizenship is worth these days.

SOVIET OCCUPATION OF CZECHOSLOVAKIA

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. BROYHILL of Virginia. Mr. Speaker, there will be no freedom in Czechoslovakia until Soviet troops are removed and the iron heel of dictator's boots lifted from the backs of those who live in this great land where decency and justice has been stifled by oppression.

Now is the time, the hour and the moment for America to marshal world opinion to expose the indecency that is depriving the people of Czechoslovakia of their historic right to govern themselves in peace and freedom.

We who are free cannot rest in security until man is free everywhere. Aggression and oppression must not, cannot be tolerated by civilized nations. Those who seek to join the community of free nations as the Soviet Union is attempting today, must pay freedom's price or be denied the equality and respect it demands. Until such time, when the Soviet Government ceases its occupation and oppression, it must stand aside from the world of peace-seekers. So long as there is a single Czech or Slovak citizen deprived of his rights or his freedom there can be no trust or faith in our relations with Soviet leadership. We who are free must proclaim this rule of decency for mankind, now and tomorrow, with all the strength and insistence we command. To do less is to deny our own heritage. This we will not do as Americans. This we cannot do as decent people whose faith in justice extends to all who are now denied it.

SLICING TWO WAYS

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. WOLFF. Mr. Speaker, while I am sure that there are numerous positive aspects to the United States-Soviet grain agreement, I am deeply concerned that this $750-million deal may be paid for by the American consumer and taxpayer.

According to a Wall Street Journal article, which I will include following my remarks, the grain deal may add 1 or 2 cents per loaf of bread for the consumer and necessitate added Government export subsidies for the already overburdened taxpayer.

I am afraid that this may be another example of an international agreement, which may have a definite adverse economic impact on the average American, taking precedence over the needs of our troubled domestic economy.

The article follows:

SLICING TWO WAYS—U.S.-SOVIET GRAIN DEAL COULD LIFT BREAD PRICES AND INCREASE SUBSIDIES

(By Norman H. Fischer)

CHICAGO.—Along with all the expected benfits, the big grain deal with Russia may deliver a couple of surprise punches to U.S. consumers and taxpayers.

—Bread prices could go up. Wholesale flour prices already are rising dizzyingly, and if they stay up the big bakers say they will be forced to ask the Price Commission for permission to boost retail prices by a cent or two a loaf.

—The government will have to shell out many million of dollars in export subsidies to move U.S. grain to Russia. The Soviet Union is buying wheat here at prices generally prevalent throughout the rest of the world, while wheat prices in the U.S. are climbing to much higher levels because of the increased demand caused by the sales to Russia. The government subsidizes exporters to make up for the difference.

On the positive side, of course, selling at least $750 million of wheat, corn and other grains to the Soviet Union over the next three years will be a welcomed boost for the lagging U.S. balance of payments. The deal will benefit the U.S. economy, too, with boons for those handling the grain—farmers, elevator operators, railroads, truckers, barge lines, exporters, longshoremen and ship owners.

EASING THE STRAINS

There is no indication yet how the positive and negative repercussions will balance out. In the long run, argue Nixon administration officials who helped negotiate the deal, the U.S. stands to gain not only economically but in reduced international tensions as well. The benefits of relaxing the often-strained relations with Russia are incalculable, administration men assert.
